With crank on either dead center the strap should not move on the eccentric as the reverse lever is thrown backward and forward. If it does, note whether it moves with or opposite the direction of the throw of the lever. If it moves with on one center and opposite on the other center the eccentric is not quite to its correct position and should be put there before attempting to do anything else. If it moves with the lever on both centers the eccentric strap arm, connecting to the slide pin, is too short; and if it moves opposite it is too long. In either case the correct length can be made by cutting the babbitt out of the top end of the eccentric strap and adjusting to the correct length and rebabbitting.

This being done, run the engine slow and pry against the flywheel to make the engine labor a little so the sound of the exhaust will be distinct, and note if the exhaust at each end is equal and even. If unequal shift the length of the valve stem outside, a little at a time as the engine runs, until it is even. Reverse the engine and repeat the operation until the exhaust at both ends of the stroke, running in either direction, becomes equal.

Engine Lacks Power.

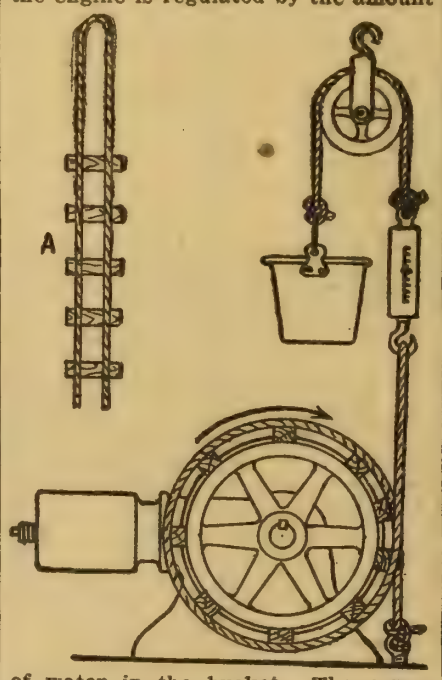
I have a stationary gasoline engine that has no power. The engine has a ten-inch bore and ten-inch stroke. It runs 250 revolutions per minute. What horse power is it?

Answer.—Your engine should develop seventeen horse power. The first thing necessary for power is good compression. If compression is not good examine the valves. See that they seat properly and do not leak. If they leak grind them in with emery flour and oil. If the engine has been run a long time the rings may be worn, in which case new rings are necessary. If the engine is new it may be the rings are not well "run in," in which case the compression will be better after the engine has run a few weeks. If the compression is good check up the timing. The exhaust valve should close and the intake valve open soon after the end of the exhaust stroke. The spark should occur near dead center at the end of the compression stroke when the spark is in starting position. See that your engine gets plenty of gasoline, but not enough to cause it to smoke. Also see that your engine bearings are well lubricated so that the engine runs freely.

Brake Horse Power.

Please publish a sketch showing how to test for brake horse power of a gasoline engine. Can a spring scale be used? How is the horse power figured from the pull on the scales?

Answer.—The figure shows how to arrange the apparatus. Several hardwood blocks, notched out to fit the rim of the flywheel, are fastened by staples or nails to a loop of rope, as shown at A in the figure. The ends of the rope are fastened to the floor. The rope is passed around the flywheel so that the wooden blocks bear against the face of the wheel. A pair of spring balances is hooked into the loop of the rope and suspended from the ceiling by a rope running over a pulley. At the other end of the rope is a basket. The amount of load on the engine is regulated by the amount



of water in the bucket. The arrow shows the direction of rotation of the flywheel. If the flywheel runs opposite place the scale on the other side, so that the flywheel pulls on the scale. Use a little oil on the blocks. It will be necessary to use water also to keep the block from burning, as considerable heat is generated.

To make the test, proceed as follows: Leaving the brake free with just enough weight on the bucket side to balance the weight of the scale and brake, read the scale to see how much dead weight there is. This dead weight must be subtracted from the scale reading when the engine is under load. Start the engine; allow it to run for some time with the brake loose, until the engine becomes warm. Then tighten the brake by pouring water into the bucket until the engine just begins to slow down, due to overload. Take the scale reading; also determine the R. P. M. of the flywheel. The diameter or circumference of the flywheel must also be known.

To figure the horse power multiply the circumference of the flywheel in feet by the revolutions per minute by the pull in pounds on the scale—deducting the dead weight—and divide by 33,000. The result is the brake horse power. Here is a typical example:

Diameter of flywheel, 36 inches.
Revolutions per minute 200.
Dead weight on scale, 3 pounds.
Total pull on scale, 63 pounds.

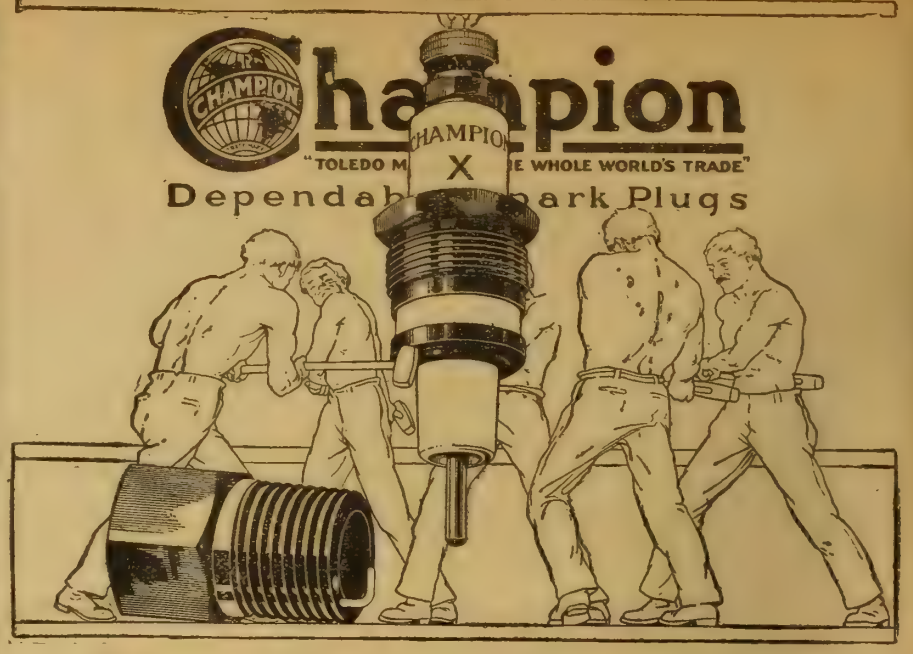
The circumference of the flywheel in feet=36×3.1416÷12=9.4248 ft.

The actual pull on the scales=63 lbs.—3 lbs.=60 lbs.

Applying the above rule,

9.4248×200×60÷33000=3.4.

Therefore, the above engine would test 3.4 horse power.



Champion

"TOLEDO M... E WHOLE WORLD'S TRADE"

Dependab... Spark Plugs

And the Porcelain Doesn't Break

The rapid succession of explosions in your cylinders beat upon the porcelain insulators of your spark plugs like the blows of a trip hammer.

Champion "X" porcelains are double cushioned against breakage.

At both shoulders of the porcelain there is an asbestos cushioned copper gasket to ease the force of the explosions and absolutely hold the compression in your cylinders.

This is one good reason for the dependability of Champion "X" Plugs. And because they are so reliably dependable Champion "X" Plugs are installed on all new Ford Cars and have been since 1911.

They are part and parcel of the reliability of these popular cars.

Remember to specify Champion "X" when you go to your dealer for new plugs for your Ford.

UPPER WISCONSIN

County Settlers' Agent.

Marinette county has hired what is known as a "settlers' agent." His duties are not necessarily to promote scientific agriculture, but to help the new settlers when they arrive with their carloads of goods and stock, and get them located on their land, and get up some buildings to shelter their families and stock.

He also helps the settler to buy teams, dairy cattle, harness, wagons, feed and other supplies which they need, and which they do not know where to get it in a new country without paying exorbitant prices.

Although the new plan has been in effect only three weeks it can already be seen that it will be worth many hundreds of dollars each year in helping new settlers to make good and in keeping them from becoming discouraged and wanting to move back to the states from which they came from.

The position in Marinette county is filled by S. E. Bennett, a practical farmer who for the past three years has been chairman of the committee in charge of the great annual Marinette County New Settlers' Picnic, which was attended last year by over 4,000 people.

Mr. Bennett came to Marinette county as a settler from the state of Illinois, and it was not only his experience as a settler and a farmer which recommended him for the place, but his ability as an organizer, which was shown in the success of the big annual settlers' picnic. He will organize farmers' clubs, and co-operative land clearing, plowing, etc., in all the new settlements of the county.

One instance of the value of this work will give us an idea of the plan in general. A new settler had just arrived in the county and wanted to get enough land cleared to begin farming this year. He wanted a team in short order and was about to pay $600 to a horse dealer when he was referred to the new settlers' agent. Examination showed that one of the horses which he was about to buy was badly ruptured, and was almost useless for work.

The settlers' agent keeps a list of all good live stock which is for sale in the county, and he was able to direct the new settler to a man from whom a perfectly sound draft team of five and six year olds was purchased, together with a new harness for $375. The new settler was saved at least $200 on the deal.

Feeling that he has a friend who will stand by him in getting located in a new country, and in getting acquainted with his neighbors the new settler and his family do not have the experience of loneliness which keeps so many from taking advantage of the very cheap good lands which they can get in Upper Wisconsin.

It is likely that the Marinette county plan will be followed in other Upper Wisconsin counties just as soon as the successor of the work is recognized.

Secretary Bennett works under the direction of the Marinette County Advancement Association, and has his office in Wausaukee, Wisconsin. The president of the association is Mr. George E. Bogrand, publisher of the Wausaukee Independent.

It was this association which started the co-operative dairy cattle plan in Marinette county which has since become known throughout the country, and which has brought over $20,000 worth of good dairy cattle into Marinette county in the past two years.

This pure-bred Holstein, with a seven-day record of 26.7 pounds of fat, is the highest producer in Upper Wisconsin, say her owners, Augustine Bros., Marinette county.

Crow-Elk-hart "30" at $725.00 Season's Motor Car Surprise

Before you invest a lot of money in a motor car, **it will pay you** to know of this big, roomy, five-passenger, 34.9 horsepower car with a 112-inch wheel base, built on a chassis of **eight years' proved construction.**

Gives Riding Comfort Satisfaction

The long wheel base, the resilient yet sturdy spring design, and conscientious solidity of entire construction, give a satisfying comfort over any road and guarantee long life and endurance of the Crow-Elk-hart "30."

Owners report mileage of from 22 to 26 miles per gallon of gasoline, and power to meet any conditions. There are many exclusive features, such as motor with detachable head; piston port-holes for saving of oil and to prevent smoking; equal distribution of weight front and rear; etc.

Features

Wheel base—112 inches.
Motor—34.9 h. p., 4-cyl. enbloc.
Electrical Equipment—Dyneto 6-volt system, starting and lighting; Willard Storage Battery.
Clutch—Multiple disc, 7 plate, Raybestos lined—in oil spray.
Tread—56 inches.
Rear Axle—FULL floating type.
Body—Full streamline, 5 passenger, beautifully upholstered; instruments on cowl.
Weight—1970 lbs.
Price—$725.00 f. o. b. Elkhart, Ind., fully equipped.

The Crow-Elk-hart "30" is the best buy in its class. You'll want one. See it today—and place your order at once.

Five-Year Rotation For Upper Wisconsin.

(Continued from last week.)

A good five-year rotation well adapted to the heavy clay lands of the Lake Superior region and the recently cleared loam soils of north-central Wisconsin consists of. Small grain and clover, clover, mixed clover and timothy, peas and cultivated crops. If the land is weedy it is preferable to let peas follow instead of precede cultivated crops. This rotation is not well adapted to farms of less than sixty acres. The section in mixed timothy may be pastured or cut for hay as desired.

A FIVE-YEAR ROTATION FOR HEAVY SOILS.

The rotation is a good one for naturally fertile soil and is well adapted to dairy farming with peas being grown as a cash crop. Good provision is made for maintaining the nitrogen and humus supply of the soil. The section in mixed clover and grasses may be pastured or cut for hay as circumstances may demand. As the soil requirements of alfalfa become better known it likely will replace clover on many Upper Wisconsin farms.

Extensive tests carried on by the experiment station have demonstrated that the red clay soils bordering Lake Superior are well adapted to growing clover for seed. Good results have been obtained by growing the crop in a rotation as follows: Small grain seeded to clover, one year; clover for seed, one year, and mixed hay, c year. The land is then plowed up a reseeded to clover with small gra preferably wheat. A better grade seed and a larger yield to the a would be obtained by following a tation which includes a cultiva crop, such as rutabagas, cabbage, tatoes or corn. The following thr year rotation: Small grain and ver, one year; clover for seed, year, and cultivated crops, one y is also suggested. This rotation be well adapted to new farms by c

bining sheep raising with the grov of clover for seed.

Potato raising when propery r aged is a profitable industry in n localities of Upper Wisconsin. though good crops may be grow heavy soils, the sandy loams are pecially well adapted to potato duction. For best results this should be grown in rotation with c crops and always following a leg of some kind. Potatoes should no low corn or corn potatoes, since crops draw heavily on the fertili the soil. Such a practice tends t haust the vegetable matter in the In the rotations which have been potatoes can be planted as one o cultivated crops. As a rule, it is b to apply manure to the clover rather than just before planting t tatoes, for scab is more common potatoes are planted on freshly nured land. The three-year rot just described is excellent for sec where potatoes are extensively g As a general rule, cropping to toes oftener than once in three is not to be recommended.

WHO GIVES MORE?

WHEN A

RED RIVER SPECIAL

Works for You
It Is Guaranteed

"With proper management to be capable of doing more and better work than any other machine made of like size and proportions, working under the same conditions and on the same job."

It is so written in your purchasing contract. This clause has stood for years and years in the selfsame words. We believe them ourselves and we back them up with the machine that we build.

WHO WANTS LESS?

HEPSEY BURKE—A Sister to David Harum

By F. N. Wescott, the Brother of the Author of "David Harum."

(Copyright 1915.)

CHAPTER XXI.

Uninvited Guests.

A FEW nights later, when Maxwell returned from his work he found Mrs. Burke sitting on the front platform of the tent with Mrs. Betty, and, having washed and changed his clothes, he persuaded their visitor to stay to supper. After supper was over they sat out doors, chatting of Maxwell's amusing experiences.

They had not been sitting long when their attention was attracted by a noise up the street, and, going to the fence, they saw a horse, over which the driver evidently had lost control, galloping towards them, with a buggy which was swerving from side to side under the momentum of its terrific speed.

Maxwell rushed into the middle of the street to see if he could be of any assistance in stopping the horse and preventing a catastrophe, but before he could get near enough to be of any service the animal suddenly shied, the buggy gave a final lurch, overturned an was thrown violently against a telegraph pole. The horse, freed, dashed on, dragging the shafts and part of the harness. The occupant of the buggy had been thrown out against the telegraph pole with considerable force, knocked senseless, and lay in the gutter, stained with blood and dirt. Mrs. Maxwell and Betty lifted the body of the buggy, while Maxwell pulled out from under it the senseless form of a man; and when they had turned him over and wiped the blood from his face, they discovered, to their utter amazement, that the victim was no less a personage than the Senior Warden, Sylvester Bascom.

Of course, there was nothing to be done but to carry him as best they could into the tent and lay him on a lounge. Maxwell ran hastily for a doctor, while Hepsey and Mrs. Betty applied restoratives, washed the face of the injured man and bound up as best they could what appeared to be a serious wound on one wrist and another on the side of his head. The doctor responded promptly, and, after a thorough examination, announced that Bascom was seriously hurt and that at present it would be dangerous to remove him. So Mrs. Betty and her guest removed Maxwell's personal belongings and improvised a bed in the front room of the tent into which Bascom was lifted with the greatest care. Having done what he could, the doctor departed, promising to return soon.

In about twenty minutes there were signs of returning consciousness and for some time Bascom looked about him in a dazed way and groaned with pain. Mrs. Burke decided at once to remain all night with Mrs. Betty and assist in caring for the warden until Virginia could arrive and assume charge of the case. After about an hour Bascom seemed to be fully conscious as he gazed from one face to another and looked wonderingly at the canvas tent in which he found himself. Mrs. Burke bent over him and inquired: "Are you in much pain, Mr. Bascom?"

"Where am I?"

A curious expression of mild triumph and amusement played across Mrs. Burke's face as she replied:

"You are in Donald Maxwell's tent. This was the nearest place where we could bring you at the time."

For a moment a vestige of color appeared in Bascom's face and he whispered hoarsely:

"Why didn't you take me home?"

"Well, we were afraid to move you until the doctor had examined you thoroughly."

The patient closed his eyes wearily. It was evident that he was growing weaker and just as the doctor returned he again lapsed into unconsciousness. The doctor felt of Bascom's pulse and sent Maxwell hastily for Doctor Field for consultation. For fifteen minutes the doctors were alone in Bascom's room and then Doctor Field called Maxwell in and quietly informed him that the warden had lost so much blood from the wound in the wrist that there was danger of immediate collapse unless they resorted to extreme measures and bled someone to supply the patient. To this Maxwell instantly replied:

"I am strong and well. There is no reason why you should hesitate for a moment. Send for your instruments at once; but my wife must know nothing of it until it is all over with. Tell Mrs. Burke to take her over to Thunder Cliff for an hour or two on the pretext of getting some bedding. Yes, I insist on having my own way, and as you say, there is no time to be lost."

Doctor Field took Mrs. Burke aside and the women immediately departed for Thunder Cliff. The necessary instruments were brought and then the three men entered the sick room.

In about twenty minutes Maxwell came out of the invalid's room, assisted by Doctor Field, and stretched himself on the bed.

Bascom's color began slowly to return; his pulse quickened, and Dr. Field remarked to his colleague:

"Well, I think the old chap is going to pull through after all; but it was a mighty close squeak."

Meanwhile, the messenger who had been sent out to Willow Bluff to appraise Virginia of her father's accident returned with the information that Virginia had left the day before, to stay with friends, and could not possibly get home till next day. It was decided to telegraph for her; and in the meantime the doctors advised that Mr. Bascom be left quietly in his bed at the new "rectory," and be moved home next day, after having recovered some of his lost strength. Mrs. Betty and Mrs. Burke took turns in watching by the invalid that night and it might have been observed that his eyes remained closed, even when he did not sleep, while Mrs. Burke was in attendance, but that he watched Mrs. Betty with keen curiosity and wonder from between half-closed lids, as she sat at the foot of his bed sewing or moved noiselessly preparing the nourishment prescribed for him by the doctors and which the old gentleman took from her with unusual gentleness and patience.

It was Mrs. Burke who, having learned of the time when Virginia was expected to return home, drove out to Willow Bluff with Mr. Bascom and assisted in making him comfortable there before his daughter's arrival. He volunteered no word on their way thither, but lay back among his cushions and pillows with closed eyes, pale and exhausted—though the doctors assured the Maxwells that there was no cause for anxiety on the score of his removal, when they urged that he be left in their care until he had regained more strength.

It was a white and scared Virginia who listened to Hepsey's account of all that happened—an account which neither overstated the Bascoms' debt to the Maxwells nor spared Virginia's guilty conscience.

When she found that her father had been the guest of the Maxwells and that they had played the part of good Samaritans to him in the tent in which the Senior Warden had obliged them to take refuge, she was thoroughly mortified, and there was a struggle between false pride and proper gratitude.

"It is very awkward, is it not, Mrs. Burke?" she said. "I ought certainly to call on Mrs. Maxwell and thank her—but—under the circumstances——"

"What circumstances?" asked Hepsay.

"Well, you know, it will be very embarrassing for me to go to Mr. Maxwell's tent after what has happened between him and—my father."

"I'm not sure that I catch on, Virginia. Which happenin' do you mean? Your father's cold-blooded ejection of the Maxwells from their house or Mr. Maxwell's warm-blooded sacrifice to save your father's life? Perhaps it is a bit embarrassing, as you call it, to thank a man for givin' his blood to save your father."

"It is a more personal matter than that," replied Virginia, gazing dramatically out of the window. "You don't quite seem to appreciate the delicacy of the situation, Mrs. Burke."

"No, I'm blessed if I do. But then you know I'm very stupid about some things, Virginia. Fact is, I'm just stupid enough to imagine—no, I mean think—that it would be the most natural thing in the world to go straight to the Maxwells and thank 'em for all they've done for your father in takin' him in and givin' him the kind of care that money can't buy. There's special reasons that I needn't mention why you should say thank you and say it right."

Virginia examined the toe of her boot for some time in silence and then began:

"But you don't understand the situation, Mrs. Burke."

"Virginia, if you don't stop that kind of thing I shall certainly send for the police. Are you lookin' for a situation? If you have got anything to say, say it."

"Well, to be quite frank with you, Mrs. Burke, I must confess that at one time Mr. Maxwell and I were supposed to be very good friends."

"Naturally. You ought to be good friends with your rector. I don't see anything tragic about that."

"But we were something more than friends."

"Who told you? You can't believe all you hear in a town like this. Maybe someone was foolin' you."

"I ought to know what I am talking about. He accepted our hospitality at Willow Bluffs and was so attentive that people began to make remarks."

"Well, people have been makin' remarks ever since Eve told Adam to put his apron on for dinner. Any fool can make remarks and the biggest fool is the one who cares. Are you sure that you didn't make any remarks yourself, Virginia?"

Virginia instantly bridled and looked the picture of injured innocence.

"Certainly not!" she retorted. "Do you think that I would talk about such a delicate matter before others?"

"Oh, no, I suppose not. But you could look wise and foolish at the same time when Maxwell's name was mentioned, with a coy and kittenish air which would suggest more than ten volumes of Mary Jane Holmes."

"You are not very sympathetic, Mrs. Burke, when I am in deep trouble. I want your help, not ridicule and abuse."

"Well, I am sorry for you, Virginia, in more ways than one. But really I'd like to know what reason you have to think that Donald Maxwell was ever in love with you; I suppose that's what you mean."

Virginia blushed deeply, as became a gentlemaiden of her tender years, and replied:

"Oh, it is not a question of things which one can easily define. Love is vocal without words, you know."

"Hm! You don't mean that he made love to you and proposed to you through a phonograph? You know I had some sort of idea that love that was all wool and a yard wide meant business, usually got vocal at times."

"But Mr. Maxwell and I were thrown together in such an intimate way in parish work, you know."

"Which did the throwing?"

"You don't for one moment suppose that I would intrude myself or press myself on his attention do you?"

"Oh my gracious, no! He is not the kind of a man to be easily impressed. He may have seen a girl or two before he met you; of course, I mean just incidentally, as it were. Now, Virginia Bascom, allow me to ask you one or two plain questions. Did he ever ask you to marry him?"

"No, not in so many words."

"Did he ever give you any plain indiction that he wanted to marry you? Did he ever play the mandolin under your window at midnight? Did he ever steal one of your gloves or beg for a rose out of your bouquet or turn out the gas when he called?"

"No, but one night he sat on the sofa with me and told me that I was a great assistance to him in his parish work and that he felt greatly indebted to me."

"Hm! That's certainly rather pronounced, isn't it? Did you call your father or rise hastily and leave the room, or what did you do?"

"Well, of course, it was not a proposal, but the way he did it was very

suggestive and calculated to give a wrong impression, especially as he had his arm on the back of the sofa behind me."

"Maybe he was makin' love to the sofa. Didn't you know that Donald Maxwell was engaged to be married before he ever set foot in Durford?"

"Good gracious, no! What are you talking about?"

"Well, he certainly was, for keeps."

"Then he had no business to pose as a free man if he were engaged. It is dreadful to have to lose faith in one's rector. It is next to losing faith in—in——"

"The milk man. Yes, I quite agree with you. But you see I don't recall that Donald Maxwell did any posing. He simply kept quiet about his own affairs—though I do think it would have been better to let people know that he was engaged from the start. However, he may have concluded his private affairs were her own business. I know that's very stupid, but some people will persist in doin' it, in spite of all you can say to 'em. Perhaps it never occurred to him that he would be expected to marry anyone living in a little sawed-off settlement like this."

"There's no use in abusing your native village; and"—her voice quavered on the verge of tears—"I think you are very unsympathetic." She buried her nose in her handkerchief.

Mrs. Burke gazed sternly at Virginia for a full minute and then inquired:

"Well, do you want to know why? You started with just foolishness, but you've ended up with meanness, Virginia Bascom. You've taken your revenge on people who've done you nothin' but kindness. I know pretty well who it was that suggested to your father that the mortgage on the rectory should be foreclosed and the Maxwells turned out of house and home. He's always been close-fisted, but I've never known him to be dead ugly and vindictive before.

"Yes. You were behind all this wretched business—and you're sorry for it and wish you could undo the unkindness you've done. Now I am goin' to talk business—better than talkin' sympathy, because it'll make you feel better when you've done what I tell you. You go and call on Mrs. Betty immediately and tell her that you are very grateful to her husband for saving your father's life and that money couldn't possibly pay for the things she and Mr. Maxwell did for him and that you're everlastingly indebted to 'em both."

"But—but," wailed the repentant Virginia, "what can I say about the tent? Pa won't go back on that—not if his life had been saved twice over."

"Never you mind about that. You do your part of the business and leave the rest to the other feller. You can bet your bottom dollar it won't be the Maxwells that'll raise the question of who turned 'em out of the rectory."

"I'll go right away, before I weaken. Oh," she cried, as Hepsey put a strengthening arm about her, "I've been wrong—I know I have. However shall I make it right again?"

When Virginia arrived at the tent and pulled the bell cord Mrs. Betty pushed apart the curtains and greeted her visitor with the utmost cordiality.

"Oh, Miss Bascom! I am so glad to see you. Come right in. Donald is out just now, but he will return presently, and I'm sure will be delighted to see an old friend. This way, please. Is your father improving satisfactorily?"

This greeting was so utterly different from what she had expected that for the moment she was silent, but when they were seated she began:

"Mrs. Maxwell, I don't know how to express my gratitude to you for all you have done for my father. I—I—"

"Then I wouldn't try, Miss Bascom. Don't give the matter a single thought. We were glad to do what we could for your father and we made him as comfortable as we could."

Virginia's heart was quite atrophied and so with choking voice she began:

"And I'm afraid that I have not been very civil to you—in fact, I am sure that I owe you an apology——"

"No, never mind. It's all right now. Suppose you take off your things and stay to supper with us. Then we can have a real good visit and you will see how well we dwellers in tents can live!"

Virginia winced, but for some reason which she could not understand she found it quite impossible to decline the invitation.

"I'm sure you are very kind, Mrs. Maxwell, but I'm afraid I shall inconvenience you."

"Oh no, not a bit. Now will you be a real good Samaritan and help me a little, as I have no maid? You might set the table if you don't mind and when Donald comes we shall be ready for him. This is really quite jolly," she added, bustling about, showing Virginia where to find things.

"I am afraid," Virginia began with something like a sob in her voice, "that you are heaping coals of fire on my head."

"Oh no; not when coal is over seven dollars a ton. We couldn't afford such extravagant hospitality as that. You might arrange those carnations in the vase if you will, while I attend to the cooking. You will find the china and the silver in that chest. I won't apologize for the primitive character of our entertainment, because, you see, when we came down here we stored most of our things in Mrs. Burke's barn. It is awfully nice to have somebody with me; I am so much alone; you came just in time to save me from the blues."

When Mrs. Betty disappeared in the "kitchen," and Virginia began the task assigned her a very queer and not altogether pleasant sensation filled her heart. Was it remorse or penitence or self-reproach or indigestion? She could not be absolutely sure about it, but concluded that perhaps it was a combination of all four. When Donald returned and discovered Virginia trying to decide whether they would need two spoons or three at each plate, for an instant he was too astonished to speak; but quickly regaining his easy manner he welcomed her no less cordially than Mrs. Betty had done, remarking:

"Well, this is a treat; and so you are going to have supper with us? That will be a great pleasure."

Virginia almost collapsed in momentary embarrassment and could think of nothing better to ask.

"I am not sure what Mrs. Maxwell is going to have for supper and I really don't know whether to place two spoons or three. What would you advise, Mr. Maxwell?"

Maxwell scowled seriously, rubbed his chin and replied:

"Well, you know, I really can't say, but perhaps it would be on the safe side to have three spoons in case any emergency might arise, like a custard or jelly and whipped cream or something else which Betty likes to make as a surprise. Yes, on the whole, I think that three would be better than two."

When Virginia had placed the spoons and Maxwell had returned to assist her she hesitated a moment and looked at him with tears in her eyes and began:

"Mr. Maxwell, there is something I must say to you, an acknowledgement and an apology I must make. I have been so horribly——"

"Now see here, Miss Virginia," the rector replied, "you just forget it. We are awfully glad to have you here and we are going to have a right jolly supper together. Betty's muffins are simply fine and her creamed chicken is a dream. Besides, I want to consult you concerning the new wardrobe I am going to have built in the vestry. You see there is the question of the drawers and the shelves and——"

"Never mind the drawers and the shelves," Mrs. Betty remarked as she entered with the creamed chicken and the muffins. "You just sit down before these things get cold and you can talk business afterwards."

To her utter astonishment Virginia found herself eating heartily, utterly at ease in the cordial friendly atmosphere of tent life and when Maxwell took her home later in the evening she hadn't apologized or wallowed in an agony of self-reproach. She had only demanded the recipe for the muffins and had declared that she was coming again very soon if Mrs. Betty would only let her.

And last, but not least, the rector's polite attention in acting as her escort failed to work upon her dramatic temperament with any more startling effect than to produce a feeling that he was a very good friend.

In fact, she wondered, as she conned over the events of the evening, whether she had realized before all that the word "friendship" signified.

(To be continued.)

How Unused Stump Land May Be Converted Into Fertile Farms.

(Continued from page 15.)

be able to take jobs for their neighbors. Great progress has been made by the stump puller manufacturers in recent years. This may be said of those who have the power stump puller, those who have the horse stump puller and the one-man machines. Of course the power machines will be used chiefly by contractors or by farmers' co-operative land-clearing associations. Such machines will clear as much as an acre in a day. The horse-power, capstan puller will be more generally used by smaller contractors and by individual farmers and settlers. These modern machines have been made more efficient by the use of roller bearings instead of solid journals and by putting the frame on wheels to make them more easily moved. The latter improvement is one greatly appreciated by the operator. These pullers may be equipped with one or more take-ups and this adds greatly to the speed. While one stump may be pulled with one take-up, the other may be attached to another stump. It is well to have a sufficient amount of cable with these horse pullers. While it means a little extra expense at first, it facilitates the operation considerably. The settlers of small means will be interested in the one-man puller, a device which has been improved a great deal in the last two or three years. A one-man stump puller is well adapted to the settler who can clear only a limited area each season. Those who believe that dynamite is the quickest and surest way to remove stumps will find it interesting to make a study of the different kinds and strengths of these explosives and to learn the different effect each has. This was explained very carefully during the land-clearing demonstration and it was shown that the condition of the stumps and the character of the soil determined to a large degree which kind of dynamite and what strength is best to use. In many instances settlers gained their first accurate knowledge of the use of explosives during the land-clearing demonstrations. The educational value of the demonstrations, both as to the use of explosives and stump pullers, can scarcely be estimated. Many people said that the "Land Clearing Special" was more important to upper Wisconsin than the live stock specials or the dairy specials which have accomplished so much good.

The upper Wisconsin settler with a stump problem should not forget the great advantage which may be gained by using live stock to help clear land. Sheep are good land clearers and other stock will also help. Stumps are much more easily pulled or dynamited if they are allowed to stand a few years after the trees have been cut out. Stock will clear out a large part of the brush and tramp down the ground around the stumps. In a field which has been pastured, the stumps will be found soon with the roots sticking up, and the ground partly broken up around them. Stump ground makes fine pasture, and the sowing of clover or alsike in the field increases the pasture value very much.

Stump land is being used in many counties for fruit. It is not always necessary to take out all of the stumps to start the orchard. Many settlers are having great success with fruit on lands where the green stumps have been pulled out or dynamited. The use of dynamite has had no bad effect on the soil when it is to be used for fruits. On the contrary, it breaks up the subsoil and gives the roots a fine chance to catch deep. Some of the finest orchards in the country are grown on upper Wisconsin soil, from which the stumps have been entirely or partially removed.

One of the best first crops for stump land which has been cleared is potatoes. This is especially true in the sandy soil territory of upper Wisconsin. Great crops of potatoes have been raised the first year. Potatoes are usually considered about the best cash crop for the settler for his first season on cleared land. Small grain does well and all the grasses, especially clover, on cleared land.

In the year 1910 there were twenty-eight counties in Wisconsin with a total of 16,278,227 acres of uncleared land. These were counties for the most part north of the central portion of the state, and they averaged more than 500,000 uncleared acres to the county. In 1910 the cleared or improved land in these counties totalled 2,367,533 acres, an increase of about 500,000 acres in ten years. There has been much greater progress in this section since 1910 than before that year. In Rusk county, for instance, there was practically no improved land in 1900. In 1910 there were 25,000 acres. In the same year 113,000 acres of Rusk county land had been taken up by farmers and about one-fourth of that improved. Since that the work has been progressing rapidly. Rusk county has nearly 600,000 acres of land adaptable for farming, so it appeared that in 1910 only about one-sixth of the county had been opened up for settlers. Even in Wood county there were only 107,000 acres of improved land in 1910, and there were four times that many acres of good farming land which was not cleared. Dunn county with 245,000 acres of improved land in 1910, still had about an equal amount of good farming land which had not been cleared. Marinette county had only 80,000 improved acres in 1910 and more than ten times that of good agricultural land which had not been cleared. While these counties have made considerable progress in the last six years, there are still millions of good acres, better suited to agricultural than to forestry purposes, which may be developed into rich territory by the use of modern clearing methods.

Wisconsin Grain-Breeding Work Resumed.

Another season's activity in grain breeding and selection will soon be under way at the Wisconsin Experiment Station farm, where some of the world's champion strains of pedigree grains have been originated or improved during the past decade.

The selection and increase fields of wheat, barley, rye and oats are located on what is known as the Hill Farm, within a few miles of the University Farm. Details of the work have been placed in charge of B. D. Leith, of the field corps department.

Pedigree No. 2 winter wheat, which has yielded fifty bushels an acre in repeated trials under ordinary conditions, is being grown this year in increase plots amounting in all to about two acres. Further trials with Marquis, the successful variety of spring wheat for this region, will also be carried on another year. The best wheat obtainable from different parts of Wisconsin and neighboring states will be put in competitive tests with the station-bred pedigree varieties in a number of plots of one-fortieth of an acre each.

Pedigree rye, which yielded thirty-nine bushels an acre in 1915, will also be again tried out on increase plots, as well as a number of other varieties of rye in breeding rows and one-fortieth-acre plots.

Eleven pedigree varieties of oats and a number of non-pedigree kinds will be tried out against varieties from Canada and other states of the Union. Special selection and advanced breeding work will be continued with Pedigree No. 1 and No. 5, which will be grown this year for distribution. Pedigree No. 7, a variety of oats adapted especially for light, sandy soils, originated in Russia and developed in Nebraska, will be grown to obtain seed for trials in different parts of the state.

Varieties of highly-developed barley from Canada and Sweden will line up in the test plot trials against the best of Wisconsin's famous pedigree barleys, which have brought much honor to grain growers of the Badger state from time to time. Work on all these grain tests will be carried on in duplicate, in order to avoid possible errors or accident.

The soil on the Hill Farm, where these tests are under way, is in an average condition of tilth and fertility, and is not exceptional in any way. Fertilizer is supplied in the form of stable manure and green manuring crops plowed under. The only difference between these fields and those on an ordinary farm is that the former are much more heavily cropped.

THE HOME

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

Now the Iceless Refrigerator.

We heard someone say the other day in discussing home conveniences that the best was none too good for the country woman (which we firmly believe) and that it would be far better for her to devote herself to some money-making enterprise, such as chickens or garden, and earn the money to buy these conveniences than to waste her energy and time in manufacturing with her own hands a makeshift or "something that will do." We wish with all our hearts that every woman could have every convenience to be found in the up-to-date modern home and we hope the time will come when such will be the case. In the meantime, it may take a whole summer, or maybe two or three of them, for the egg or butter or garden money to accumulate to such proportion that all these things will be possible, and we know from experience that some of the despised makeshifts come pretty nearly being comforts, if not luxuries, when compared with the old way.

So while the egg and butter money is piling up suppose we construct an iceless refrigerator to go along with our fireless cooker. This homemade contrivance is not an experiment, for it has been tried out and found to be a pretty good substitute for the real thing. It is made by covering a wooden frame with canton flannel or some similar material. Though not absolutely necessary, it is desirable that the frame be screened. Wicks made of the same material as the covering rest in a pan of water on top of the refrigerator, allowing the water to seep down the sides. When evaporation takes place the heat is taken from the inside, with a consequent lowering of the temperature. On dry, hot days a temperature of 50 degrees can be obtained in this way. The following description will aid in the construction of this device:

Make a screened case three and one-half feet high with the other dimensions twelve by fifteen inches. If a solid top is used simply place the water pan on this. Otherwise fit the pan closely into the opening of the top frame and support it by one-inch cleats fastened to the inside of the frame. Place two movable shelves in the frame, twelve to fifteen inches apart. Use a biscuit pan twelve inches square on the top to hold water, and, where the refrigerator is to be used indoors, have the whole thing standing in a large pan to catch any drip. The pans and case may be painted white, allowed to dry and then enameled. A covering of white canton flannel should be made to fit the frame. Have the smooth side out and button the covering on the frame with buggy or automobile curtain hooks and eyes, arranged so that the door may be opened without unfastening these hooks. This can easily be done by putting one row of hooks on the edge of the door near the latch and the other just opposite the opening with the hem on each side extended far enough to cover the crack at the edge of the door, so as to keep out the warm, outside air and retain the cooled air. This dress or covering will have to be hooked around the top edge also. Two double strips one-half the width of each side should be sewed on the top of each side and allowed to extend over about two and one-half or three inches in the pan of water. The bottom of the covering should extend to the lower edge of the case.

Place the refrigerator in a shady place where air will circulate around it freely. If buttons and buttonholes are used on the canton flannel instead of buggy hooks the cost should not exceed 85 cents.

Cause of Iron Stain.

Iron stains are produced either by contact with the cloth with rust or with preparations containing iron, or they may be the result of using too alkaline soaps in washing the goods, the free alkali acting as a precipitant of iron compounds as derived from the bluing used. In using liquid bluing, therefore, care should be exercised to use soaps that are as nearly free from an excess of caustic alkali as possible. Such stains are in the form of oxides of iron, which are very insoluble in water and require an acid to dissolve them. As has been suggested by several of our readers, lemon juice and salt will remove such stains. When the iron spots occur on colored goods the dye may be removed during the process, in which case try a little ammonia for restoring the color, as ammonia will ofter restore the dye after the stain has been removed.

The Country Child's Play.

Running a race with another fellow when somebody is watching his efforts is more fun for a boy than chasing a cow over a pasture. Play with a motive behind it is one of the greatest needs of the country child, asserts Otis E. Hall, superintendent of boys and girls' clubs, division of extension, Kansas State Agricultural College.

HILDRETH AND HARL ABEL,
Twin daughter and son of Mr. and Mrs. M. H. Abel.

In the use of playground apparatus and the playing of organized games the child becomes less self-centered and learns how to co-operate with his fellows. According to Mr. Hall, this is of special importance to the country child whose social life is necessarily somewhat limited. Often he finds himself poorly prepared to meet a situation where a number of persons are concerned. When he grows up he finds he has worked individually so long that it is hard to adjust himself to a group.

HELEN AND HARLEY CAMPBELL.
The sixth and seventh children in the family of Mr. and Mrs. H. C. Campbell.

The child who plays hard and plays well usually reaches maturity with all his faculties alert and unexpected situations in his business and social life are not so likely to catch him off his guard as they are the child whose play life has been neglected.

Simple playground apparatus is not expensive and any teacher who really wants to can be a playground leader. The following list of apparatus shows how cheaply a small playground may be equipped: Sand box, $1; swings, $2 to $15; teeter board, $1.65; indoor baseball, $2; basketball, goals and backstop, $10; sliding board, $2.25; horizontal bar and frame, $2.50; merry-go-round, $5; baseball outfit, $15; croquet set, $1.50. Horseshoes for quoits can be supplied from the children's home.

Diet, Fresh Air and Exercise.

To the Editor:—In reply to Mrs. W. B. I want to say that in the case of sick headache quite often osteopathy (and other things also) will relieve the pain for the time being, but unless the cause is removed the old trouble will come back. When the cause is removed then the headache will cease. Quite frequently the cause may be removed by osteopathic treatments, but diet, fresh air, proper exercise and rest all come into this question of removing the cause and in a large number of cases are what really count. A great many times headaches are caused from stomach or intestinal troubles and a strengthening of the muscles of the abdomen with various exercises so that they may do their work properly and hold the organs in their normal position will be a great help. These exercises should be taken in a well-ventilated room. Learn to sit and stand correctly, thereby giving the organs a chance to function properly.

Such a position tires the muscles of the back and cramps the internal organs.

An erect, natural position is far more restful.

Then diet—especially those who live on the farm are apt to eat too rich foods and too much meat, more than the body needs. Quite often, also the food is eaten too hurriedly and so not thoroughly masticated.

Many times headaches come from overwork and worry. Take time to relax both mind and body for at least ten minutes every day. You will find that you will feel more like working after the rest. If your work is indoors get out and take a walk and forget about duties for a while, remembering to make use of the fresh air all around you.

When you retire, in order to rest properly you should be perfectly relaxed. A good way to relax is to lie flat on the back—and then just let go. Be sure to have the sleeping room well ventilated.

A cold bath every morning and a vigorous rub on arising sometimes helps to tone up the body.

I hope this may be of benefit to Mrs. W. B. and others. N. B.

Wants Remedy For Mildew.

To the Editor:—I enjoy reading the Home page so much and I have often thought I would write. Now I would like a little advice. How can I get mildew off of any white goods, or can it be done at all? Will some of the readers help me out? I have received lots of benefit from the letters from other farm wives.

We live in the country and I am sure we could not enjoy life very well anywhere else.

I loved the letters Mrs. F. E. T. wrote and think she must be a perfect homemaker. I think it would be a good thing for all of us young farm women to make our homes look as cozy and homelike as possible.

Mrs. C. R.

Recipe For Coffee Cake.

To the Editor:—Will some of the readers of the cooking department tell me how to make coffee cake with yeast (breakfast coffee cake) by taking some of the sponge from bread? I would like very much to know how to make this and I do not have a recipe. Mrs. A. G. J.

Care of Trumpet Plant.

To the Editor:—As I am an old subscriber and enjoy the paper very much I am asking some of my sisters how to care for an angel trumpet plant. I have had this plant three years and it has not blossomed yet. I set it in the ground in the spring. Please tell me what I can do to make it blossom. An Old Subscriber.

How to Make Colors in Gingham "Fast."

It might be well to take precautions to "set the colors" in gingham and other fabrics at the time the shrinking is done, before making them into new spring garments. Any chemical substance used to set colors is called a mordant. Common household mordants are as follows: Brine, sugar of lead, alum and vinegar. They may be used in the following proportions: To one gallon of water add one-half cup mild vinegar, or two cups salt, or one tablespoonful powdered alum, or one tablespoonful "sugar of lead" (poison).

In most cases allowing the material to soak for several hours in the mordant is sufficient, although with salt and vinegar solution no harm is done if the material soaks overnight. The material should be thoroughly dried before being washed and always hang in the shade. Vinegar is best for pinks, brine for blacks and reds, sugar of lead for blues and browns and alum for greens, lavenders, purples, etc.

To freshen colors soak garment in a weak solution of borax before washing. A little ox-gall in the borax wa-

ter will help keep weak colors bright. —[Miriam M. Haynes, Colorado Agricultural College.

Household Hints.

To remove chocolate stains from white dresses or table linen sprinkle the stain thickly with borax, place a saucer beneath it and pour on just enough water to moisten. Leave for several hours and then wash.

Real frying is done in deep fat; fat deep enough to cover the food in question. The fat should be very hot. It then immediately cooks the outside of the food and does not penetrate to the inside at all.

If painted walls are streaked after being washed take turpentine, dip a woolen rag in lightly and rub well into the wall. The walls will look as if they had been newly painted.

Always measure flour after sifting it once. Some old-fashioned recipes call for it measured before sifting, but all modern ones call for sifted flour.

When colored clothing is stained with mud let it dry and brush out all you can. Then apply a mixture of salt and flour. Let it remain on, in a dry place, for a day or two, then brush off.

When you put your shoes away for next season's wear stuff them full of cotton batting or newspaper.

If one of the gem pans is filled with water the muffins will never scorch.

If the feet perspire sprinkle a little powdered burnt alum in the stockings.

When cutting new cake dip your knife in cold water before cutting each slice.

Recipes.

Veal Croquettes.—Grind two cupfuls cooked veal, add salt, pepper, celery salt, one teaspoonful onion juice. Make a cream sauce of one and one-half cupfuls of milk, four tablespoonfuls of butter, six tablespoonfuls of flour. Add sauce to seasoned veal. Cool, shape into pyramids, dip in crumbs. Fry in deep fat.

Pressed Veal.—Two pounds veal, one-fourth can pimentos, one dozen small sweet pickles, one tablespoonful of gelatine, one tablespoonful of butter. Cook veal until tender. Put meat and pickles through food chopper. Cut pimentos into small pieces with knife. Dissolve gelatine in a cup of water. Add melted butter and salt and pepper to taste. Mix thoroughly and heat, not boil, then put into bowl and slice when cold.

Corn Balls.—One cupful canned or cut corn and one cupful of mashed potato. Mix and add one beaten egg, salt and pepper. Mold into balls, roll in flour and fry in hot butter.

Y. W. C. A. Cake.—Pour two cupfuls boiling water over one pound of raisins and boil fifteen minutes. Take from stove and add one cupful cold water, two cupfuls sugar, one-half cup lard, one teaspoonful each of cloves, cinnamon and nutmeg, a little salt. Sift one teaspoonful of soda into four cupfuls of flour. Bake in moderate oven. This makes two loaves.—E. C.

Suet Pudding.—One cupful suet after it is chopped fine, one cupful molasses, one cupful sweet milk, one egg, two cupfuls flour, one teaspoonful soda, one cupful raisins. Steam two hours. Serve with lemon sauce.—Mrs G. G. B.

Pork Cake.—One and one-half pounds fat salt pork chopped fine, one pound raisins, one pound currants, one-half pound citron (cut fine), one pound sugar, one pint molasses, one pint boiling water poured on chopped pork, one teaspoonful soda, spices. Nut meats may be added if desired.—Mrs. B. G.

PATENTABLE IDEAS WANTED. Manufacturers want Owen Patents. Send for three free books: inventions wanted, etc. I market your invention without charge. Richard B. Owen, 37 Owen Bldg., Washington, D. C.

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Lives on the Bay.

My Dear Friends:—I have been reading almost all of the nice letters that you have written and I think I should write to you.

I live on a three-acre piece of land and about a quarter of a mile away we have an eighty-acre farm. I live right by a nice little bay. There are bluffs on both sides of the lake and right between the two bluffs I live. The bay grows larger and larger and then goes out into Green Bay. It is very beautiful. I go in swimming every summer and I have great sport.

I go to school every day. I live about five blocks from the schoolhouse. I am nine years old and am in the fifth grade.

I have a little sister two years old. She is very pretty and I love her dearly.

I have a cow named Rosy. She has had one calf and I sold the calf and got $8 for it. I put $1 in my little sister's bank and $7 in my bank. I have some nice white and black doves and two dogs. One dog's name is Bingo and the other is Pete. Bingo is a cow dog and Pete has a wagon and harness. I have runners for the wagon, so I make it a wagon in summer and a sleigh in winter. Pete pulls very well when hitched up and we have such fun. —Sylvia.

How Pigeon River Was Named.

Dear Young Folks:—I am a girl eight years old. One time when I was at my grandfather's for a vacation grandfather took me in a boat down the Pigeon river and he told me how this river came to be called Pigeon river. When grandfather was a little boy there were so many pigeons around that a flock would sometimes destroy a whole field of grain, so everyone who could shoot shot them so they would not destroy the grain. That is why they call it Pigeon river.

I love to visit at grandfather's. When I gather the eggs for grandmother she even doesn't care if I break an egg or two.

Grandfather has a trick dog. He can do many things. He will stand on his hind legs and when you ask him if he can pray he will bark.

—Alwine.

Father Likes Her Cookies.

Dear Young Folks:—I am eleven years old and in the seventh grade. I will be twelve years old this month. I have blue eyes and black hair. I weigh 108 pounds and am five feet two inches tall.

I have four brothers and one sister. My sister's name is Nora Elizabeth. She is seven months old and weighs eighteen pounds.

I like to go to school very much. School was out the 30th of March. We had a dinner and program. We sure had a good time. There were sixty-six people there.

We have ten horses, a dog and cat, ten calves, five milk cows and twenty head of other cattle. We live on a farm of 180 acres about four and a half miles from town.

I can bake and cook. I baked some cookies today and my oldest brother said, "My, but they are good," and papa said they were so good he would have to take another.

Say, Young Folks, suppose we give riddles in our letters. I will ask you one: What is it that has eyes and can't see? —Elsie.

School Plants Evergreen Trees.

Dear Young Folks:—I have been reading the letters in the Young Folk's department for so long and have enjoyed them so much that I thought I would write one, too. I am ten years old and in the fifth grade at school. I love to go to school.

I have three pet kittens and a pet dog. I am going to raise chickens and flowers this summer.

On Arbor Day our school went to a friend's house and he gave each of us an evergreen tree to set out in our school yard. We got eighteen trees. There was another school there to get trees while we were getting ours. When we got our trees we went back to the schoolhouse and set them out. Some of the men in the district came and helped us. —Goldie.

Your Mother Saved Money on Soap

Why Don't You?

Years ago, your grandmother made soap because she couldn't buy it. She taught your mother to make it and your mother can teach you because the important ingredient that your grandmother used is still for sale everywhere.

Lewis' Lye

The Standard for More Than Half a Century

The modern housewives do not appreciate how easily you can make clean, firm soap at home. Good lye is the secret. Lewis' Lye is good lye because it saponifies the grease perfectly and entirely. It makes just as good soap as you can buy—better than many—and it makes it cheaper. Get a can at your dealer's today and try it out at once. Lewis' is the lye you'll like for the many household uses.

International Sunday School Lesson.

Lesson for May 21, 1916.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

THE CRIPPLE OF LYSTRA.

LESSON TEXT—Acts 14.

GOLDEN TEXT—He giveth power to the faint; and to them that have no might be increaseth strength.—Isa. 40:29.

Make a list of the seven cities mentioned in this lesson and locate them on a map. Let seven pupils attach to the map a flag, or banner, to locate each one. The visit to Iconium occurred probably in the spring of A. D. 47 (Ramsey). Paul and Barnabas had a great triumph and a severe testing at Iconium, wrought a great victory of faith and became popular at Lystra, only to meet great tribulation. On their homeward journey they confirmed saints, set up rules and gave account of their labors to the home church of Antioch.

I. In Iconium (vv. 1-7). This was a Roman city of great antiquity and importance. The modern city Konia is an important Mohammedan and trade center. Tradition says Paul was imprisoned for being a magician and teaching a woman named Thekla not to marry. This woman endured great hardships and trials for the faith, finally becoming a nun at Selencia and dying at the advanced age of ninety. From this tradition we get most of our ideas of Paul's appearance—small, bandy-legged, large eyed, shaggy eyebrows, long nose; full of grace with sometimes the face of a man and at others of an angel. This is tradition only, but is probably somewhat near the truth. Paul followed his usual first witnessing in the synagogue, witnessing to the entire population, Jew and Gentile, and dividing them effectively by his words about Jesus.

II. In Lystra (vv. 8-21). (1) Popularity (vv. 8-18). Their introduction here would seem propitious, healing the cripple and at once gaining the esteem of the people. Adoration and gratitude appeal to the human heart. Underneath the heathen idea that the gods "came down to us in the likeness of men," is the great and glorious truth of the incarnation (John 1:14; Phil. 2:6, 7). We should hesitate to condemn these men of Lystra too severely, for what American community is not open to condemnation in this regard? Too many Christians offer garlands (v. 13) at the feet of the men whom God has used to work his mighty works. It was common complaint that in the days of his greatest victories, men could not find Mr. Moody when a service was dismissed, or get into his quarters at the hotels; he would give no opportunity for self-glorification. Paul and Barnabas had hard work to restrain these hero worshipers (v. 14), and to convince them who they were and how they had been enabled to accomplish such a wonderful miracle (v. 15). Paul was of "like stature" with them and would not accept worship as did the Caesars or Herod (12:22, 23). He exhorted the Lystrians to turn from "these vain things," i. e., such idol worship unto the "living God" (See also I Cor. 8:4; I Thess. 1:9). Hitherto God had not miraculously interfered to turn men from their evil ways (v. 16), but left them to their own devices to show their inability to find their way back to him (See Acts 17:30; I Cor. 1:21). Yet God is not "without witnesses" (v. 17). The seasons and the natural laws point to God, yet men still remain blind and ungrateful. Thus by vehement exhortation they prevented this act of sacrilege. (2) Persecution (vs. 19, 20). The mob is ever fickle, (v. 18), but it did not turn them "unto the living God" (v. 15). Conversion is the simple turning from idols (I Thess. 1-9), a rational thing, but one contrary to the pride of men who desire to "do something" whereby they may merit or can demand their salvation. Even as Paul had difficulty to turn people aside from idols, so today it is hard to keep men and women from idolatry, not the gross or vulgar idolatry of heathenism, but the refined idols of culture, success, power, money and pleasure. To his difficulties Paul had the added persecution of the vindictive Iconians and those from Antioch (v. 19). God delivered him from this trial (I Cor. 11:25, 27). All loyal witnesses must expect persecution from the God-hating world (II Tim. 3:12; John 15:18-20).

III. The Return (vv. 22-28). "When they had preached the gospel to the city" (v. 21) literally "having evangelized the city," they started home confirming believers and appointing leaders in each center visited. They did not take the short cut of 160 miles to Paul's home in Tarsus, but they visited their new converts.

Symbolically the cripple of Lystra is a type of sin, (a) helpless, (b) born in that condition (Psa. 51:5), (c) had to be helped from without, by outside

Mrs. W. B. Cunningham

$20.00 A WEEK *EVERY* WEEK

That's what Mrs. Cunningham makes representing Pictorial Review.

Not just $20.00 for one week or two weeks, but $20.00 *every* week for the past eleven months. And her earnings are increasing all the while.

It is only a little over a year ago that Mrs. Cunningham was left a widow with three small children and without funds.

We showed her how to build up a Pictorial Review list of subscribers as we have shown hundreds and hundreds of others.

Mrs. Cunningham with her $20.00 every week has done well by her children. She has done well by herself. Where a year ago she was in the depths of despair, now she is the possessor of a growing income. She has hope and courage.

It doesn't matter if you've never had any business experience. We know you can earn money for yourself in your spare time if you want to. You can do in your territory what Mrs. Cunningham has done in hers.

Don't imagine you can't do it. We know better. And we can prove it to you without costing you a cent.

If you'd like to make $5.00, $10.00, $50.00, or even $100.00 a month, sign and mail the coupon below and full particulars will be sent without any obligation on your part.

THE PICTORIAL REVIEW COMPANY
216-226 West 39th Street, New York City, N. Y.

Gentlemen:—Certainly I would like to know how Mrs. Cunningham has made $20 a week for the past eleven months. Please send me details without any obligation or expense to me.

power (Rom. 5:6); (d) all could see the change (James 2:18). This miracle wrought (a) Praise from the people, (b) Protestation on the part of Paul and Barnabas, (c) Persecution from the fickle and disappointed priests who incited the people. Persecution helped the proclamation of the gospel. Those who believed strengthened Paul by sharing his danger (v. 20) and because of this experience Paul "made many disciples."

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and inclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery.

CATALOG OF SPRING AND SUMMER FASHIONS.

Send 10 cents in silver or stamps for our up-to-date 1916 large spring and summer catalog, containing over 400 designs of ladies', misses' and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, MADISON, WISCONSIN.

1367—Children's rompers and cap. The pattern is cut in three sizes: 2, 4, and 6 years. It requires 2½ yards of 36-inch material for a 4-year size. It requires 2½ yards of 36-inch material for a 4-year size. The cap requires 1¼ yards of 24-inch material.

Waist 1709, Skirt 1703—A stylish gown for calling or afternoon wear. Waist 1709 cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. SAFETY
STORM BLAST
LANTERN FREE

This Safety Lantern cannot catch fire or explode. It is absolutely safe at all times and on all occasions. If you drop it in the hay loft, no oil can escape; if the cow kicks it over, it goes out at once.

It cannot blow out in a cyclone because of the storm blast feature. It is just the kind of a lantern every farmer needs about the house and barn.

Patent opening device raises and swings the globe free for lighting, filling and trimming. This lantern is fully guaranteed and is endorsed by the highest authorities on fire insurance, fire fighting and explosives. If dropped or turned over it immediately goes out. Oil cannot run. Impossible to catch fire. A lantern you will always feel safe with in the house or barn.

OUR OFFER

Send $2.00 for a three year new or renewal subscription to The Wisconsin Farmer and we will send you one of these Safety Storm Blast Lanterns as a premium free and postpaid.

Mail all orders to

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

AILING ANIMALS.

Sterility in Twins.

I have been told that twin heifer calves are sterile. Will you please tell me if this is a fact? If so, why is it not true of other animals?

We do not think this is always a fact by any means, but it probably is a fact at times just as any one animal is sterile at times.

Thumps in Pigs.

Please give me cause of thumps in small pigs. Is it contagious? Does a cough accompany it? What is the remedy, if any?

Thumps is a condition brought about through nervous disturbance causing spasms of the diaphragm. It is not of contagious nature and a cough does not necessarily accompany it, but it may. It is very hard to get results from treatment of small pigs, especially those of a few hours to a few days old. In small pigs two to five drops of spirits of chloroform diluted in water and given as a drench may prove beneficial. The dose should be regulated according to size.

Warts.

Will you please tell me how to cure a blood wart on a horse's cheek, also one above the eye?

If there is a neck part to these warts they may be cut off by use of stout cord tied around the base. Those around the eye are best treated with sharp pair of scissors, cutting the wart entirely away and touching the wound with caustic. The use of the knife or scissors is the quickest way and is fairly sure if the wound is touched with caustic afterward. Sloughing agents should not be applied to warts around the eye, but may be applied to warts on other parts of the body. Try applying the following to the wart on the cheek. Arsenous acid and gum arabic, each one dram, and water to make six drams. Apply some of this paste to the surface of the wart.

Farrowing Dead Pigs.

I have thirteen brood sows, last spring gilts. Seven of them have farrowed. Two of these farrowed all live pigs, and the other five only farrowed from one to three live pigs, the rest being dead. Some of these dead ones were not half matured and others look like they have died later. They are all different sizes. The live pigs are strong. The sows had exercise all winter. I fed them in slop fresh mixed equal parts daily oil meal, shorts and bran. Fed about a quart when mixed together daily and about three to four ears of corn twice daily. Some of this corn was not good quality and quite a lot of it was moldy. Now, what is the trouble? I thought it was the unsound corn.

There have been a number of complaints of this kind and various causes have been given for the trouble. We would be inclined to believe that the moldy feed is the cause of the trouble in this case and would advise you to discontinue the use of moldy corn and change to some clean, wholesome food.

Rheumatism.

I have a five-year-old cow that got something the matter with her hind legs last fall. It came on all of a sudden in her left ankle. It swelled and was very painful to the touch. Then after a time it went into her hip and that is still swollen. The swelling has left that ankle, but her right ankle has been swollen for some time now. Haven't done anything for her yet. She does not seem to have much of an appetite and she walks very stiff. She should come fresh in June, but does not look as though she will be fresh at all.

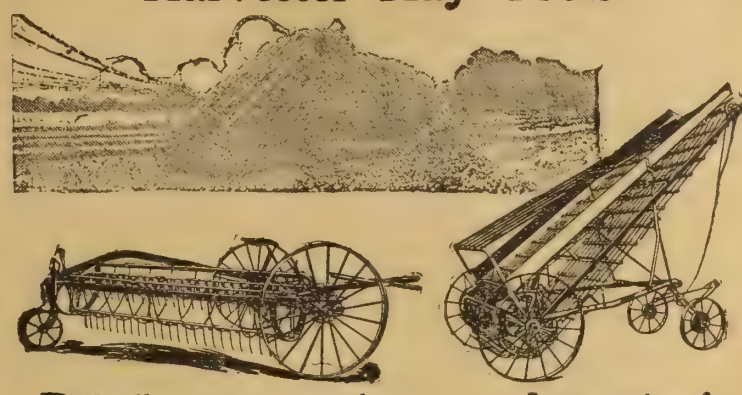
Your animal is probably the victim of rheumatism. This should have been attended to immediately upon noticing the trouble, as it would have been much easier then to get results. Give your animal the best of care, good housing and good food, which should be of a laxative nature. The use of potassium nitrate in one-half ounce doses given two or three times daily is indicated. The following tonic should also be given. Powdered cinchona, nine ounces; dried sulphate of iron and powdered nux vomica, each three ounces; powdered fennel two ounces. Mix and make into twenty-four powders and give one powder three times daily in feed. The application of iodine ointment to the swollen parts may be of some benefit.

Nervous Derangement.

I have a mare that is afflicted with locomotor ataxia, so my veterinarian tells me. He has been to see her once and left some medicine for her and directed me to give bromide of potash in case of severe agitation. Mare eats well, but is nervous and anxious to avoid one, and is poor. Has been afflicted for five weeks. What can I give her to help recovery?

Your animal is the victim of some nervous derangement which may be brought about from any one of a number of causes. Your veterinarian, if he is a good one, probably knows what he is talking about and his line of treatment will probably meet with as good success as any.

See These 1916 International Harvester Hay Tools



BY all means see these 1916 **International, Osborne** and **Keystone** side delivery rakes and hay loaders before your haying season starts.

These new **side delivery rakes** are all left-hand rakes. They do not thresh off leaves and blossoms. They form the windrow on the raked stubble where the hay lies untouched until the loader comes along to pick it up. International Harvester side delivery rakes are all steel, strong and durable. The cylinder can be raised or lowered at both ends, giving perfect adjustment under all conditions. Made in two widths—7 feet 3 inches and 8 feet (bean special).

If you use a side delivery rake to throw the hay up into windrows, you will need an International, Osborne, or Keystone **windrow loader.** These good loaders are 6 feet wide and elevate the hay to a height of over 10 feet. They gather the hay gently, they are very easy to handle, two horses pull them easily, and they last a long time. The **rake loader** does as good work for the man who teds his hay after mowing.

International, Osborne, and **Keystone** hay tools are sold by I H C dealers wherever farmers use these machines. See the I H C dealer. Write to us for catalogues before you buy.

Fireproof, Frostproof Farm Houses, Barns—At Cost of Frame!

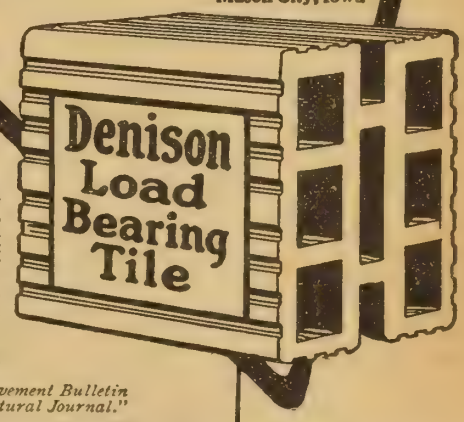
YOUR home—barn—*any* building—*if made of Denison Load-Bearing Tile—will be completely fireproof and frostproof!* The strongest, most permanent construction known. Cooler in summer. Warmer in winter (for proof of this see printed matter to left). Costs no more than good frame construction. The maintenance will be practically *nothing!* Requires no repainting. Infinitely superior to *any* other type of construction. Write for full information—and name of your nearest dealer.

Mason City Brick & Tile Co.
Dept. L Mason City, Iowa

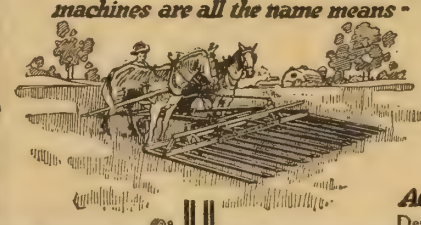
Read This Remarkable PROOF!

"A notable instance of easy heating and fuel economy is furnished by H. M. Spencer of No. 316 W. Minnehaha Boulevard, Minneapolis. The walls of his house were built of Denison 8-inch triple-air-space tile and the record made in keeping the house warm when the temperature was 18 degrees below zero, indicates the value of this construction to save money in winter. Dec. 30th, when the thermometer outdoors showed 18 below, the thermometer on the boiler showed that the temperature of the heating plant was 111 degrees. As a rule, a heating plant in a house of this size requires from 140 to 160 or 180 degrees according to exposure of house, material, age and other conditions; and 120 degrees has been the lowest considered possible. Mr. Spencer's house contains eleven rooms."

—Excerpt from the "Improvement Bulletin —Authoritative Architectural Journal."



"ACME
machines are all the name means"



There are six styles and sizes of ACME SWEEP RAKES to choose from. Every one is built along most scientific lines—every one is made to meet the demands of the most exacting farmer. **THE ACME**

sweep RAKE

makes a thoroughly satisfied user. If you are not now getting the results you want—then—you are not using an ACME.

It's to your advantage to get our Sweep Rake and Stacker catalog—it contains information that you need before making your final selection. Write today, it's FREE.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Experience With Poultry.

To the Editor:—I have been a subscriber of The Wisconsin Farmer for years, and, as it is time that all so-called chicken "cranks" tell what they know and what they don't know, I will write a little on the subject.

Often when I am down in the city I am asked by poultry fanciers what kind of poultry would be best to start with, what kind laid the most eggs, also what I do to cure roup. Now I have been in the fancy chicken business for over thirty years and have been judging poultry nearly all that time at poultry shows and county fairs and yet I do not know it all. I have kept seventeen different breeds and still have eleven breeds, but will not pen them again and have nothing to sell. I have sold poultry and eggs all over the United States, but will now leave that to younger people. As to the best breeds to keep, that is a hard question to answer. I have had nearly all the common kinds and still I do not know. It depends on where you are and what you wish to do with them. Some breeds will do better if permitted to run where they choose. I lived in the city for seventeen years and I never thought it right to keep poultry shut up all the time, even when they had the best of care. At least, I can see the difference between city and farm-raised chickens. Almost any breed will do well if they receive proper care.

My best cure for roup—when I know they have it—is to cut their heads off, although I have treated some with success. A preventive is the best thing. I use Venetian Red. It is a red mineral used in painting barns. For twenty-five hens I put about half a pound in two gallons of water and do not let them have anything else to drink. They soon learn to like it. You will see by the appearance of the droppings that it has a cleansing effect. The mineral costs less than 5 cents per pound. I have used this for thirty years. I never have much roup, but I do not wait until they get sick. I use the solution about four times a year—sick or well.

I started with Barred Rocks, Rose Comb Brown Leghorns and White Face Black Spanish. I think I secured the first Rose Comb Brown Leghorns that were brought into this part of the state. I like the busy little brown hens and like all rose-comb breeds the best. In a cold country like Wisconsin I have observed that a single comb will freeze quickly and a hen with a sore comb will not lay. The Rock family are good all-around chickens, but the Rocks and I disagree on the sitting business.

Although I have different breeds of fowls on the farm I can learn more about poultry from the farmers' wives than from any other source. I think that women are naturally adapted to raising poultry. They seem to learn Biddy's ways and wants easily and can give us lots of valuable information on the subject. By talking to the farmers' wives, who are the principal exhibitors at the county fairs I learn that the Wyandotte is a good general-purpose fowl. The Orpington family is quite a favorite also and the Rhode Island Reds hold a good place. I have the Black Orpington, but would prefer the Buff or White. The White Face Black Spanish I found good layers and great hustlers, but the Wisconsin winters are too rigorous for this breed. The Hamburgs are also good layers, but a very small breed. I will say right here that it is hard for me to turn down the little brown rose-comb hen. She is always there with the goods—cold or warm—and never has time to sit, but this, you will say, is my fancy and perhaps you are right.

Proper care is the best medicine to give. A damp, drafty poultry house will furnish you with plenty of dead chicks. I will tell you how my poultry house is built. The one I have for 100 fowls is 12x36 feet, divided into three parts. Two rooms, each 12x12 feet, are for roosts. The balance has no floor in it. In this part I put lots of leaves and straw in the fall of the year. I put all grain and feed into the leaves. This makes the biddies work for all they get and all seem to enjoy it. There is nothing like exercise for them. Do not keep the house too warm, but be careful they are not open to drafts. I ventilate from above, using a wooden flue measuring about six inches inside. I use glass windows on the south, but think canvas is good to nail over the window openings. Nail lath across the windows to keep out stray marauders if you use canvas.

I feed mostly corn and wheat, corn always at night. I think wheat is a great egg producer. The farmers' wives say when the hens can get to the grain stacks they always look for more eggs and I find this is true. Corn is all right for poultry, but should be fed at night only. An abundance of gravel, ground oyster shells, etc., should be kept in the poultry house at all times. The fowls should have access at all times to good, clean water. Keep a large box of ashes or road dust handy for the hens to wallow in. Slaked lime is also good. Lice or mites cannot live in dust.

I have been asked how to rid the poultry house of mites and lice. I believe I have tried nearly everything and can think of nothing as good as hot water. I use a large boiler or kettle and make the water as hot as possible, put all the chicks out, then with a dipper I have it out with the mites and lice. Throw the water on the walls, roosts and floors. It runs down the wall and into all the cracks and neither mites, lice nor their larvae can stand hot water. If you repeat the process two or three times during the spring and summer you will not be troubled with mites.

I have used incubators with good success. Any make is good. They must be or they would not sell, but I have never gone back on the old hen as an incubator. Lice do not bother incubator chicks, but the chicks bother me, as they become great pets.

I think it is well for all poultry breeders to subscribe for a good farm journal or two, then write all they have learned about the business and send it to the farm journals. That is where I look for poultry news. I do not expect all to agree with me in all I write; neither do I swallow all I read, but I have obtained lots of good ideas from The Wisconsin Farmer. Perhaps you will see I have a choice of the different breeds, but that is my fancy. You may prefer another kind. If you do, give them a good chance and you will have success with any of them. I look well after my poultry and never let them out when the weather is cold enough to freeze their combs or their feet. J. T. Barto.

Richland Co., Wisconsin.

What Is Cause of Weak Chicks?

To the Editor:—I have a 200-egg incubator and am trying to raise lots of chickens, but have failed to be successful. This spring I hatched out about 125 of the 200 eggs. The chicks would pick the shell and sometimes the shell would be cracked clear around just ready for the chick to hatch out and it would die. Can any of your readers tell me the reason for that? We gathered the eggs three and four times a day for the incubator and turned them every day.

Now since my chicks are hatched they keep dying, three or four a day. They haven't bowel trouble and I could find no lice on them. They will eat all right all the time. Their wings get droopy and they just dump around till they die. I have fed them boiled eggs, Dutch cheese at first, now chick feed, bran and corn meal. Last year our chicks died of leg weakness, but they act different this year.

Mrs. F. L. Kirstein.

Wright Co., Iowa.

Guaranteed Seed Corn

WE recently sent average identical sample of our Northern Iowa latitude grown and Central Minnesota (Redwood Co.) grown seed corn to the foremost agricultural college of this country and have just received their official report, as follows:

CEN. MINN. (REDWOOD CO.) GROWN.

Northwestern Dent	96%	Minn. Ea. Yel. Dent	92%
Wis. No. 7 or Silver King	92%	Minnesota No. 13	88%
Minnesota King	96%	Minnesota Early White Dent	73%

THESE LOTS ARE ALL 1914 CROP

The above tests prove that our stocks of genuine NORTHERN GROWN Seed Corn are the highest qualities you can buy—regardless of price.

We Give You a Sworn Statement as to Where Our Seeds are Grown

We do not handle any dent corn from either central or southern Iowa, Nebraska, Kansas, Missouri or Illinois, as such seed, although of good germination, cannot ripen and mature in the North. Look at your map. **Don't buy seed corn that is grown south of you.**

SPECIAL NOTICE.—Until sold out and for prompt orders we offer you a varieties of our

CENTRAL MINNESOTA GROWN

Graded, shelled, high test (1914) seed corn as follows: Bushel $5.00; in 5-bushel lots $4.85 per bushel; in 10-bushel lots, $4.75 per bushel. New "American A"—bags included **free.**

We GUARANTEE every bushel of Seed Corn we ship to be exactly as represented in every particular or money refunded.

Send your order promptly if you want any of the above lots at these prices.

S. C. W. Leghorns, Wyckoff strain, chicks, eggs. Prices right. Flock headed from 288-egg strain. Mrs. Mollie Wachendorf, Monroe, Wisconsin.

PARTRIDGE and BARRED Plymouth Rocks. Eggs from choice pens of Partridge and Barred, $2 per setting. Dr. O. R. Rice, Delavan, Wis.

EGG. FOR HATCHING. Pure R. C. Rhode Island Reds, $1.25 per 15, $5.00 per 100. Address Fred M. Smith, Route 7, Elkhorn, Wis.

SINGLE Comb Buff Leghorn eggs from high-class stock at $1 per 15, 100, $4.50. Chas. Schmit, R. 22, Hortonville, Wisconsin.

EGGS for hatching from Barred Rocks, E. B. Thompson's Ringlets, $1.25 per 15, prepaid. D. S. Thoreson, Shell Lake, Wisconsin.

MY R. C. REDS ARE MONEY MAKERS. Eggs postpaid, prices right, circular free. Mrs. G. Ellis, West Salem Wisconsin.

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

J. D. McDonald a Real Hog Man.

EVER since coming to the state of Wisconsin we have heard of J. D. McDonald, the Poland China breeder of North Bend, however, we didn't have the pleasure of knowing him or seeing his herd until last week. We had heard many compliments in behalf of Mr. McDonald as a breeder and showman. All Poland China breeders whom we have met speak highly of Mr. McDonald and since we have seen his stock, The Wisconsin Farmer will continue to boost this herd for a man that has as many friends as he and with the good Polands he has we can say good words for him conscientiously. No doubt many of our readers would like to know what Mr. McDonald is going to take out this year, for if we have been informed correctly he furnishes strong competition at the fairs. The attraction on his farm at this time is his aged boar, McChief by Big Chief by Big Bug. His dam is by the good sire, Chief Price 2d. In the first place, McChief is a big hog and I will go on record now saying he will weigh over 1,000 pounds by fair time. The writer weighed him May 6th and he tipped the scale at 840 and he hadn't started to get fat yet. He is three years old and very smooth and if he stands the fitting all right, he will be competition this fall in the aged boar class. His senior yearling is King James by Wisconsin King by the noted Long King's Equal. His dam is by Big Bone. This boar has several outstanding points about him and you can rest assured that he will be a show hog when finished. The other hog, however, is our choice of the two boars—we consider him a great boar. His senior pig is Mc's King, a son of Golden Gate King. This boar is smooth as it is possible to make him and he will make an attractive show boar this fall. Of the sows, Crow's Model, the aged sow that was grand-champion last year is holding up fine. Is very smooth, is in nice condition and Mr. McDonald expects to take her out again this year. She is indeed a wonderful sow in all respects, however, there is another sow in the herd that may finish better than the champion sow. She is out of a dam by Chief Price 2d and we believe this sow will make a wonderful showing this fall. Of the fall gilts, he has several that are great, but the best one he does not expect to take out, as he figures she is more valuable as a brood sow than she is as a show sow. She is one of the best gilts of her age we ever saw. The ones that he will take, however, are up to standard. Mr. McDonald has several litters picked out for the futurity, but, of course, it is too early yet to tell much about them. They are all doing nicely. He expects to have a full herd out and will have all classes filled. Spring pigs number 160 and are sired by Jim Crow that by the way is by Crow's Kind. We have seen the latter boar several times and while there was not as much noise made about him as some sires in Iowa he was a wonderful sire of the smooth ones with size. Jim Crow is the sire of the litter of fall pigs that will show in the futurity. Other pigs are by Crow's Progress by Great Progress and Wisconsin Chief by Wisconsin Giant. There is also a good litter of ten by Black Jumbo the good boar heading the E. W. Hendricks herd. Some are by Repeater and Smooth Price the J. C. Hendricks boars and they look fine. Mr. McDonald has several fall boars that are suitable to ship out and he is pricing these well worth the money. They are sired by the first mentioned boars and out of some of his best sows. You will not make a mistake if you buy one of these fall boars. His advertisement appears in this issue and if you write Mr. McDonald please mention The Wisconsin Farmer. See page 27.—Adv.

Pingel's Holsteins.

A. G. PINGEL, Chilton, Wis., is one of the most prominent Holstein breeders in Calumet county. He has been breeding registered Holsteins for over twenty years and has developed an exceptionally good herd. The cows are largely of Korndyke breeding and are big, fine animals with exceptionally well-developed udders and long, smooth teats. The bull now at the head of the herd is Calumet Johanna Abbekerk Champion 105829. His dam, Dianah Johannah Abberkerk 2d made 28.71 pounds of butter and 623.70 pounds of milk in seven days. In 300 days she gave 16,177.90 pounds of milk and made 677.45 pounds of butter. Her dam, Dianah Johanna Abberkerk made 20.20 pounds of butter in seven days and has four A. R. O. daughters. The sire of Calumet Johanna Abberkerk Champion is Oakhurst Milk and Butter King, a twenty-five-pound son of the $10,000 bull, The Milk and Butter King. This bull is an outstanding individual both in size and conformation. The yearling bull advertised for sale on page 28 is well marked, being over one-half white, is of straight, level type and is ready for immediate service. When writing kindly mention The Wisconsin Farmer. —Adv.

Thompson's Mule-Foot Hogs.

TWO HUNDRED head of Mule-Foot hogs are advertised by Charles Thompson, Letts, Ind. These hogs are all immuned, are sired by or bred to champion boars, and will be priced worth the money. Mr. Thompson's hogs have been consistent winners at the big shows for years, and the hogs he offers are bred along the same lines as his winners. Mr. Thompson also breeds registered Hampshire sheep. See page 27.—Adv.

The Dennis Shea Duroc Herd.

ANOTHER one of the good fellows in the Duroc game in Wisconsin is Dennis Shea located at Melvina. This gentleman has not been in the game as long as some, but he has a herd a great deal better than many. Mr. Shea started, right, buying the good stuff as a foundation and consequently it hasn't taken him as long as some to get a good herd together. In the first place he is and has been using good boars. The senior herd boar at the present time is Col.'s Choice, a massive two year old sired by King the Col. and his dam was by H. A.'s Choice Goods. This boar is a good sire and the yearlings on the place by him are the best in the herd. A senior yearling boar is Wonder Chief, a son of Cherry Chief, out of a dam by Proud Ohio Chief. This boar is siring a bunch of pigs with worlds of quality. One of the boars with a future is Pal's Defender he by Lee's Defender and his dam was by Pal's Dude he by Pal's Col. Of the sow herd he has two wonderful sows by Col.'s Choice, out of a Marion Wonder dam. These matrons have the size, great backs and feet and are the dams of some of the best spring pigs we saw on the farm. Mr. Shea has a two-year-old sow that would look good in the show ring this fall. She is big, yet has world's of quality. She is by Col. Defender and is perhaps the best aged sow in the herd. We saw one of the best yearling (April) sows we have seen for some time. She has all the good points of a show and breeding sow. If Mr. Shea shows anything this year, she will be the attraction. She is sired by Col.'s Choice, her dam by Marion's Wonder. This breeder was one of the first to enter the futurity and in all probability he will take out a few, though he can't fill all classes this year. Mr. Shea has a pleasing personality and it is a pleasure to visit and talk "hog" with him. The plan now is to make a winter sale, his first, and if he does breeders can rest assured that they will find "some offering." Ninety pigs represent the spring crop and they are sired by the three boars mentioned above. His pigs are doing nicely and he will have a nice lot of boars to offer the trade this fall. Mr. Shea has a few very choice fall boars, in nice condition and if any of our readers are in need of a Duroc boar, these are being priced very reasonable. It will pay you to write Mr. Shea and in so doing please mention The Wisconsin Farmer. See page 27.—Adv.

Holt & Son's Jerseys.

ELMDALE FARM owned by Henry Holt & Sons, Oconomowoc, Wis., are offring some choicely bred Jersey bulls for sale on page 27. These bulls were sired by Inez Rosaries Oxford and are from heavy producing cows of good type and choice breeding. They range in age from nine to fifteen months, are well grown and of good, straight, level type. Their sire, Inex Rosaries Oxford, is backed by choice breeding and high production records. His dam, Inez Rosaries, made 720 pounds of 83 per cent butter in a year. She is a daughter of Rosaries Golden Lad, that has five register of merit daughters, all with very creditable records. Her dam was Miss Melia Ann, that made twenty-three pounds of butter and gave 319 pounds of milk in seven days. Inez Rosaries Oxford was sired by G. F. Primes Oxford, a brother to the $11,500 bull, Royal Majesty. He was by G. F. Oxford Lad by Champion Flying Fox. From this limited description of his pedigree it will be seen that he carries the blood of many of the highest producing animals of the breed. For more complete pedigrees, description and price write to the above address. When writing kindly mention The Wisconsin Farmer.—Adv.

Higgins' Model Durocs.

J. W. HIGGINS, Gotham, Wis., and breeder of Durocs writes that he has had good success with his spring pigs. He has also had calls for bred sows, but was unable to fill the orders. Such is the demand of the men that raise the good ones. Mr. Higgins' herd is nominated in the Duroc futurity. Some of his pigs are about old enough to wean and he will sell a few—boars or gilts—at that time. They are well bred and we will warrant they are well grown for Mr. Higgins is a good caretaker. If interested get his prices on a pair or a trio. Mention The Wisconsin Farmer.—Adv.

Boost the Poland China Futurity.

EVERY man in the state that is a hog raiser, especially pure-bred, should boost a hog show and one of th greatest features of a hog show is the futurity. There has been no phase of the live stock shows that has enthused the public and breeders alike as has the futurities which have been put on by the various breed associations. The Poland men had a very successful futurity last year and it should be better this year and it will be if all Poland China breeders will pull together and boost their game. You men that breed Polands believe in that breed or you would not stay by it, then why not boost your breed as much as possible for the more men you can get interested in the breed which you handle, the more demand there will be for your product. The Wisconsin Farmer and its field men are doing everything in their power to stimulate more interest in the swine industry of Wisconsin and if the breeders and the press will pull together and "boost" the game, the results will be accomplished. The Wisconsin Farmer gives a silver trophy again this year. Every man in the state that claims to be a breeder of Poland Chinas should have entered his herd in the futurity even though he didn't expect to show a pig. By doing so he would have helped the breed and everyone connected with it. We follow with a list of the men that nominated their herds and made it possible to have a Poland China futurity at the Wisconsin State Fair this fall. They ai boosting the breed, are you? Smiley & Sons, Albany; J. F. Diley, Rush Lake; L. P. Martiny, Chippewa Falls; Madson & Sons, Madison; W. H. Erterly, Whitewater; J. D. McDonald, North Bend; M. Kinbz & Son, Berlin; J. C. Schoenfeld & Son, Fox Lake; Jas. Derivan, Fox Lake; E. P. Tobie, Amherst Junction; J. C. Hendricks, Hazel Green. E. W. Hendricks, Hazel Green; Dobson & Eastman Lancaster; Heck Bros., Lyons; Geo. Larch, Lyons; W. W. Quackenbush, Melrose; J. Leroy Larson, Iola; A. C. Diedrick, Rush Lake; J. S. Cross, Winnecomie; A. A. Erickson, Morrisonville. Boost for a bigger and better swine show.—Adv.

The R. Conner Short-horn Herd.

THE R. Conner Co., who have a large farm at Auburndale, Wis., are breeders of high-class Short-horns in fact most of them are of the best Scotch breeding. Excellent bulls have been used in this herd from time to time and one of the best if not the best is the imported bull, Brilliant Bandsman. He is sired by the great Bandsman and his dam, Favorite Missie, is only two places removed from the noted imported Missie 166. This bull has done a great deal of good in this herd as the young stuff on the place will show. No time in recent years has there been such a demand for good Short-horn cattle and the fact that the R. Conner Co., have bulls and females that they will sell should meet with favor among those wanting some choice cattle of this breed. The office of the above firm is at Marshfield, but don't forget that the cattle are at Auburndale, ten miles from Marshfield. If you want Short-horns don't wait, write at once and mention The Wisconsin Farmer.—Adv.

Send For this United States Separator Catalog.

ANY farmer or dairyman in need of a cream separator should send for Catalog 28 of the United States cream separator. This machine is made by the Vermont Farm Machine Co., Bellows Falls, Vt., and claims the world's record in the most severe competitive skimming contest ever held. A large number of distinctive features of this cream separator make it very efficient and desirable. The catalog contains a complete description. Write for it today, addressing the company named above. See advertisement on page 12. —Adv.

Square Deal Buggies Give Absolute Satisfaction.

ANYONE expecting to buy a buggy should send for the new circular of the Square Deal line of vehicles sold by Montgomery Ward & Co. This circular gives some special buggy bargains; the low prices quoted are made possible by direct selling with only one small profit added to the actual cost of labor and material. The materials and methods employed are of the highest type, and Square Deal buggies are guaranteed to give absolute satisfaction. Write for the circular today, using the address of the house nearest you as given in the advertisement on page 18. Kindly mention this paper when you write.—Adv.

Harford's Holsteins.

FRED HARFORD, Kaukauna, Wis., has one of the best herds of Holstein cattle in the Fox River Valley. The cows are large animals of good, straight type and have big, square udders, showing heavy production ability. Although but few have been run for advanced registry as yet there is every evidence that the majority of the cows in the herd are capable of making records well above twenty-five pounds of butter in seven days. Mr. Harford is now installing the most moderate dairy equipment and is getting his animals in condition to do official testing in the fall. The cows in the herd are exceptionally well bred. Many of them are daughters of the great bull, Hengerveld Sir De Kol, the sire of Pontiac Maid, that has a record of 30.21 pounds of butter in seven days and has an average test of 4.90. Hengerveld Sir De Kol is a son of Hengerveld De Kol, that has 116 A. R. O. daughters, ten of which have records from 30.15 to 33.62. The dams of Hengerveld Sir De Kol is Inka Darkness 2d's Queen, that at twelve years of age made 25.70 pounds of butter and has an average test of 4.17 per cent of fat. She is the dam of Pontiac Queen Korndyke, that made 31.01 pounds of butter in seven days and 121 pounds of butter in thirty days. She also has two other A. R. O. daughters, one a 36.40 four year old and the other a 20.68-pound three year old. In this herd there are also daughters of Pontiac Sadie Jewel, that has fourteen A. R. O. daughters one with a record of 30.78 pounds of butter and 516 pounds of milk in seven days. He is a brother to the celebrated bull, King Segis. He was sired by Mercedes Julip's Pietertje's Paul, that has eighty A. R. O. daughters. The dam of Pontiac Sadie Jewel is Sadie Vale Concordia Beryl, a sister to Sadie Vale Concordia 4th, that recently made 41.06 pounds of butter in seven days. There are also several daughters in the herd of King Sadie Cornucopia De Kol, that combines the breeding of the thirty-pound cow, Sadie Vale Concordia, with that of Aaggie Cornucopia Johanna Lad and Hengerveld De Kol. The present bull at the head of the herd is King Colanthus De Kol Korndyke, a twenty-five-pound grandson of Pontiac Korndyke. At the present time Mr. Harford is advertising young bulls for sale on page 28. For extended pedigrees and further information in regard to these animals write to the above address. When writing kindly mention The Wisconsin Farmer.—Adv.

A Well-Known Short-horn Herd.

THE name Eben E. Jones, Rockland, Wis., is not new to Short-horn men in Wisconsin, however, it may be new to some of our readers. Mr. Jones has a show herd out each year and being president of the Wisconsin Short-horn Breeders' Association he has a wide acquaintance. When we looked over his herd last week we saw some very desirable cattle, and many of the best ones were sired by Prince Cumberland. This sire did a great deal of good in this herd and Mr. Jones was indeed fortunate when he purchased this bull. He is sired by Cumberland's Last. The present herd bull is Collynie Sultan, a son of the champion, Roan Sultan by Whitehall Sultan. His dam is Marchioness 19th by Royal Luxury. This bull just turned two years and the owner only has a few calves by him, but these look good, in fact some of his get will be showed this fall. One of the best things in the herd is a senior heifer calf sired by Prince Cumberland. She should make a creditable showing this fall. He also has a roan two year old that has done well since last year and in all probability she will be shown again this year. Mr. Jones won't have a full herd out this year, but he will have some strong entries for the classes in which he can fill. Just at this time he has a couple of bulls of serviceable age that he wishes to sell and they are being priced worth the money. They are guaranteed in every way. If you need Short-horns get a line on what Mr. Jones has to offer. Write him and in so doing please say you saw the advertisement in The Wisconsin Farmer. See page 27.—Adv.

Free Service in Buying and Selling Short-horns.

THROUGH the extension department of the American Short-horn Breeders' Association, over 2,000 Short-horns have been placed during the last twelve months, in sections that would not have been reached by individual breeders. The demand for Short-horns is steadily increasing. Short-horn breeders are invited to inform the association of their salable stock, and all prospective buyers may avail themselves of the free service of the association's extension department. The next number of

Field Men for The Wisconsin Farmer.

T. P. Shreve, western half Wisconsin and eastern Minnesota. Address Room 201, Washington Building, Madison, Wis.

Fred V. Johnson, Wisconsin, Illinois, Indiana, Ohio, Michigan and Kentucky. Address 924 Hearst Bldg., Chicago, Ill.

Carlos C. Palmer, eastern half of Iowa and Minnesota and swine division in Illinois. Address 2714 High St., Des Moines, Iowa.

W. S. Steele, northwest Iowa, South Dakota, western Minnesota. Address Box 109, Sioux City, Iowa.

M. T. White, western Iowa and northeastern Nebraska. Address 4015 Izard St., Omaha, Neb.

A. T. Cole, Missouri. Address 3900 Holmes St., Kansas City, Mo.

"The Short-horn in America" will be published July 1st, and everyone interested in Short-horns should keep this publication on file. Be sure to get a copy of the July issue, and if you want to buy or sell any stock, write to American Short-horn Breeders' Association, 13 Dexter Park Ave., Chicago, Ill.—Adv.

Williams Brothers' Short-horn Herd.

WILLIAMS BROS., Bangor, Wis., start a card in this issue calling attention to their herd of Short-horn cattle. This name may not be familiar to all breeders of the state, but it would be well to keep your eye on this herd, for these gentlemen, we feel sure, will come to the front rapidly. They have been breeding cattle for several years, but they have never made much noise about their herd, though they have individuals far better than many in the state. Their foundation cows were of the Red Rose and Annabelle strains. Princess of Fish Creek (Vol. 41, P. 566) was the first pure-bred cow purchased. She was by Emperor 3d and on down through British Ensign, Duke of Oxford 54th and Waterloo Duke 5th. She traced to the imported cow, Red Rose 2d. The other cow purchased at that time was 3d Red Rose of Fish Creek by Strathmore 2d and tracing to Imp. Annabella. These cows proved valuable breeding cows and excellent milkers consequently they and their produce were retained in the herd and today, practically the entire herd is descendants of these two cows. It stands to reason, that if these cows had not been good producers, both at the pail and in the quality of their offspring they certainly would not have retained this line of breeding in the herd. The herd is mostly roans and of nice quality. They have been using a son of Prince Cumberland, Nominee Cumberland, in the herd and he has sired some fine calves and they are being offered at this time. Prince Cumberland is sired by Cumberland's Last. The dam of Nominee Cumberland is Harvester's Fancy by Lord Harvester 217030, tracing to the imported cow, Rose of Strathallan by Allan. If you write these boys for information about their cattle you can rest assured they will tell you just what they have and if you visit their place you will find the cattle just as represented. It is worth something to do business with such men. We all know there is a great demand for Short-horns at this time and if you are in need of cattle of his breed, don't hesitate too long. When writing please mention The Wisconsin Farmer. See page 27.—Adv.

Use Medusa Cement Products.

NOW is the time to build a new barn, silo, feeding floor or watering trough; the building season is at hand, and if planning any kind of construction work, you should consider the use of Medusa cement. This material will make a concrete that is permanent, giving year after year of satisfactory service. Medusa cement is manufactured in either the gray or white form. The white is used for all sort of facings and gives a smooth, even, white surface. When a waterproof concrete is desired for a silo, barn or feeding floor, where moisture must not be allowed to seep through the walls or floor, Medusa Waterproofing should be mixed with the cement. Eight pounds of waterproofing to every barrel of cement will make the concrete impervious to water and prevent cracking or discoloration. Medusa Portland cement (gray or white) may be obtained already mixed with the right proportions of Medusa waterproofing. This is a good way to buy it when waterproof concrete is desired. Several valuable free booklets regarding the use of concrete for building may be obtained by writing to the Sandusky Portland Cement Company, Cleveland, Ohio, and mentioning this paper. See page 9. —Adv.

Short-horn Bulls and Females for Sale.

IF you want Short-horns of either sex you can find them in the Wm. Hickin herd of Lancaster, Wis. Owing to the fact that he cannot use his herd bull, Champion Banff 277574 to advantage any longer he is offering him for sale. He is also offering two other tried sires as well as some younger bulls ranging in age from six to fourteen months. Among the lot there is one straight Scotch bull. He will also sell a few cows and heifers, bred or open and either Scotch or Scotch-topped. Short-horns are in demand and especially females, so if you can use some of the animals offered by Mr. Hickin we would suggest that you write him at once. We will have more to say about this herd in a later issue. Don't forget to mention The Wisconsin Farmer. See page 27.—Adv.

A Low-Priced Car With a High Record.

AN investigation of the Crow-Elk-hart "30" at $725 should be made before investing in a new motor car. This five-pasenger car with 112-inch wheel base is big, roomy and comfortable and gives perfect riding satisfaction. Sturdy spring design and solidity of construction contribute to a long life of satisfactory car service, and economy in operating is shown by the fact that many owners report a mileage of from twenty-two to twenty-six miles per gallon of gasoline. Read the advertisement on page 17 by the Wisconsin Motor Car Co., Distributors, Janesville, Wis., and see the Crow-Elk-hart "30" before selecting your car.—Adv.

Marquette Cement, the Building Material For the Farm.

WHEN ready to build a feeding floor, watering trough, silo or any farm structure in which permanence and service is desired, do not fail to figure on the use of Marquette Portland cement, the material which is "as lasting as the pyramids." All cement sold under this brand is thoroughly tested and guaranteed. It may be identified by the green zig-zag tag found on each bag, which is shown in the advertisement on page 2. Ask your dealer for Marquette cement and mention that it is advertised in this paper.—Adv.

Some Great Spring Pigs.

WE have seen a great many pigs this spring, but we havn't seen any that look better or have been grown better than the Chester Whites owned by Adolph Nuttleman, West Salem, Wis. He has about forty pigs that came the latte part of February and they certainly have done well. One of the best sows on the place is a granddaughter of St. Elmo and she has a fine litter of seven by Joy Boy. Wykoff Silvia is a daughter of the champion, Wykoff Lad, and her litter of eleven show up well. They are by Joy Boy, in fact most of the pigs are by Joy Boy. He is by White Prince and his dam is by Comet. Joy Boy is a good two-year-old boar. Will weigh right at 600 pounds now and no doubt his owner will show him this fall. Mr. Nuttleman is offering spring pigs for sale, any number to suit the buyer and we will say right now that the buyer will be pleased with any of them. If when you get the pigs you don't like them ship ship them back and Mr. Nuttleman will gladly refund your money. Order early and get the pick. There are some show pigs in the lot. Mention The Wisconsin Farmer. See page 27.—Adv.

Engines for Every Engine Job on the Farm.

THE Wisconsin gas and gasoline engines can handle any engine job on the farm. They are made in fifteen sizes, running from one and one-half to thirty horse power and are furnished in stationary and portable types. Each engine is guaranteed and if it fails to do the work claimed for it, the purchase price will be refunded. Low fuel consumption is an important feature of these engines. See the advertisement on page 16 and send for the thirty-two-page catalog describing the Wisconsin engines and the literature on farm electric light plants, which may be had free on request to the Lawson-Lawton Co., De Pere, Wis., if you mention The Wisconsin Farmer.—Adv.

News of the Sale Ring.

Central Wisconsin Holstein Sale.

The third sale of Holstein cattle made by the Central Wisconsin Holstein Breeders' Association was held at Marshfield, May 10th and 11th. Owing to the fact that the farmers were so busy in the fields there was not as large an attendance as at some of the previous sales. There were some excellent cattle sold far below their value. There were also cattle listed that should not have been offered at public auction at all for it is a poor advertisement for a breeder to put up undesirable individuals. The top of the sale was Belle Hartog Zerma Netherland 231277, a three year old sired by Prince Idaline Pietertje Hartog 60810. She was consigned by Wm. Krause, Thorp, and M. L. Wogensen, Veedun, Wis., was the buyer, paying $285 for her. She was a good buy at that figure. The sale was well managed and Mr. W. W. Clarke and E. E. Butters worked hard for the success of the sale. Col. J. E. Mack sold the offering in his usual satisfactory manner. We follow with a list of those selling for $100 or over:

BULLS.

Signal Mercedes Bess Posch Lad, Oct. 20, 1915; E. O. Brecke, Stetsonville, Wis. $100
Rosetta Clothilde's Posch Lad, Sept. 10, 1915; August Mews, Auburndale, Wis. 105

Sheboygan County Holstein Breeders' Sale.

There was a marked improvement in the sale this year over that of a year ago. In the first place there was a better lot of cattle offered and secondly the buyers seemed to more nearly appreciate the difference between the well bred and plainly bred animals. One of the features of the sale was the eight-weeks-old calf out of the thirty-pound three-year-old cow, Eagle Rigtje Jessie. John Goelzer, Plymouth, Wis., was the fortunate purchaser at $325. This calf was consigned by the Truttschel Bros., Sheboygan Falls, Wis. The twenty-seven-pound cow, Klazerina 2d's Gerben was purchased by Dr. G. H. Stamrard, Sheboygan, Wis. Although she was eleven years old she brought $350. A detailed list of the sale is given below:

BULLS.

No. 9, March, 1916; John Goelzer, Plymouth, Wis. $325
No. 24, March, 1916; Wm. J. Schreider, Sheboygan, Wis. 150
Segis Pontiac Korndyke Polkadot, March, 1913; O. J. Berglin, Shawano, Wis. 125
Kaiser Nig, June, 1914; John Sperl, Sheboygan Falls, Wis. 100
No. 57, J. W. Miller 155

FEMALES.

Blackie Korndyke Colanthus, Feb., 1914; Walter Behlow, Hilbert, Wis. 200
Jennie Walton Colanthus, July, 1907; O. J. Berglin, Shawano, Wis. 305
Blossom Korndyke Segis, Sept., 1912; Tom Kelly, Plymouth, Wis. 150
No. 5, March, 1916; H. C. Prange, Sheboygan, Wis. 240

WAUKESHA COUNTY HOLSTEIN SALE

WAUKESHA, WIS., JUNE 1, '16

A GREAT SALE

Great because of the high-class offerings. The offerings are strongly backed with 30-pound records. They are represented:

First—In the 30-pound bull himself. He is a son of Pearl Wartina, a 30-pound cow, and Paul Ormsby, that is grandsire of Ormsby Jane Segis Aaggie (44.42 pounds butter, world's record).

Second—In young sons and daughters with strong 30-pound breeding on both sides.

Third—In animals with A. R. O. records or breeding, bred to 30-pound bulls.

The Ormsby, Pontiac, Segis and Homestead blood lines are strongly represented throughout the entire sale entries. These animals are bred for production and individuality.

Among the consignors we find the following who are consigning some of the best animals of their herds: Schley Bros., S. A. Baird & Son, W. O. Briggs, Connell Bros., Geo. J. Schuster, Burmeister Bros., Dr. David Roberts, Dr. B. O. Nobles, H. E. Reddelien.

Catalogs now ready. Address

No. 51, Nov., 1915; Arno Eastman, Sheyboygan Falls, Wis.	100

Hope of relief for the pea-canning industry of Wisconsin was lost recently when the supreme court upheld the law forbidding employing women more than ten hours a day. As peas must be packed the day they are cut and because of the short season it is almost necessary that the plants run long hours. As labor at such times is scarce it is necessary that employes work overtime. Under the court ruling the canners must observe the ten-hour law to the letter, and the industrial commission is prevented from permitting women to work longer than ten hours daily, as has been done during the last three years.

AYRSHIRE CATTLE.

Breeding Ayrshire Bull Individuality

BORN August 3, 1915. Sire: imported **Craigbrae Lord Rosebery** 15001. Dam: **Bonny Miss Casanet of So. Farm out of** 480 pound three-year-old. POLAND CHINA SWINE.

Martiny's Poland China Boars

15 FALL boars of September farrow, sired by Wisconsin Jumbo, the 1st prize and Jr. champion boar at the Wisconsin State Fair, 1914. I believe he was the biggest boar of his age shown that year, he weighing 510 pounds at eleven months old. This will be the last chance to get a herd header from this great boar. The wise man will raise a few fall pigs this year if he never did before. I will sell these boars now for less than they will bring for pork after you get through using them next fall, as I wish to make room for my 100 spring pigs I already have on hand.
L. P. Martiny **Chippewa Falls, Wis.**

POLANDS

ATLAS EXPLOSIVES

Anyone Can Use Atlas Farm Powder

No experience or skill is required, because Atlas Farm Powder is made especially for you. You can do your own blasting without trouble or risk by following a few simple instructions that even children can understand. Many women farmers use

Atlas Farm Powder
THE SAFEST EXPLOSIVE
The Original Farm Powder

Improve the fertility of your soil, get out stumps and shatter boulders quickly, safely and cheaply with Atlas. Blast holes for tree-planting, dig ditches and do other kinds of farm work in the most economical, up-to-date way.

Atlas Farm Powder costs little compared with the cost of labor that it replaces. You can buy it from a dealer near you. If you don't know him, ask us. We will also tell you exactly what you need for any kind of work.

Get Our Free Book—"Better Farming"
It tells you how to save labor on your farm by using The Safest Explosive for stump blasting, ditch digging, tree-planting, subsoiling, etc. Fill out the coupon *now* and mail it *today*.

ATLAS POWDER COMPANY General Offices: **Wilmington, Del.**
Sales Offices: Birmingham, Boston, Houghton, Joplin, Kansas City, Knoxville, New Orleans, New York, Philadelphia, St. Louis

CURRENT EVENTS

A RURAL credit bill, providing for a federal farm loan board and a system of twelve land banks, passed the lower house of congress last week by the decisive vote of 295 to 10. A similar measure has already passed the senate, the difference between the two bills to be made up in conference. Under its terms the land banks would lend money to farmers at not more than 6 per cent interest through local associations, mortgages running from five to thirty-six years. The mortgages would be used by the banks as the basis for farm loan bonds. The senate would limit loans on lands at 50 per cent with no recognition of improvements. The house proposed to grant 60 per cent on land values and 20 per cent on permanent insurable improvements. The senate proposes that no loan shall be made if the three members of the local loan company are not unanimous in their appraisement; the house would require a majority report of the committee. The senate makes the minimum loan $200; the house $100. The senate would charge borrowers 10 per cent interest on all defaulted payments; the house would charge only contract rates. It seems now almost certain that some form of rural credit legislation will be decided upon at this session of congress, sentiment being overwhelming in favor of it among the lawmakers.

AFFAIRS in Mexico continue unsettled. After conferring together for a week, General Scott, chief of staff of the United States army, and General Obregon, minister of war of Mexico, separated with but little actually accomplished. General Obregon continued to demand that the United States set a date when the American troops would be removed, but this was persistently refused by General Scott, acting under orders from Washington. The American troops will not be withdrawn until a semblance of order has been restored and raids across the border are discontinued, that much is assured. In the meantime American troops killed three Villa bandits last week, one of the number being one of Villa's lieutenants. Villa is reported to have recovered from his wounds and to be recruiting another army with which either to raid the border or attack the troops in Mexico. Altogether the situation is far from comforting, although there has been but little loss of life for some days.

WM. J. BRYAN has issued a signed statement in which he declares that the democratic party, to win the coming campaign, must "move toward peace" and thereby capture the peace element in the republican party. The surprising victory of Henry Ford in Michigan and his strength in the Nebraska primaries has convinced Mr. Bryan that there is a greater following for peace than was formerly thought. In order for the democrats to win (President Wilson being a minority president, in that he received fewer votes in 1912 than Roosevelt and Taft combined) they must get this peace following. Mr. Bryan concludes: "If this element is to be conciliated it must be done by a move toward peace. The opportunity is here. The German government, in accepting this government's position in the submarine controversy, gives as one of its reasons for doing so its unwillingness to be responsible for extending or spreading the war. It refers to the fact that it has twice expressed a desire to consider terms of peace. The way is open. Will the president take advantage of the opportunity? Failure to secure peace would bring no humiliation, while success would be of tremendous advantage to him politically, as well as a blessing to this country and the world. He can at one stroke destroy all the advantage the republican party now has and make the race on the record of a peacemaker. Will he give voice to the world's conscience—to humanity's hope?" Mr. Bryan has been delivering a number of speeches throughout the grain belt recently, mainly in the interests of prohibition and woman suffrage.

A REGULAR army of 254,000 men will be provided the United States as a result of pending legislation in congress. This figure was reached as a compromise between the Chamberlain bill in the senate and the Hay bill in the house. Under the agreement betwen the two houses of congress there are to be 175,000 fighting men, 5,733 scouts, 6,409 quartermaster corps men, 7,290 medical corps men, 3,387 signal corps men and 8,750 unassigned troops. This makes a total of 206,169. In the probable event of war the president is authorized without further authority from congress to recruit the army up to 125 per cent of its peace strength, or 254,000 men in all. With regard to the national guard and reserve features, the measure represents a compromise. It provides for 425,000 men in the national guard, 800 for each member of congress and each senator. It also contains the Wadsworth provision that national guardsmen shall first take an oath of allegiance to the national government. It is believed this oath will give the president the right to send them out of the country without further formalities in case he believes they are needed elsewhere. The enlisted period for the regular army is fixed at seven years, three with the colors and four in the reserve. A spirit is manifest in both houses of congress to increase the fighting forces of the nation, party lines being well-nigh obliterated in the scramble to get in on the preparedness bandwagon.

TAXES on incomes, inheritances and war munitions will be depended on to pay for the preparedness campaign, according to Chairman Kitchin, of the house ways and means committee of congress. The plan is said to have the support of President Wilson. Just what amount will have to be raised cannot be determined until the naval and military bills are completed. Other than a decision not to lower the present exemption limit for incomes ($3,000 for unmarried and $4,000 for married men) none of the details of the tax plan have been worked out. Plans for imposing stamp taxes on manufactured tobacco, liquors, beer, gasoline and other articles, Mr. Kitchin said, had been definitely abandoned. He declared the plan of taxation decided on would affect only those best able to pay the levy, falling exclusively on the wealthy and on foreign nations engaged in war. The big preparedness revenue measures will not be introduced in congress until after the national political conventions. Between now and that time the speeding up campaign inaugurated recently will be continued with a view to disposing of all other business by early July if possible.

THE tide of immigration will flow so strongly after the conclusion of the European war that a million foreigners will pour into America within the first twelve months of peace, according to a statement made by the commissioner of immigration, who said: "It is hard to tell now just what will be the effect of the close of the war upon unemployment. It is certain that immigration will be greatly increased. There were 17,000 immigrants in January last and 33,000 last month. It is safe to say there will be a million immigrants in the first year after peace is established. The people coming in from the outside will determine the weal or woe of this country." The Franco-Prussian war was followed by an immense increase in immigration to the United States and it is believed that the present war will present a similar situation.

Breeders in Oklahoma, who have been backward in taking up with the thoroughbred idea, have shipped into the state since the first of the year about 1,000 head of the best pedigreed bulls and heifers procurable.

The Wisconsin Farmer

THURSDAY, MAY 25, 1916.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

HAVE YOU MADE YOUR WILL?

I WANT to talk with my farmer friends who own property—both real and personal—on the important question of will-making. It is one of those things which many of us, for various reasons, are all too prone to put off, sometimes too long altogether.

I fear that farmers are even more neglectful of this important matter than other men. There is no reason why this should be so, for prosperity is more general in the country than in the city, and a far larger proportion of farmers own property than city men. Yet all too many farmers put off making their wills, because they believe it to be a legal matter which requires the services of a high-priced lawyer, and so they let week after week and year after year slip by, until sometimes the grim angel beats them in the race, and then the farm is tied up in litigation or there is a long delay in getting the property into the hands of those for whom it was intended and to whom it should go.

Let us see if will-making is such a difficult and complicated matter after all. I am advised by a lawyer that a will was once probated in Cook county, Illinois, which read as follows:

Everything to my wife.
WILLIAM BROWN. }
JAMES ROBINSON. } JOHN JONES.

This will was held to conform with every legal requirement and a considerable estate was settled under its provisions. All the important factors were present: First, the plain intention of the testator to give all his property to his wife; second, his signature; third, the necessary witnesses to his signature. Now, if you and I can arrange matters after our decease in so simple a manner, why do so many of us keep putting it off? Do not misunderstand me; I am not advising any of my readers to make a will like the one above; do not take such chances, but do make a will, even writing it yourself, if need be, and making it as simple as possible, and do not put off such an important matter too long.

I am indebted to a lawyer friend for some valuable advice on will-making which I am going to pass along to you for your guidance. Here is what he says:

Make up your mind as to how you propose to leave your property.

If the disposition is simple, such as leaving everything to your wife or your children in equal parts, any ordinary skilled person can draw the will.

Be sure to comply with all formalities required by the statute, especially the following: Subscribe your name to the will in the presence of witnesses. Declare it to be your will in their presence. Have at least two witnesses sign in your presence. If you sign by mark, or for any reason are unable to write your name, have at least three witnesses to the fact of your signing by mark or that you requested some other person to write your name.

Ask people who have long known you and who have no doubt as to your sanity to be witnesses to your will.

Place your will in the custody of some perfectly responsible person or in some receptacle where it will be safe.

Remember that any provisions you may make for your wife must at least equal her common-law rights, which are one-third of the personal property and a life interest in one-third of the real estate in the majority of states and one-third of all property in some, notably Iowa and Indiana.

Don't make a nonresident of your state the executor of your will. Don't have the man you selected as executor sign as a witness. Don't have anyone to whom you left any property sign as a witness.

Certainly there is nothing here so formidable and complicated that we cannot all attend to it. Many of us, however, fear that any will which we might draw up ourselves would be broken in some court. Are the possibilities of this as great as we fear? Let me quote from a recent article I read, as follows:

The truth is that it is harder to break a will than it is to break any other human contract. In the entire history of the state of Illinois fewer than ten wills have been "broken" by the supreme court.

The source of the idea that it is easy to break a will lies in the fact that almost any jury will break almost any will. If a will is contested by any heir or claimant who has been "cut off" seemingly unjustly, the chances are better than twenty to one that the jury will "break the will." If the case is carried to the higher courts the odds that the will will be upheld are all the other way.

The jury decides almost entirely upon sentiment, the higher court decides almost entirely upon the intent of the maker of the will. There are some things which are fatal to any will and which the higher courts cannot change; but if the high courts can get at the intent of the maker of the will from any construction, they will uphold his testament.

Contests usually arise from the "cutting off" of persons who, had the will maker died without a will, would have inherited under the common law. The jury sympathizes with such persons almost always, refuses to believe the complainant was treated rightly. As a matter of fact, a man can cut off anyone he desires, except his wife. He cannot deprive her of her share of the estate, even by agreement, providing she elects to break that agreement after his death.

I have talked quite a bit lately on the question of life insurance. This question of a will is equally important. Will you all attend to it, before it is too late, and save your loved ones unnecessary trouble and delay in securing what is so justly theirs?

RURAL CREDIT LEGISLATION

SOME form of rural credit legislation is almost certain to be enacted at this session of congress. In fact, bills have already passed both houses. Differing in important particulars, it becomes necessary to reach a compromise between them. This may be done before what I write is read; I doubt it, however, as congress is a deliberative body and proceeds slowly.

I was talking with a banker friend on this very subject last night. He is the executive officer of one of our large national banks and is thoroughly posted on most of the financial and economic questions of the day. He gave it as his earnest conviction that rural credit legislation is bound to come and that, in the long run, it will benefit farmer and banker alike. For the first dozen—perhaps the first score—of years, he said, the banker may find the legislation inimical to his welfare, for it will reduce interest rates and take away from the bank much of its now profitable loan business. In the long run, however, anything which makes for more widespread prosperity is beneficial to the bankers. They have been quick to realize this, therefore they have contributed generously to hire county agents, to run demonstration trains, to enable farmers to stock their farms with pure-bred animals, and so on. If a form of rural credit legislation enables a farmer to borrow money at a lower rate of interest, add to his land holdings or buy farm machinery or live stock which he cannot now afford, in a few years that farmer will be better off financially and will be a heavier depositor in the local bank, therefore the banker will profit by the transaction. "Looking at the matter in twenty-five-year periods and taking the welfare of the people (farmers and bankers alike) into consideration, I cannot help but believe that rural credit legislation will prove a wise and beneficial thing," concluded my banker friend quite emphatically.

I realize that some of his banking confreres do not hold this view, but I am inclined to believe that he is right. He put the issue up to me squarely when he asked: "How, in this day of $150 and $200 farm land, is a young man to get a start in farming?" I would like to pass the question on to my readers. I can give various answers, but they all resolve themselves into questions of thrift and perseverance and other cardinal virtues. Perhaps I cannot do better than to give the words of my banker friend as he wrote them out for me, so that I might quote him exactly:

Here seems to be the conclusion of the whole matter: A rural credit system which will extend the time of farm mortgages and reduce the interest rate; some practical state or national aid by which the worthy may get a place before their ambition is crushed; a diversified system of farming which will insure ready money all the year around, and a realization that, in farming as in all other lines of business, it is better to start at the bottom and work up than to start at the top and slide down.

He was arguing that most young men try to start out in farming, for themselves, on too large a scale. He said:

Instead of thinking of 160 to 320-acre farms, he should start on a ten or twenty-acre farm close enough to a fairly good town with good school and church facilities to take care of the social needs of his family and, if need be, rent a small cottage in the town and work the ten or twenty acres for all they can produce. Tenant farmers, like all beginners in other lines of business, must start at the bottom and work their way into larger things, by a system of close application to the work at hand, with the tools they have and by the exercise of thrift and economy fundamental to all success in this world.

This appears sound and logical to me. While farming is the most pleasant and productive calling in the world, and may easily be made among the most profitable, we should not assume, for a minute, that success is won in farming by any other methods or principles than apply to other callings: Perseverance, determination, thrift, industry and so on. There is no royal road to fortune along the furrow or the cowpath, except as we follow the way diligently, work industriously and apply ourselves conscientiously and with the utmost ability at our command to the needs of the hour.

I would like very much, indeed, to have an expression from my readers on this all-important subject. Will you write me, fully and frankly, telling me what you think of the matter in general, the need (if need there be) of remedial legislation, the manner in which the pending bills afford this relief and the situation as it exists throughout the grain belt generally on financial matters as they apply to the farm?

DECORATION DAY.

TUESDAY of next week will be Decoration Day. Another year has rolled around since we cut the lilacs, the snowballs, the peonies and other flowers with which our yards abound at this time of the year and reverently laid them on the graves of our soldier dead. It has been a year of stress and storm for many of us, a year of war and rumors of war in the land which is still at peace. We do well this year to put aside the duties of the season for a few hours and go out to the cemetery, where we may reflect on the great sacrifice of the heroes and heroines buried there and on the goodness of God in bringing us through another year in peace, when so many other nations are engaged in the death grapple.

Decoration Day is to me one of the saddest and loneliest of the whole year. I remember the years which have gone; the father who left the happy home circle, never to return, lying today in an unknown grave in the sunny Southland. I remember the uncles who likewise gave up their lives that this nation might be free and united. I remember the struggles and the sacrifices of my mother and my sisters, and as I remember them the tears well from my eyes and loneliness comes down around me and upon me, like shades of night. Such a goodly company of brave young men marched forth, dropping plow-lines and ledger, with fifes and drums quickening their pulses and their steps; and so few returned. And of that pitiful handful which came back, how few we have left with us today. The ranks or those who don the old and threadworn uniform to march out to the cemetery and honor their fallen comrades are thinning rapidly; but a few more years and there will be none left among us. Shall we not honor them while they are yet here? The poet was inspired, I believe, when he wrote these lines:

It's lonesome, sort o' lonesome, it's a Sund'y-day,
to me,
It 'pears-like, more'n any day I nearly ever see!
Yit, with the Stars and Stripes above, a-flutterin'
in the air,
On ev'ry soldier's grave I'd love to lay a lily thare.

Gone are the days when there was North or South, when there was division in our beloved land. Today we are united as never before, and as we strew our flowers and reverently lay our wreaths we do not think of whether the one we revere wore the blue or the gray; he was a hero and he fought for what he believed to be right. Let me give you three of the stanzas of a poem I love that you may read them over, at your leisure, between now and Decoration Day:

So when the summer calleth,
On forest and field of grain
With an equal murmur falleth
The cooling drip of the rain;
Under the sod and the dew,
Waiting the judgment day;
Wet with the rain, the Blue;
Wet with the rain, the Gray.

Sadly, but not with upbraiding,
The generous deed was done;
In the storm of the years that are fading,
No braver battle was won;
Under the sod and the dew,
Waiting the judgment day;
Under the blossoms, the Blue,
Under the garlands, the Gray.

No more shall the war-cry sever,
Or the winding river be red;
They banish our anger forever
When they laurel the graves of our dead.
Under the sod and the dew,
Waiting the judgment day;
Love and tears for the Blue,
Tears and love for the Gray.

Could we do better than to read these verses aloud, or teach one of the children to speak them at school, or ask that they be read at whatever exercises may be held in our cemeteries next Tuesday? We have been drawn together—we of the North and of the South, we of the farm and of the city—within the past year, in the face of a common danger, as never before. Shall we forget that there ever existed dividing lines, and unite, all together, in being true-blue Americans, dedicated to one another's welfare and prosperity, the greatest, most closely-knit nation the sun ever shone on?

SUBSCRIPTION RATES—Single subscriptions, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of fifty or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription prices in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as you gave before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address WISCONSIN FARMER, MADISON, WISCONSIN

Wisconsin Coummunity Dinners.

IN THE Upper Wisconsin Department this week will be found an interesting letter from one of our readers, A. R. Anklam, president of the North Crandon Potato Growers' Association, of Forest county. Mr. Anklam is also interested in the Guernsey breeders' club of his community, and The Wisconsin Farmer is delighted to note some of the interesting sidelights of this club's excellent work. Mr. Anklam's letter contains this statement:

One of the best parts of our Guernsey club meetings is the get-together dinner. A committee is ... ave charge of the dinner, and this com... s out a list of what each farmer is ex... g.

... of a community dinner for farmers as ... getting together to discuss matters of ... mon interest is one which is receiving more attention each year. Forest county breeders of Guernsey cattle are certainly to be congratulated upon the success which they have had with the plan. We suspect that some of the farm women have a "finger in the pie" to a very large extent, but that is neither here nor there so long as the dinner is provided and the farmers and breeders meet at the common board to talk over matters which are of vital importance to each and every one of them.

The dinner route is proving effective in all sorts of organization work. We happen to know of a Methodist church where there is a dinner of some kind almost every day. And they even serve lunch on Sunday so that members of the congregation need not go home between services provided they live a long distance. It happens that this church has the largest membership of any Methodist church in the state where it is situated.

Nothing will go further to promote good fellowship among the Guernsey breeders of Forest county than an occasional good dinner. Matters of importance for the benefit of the breed will come out in this way which would otherwise be entirely lost sight of.

The Wisconsin Farmer also takes this opportunity to commend the Guernsey breeders of Forest county for their efforts to interest the young people in good, clean amusements. Only recently, as Mr. Anklam states, the club provided a moving picture show for the boys and girls. For the entertainment of older folks at this same club meeting a lecture by the county agent, Mr. John Swenehart, with picture slides, and a spirited debate on the relative merits of the beef and dairy breeds of cattle were provided.

With all these activities in motion The Wisconsin Farmer expects to hear a good report from the Forest County Guernsey Club, and furthermore we are certain that these breeders will be prosperous and happy in their work.

Langlade County May Have Free Fair.

THE County Agricultural Society of Langlade county, Wisconsin, is debating the subject of a free fair. It is probable the plan will be tried out this fall.

This county is among the first in Wisconsin to give this matter serious attention. The Wisconsin Farmer has been discussing the free fair for some time. A free fair means that there is no admission at the gate. On the theory that a county fair is an educational institution, The Wisconsin Farmer has taken the position that it would be better to eliminate any admission charge. As we understand it, one great purpose of the fair in each county is to stimulate interest in better agricultural and live stock products. It is on this account that the state gives aid to county fairs. If the county fair is purely an amusement enterprise, conducted for the purpose of paying dividends to stockholders, then there is no excuse for the state giving financial aid.

There are special reasons why fairs should be free in Upper Wisconsin. Settlers should have every opportunity to see what can be grown in their community. If it is true that some would come when the admission is free who would otherwise stay away, then the admission should be free to accomplish the greatest possible good. The question arises as to how the fair may exist without making any admission charge. Of course, the money received as state aid can be used only for the purpose of paying premiums on live stock and agricultural products. The amusement part of any fair should take care of itself. Experience has shown that the attendance at fairs is wonderfully increased by the free gate. Amusement features are much more liberally patronized when no admission fee is charged to get into the ground. To maintain a free fair successfully there must be ample accommodation in the amphitheater. The free fair will attract a larger crowd than one where there is admission at the gate, hence the concessions are worth more money. These should provide an added source of revenue.

We believe that every county fair should be free to everybody just the same as the schools are free and the libraries are free. The counties can well afford to put up substantial buildings. When the county fairs are conducted as educational enterprises they are entitled to state aid and support from the county funds.

In the event the experiment is tried out in Langlade county, it will be watched throughout the state with considerable interest. Very few Wisconsin county fairs make any money, notwithstanding the state aid. There is quite a general belief that they are conducted on the wrong principle.

Western Wisconsin Holstein Breeders.

PLANS are being made for a big meeting of the Western Wisconsin Holstein-Friesian Breeders' Association, to be held at Tomah, June 17th. The secretary of this association, Mr. E. L. Liddle, has written The Wisconsin Farmer, relating some of the work of the association, and its future plans, as follows:

Our breeders' association was organized November 30, 1915, with an initial membership of nineteen. Since that time the association has been very active and we now have a membership of fifty-four enrolled. A winter meeting was held at Sparta, February 17th, in connection with the meetings of two other county breeders' associations. There were between 300 and 500 present and we had a fine program. A fine dinner was furnished by the advancement association, of Sparta.

Another similar meeting will be held June 17th at Tomah, Wis. We are planning to have the governor with us and there will be other good speakers on the program, further announcement of which I will send to The Wisconsin Farmer later. The meeting will be held on the Government Indian School grounds, and a basket dinner will be served. Part of the refreshments will be supplied by the school.

As our association covers five counties we have also arranged for other meetings to be held this summer on breeders' farms. In this way we hope to enlarge the membership and the influence of the work.

We intend to work out some plan in the future wherely we can increase official testing in our association and bring to ourselves a little more publicity. We have not done any advertising as yet, but we have had a number of calls for stock.

This report certainly indicates a healthy condition on the part of the Western Wisconsin Holstein-Friesian Breeders' Association. Such work as has been done and as has been planned for the future will certainly bring big returns to the breeders of western Wisconsin.

How Far Will Tractor Displace the Horse?

THE federal department of agriculture has been in communication with 400 owners of tractors in Illinois. The object has been to determine just to what extent the tractor is doing away with the horse for farm work. The investigators say it is apparent the tractor has not displaced the horse to any considerable extent. By this statement they do not mean to minimize the value of the tractor. They find the greatest advantage from the use of a tractor lies in the fact that it does the heavy work quickly, completing it within the proper season, and, furthermore, places at the farmer's command a large amount of power which he can use under many circumstances, when needed. The investigation shows that in a number of instances the average number of horses displaced was four, and that in these instances the value of the horses displaced represented slightly in excess of 5 per cent of the cost of the tractor outfit. One statement of interest is that the large outfit has apparently not displaced many more horses than the small outfit. The report says, however, that the number will vary under different conditions; the principal influencing factors being the number of acres farmed by horses and the distribution of work throughout the year. We quote from the report of the federal department of agriculture as follows:

On ninety-two Illinois farms where no change in the acreage was made after the purchase of the tractor, an average of twelve horses per farm had previously been kept. Two hundred and sixty-three horses were displaced on these farms, an average of not quite three horses per farm. On thirty-one, or about one-third, of these farms, no horses were laid off.

The raising of colts is an industry of considerable importance on farms in the corn belt, and it would seem natural to expect that where tractors were bought and the work stock thus relieved of the heavy field work the percentage of brood mares kept would be increased, and that the chances of raising more and healthier colts would be enhanced. It was found, however, that on a large group of farms in Illinois the brood mares constituted 33 per cent of the work stock before the tractors were bought, and while the work stock was decreased to some extent after the purchase of the tractor, the percentage of brood mares increased only 3 per cent, making the percentage now kept amount to 36 per cent.

The horse has been receiving many jolts the last few years. When the automobile appeared it was announced that the horse was doomed. But the number and value of horses are increasing. It remains to be seen just how far the farm tractor and the automobile truck will be able to accomplish the work wherein the pleasure automobile failed.

Breeders, Beware of the Self-Satisfied State.

THE WISCONSIN FARMER is in receipt of a letter from J. Wesley Raven, breeder of Holstein cattle at Bloomer, Chippewa county, and owner of Raven's Roost Farm. Mr. Raven, among other things, writes as follows:

The Holstein herds of this county are increasing about as fast as possible, but our association is on the decline. The members are too well satisfied with the results they are getting with their herds. Good sales for all surplus stock.

This letter may be a key to the explanation of what ails some of our Holstein organizations. With the largest representation by far of any dairy breed in the state, and with ample records as a foundation for bigger business, the State Holstein Association has been permitted to lag along. Efforts are now being made to revive it, and the plan has been discussed in previous issues of The Wisconsin Farmer. The farmer whose soil is rich doesn't worry about fertilizing. The orchardist too frequently doesn't spray until after the insects have spoiled his fruit. The Wisconsin Holstein breeder is doing so well that he fails to have the proper vision of what his business might be if he gave it more attention. In some counties the representatives of other dairy breeds are much more active than are the representatives of the Holstein breed. This may be explained by the fact that they have had to hustle to command attention. But they are commanding attention, and it is time for the Holstein breeders to wake up to the fact.

The Wisconsin Farmer is sorry to learn that the state association has abandoned for the present the effort to put a good field man on the job. The right kind of a traveling representative, a man who could devote all of his time to Holstein interests and be well paid for the work, should be of very great value to Holstein interests. This man should be an organizer and should visit the county organizations and keep them alive with interest. He could handle the book proposition which is now before the breeders and other matters which will need attention from time to time. He should be a man free from any other interests, and broad-gauged enough to work for the interests of the breed as a whole and not for the interests of any small clique of breeders.

The Wisconsin Holstein-Friesian Association ought not to suffer from politics as so many good interests in this state have suffered. It should be an association in which every breeder, little and big, will feel he has a part.

Above all things the Holstein breeders of this state should not permit themselves to reach the self-satisfied state. There are many splendid breeders in this state. The state association should have not less than 1,000 active paid-up members. This may be accomplished when the association gives some service to its members as it is now planned to do. But what is everybody's business is sometimes nobody's business. So we believe it would pay the association to have a paid secretary. Certainly there is no other $30,000,000 business in this state which is so lacking in effective organization as the Holstein breeders. And we know of no business interest in the state which has any greater possibilities. Let the leaders in the state association be big enough and broad minded enough to work for a general Holstein organization—one which will unite all the supporters of this breed, or at least a very large per cent of them, and an organization which will join hands with every agency which is friendly and wants to help.

The Wisconsin Holstein Association will never be a great success until breeders get over the self-satisfied feeling, and unite for the common good of Holstein interests in the state. Neither will it ever be a very great success until a policy of general friendliness prevails—a policy which admits that the Holstein tent is big enough to accommodate all the good friends of the breed, and to make use of all the available avenues of support.

Wisconsin Bank Report For May.

A REPORT of the Wisconsin banking department, showing the resources of Wisconsin state, mutual and savings banks and trust companies at the close of business May 1, 1916, is very encouraging. During the year from May 1, 1915, to May 1, 1916, the resources of Wisconsin state banks increased $27,236,937.15. The total resources of Wisconsin state banks on the last named date is given as $27,704,252.84. In practically every department of banking there has been an increase.

The increased banking resources are due, in part, to the increased farming business and part to the increased business in the cities. One important factor has been the way in which the price of dairy products has kept up. The gain in cheese prices

during the past year has been a great help to the smaller banks. The manufacturing cities of Wisconsin are now in a more prosperous condition than usual. Labor is generally employed. The market for live stock and other farm products has been generally good.

Saving Feed by Pasturing Work Horses.

THOSE who are having success in operating the small farm tractor are quick to point out when pressed that the chief saving is in the value of the food fed to idle horses. In most instances where good, serviceable tractors are used an eight-horse power machine can save anywhere from four to six horses during the rush season, and it is a well-known fact that a smaller number of horses are required during the period of corn cultivation and corn husking than is needed in preparing soil for crops.

Of course, in any event, it will be many years before all our farms will be supplied with tractors, and in the meantime the question of keeping down the cost of maintaining horses is one that should receive attention. On the one hand we find successful farmers who never turn their horses to pasture until the corn crop is laid by, while thousands of instances could be cited where very good work is done even during the rush season with horses that are pastured during the night.

This matter is brought up by an Iowa subscriber who calls attention to the fact that hay is high in price in his locality and it is a scarce article on his farm. Corn is of poor quality and also high in price. He has always been an advocate of keeping horses on dry feed until the hard work is over, but he is now of the opinion that he will change his practice and turn his horses out at night. He wants to know if it will be necessary to feed more grain than if the horses were on dry feed if they are kept in good flesh. He also asks if it is as safe to work horses hard when they sweat freely, as they will when they run on pasture, as it would be if they are kept on dry feed.

This paper has always believed in pasturing work horses. On most farms grass is the cheapest food available because it requires no labor to prepare it for use. There is a real saving in allowing horses to harvest it for themselves, and even though it is succulent enough of it is consumed by the work horse during the night to take the place, in a measure, of both roughage and grain.

Even while grazing on grass that is rank horses will always consume a certain amount of fresh, tender foliage, and this is exceedingly rich in flesh-forming matter, running up in some instances as high as 30 per cent protein in the dry material.

As said before, it is bulky and one must make up his mind in advance that the horses on grass will not present the prime market condition that they are frequently kept in when they are fed dry feed, but they will do a day's work every day while running on pasture at night if they are fed a reasonable ration of grain. In many cases a considerable part of the farm work is done with brood mares and certainly the mares with their colts are better off in the pasture than they will be in box stalls. It means that the colts will be more thrifty and unquestionably a brood mare will feed her colt better if she is fed a succulent ration than she will if kept on dry feed.

The average dairy cow will return a larger profit on pasture alone than she will if fed a heavy ration of grain along with pasture. While it is true she does not labor like the work mare, still this is an indication as to the possibility of grass feeding and the mare that is pastured at night will take good care of herself and her colt and she will put in a good ten-hour day every day if fed a suitable grain ration.

Possibly under certain conditions where an exceptionally strenuous season has to be put in with the horses one might be able to do a little more work on dry feed and possibly this extra work might pay for the increased cost of the dry feed. On the average, however, the pasturing plan cannot be too strongly indorsed, because we are firmly of the opinion that it materially cuts down the yearly cost of keeping a farm horse. The plan of pasturing is especially to be recommended where the work is done with three-year-old and four-year-old horses. Their mouths, as a rule, are in bad shape on account of their shedding their teeth, and they will do much better on grass than they will on dry feed. To be sure they will sweat more freely, but a sweating horse is seldom injured save only in cases where good sense is not used in supplying water. A horse's feet keep in better condition when he runs on pasture at night, and this counts for something, not only affecting his daily serviceability but materially affecting his value if he is placed on the market when the season of labor is over.

High-Water Mark in Herefords.

SOME splendid records have been made during the hundred years of Hereford cattle breeding operations carried on in the United States. This great breed, renowned from the beginning for meat-making qualities, has been making stronger and stronger appeal to men whose endeavors have to do with the annihilation of the scrub.

Great as have been certain selling records in the past and great as has been the achievement of the Hereford at national and international shows, the crowning event of all occurred last week when Warren T. McCray, of Kentland, Ind., sold seventy-five head for the sum of $96,575, or an average of $1,287 per head. These are astounding figures but they fittingly represent the achievement of one whose knowledge of hereditary forces in breeding operations has led to the fixing of a type in Hereford cattle for which the world is clamoring.

That thirteen sons of the great Perfection Fairfax should sell for $13,300 is a most noteworthy achievement, and its significance lies in the fact that these young bulls were purchased not for speculative purposes but to stamp Perfection Fairfax qualities on coming generations of Herefords. Astounding as the average of $1,287 may seem and splendid as the record is as an achievement for Mr. McCray, it is but the stepping stone to the further greater rewards that will be realized by Hereford breeders who attended this sale as year by year improvement is wrought in those herds where cattle of the McCray breeding are introduced.

No man can accurately predict what added wealth will result from this record-breaking event. If it is an unmatched record and if it is a momentous event in the life of Mr. McCray it is of still greater importance to the Hereford breeding fraternity. The blood lines of the great Perfection Fairfax as they flow on through the generations to come will mean added wealth to thousands of breeders. These cattle, purchased at a record-breaking price, will, under proper care, unquestionably lead to fame and fortune scores of those who had courage to compete for this superior Hereford lot.

Memorial Day Cover Page.

SOME weeks ago we introduced to readers of The Wisconsin Farmer Mr. Frank J. Eslinger, of Wisconsin, a farmer who has made conspicuous progress as an artist. Mr. Eslinger drew our cover page for the issue of February 17th, taking for his subject at that time, George Washington, father of his country, whose birthday anniversary we celebrated February 22d.

FRANK J. ESLINGER.

The cover page this week was drawn by the same artist, who has found time during the stress of spring farm work to make a drawing which will carry our thoughts back to the dark days of the rebellion, and remind us of the duties which we owe to those who "died that the nation might live."

It has occurred to the editor that many readers would be glad to see a portrait of this young farmer-artist. The same is presented herewith as evidence sufficient that Mr. Eslinger is a young man of promise.

In a previous issue we expressed our appreciation of Mr. Eslinger's work and made the prediction that he will be heard from later as an artist. The Wisconsin Farmer wishes him continued success in all of his work, and we express the sincere hope that he will be so prospered that he may find time to pursue his artistic studies.

Avoid Negligence as Well as Over-pampering of Mares.

A WRITER, in a recent issue of the London Live Stock Journal, points out that in the handling of brood mares there are two extremes, negligence and overpampering, and it is sometimes difficult to say which is attended with most disastrous results. In some cases breeders leave them to "nature," as they call it, but as a general thing there is great advantage if a caretaker is present at foaling time.

According to this writer great care should be taken to discover the first signs of navel hernia or navel ill in the foal, and they should be treated at once. The former, if slight, can generally be managed without calling in veterinary aid, but if the latter disease shows itself professional assistance should be called in at once, and the greatest care be taken of the patient. The disease is a most insidious one, and very frequently proves fatal. There is not any doubt, however, that if more care were taken in its earlier stages the proportion of fatal cases would show a material decrease. Mares that work should have at least a month's rest after they foal, and the owner may take it for granted that whatever they earn in that month is more than lost in the foal. In normal weather the turning out of the mare and foal to grass is not a matter which involves a great deal of trouble. They should be turned out when the day begins to get warm and be taken in early in the evening. But in variable and cold weather, such as we have experienced this spring, the greatest care is necessary. Nothing is so harmful to the foal as standing chilled to the bone at the lee side of a hedge. He should be taken into shelter at once, even if it should be necessary or desirable to turn him out again when the weather improved. A young foal should never be left out in cold rain. Some strong foals, especially if well bred, will be keen of a gallop. Sometimes their high spirits will cause them to gallop till they are in a profuse sweat. They should never be allowed to lie on the cold ground or stand about in a cold wind when in this state. If they are, scours and swelling of the joints, and eventual worthlessness, are almost certain. The eye of an experienced man must be constantly on the young foal if the best is to be made of him.

Letting Pigs Wean Themselves.

THERE is considerable variation in the practice of swine breeders as related to the plan followed in weaning pigs. On the one hand there are those who allow pigs to run with their dam until the milk dries up, while in other cases pigs are weaned at eight or nine weeks and this is done at a time when there is still considerable milk flow. In his work entitled "Forty Years' Experience of a Practical Hog Man," Mr. A. J. Lovejoy takes up this subject, and, among other things, says:

As weaning time approaches, which should not be earlier than ten to twelve weeks, in my opinion, the feed may be lessened for the sow and more given the litter, so that the sow would gradually give less milk and have no trouble when the pigs are taken entirely away.

Some breeders have made it a practice to gradually wean the litter by taking them away for a few hours and then returning them to the mother and following this up for a few days until they are taken away entirely.

Others have practiced taking one or more of the most thrifty pigs in the litter away from the mother first, then after a few days a few others, and finally taking those remaining, believing that pigs so weaned would leave the sow in better condition and less danger of swelling and soreness of the udder.

We never have practiced this, however, during our forty years of breeding pigs. By letting the litter suckle until it is ten to twelve weeks old or a little over, the sow naturally is inclined to wean them herself and if she has been properly fed the last part of this period she will practically give no milk at the end of three months or thereabouts.

When the litter is finally weaned the sow should be given a good, fresh pasture of some kind with a little grain and she will need very little else during the next month or two or until time to begin to bring her in condition for another season's breeding.

We pastured something like forty brood sows that had weaned their pigs in May, by turning them directly into a fresh white clover and blue grass pasture where there was plenty of shade. They had no grain or slop for four months, but were given daily from a water fountain all the fresh, clean water they could drink.

They did well on this grass and water diet, but in 1914 we will feed two or three ears of corn daily to each sow, besides the grass and water, as I believe for best results they should have a little grain. The sows that were bred for fall litters ran in the pasture with the others and were removed into individual lots about a month before farrowing, where they were given a little corn and some slop with plenty of grass.

Of course, where it is the intention to raise a fall litter earlier weaning becomes an absolute necessity, but where only one litter a year is raised we are frank to confess that Mr. Lovejoy's plan appeals to us strongly. There is no time that one can make as cheap gains as during the period when the pigs are getting the milk of the dam. At such a time one can well afford to feed the sows liberally, and let it be remembered that a vigorous sow with a large litter will eat almost as much grain as a dairy cow. She will give a good account of the food consumed, however, and if she is allowed to suckle her pigs until she weans them herself there will be no setback whatever at weaning time. The pigs should have a creep just as soon as they are old enough to eat. If they have access to a grain mixture they will make exceedingly rapid gains and these, as said before, will be put on at a comparatively low cost per pound.

Thirty more pure-bred Holstein cattle were shipped from Wisconsin to former Governor W. R. Stubbs' dairy farm near Mulvane, Kan. Included in the number were three of the greatest Holstein bulls in America, which are to be used in establishing a premier dairy herd in the state.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

QUESTIONS AND ANSWERS.

Lighting by Storage Battery.

I have a fifteen-volt dynamo that I would like to use to charge storage batteries for electric light. I would like to use eight lights, burning them about one hour each night. How many batteries would be required and how could I make them, using glass jars?

Answer.—You would require a ten-volt, 120-ampere hour storage battery. We doubt that you could make the battery successfully. If you wish to try obtain a book on storage batteries from a book dealer.

Strength of Electrolyte.

I would like to ask you a question in regard to my storage battery. What is the reason the cells in a battery do not test nearly the same? I have a battery in which one cell tests 1.3 when fully charged, and the other two test 1.26. What is the cause and the remedy?

Answer.—There is a little more acid in the first cell than in the other two. All three cells are all right, the slight difference in specific gravity not being a sign of trouble. The specific gravity should not exceed 1.4 or fall below 1.2 when the battery is fully charged.

Power of Engine.

I have an Argo roadster. The motor has a bore of two and five-sixteenths inches; stroke, four inches; four cylinders. What is its horse power? What is the advantage of a muffler cut out?

Answer.—Your engine would be rated at [illegible] horse power by the A. L. A. M. rule. A muffler causes some back pressure which reduces the power of the engine. The muffler cut-out enables the driver to allow the engine exhaust into the open air without the exhaust passing through the muffler, thereby giving the motor more power. On account of the noise of the free exhaust the cut out is seldom used except when starting.

Ford Differential Pins.

There are thrust plates on each side of the differential of a Ford car. It sometimes happens that these plates wear considerably. The pins also wear so much that sometimes the plates drop down on the roller bearing. Please tell me how to remove the old pins and put in new ones. On which side does the thirteen-thirty-second pin belong, and on which side the seven-thirty-second pin?

Answer.—Grip the projecting part of the old pins in a vise and pry up on the housing to remove them. If impossible to remove them in this manner file them off level with the housing and drill them out. After removing the old pins drive in the new ones. Both pins are thirteen-thirty-seconds long.

A Small Tractor.

I have the frame of a little tractor or auto that I made myself. It has a steering gear similar to that of a Ford car. We are thinking of buying a three-horse-power gas engine to pump water. I think I will mount it on the above frame, making a truck out of it, using mower wheels for the drivers. Are they all right? I would like for it to run ten miles per hour. Which will be the better, a belt or a chain from the engine to the jackshaft? I will have a small sprocket on each end of the jackshaft to drive the drive-wheel sprockets. How large a sprocket wheel must I use on the drivers and what size should the small sprockets be to speed the truck at ten miles per hour if the engine pulley is eight inches diameter and runs at 350 R. P. M.? How much will the truck haul?

Answer.—It would be better to use a chain from the engine to the jackshaft. You could use a belt if you mount the engine on skids so as to keep the belt tight. You will require a friction clutch either on your engine or on the jackshaft. The outfit will be very hard to steer without a differential. The mower wheels will be all right for your truck. Ten miles per hour is too high a speed for such a truck. Five miles would be high enough. In fact, the outfit on the road would soon jar itself to pieces even at five miles per hour.

You did not give the diameter of your mower wheels. If they are thirty inches in diameter you can use the following arrangement for a speed of ten miles per hour. Use a pulley on the jackshaft the same diameter as the engine pulley. Use fifteen-tooth sprockets on the jackshaft and forty-five-tooth sprockets on the drive wheels. If you wish to reduce the speed to five miles per hour use the same sprockets, but use a sixteen-inch pulley on the jackshaft. The outfit should pull about as much as one horse working at the same speed.

Burnt Out Lights.

Please tell me whether an electric light bulb on an automobile can be cleaned after it is once burnt out.

Answer.—It cannot. The black inside the bulb is the remains of the filament, which was destroyed. When a lamp burns out the filament vaporizes. The light cannot be repaired.

Noisy Timing Gears.

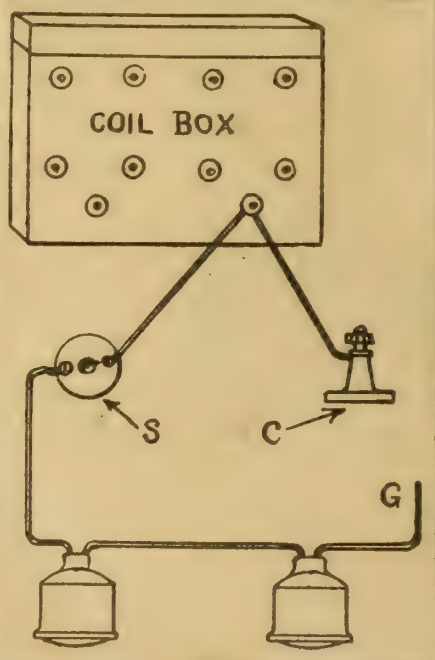
We have a 1913 Model R. C. H. car. The timing gears that drive the magneto clatter very badly. Will mixing clean sawdust with the grease remedy this annoying sound? Would the sawdust have a bad effect on the gears? If it would, what would you advise me to do?

Answer.—The clatter is due to the gears meshing too loosely. About all that can be done is to obtain a new set of gears. Even a new set of gears will not run quietly in a motor whose bearings are worn. Sawdust is a good gear silencer and would have no bad effect upon the gears themselves, but it might interfere with the lubrication and cause a bearing to burn out.

Ford Lights.

Can an Atwater-Kent ignition system be operated with current from a Ford magneto? How would it be connected? Please give diagram showing how the lights are connected on a Ford car. Is it necessary to loosen the rear system in a Ford car to remove the power plant? On an Overland the rear axle is placed above the lower half of the spring. What would be the best way to remove the rear system from this kind of a car?

Answer.—The Atwater Kent system can be operated by current from the Ford magneto. The figure shows how the lights are wired. C is the magneto contact post, S the switch on the dash and G the lamp wire grounded to the frame or radiator. The ground wire should be soldered to the radiator or frame. The dealer



will give you directions for installing the Atwater-Kent system. It is not necessary to loosen the rear system in order to take out the power plant. When removing a rear system it is often easier to leave the springs on the rear system, disconnecting them at the spring links or shackle or at the spring bracket on the frame. A positive rule cannot be given, as much depends upon how the car was assembled.

A Sulphated Battery.

I have a six-volt, forty-ampere storage battery that has given me a great deal of trouble. It had a short circuit inside of it, which I had repaired. It seemed to be all right. Last fall I took it out and put it where I know it did not freeze. Now it seems to be dead. What would you advise me to do with it?

Answer.—A storage battery should be given a small charge every two or three weeks even if not used. An idle battery slowly discharges itself and chemical action takes place. One result is the deposit of a white powder known as "sulphate" on the plates. The sulphate keeps the electrolyte away from the plates and, therefore, prevents the battery from acting.

Put your battery on charge and give it a good overcharge. See that the electrolyte covers the plates and that it tests about 1.23. If the battery will not charge all that can be done is to remove the plates and scrape off the sulphate.

Carburetor Adjustment.

I have a Model R. Schebler carburetor on my four-cylinder car. Since I have had it repaired, the carburetor is out of adjustment. Please tell me how to adjust it so that it will pick up rapidly and give power to the engine. The carburetor leaks at the air inlet. What is the reason?

Answer.—The first thing to do is to stop the leak. It may be that there is a little dirt or lint under the float valve that prevents the float valve from seating. It may be that the cork float is soaked with gasoline, in which case a new cork is needed. It may be that the arm of the float is bent. Before you can adjust your carburetor it is necessary to have the float valve seat gasoline tight and the gasoline level in the float chamber about one-eighth inch lower than the end of the needle valve nozzle—spraying nozzle.

Having attended to these points, get someone to drive your car while you sit on the running board and adjust the carburetor. It is necessary to have the engine under load when adjusting the carburetor. Vary the amount of air by changing the tension on the auxiliary air valve spring and vary the amount of gasoline by screwing the needle valve in and out. If the exhaust is sooty there is too much gas for the amount of air. It requires patience, good judgment and "knack" to properly adjust a carburetor. Holding up the auxiliary air valve with a pencil will often tell whether or not too much gas is used. The motor will speed up for an instant if the mixture has been too rich.

Why Take A Chance?

WHEN you buy your grain binder this spring, do not make the mistake of experimenting with an untried or cheap machine. You cannot make money that way. A binder is useful for one purpose only—to get all the grain cut and bound in the short time allowed for the harvest. That is no time to risk experiments, especially when you do not have to. Choose your binder from one of the old reliable, yet up-to-date in every way, **International Harvester** binders sold under the trade names—

Champion Deering McCormick
Milwaukee Osborne Plano

You will find practical farmers, who know what particular harvesting difficulties they must overcome each year, urging the use of some binder with an **IHC** name. Years of building and betterment have resulted in these machines that insure as complete a harvest as it is possible ever to get, even under worst field and grain conditions.

Look for the same high-grade workmanship, the same famous **IHC** quality in **IHC** twine. Make the most of your crops. Your local dealer can furnish you with **IHC** binder repairs and twine. See him or write to us for information.

How to Establish Flock of Sheep.

Frank Kleinheinz, in Wisconsin Experiment Bulletin, Gives Pointers on Getting Started and Profits to Be Expected.

IT HAS never been disputed that sheep are of great value on the farm. Some men who have had years of practical experience with sheep and have raised a flock in connection with other classes of live stock, declare that they have derived the largest and easiest income from sheep. From the standpoint of profit they consider: First, the small sum of money required for the establishment of a flock; second, the small expense incurred in building suitable shelter for sheep; third, the little care sheep require in the summer, during the farmer's busiest time; fourth, the extermination of weeds on the farm by the sheep; fifth, the enrichment of the soil on which the sheep graze by the even distribution of their manure, which is much value to the land; sixth, that with present prices of wool a breeding ewe ought to pay for more than her keep and that her lamb or lambs are their net profit; and seventh, that since the demand for them is ever growing stronger, mutton and wool are constantly increasing in value.

SHEEP PASTURING ON CLEARED LANDS IN WISCONSIN.

One of the greatest advantages that Upper Wisconsin offers to the settler who raises sheep is the nearness of the market. Within one night's run or even less, sheep can be placed on the Saint Paul market. The Chicago or Milwaukee markets can be reached from the most distant part of the state in thirty hours. Because of the near-by markets, sheep do not have a heavy shrinkage in weight as when they are shipped from a greater distance. The additional advantage of not having to unload to feed and water while on the way to market is found in the short haul.

If the settler intends to engage in sheep raising for the mutton and for wool production a good start can be made with inexpensive females. The offspring can be improved rapidly by the use of a pure-bred sire. In the fall young breeding ewes of the Merino type from the western ranches can be purchased on the market for from $5 to $8 a head. These ewes are very hardy and should be mated to a pure-bred ram of one of the leading mutton breeds. This gives a cheap and also a profitable start. Western ewes are generally good mothers and producers.

The old saying that "the ram is half the flock" is true. No inferior ram ever helped in the improvement and upbuilding of a flock. When scrub rams are used the flock always degenerates. Flockowners should use only good rams, since they are the only kind that are profitable. The owner will be repaid many fold for a few dollars spent in the purchase of a better ram. The following season he will have a better crop of lambs.

It is not a good practice to use ram lambs for breeding. The ram lamb should be given time to develop and get his growth. A ram should be a year and a half old before he is used for breeding purposes. This age also holds true for the ewe lambs. Ewes should never be bred until they are past a year old. In order to secure the best result and the strongest lambs no ram should be bred to more than fifty ewes in a single season.

Each year before the breeding season the ewe flock should be carefully culled. All the old ewes which have lost some of their teeth should be fattened as much as possible and sold to the butcher. The younger ewes that have proved poor mothers or poor milkers, raising only tiny lambs, should also be removed from the flock and sold. Only the best ewe lambs from each year's crop which show the most promising mutton form should be kept to take the place of the unfit ewes.

The settler who goes to Upper Wisconsin should begin with a small flock. It is not a wise plan to buy large numbers of sheep to make a start. It is far better to start with a small flock and then to gradually let the flock grow in size as the settler's knowledge of the sheep grows.

A large flock should not be maintained unless there is a competent man to care for it. Many settlers who have started with large flocks and without experience, have, in a short time, had but a small flock left. With a large flock kept together sickness is far more likely to break out than in smaller flocks. Sheep multiply rapidly, and a large flock can soon be raised from a small beginning, thus requiring a smaller capital to be invested.

Many of the more successful settlers say that in order to have a good dairy farm in the upper part of the state, it is necessary to have sheep first to clear the land and put it in shape for dairying.

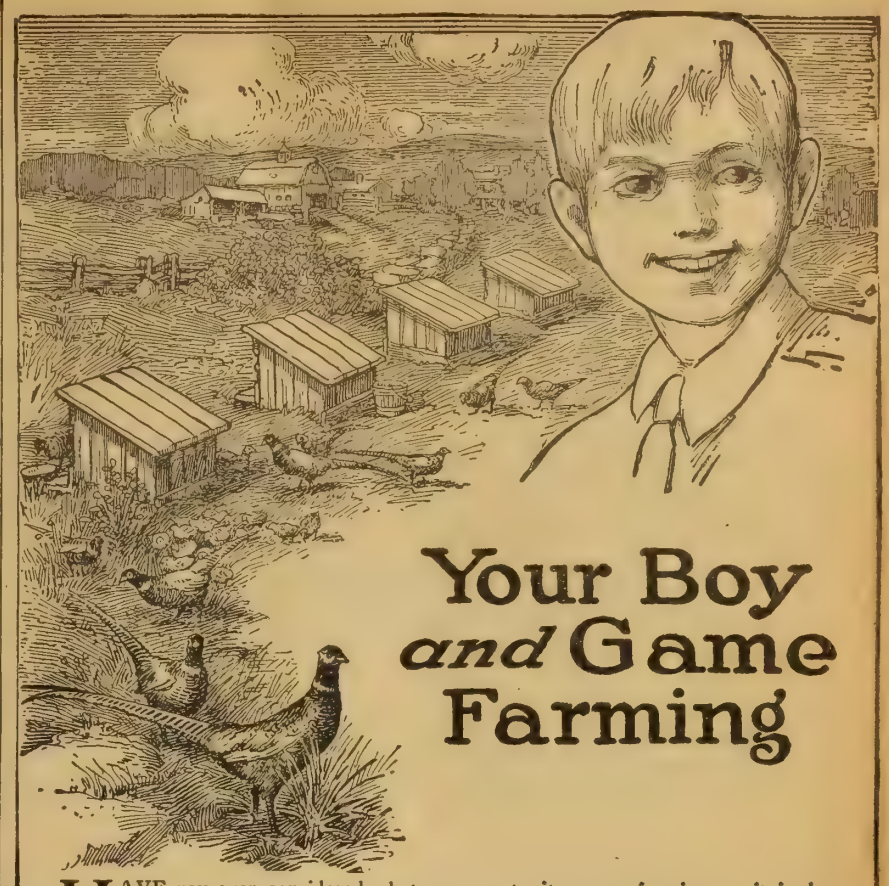
Although sheep do excellent work in clearing land of the brush, it needs to be remembered that sheep will not thrive and do well on a diet of brush alone. When sheep are used solely for clearing land a little grain of some kind should be fed with the brush ration. When the sheep have an opportunity to eat grass as well as the brush no grain is needed.

WHEN USED FOR LAND CLEARING SOLELY, SHEEP SHOULD ALSO BE FED A LITTLE GRAIN.

Many of the northern sheepmen buy a bunch of sheep in the spring, graze them during the summer, and send them to market in the fall. Others are finding it profitable to retain a flock of breeding ewes during the winter and sell the lambs in the fall.

During the early spring and late fall if the flock is allowed to graze along the roadsides and in fence rows, considerable useless vegetation which harbors insect pests will be destroyed. A small flock will do much toward cleaning out the fence row, and if fed some grain will fatten while doing it.

Fences can be built in Upper Wisconsin for less than it would cost in many other parts of the country. In many instances the settler can cut all the posts needed on his own land. A fence made of four-foot closely-woven wire, with two or three barbs on top, and one barb at the bottom to keep the dogs from digging underneath the woven wire, will keep the sheep in and will also prevent any dogs from getting in and molesting the flock. The fence will not cost as much to construct if a thirty-six-inch woven wire is hung on posts twenty feet apart. This fence will keep the sheep from straying. Such a fence, however, will not keep dogs or an occasional wolf from attacking the sheep. A good fence, while costing more in the beginning, does service for a much longer time than does one which may be more cheaply built.



Your Boy *and* Game Farming

HAVE you ever considered what an opportunity game farming, as it is developing in this country, affords your boy? It offers him a splendid chance to show his worth, increase the value of your farm, and, what is most important to him, earn extra pocket money.

Thousands of ambitious, industrious boys on American farms are playing a big part in the intensive development of our agricultural resources. Game farming falls right in line with their activities.

Profit and Pleasure in Game Farming

This is a profitable and pleasant industry for you and your wife as well as your children.

The breeding of game birds is profitable from a marketing standpoint. The demand for eggs and for breeding stock is much greater than the supply, and will be for years to come. Pheasant eggs, for instance, sell today at from $20 to $25 a hundred. Live birds bring from $5 to $7 a pair.

It will, at small expense in time and trouble, supply you with an abundance of food for your own consumption. Pheasants, wild turkeys, and other birds forage much of their own food and require comparatively little attention.

Game farming will provide more shooting for you and for everyone, for it is a fact that game raised for sporting purposes cannot be confined in any restricted area. At the same time those who own large acreage, or who pool their land with others, get profit from those who pay for sport.

If you yourself haven't the time to devote to game farming give your boy a chance at it. You put up the money—and it won't be much. Let him contribute the work. You will find the combination a good one.

Write today, or let your son write, for the booklet, "Game Farming for Profit and Pleasure." You will find it well worth reading. Please use the coupon below.

Better Built
Warmer Farm Buildings

—and at same cost as frame—made possible with Denison Hollow Blocks. 25 per cent stronger than ordinary blocks. Note the *two* webs. *They double the strength.* Note the *three* dead air spaces. *They perfect insulation.* Keep out cold in winter. Keep out heat in summer. Any farm building made of

DENISON
Hollow Clay Blocks

(No. 20) save money in feed bills because the animals fatten quicker—yield more profit when comfortably housed. Fireproof—everlasting—permanent. Write us today for complete details and name of your nearest dealer.

Mason City Brick & Tile Co.
Mason City, Iowa. Dept. L

Furnace Heat Without Pipes

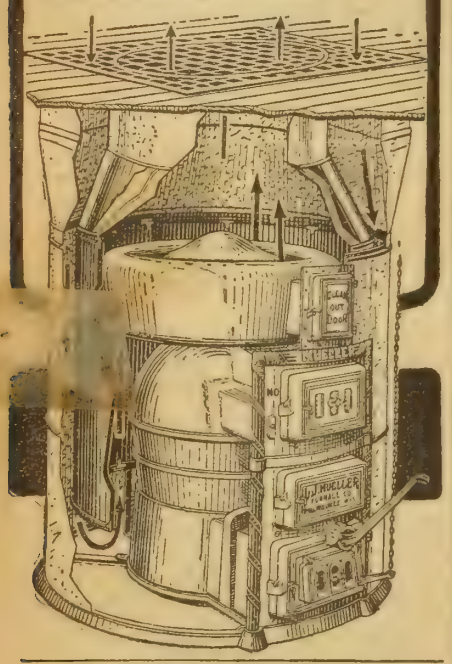
HEAT your whole house from the cellar, through one register, without the waste and woe of pipes. Save work—discomfort—dirt, trouble. Cut your fuel bills 25%—keep your rooms properly ventilated. The Mueller Pipeless will do it for you. It's a **real furnace**—guaranteed—and costs one third to half less than pipe furnace or hot water system.

MUELLER PIPELESS FURNACE

Substantial, practical construction insures heating efficiency and long life. Goes in any size cellar—if there's no cellar under your house just dig a pit for it. Lessens fire dangers—leaves cellar and contents cool. Write for our **Free Book.**

L. J. Mueller Furnace Co. 204 Reed St Milwaukee, Wis.

Makers of heating systems of all kinds since 1857. Can supply you with regular hot air pipe furnaces, steam or hot water boilers and Vapor heating systems. Give you honest advice on your heating requirements.



CHIEF SUNSHINE

Hog House Windows

Latest improved and best windows for YOUR hog house. Scientifically designed by window specialists Made of galvanized steel-- can't rot or rust---will not leak---need no paint, no repairs--- good for lifetime service. Fit any hog house. Easy to install.

Give Your Pigs a Chance

Let them have the warming germ-killing sunshine right in their pens. Sunshine means hog health, more vitality, quicker growth, more profits for you. Absolutely necessary for the best growth of young pigs. Install Chief Sunshine Windows now and insure your pigs sunshine every day. Successful hog-raisers everywhere recommend them.

4 Blue Prints Modern Hog Houses FREE We furnish you, FREE OF CHARGE, four complete plans of latest type hog houses. Detailed information and full specifications prepared by experts in hog house designing. All the modern features you want for best results with hogs. Plans show Chief Sunshine Windows in use. Write for them. They are worth money to you.

Barn Windows We specialize on modern windows for all farm buildings. Chief Sidewall Windows for barns, poultry houses, work shops, garages, etc. Chief Ventilating Windows for dairy and stock barns. Write for full information today. Also Chief Cupolas for any bldg.

In and Around Wisconsin

Breeders' Associations Planning Summer Meetings Which Will Be Held in Most Instances During Month of June.

The grand stand on the Ashland County Fair grounds at Ashland was blown down during a recent wind storm and the board estimates the damage at $700. The county board recently appropriated $1,500 aid to the fair.

J. W. Hutchinson, president of the Portage Prairie Holstein-Friesian Association, advises that the summer meeting will be held June 17th at Bonnie Meade Stock Farm, two miles from Randolph, Wisconsin, and a large attendance is expected.

E. A. Schiller, of Beaver Dam, secretary of the Calmus Holstein Breeders' Meeting, writes The Wisconsin Farmer that the association plans to hold a summer meeting some time in June, the day yet to be set. J. R. Wheeler, of Columbus, has been invited to speak.

The Fox River Valley Guernsey Breeders' Association has chosen June 7th at the farm of Edward Lawrence & Son, Appleton, for its summer gathering. A stock-judging contest at 10 o'clock will feature the forenoon session and in the afternoon George McKerrow will speak.

The Inter-County Guernsey Breeders' Association will hold its summer meeting at the farm of William Harmon, Arkansas, Wisconsin, on June 8th. W. M. Pace, secretary, advises that the association now has twenty active members, all of whom are using pure-bred sires, while several have a number of pure-bred females.

The Eau Claire County Holstein Breeders' Association will hold its summer picnic on June 16th at the Silver Springs Farm of George H. Comings at Eau Claire. Prof. G. C. Humphrey will be the principal speaker and will also conduct the judging contest in the forenoon. This is open to any person in the county.

The summer meeting of the Kewaunee County Holstein Breeders' Association will be held Sunday, June 25th, at the Foot Bridge Pavilion, Kewaunee. The association now has forty members and an enjoyable meeting is anticipated.

Polk county Holstein breeders are planning a trip to St. Paul and Stillwater on June 13th to see various farms and an enjoyable time is anticipated. The association is also considering holding a picnic some time this summer.

The Polk County Fair Association has chosen September 19th-22d as the date for the fair at Balsam Lake and have elected J. A. Mack president; H. F. Taylor, vice president; E. J. Iverson, secretary, and E. J. Day, treasurer.

The Monroe County Guernsey Breeders' Association will meet jointly with the other breed associations on June 17th at the Indian school farm at Tomah. The western Wisconsin Holstein breeders and the Monroe county Jersey breeders will co-operate and a big crowd is expected.

Three local potato growers' associations have been organized in Rusk county this spring for the promotion of the potato industry in that community. The associations and their secretaries are at Bruce, Ed Stahl, secretary; at Ladysmith, A. A. Hadden, secretary; at Weyerhauser, John Hurless, secretary.

R. A. Kolb, county agent of Taylor county, is warning the farmers not to be discouraged over the 1915 corn failure, as it is a good crop, even in Taylor county. This county now has 100 silos, but Mr. Kolb says it should have 200 and suggests to every farmer that he insure his corn crop by building a silo this year.

The fruit acreage in Bayfield county is being largely added to this spring with the planting of hundreds of acres of fruit trees in different parts of the county. Apples, cherries and plums are being largely planted and a few growers are experimenting with peaches and pears. The county now has some of the largest commercial orchards in the state.

There are indications that the strawberry crop on the peninsula will be a large one this season. The heavy snows of the past winter protected the vines and if weather conditions are right during the blossoming stage a record crop will be harvested. The Bayfield district is coming to the front as a strawberry center and the past few seasons more than 100 carloads of fruit have been shipped.

The summer meeting of the Waukesha County Guernsey Breeders' Association will be held on Friday, June 2d, at the farm of Roy Burton near Eagle. The Guernsey breeders hope to make this gathering the largest in the history of the association.

The picnic of the Washington County Holstein Breeders' Association will be held June 20th at Cedar Lawn Farms in the town of West Bend.

The Stevens Point Fair Association, co-operating with J. M. Coyner, county agricultural representative, has announced plans for a calf-growing contest. Prizes will be given to the best four calves shown at the county fair September 12th-15th. The first prize will be a pure-bred heifer calf of any breed the winner selects.

Farmers in the town of Empire, Fond du Lac county, have organized the third cow-testing association in that county with Wesley Keys as president; C. Schroeder, vice president, and E. A. Quick, secretary and treasurer. The other two associations are in the town of Alto and the town of Forest and it is planned to form associations in the near future at Rosendale and Eldorado.

The annual stock show which will be held at River Falls, Pierce county, on June 2d, promises to be the largest and best ever held. Cash prizes have been offered for the best three animals in each class and several new features have been added to make the show successful. Merchants plan to close their stores for a few hours during the afternoon in order to get acquainted with their farmer customers.

The Northern Wisconsin Guernsey Breeders' Association will meet jointly the last week in June with the northern Minnesota breeders at Island Farm, Island, Minn., a few miles from Duluth. The exact date has not been chosen at this writing. W. H. Caldwell will be the principal speaker and a big crowd is anticipated, as it is planned to run a special train from Duluth to accommodate members and guests.

Manitowoc county Holstein breeders hope to make the annual picnic on Sunday, June 18th, the largest gathering in the history of the association. This meeting will be at Lindsted Farm, Manitowoc, and F. B. Fries, of Richland Center will be the principal speaker. More than 600 attended the meeting last June and the accessibility of Lindsted farm, which is reached by the interurban, should draw a big crowd.

The Western Guernsey Breeders' Association will meet jointly with the Southwest Guernsey Breeders' Association on Thursday, June 1st, at Livingstone, Grant county. The meeting will be held at the farm of Dale E. Rundell and an invitation is extended to all who are interested in the breeding of Guernseys. The meeting will be addressed by Dr. M. B. Wood, of Mankato, Minnesota, on "1904 and 1916," and by Brian L. Rundell, of Hammond, Wisconsin, on "A Beginner's Experience." There will also be a color judging demonstration and a scoring contest with prizes to the winners. Livingston is on the C. & N. W. R. R. and a morning train for Livingston leaves Madison at 7:20 a. m., arriving in Livingston at 10:20, and the program will start immediately after the arrival of this train. Those who desire can leave Livingston at 2:55 p. m., arriving in Madison at 5:40.

Silo and frame work of new barn of Dr. C. L. Pickering, of Muscoda, Grant county, photographed during construction. This shows the class of improvements being made on southwestern Wisconsin farms.

Where Clover Has Winterkilled.

Mixed peas and oats will make a good crop on land where clover has been winterkilled, according to R. A. Moore, of the Wisconsin Agricultural Experiment Station. Sow at the rate of two bushels of oats and one bushel of peas to the acre. Cut when the oats are fairly well headed out and before they turn yellow. This combination will make good hay, Mr. Moore says. On heavier soils of Wisconsin Mr. Moore recommends the German, Hungarian or Japanese millets as a good catch crop.

Statistics show that the number of automobile accidents is decreasing steadily as compared with the number of machines in use.

Weather Is Still Too Cold and Wet for Crops.

Continued Cold Weather Is Retarding the Growth of Grass and Small Grains. Heavy Rains Have Delayed Farm Work and High Winds Have Caused Some Damage to Young Crops.

WISCONSIN.

Barron County.—This is the latest spring for many years. Considerable seeding is to be done yet, and no corn or potatoes have been planted. There will be the usual acreage of both of these crops. Snow protected the wintea grain, pastures and meadows and they are looking good now. Hay is very scarce and selling at from $10 to $15 a ton. A large number of small pigs were lost this season.—Wm. Bartlett.

Burnett County.—Weather continues cold and severe. Winds from the west have caused much damage to crops on light soils. All small grain is sown and farmers are ready for planting corn. Pastures are in fine shape. Winter wheat is good. Fruit trees are rich in blossom, but there is danger from frosts.—E. H. Johnson.

Chippewa County.—Nearly all small grain is up and looking good. Cold rains are holding back the hay and grain. Only about 10 per cent of the corn is planted. Late potatoes will not be planted until after the corn. Early potatoes have been planted about two weeks, but are not up on account of the cold, wet weather. Small grain, sown on sandy spots, was slightly damaged by recent heavy winds. Cattle are in very good health, but the long, hard winter has not left them in the best condition. Pastures are slow and the stock cannot get on to them. About 85 per cent of the small pigs are being saved and hogs are in good health. The bad weather keeps back the young pigs. The number of calves has been reduced by losses from scours and other ailments.—Jas. A. Smith.

Crawford County.—Winter wheat crop is fine. Meadows, pastures and oats are all good. Not many early potatoes are grown; late potatoes have not been planted yet. The principal crops will be corn, oats, wheat and hay. Fruit prospects are good. The percentage of young pigs saved is above normal. Dairymen are having good luck with their calves.—George Ashbacher.

Dodge County.—The heavy rains have not damaged the small grains much except in the low places. Early-sown barley and oats looks good; the late sown is not out of the ground yet. Very little corn has been planted, and only the early potatoes are in. Most of the farmers have turend the cattle out on pasture, but the grass is extremely thin. If the weather does not turn warm soon, pastures will be short all summer.—E. R. Fredrich.

Eau Claire County.—Oats and barley were covered with sand from the wind storms of May 8th and 10th. Clover is doing well; the old seeding has a good sod, but does not grow rapidly on account of the cold weather. Rye is doing well; only a small amount was sown. Early potatoes are coming up. Most of the corn will be planted soon. Pastures are short. Farmers are saving about 80 per cent of the young pigs. Only about 50 per cent of the calves are raised and the rest of them are vealed. —C. A. Koll.

Florence County.—Weather is cold and backward, with occasional freezes. Only part of the seeding is finished. The principal crops will be hay, oats and potatoes; some wheat will be raised, but practically no corn. There are a good many spring pigs. Most of the dairy cattle here are Holsteins.—Phil Kelmes.

Green Lake County.—Corn planting has been delayed on account of cold, wet weather. Small grain is doing well. Young pigs are about 85 per cent of a normal crop. Young colts are below average.—Geo. Wiedman.

Iron County.—Weather is cold with heavy winds. Meadows and pastures are very poor. Small grain seeding has started and early potatoes have been planted.—J. A. Becker.

Jackson County.—Spring seeding is about finished. Heavy rains have stopped work on corn ground. Wheat is about 90 per cent normal. Clover is less than 10 per cent normal, because of heavy ice on the ground in February and March. Timothy meadows are probably about 80 or 90 per cent normal. Rye is in fair condition. Many small pigs were lost this spring. Lambs are doing well.—J. P. E.

Juneau County.—Spring is wet and cold. Small grain went into the ground late and is not doing its best. Recent high winds have seriously damaged the grain on exposed sandy soils. Ground is too wet for plowing for corn, and no planting has been done yet. Fruit blossoms are just coming out and fruit prospects are fair.—J. H. McNown.

Kewaunee County.—Cold, wet weather has delayed grain seeding. About three-fourths of the grain is sown. Early sown oats and barley is up and looks good; rye looks fair, but wheat winterkilled badly. A great deal of clover in the old meadows is killed, and pastures have not advanced enough for grazing. Losses in young pigs have been considerable. No great losses in calves have been reported; early colts have done fairly well, but there were two cases of navel trouble which proved fatal. Several cases of blackleg have been reported among cattle.—Fred Lutz.

Lafayette County.—Oats and barley are backward because of cold weather. A large acreage of small grain was planted this spring. Pastures are beginning to look good. No corn is planted; farmers are waiting for more favorable weather. Clover is good, most of the new seeding came through the winter in good condition. Meadows are backward and need warmer weather. There were many small litters this spring and many of the pigs died. Several farmers have lost calves on account of white scours. One of the largest barns in this county was struck by lightning on May 8th, and several pure-bred Holstein cows were killed.—W. F. Pease.

Manitowoc County.—Season is late, cold and wet, with little sunshine. Most of the spring seeding has been done. Winter rye looks good, but much wheat winterkilled. Preparation of ground for corn is beginning. Clover that was cut last year winterkilled, also some of last year's clover seeding. Pastures are late and many farmers are getting short on feed.—Edward E. Straka.

Marinette County.—The season is very backward, and farmers are not more than half done sowing small grain. Corn and potato land remain untouched. Heavy rains have soaked the fields badly. Weather is windy and cold and fields are drying up very slowly. Grass is turning green and pastures are starting. Cattle have just been turned out. Hay is scarce because cattle were stabled so long.—H. B. Pederson.

Oneida County.—Weather has been quite cold, with heavy rains on the 14th and 15th. Alfalfa came through the winter in good shape and is now about two inches high. Practically all the small grain is sown. Fields that were sown first are beginning to look green. The grass seeding was damaged by high winds on the 8th and 10th. Pasture is fine and the new seeding promises a good crop. Corn planting has begun and a few potatoes, also, have been planted. Farmers as a rule are having poor luck with young pigs. —Clyde Burkhart.

Outagamie County.—Winter wheat is almost a total failure; winter rye is about 50 per cent of a crop. Heavy rains have delayed seeding. Meadows look poor and some of the clover is killed out. Fruit trees are just blossoming. Pig crop has improved lately and is now about 60 per cent normal. Young colts are not in good condition; about half the early colts were lost.—Henry Lepplu.

Polk County.—Spring is very cold and backward, with much wind and rain. All small grain and some potatoes are planted. Meadows are in good condition;

(Concluded on page 16.)

The Use Of Hercules Dynamite On Farm, Orchard and Ranch

See the State Land Clearing Demonstration

YOU have undoubtedly heard of the demonstration in land clearing which the State Special Excursion is giving. These demonstrations will be of great value to every Wisconsin farmer who attends them.

You owe it to yourself, your family, and your farm, to be present at the demonstration given near you. Find out when and where it will take place.

You will receive visual proof of the remarkable results which may be achieved by the use of dynamite in felling trees, stump removing, rock blasting and drainage work. You will realize why dynamite saves time, labor and money in work of this kind.

In addition to seeing the demonstration write us for a copy of "Progressive Cultivation". It will be sent free on request. It tells in detail how to use Hercules Dynamite to the best advantage on your land. Write for your copy today. Please use the coupon below.

HERCULES POWDER CO.

Please send me a free copy of your book, "Progressive Cultivation." I am interested in Dynamite for

_____

_____

_____

Tree Planting

The two illustrations above show fully the value of using dynamite in planting trees. These drawings are exact copies of photographs of two trees planted at the same time and in the same orchard. The one on the left was planted in a spaded hole, the other in a dynamited hole. The growth and development of the latter is almost twice that of the former. This difference always shows when Hercules Dynamite is used.

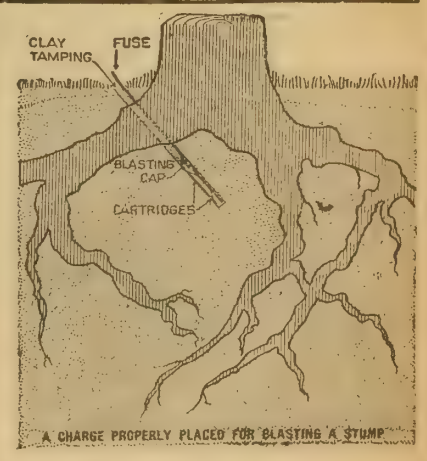
The ground is thoroughly broken up. The roots have a chance to spread in a natural manner. Also the work of planting is done more quickly and at less expense. In "Progressive Cultivation" are given interesting details with regard to the use of Hercules Dynamite for tree planting. Are you familiar with the method and its results?

Stump Blasting

Every man who has had experience in pulling stumps *without* the aid of dynamite knows only too well the amount of labor and time involved.

When you have land to clear, use Hercules Dynamite. You not only save labor and time—and, as a result, money—but you also thoroughly break up the subsoil and very effectively prepare the land for cultivation.

The diagram given shows the best way of removing one kind of stump, that with matted, spreading roots. When dynamiting a stump with a tap root the charge should be placed differently to get the best results. "Progressive Cultivation" tells just how stumps of various kinds can be most readily removed.



A CHARGE PROPERLY PLACED FOR BLASTING A STUMP

Drainage Work

The draining of swamps and ponds can be done better with Hercules Dynamite than by any other means. There are several ways in which dynamite may be used. We have room to illustrate only one of them — the crater method. By this method the hard soil forming the bed of the swamp is broken up and the water drains off through the loose stratum below.

In "Progressive Cultivation" full details with regard to drainage work with dynamite are given.

BLASTED CRATER FOR DRAINING SWAMPS AND PONDS

Success on Slashing in Langlade County.

Ten years ago Anton Greisinger, full of ambition, energy and willing to undergo the many privations of the settler, began farming on a 120-acre slashing in Langlade county, Wisconsin. With only a small amount of capital to start him our readers, especially those who have pioneered, can calculate for themselves the task he undertook, but today he is the owner of a fine Guernsey herd on this very same slashing; is quartered in a nice, comfortable home with good farm buildings and, as Mr. Greisinger says, he has "no one to blame except the cows."

What this Langlade county pioneer has accomplished during the last decade hundreds of farmers are accomplishing today in every county in Upper Wisconsin. Never was there more interest in this section than there is at the present time, and everywhere the settler's cabins can be seen going up in the slashings which cabins, like the experience of Mr. Griesinger, will give way in a few years to more modern homes and farm buildings.

Mr. Greisinger made his start with a few scrub cows, which were about the only kind to be found in that county ten years ago, but by intelligent breeding and careful management he has been able to breed up his herd and make it one of the best producing herds in the county cow-testing association. The resutls are that on the Greisinger farm on Route 1, out of the village of Bryant, are today twenty-four good producing grades in addition to two pure-bred females which he has imported. The pure-bred sire has made this all possible for at the first opportunity after settling on his slashing he bought such a sire and has used only a pure-bred since then. He now has his third pure-bred sire and he is going on four years of age.

The accompanying illustrations show the Greisinger home and farm buildings which he says the cows have made possible. The buildings to the left would do justice to the more settled counties in many older states and it is all the more remarkable that this result should be attained in ten years on a slashing that once was considered useless and of little value as a farming proposition. To the extreme right are shown the original buildings that went up when he settled on this place, and in time they will pass away as the cows make it possible to add additional equipment.

The oft-heard statement that dairying will make Upper Wisconsin seems to be borne out by Mr. Greisinger's experience as he found it a sure method for success and, situated near a factory for selling his raw product, he discovered the monthly cream check far more than convenient. With dairying has gone the general grain farming required on a dairy farm, and each year he has cleared a little more of his 120 acres so that the income might be raised by an increased acreage.

When it was proposed to start a cow-testing association in that county, that the owners might know just what the cows were doing for them, he was ready and willing to join. He had found that no farmer is rich enough to keep poor-producing cows, especially a settler who has to make both ends meet in addition to squeezing out enough for permanent improvements, etc. So he joined, and during 1914 he had twelve grade Guernsey cows in the association and under test. Of these four were two-year-old heifers which gave a good account of themselves, and his aged cow returned him a profit of $96.

Mr. Greisinger's total income for the year from these twelve cows was $981.82 and the net profit amounted to $641.64, or better than $51 per cow. The feed bill for the year totaled $340.18. Two of the cows, one of which made the $96 net profit, finished the year with very nice records, 444.1 pounds of fat for one and 408.1 pounds for the other. Of course, these two brought up the average but it is easy to figure that the others did well or the average profit of $51 and over for the twelve head could not have been maintained.

No obstacles seemed too great for Mr. Greisinger, and in spite of the fact that during the year these twelve cows were under test he was without silage of his own he hauled pea silage a distance of eight miles to feed his herd. This he got from the local canning factory, and paid the sum of $2.50 a ton for it. His feed was largely clover hay and a ration suggested by the tester at that time, J. J. Schmidt, but Mr. Greisinger figures now that he did not feed enough grain. Had he fed more grain he believes his production record for the year would have been much better.

The 1915 corn was caught by the frost, so in filling his new silo last fall Mr. Greisinger filled the top half with second cut clover, the corn only half filling it. He fed this silage during the winter and reports that it worked fine and that the cows relished it. Many told him he was foolish to run clover in on top of his corn, but he had the clover; realized the value of silage and therefore took the risk, much to his benefit. The clover was cut up with the feed cutter and run in on top of the corn without water.

Perseverance proved a big factor with Mr. Greisinger and in his own words: "It is not the money that made me where I am now, for I had very little when I first came here. All I have I owe to the good old cows." And he has taken care of these cows as his experience with them proves.

LDINGS OF ANTON GREISINGER, LANGLADE COUNTY. TEN YEARS AGO HE SETTLED ON THIS 120-CRE SLASHING WITH A FEW SCRUB COWS, DETERMINED TO WIN OUT AND HE SUCCEEDED.

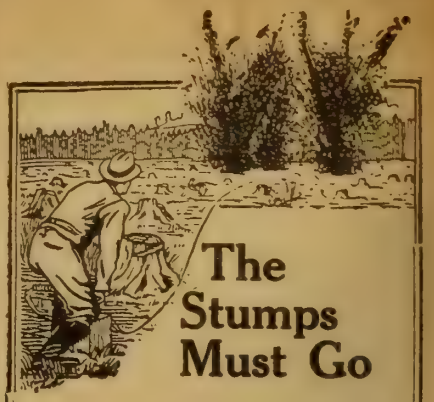
THREE OF THE GUERNSEY HERD SHOWN AT THE FAIR AT ANTIGO, TO WHICH MR. GREISINGER GIVES CREDIT FOR THE IMPROVEMENTS SHOWN IN THE ABOVE ILLUSTRATION. THE AGED GRADE COW SHOWN HERE NETTED HIM A PROFIT OF $96 IN ONE YEAR.

Guernsey Men Active in Forest County.

To the Editor:—Our County Guernsey Club held its meeting recently. The county agricultural representative showed some slides and several humorous pictures were shown for children. There was a thirty-minute debate on the relative merits of beef and dairy cattle. The potato growers of this section have held some very good meetings of late. At our last gathering we took action on buying co-operatively insecticides and fungicides. Invitations have been sent out to every potato grower in the county for the county meeting to be held at the county seat. It is proposed to form a county organization. It is also proposed in this connection to have a set of by-laws drawn up, in addition to our regular working constitution. Under these by-laws all members of the association agree to abide by certain rules relative to disease treatment, grading and varietal mixture. One of the most enjoyable features of our meetings is the get-together dinners. A committee has this matter in charge and the food is collected by assignment to the various farmers. Each man brings in what he is asked to bring. We expect to have our county meetings some time in June.

I get your Wisconsin Farmer every week and enjoy it very much.

Forest Co., Wis. A. R. Anklan.



The Stumps Must Go

Increasing population, growing demand and better prices for food stuffs are raising farm values. Stumps take up space, hinder work and cost you money. Get them out.

DU PONT

Red Cross Farm Powder

will remove them. In most cases Red Cross Farm Powder alone will do the work most quickly, easily and cheaply. Used in connection with other mechanical appliances it makes their work more efficient because it loosens the roots, shakes them free of dirt and leaves most of the soil in the hole. Long use by thousands of farmers has proved its merits for stumping, subsoiling, ditching, tree planting, etc.

Big Book Free

Fine Ground For Tractor Show.

Tract Selected Near Madison For Tractor Demonstration, to Be Held September 4th to 8th, Is Beautifully Situated on Lake Monona—Good Transportation Facilities.

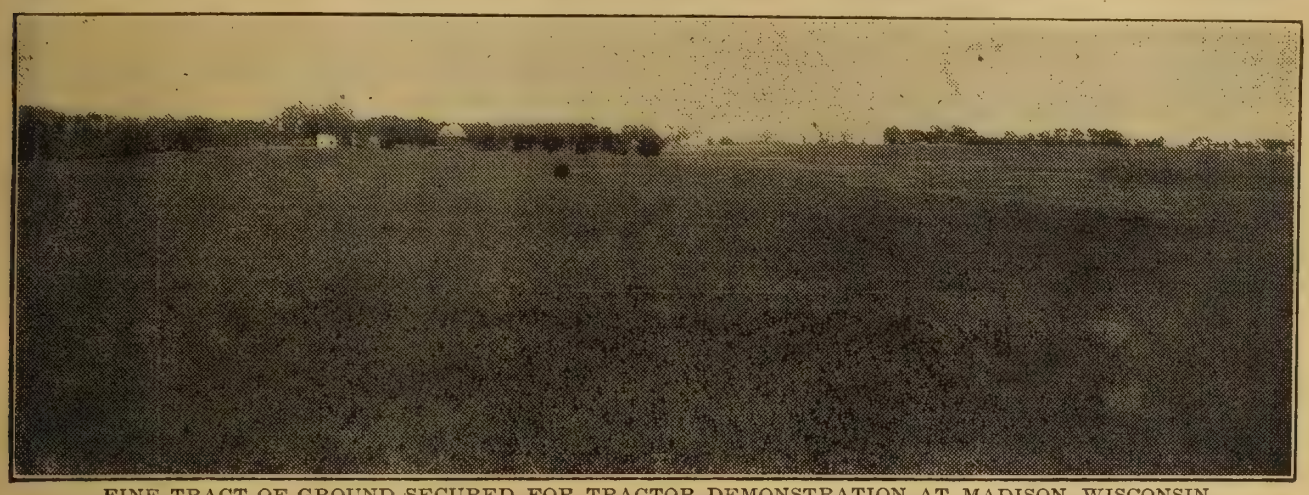
WISCONSIN is to have one of the eight great tractor shows to be held in the United States this year. The show will be held at Madison, September 4th-8th, and guests are expected by the tens of thousands. Already about fifty companies making many more machines have signed up to attend the 1,000 and a large portion of them have already been engaged. The Rotary Club and the commercial bodies are arranging to accommodate large numbers of visitors in private homes throughout the city.

The writer had a personal interview lately with Mr. Frank M. White and with some of the town and university people, who are uniting to make this tractor demonstration a great success. Mr. White is very well pleased with the grounds secured and especially with the transportation facilities to the grounds. Arrangements will be made for additional street car service and the automobile road will be policed for motorists. In addition, there will be a special boat service to the grounds, from the landing near the State House Square. Train service to Madison is favorable to those who wish to come in the early morning and leave in the evening. Madison is well supplied with restaurants and eating houses, in addition to hotels, and doubtless there will be no trouble in feeding the people.

At the time this article is written the following companies had entered for the demonstrations at Madison:

Advance-Rumely.....La Porte, Ind.
Albaugh-Dover Co.....Chicago
Allis-Chalmers ..... Milwaukee
Aaultman-Taylor.....Mansfield, Ohio
Avery Co.....Peoria
Avery & Sons, B. F.....Louisville, Ky.
Bull Tractor Co.....Minneapolis
Bullock Tractor Co.....Chicago
Case T. M. Co.....Racine
Case Plow Works.....Racine
Chase Motor Co.....Cyracuse
Dauch Mfg. Co.....Sandusky
Dayton-Dick Co.....Quincy
Deere & Co.....Moline, Ill.
Denning Tractor Co...Cedar Rapids, Ia.
Electric Wheel Co.....Quincy
Emerson-Brantingham .....Rockford
Grand Detour Plow Co.....Dixon, Ill.
Happy Farmer Co.....Minneapolis
Hart-Parr Co.....Charles City, Iowa
Holt Mfg. Co.....Peoria, Ill.
Huber Mfg. Co.....Marion, Ohio
International Gas Engine Co....Cudahy
International Harvester Co.....Chicago
Janesville Mch. Co.....Janesville
Joliet Oil Tractor Co.....Joliet
Kinnard-Haines Co.....Minneapolls
La Crosse Plow Co.....La Crosse
Lawter Tractor Co.....St. Marys, Ohio
May-Tag Co.....Newton, Iowa
Minneapolis Steel Mch. Co. Minneapolis
Moline Plow Co.....Moline
McIntyre Mfg. Co.....Columbus, Ohio
Nilson Farm Machine Co...Minneapolis
Oliver Chilled Plow Co.....South Bend
P. & O. Plow Co.....Canton, Ill.
Parrett Tractor Co.....Chicago
Peoria Tractor Co.....Peoria
Rock Island Plow Co.....Rock Island
Russell & Co.....Massillon, Ohio
Simplex Tractor Co.....Minneapolis
Steel King .....Detroit, Mich.
Waite Tractor Co.....Elgin
Wallis Tractor Co.....Racine
Waterloo Gas Engine Co...Waterloo, Ia.

This does not include the accessory companies. It is probable the final number of entries will be more than 100. The number of entries already arranged for exceeds that at a number of the big tractor shows last year.



FINE TRACT OF GROUND SECURED FOR TRACTOR DEMONSTRATION AT MADISON, WISCONSIN.

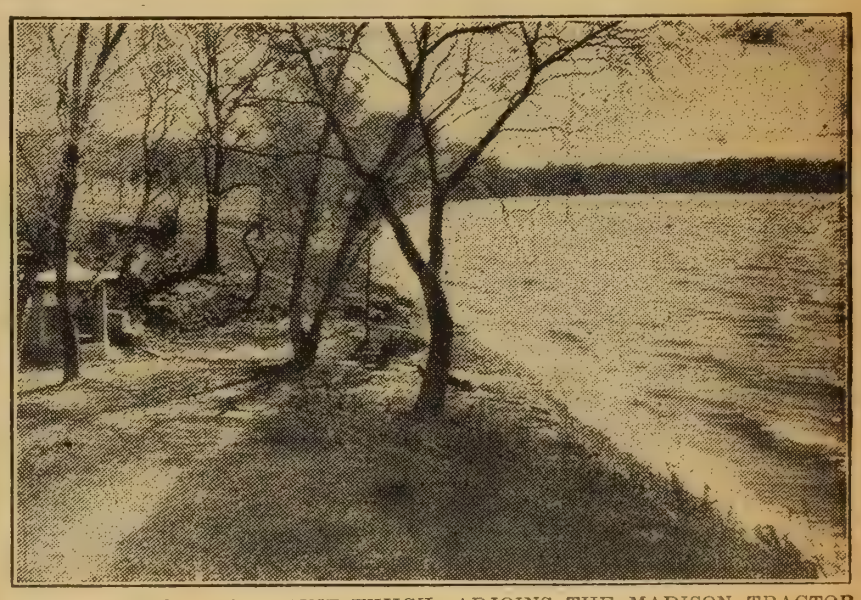
Wisconsin demonstrations. This insures a splendid show, with demonstrations of the several types. Special attention will be paid to the smaller and medium-sized tractors adaptable to small farms. This will be the first opportunity which farmers of this state will have to witness a practical demonstration of the tractor in a big way.

The Rotary Club, of Madison, has charge of the local arrangements for the demonstrations. Mr. Frank M. White, director of the agricultural engineering division of the University of Wisconsin, has been chosen manager of the Madison show. This show will be the eighth and last of the special tractor demonstrations and will be in a sense a sort of round-up.

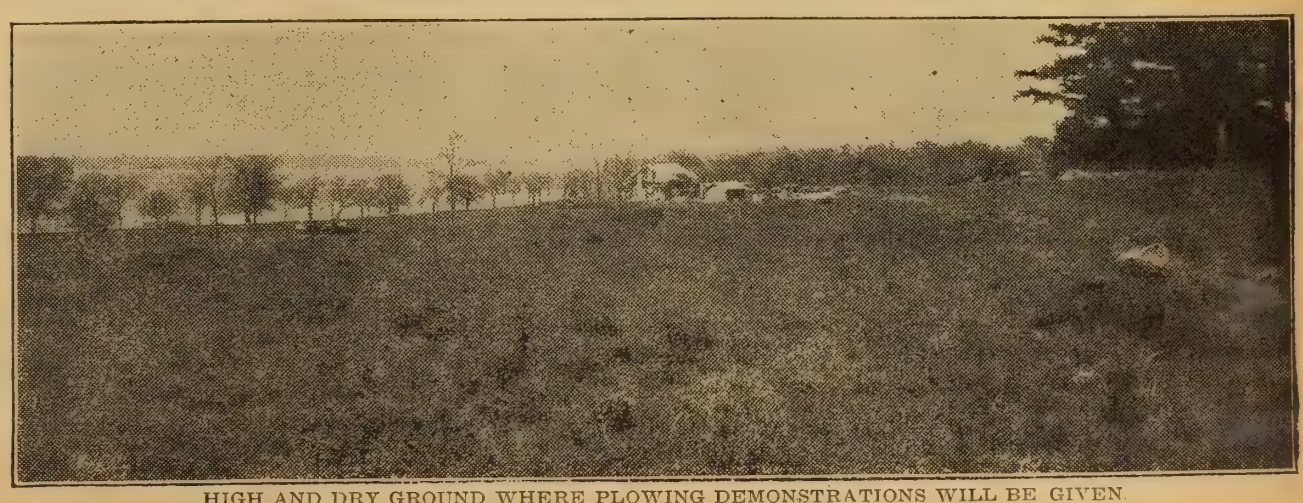
LOOKING FROM HEADQUARTERS ON TRACTOR GROUND ACROSS LAKE MONONA TO THE NEW STATE CAPITOL.

Mr. White is especially well pleased with the arrangements which have been made for grounds for the tractor demonstrations. It is doubtful if any better site could have been secured in the entire state of Wisconsin. The site includes several hundred acres and lies east and a little south of the city of Madison. The grounds are connected with the city by street car line and also a good automobile road. The grounds adjoin Lake Monona. Near the headquarters building there is a fine spring with running water all the time. This spring is quite famous with visitors along the shore of the lake and a handsome spring house has been erected over it.

Madison is making every effort to accommodate the crowds which are expected. The city has eleven hotels, besides a great many rooming houses. The rooms in hotels number about



LAKE MONONA SHORE LINE WHICH ADJOINS THE MADISON TRACTOR GROUNDS.



HIGH AND DRY GROUND WHERE PLOWING DEMONSTRATIONS WILL BE GIVEN.

Seed Stock For Schools.

The horticultural department has placed considerable of the best standard varieties of seed stock at the disposal of county school superintendents in Sauk, Chippewa, Washburn and Adams counties, where it will be used in conducting potato contests in rural schools. From fifty to 200 students in each county are expected to take part in the raising of these improved varieties of marketable potatoes. Competitive exhibits will be arranged at the close of the season, with a final round-up at the state potato growers' convention at Eau Claire next November.

Expects to Attend Madison Show.

To the Editor:—I have given the question of farm tractors some consideration. I think what I would need on my place is an 8-16. That would answer my purposes. I am using a four-roller shredder and a sixteen-inch silage cutter. I know a good many farmers think for this they should have a 10-20, but now for a farm of 160 acres an 8-16 would be big enough I think. I am using a ten horse power gasoline engine and do all my own work with it, but could use a little more power on the belt if I had it. I expect to be in Madison in September if possible to attend the big tractor show.

A. A. Goetsch.

More than 12,000 students are taking courses in agriculture in the colleges of the United States.

TRACTOR EFFICIENCY LARGELY DETERMINE

PROPHECY and prediction make scant appeal to men who are seeking information in regard to farm tractors. From such the pointed questions come: What is the tractor actually doing in farm affairs, and what is its sphere? Will it supplant or simply supplement horses? In brief, will the tractor augment farm profits in anything like a comfortable degree? If these inquiries are properly answered, an appeal must be made to the experience of men who have used and who are using tractors.

Mr. L. G. Jaques, of Greene county, Iowa, faced the situation squarely this spring. He planned on putting in 135 acres of corn and sixty acres of small grain. He had seven horses ready for the collar and provision had been made for employing but one hired man. Every practical man knows that it would take three 4-horse [illegible] crop in if the work were properly done. In other [illegible] would have to buy five more horses and, in addi- [illegible] hire an extra man. Instead of investing in horses, an 8-16 [illegible] was purchased and was put onto the land just as soon as [illegible] enough to till without packing or puddling. One of the first tasks was that of breaking a 30-acre native prairie—a sod so tough that the furrow, in a few instances, flew back like a spring trap from one end of the field to the other. It seemed like a hard task for a 5,000-pound machine, but the work was done in ten days with a two-bottom plow. The neighbor for whom this plowing was done had almost given it up in discouragement, believing that the task was almost impossible with horse power. In spite of the fact that an occasional "hard head" poked its nose to within a few inches of the surface, the work was done without a break either in the plow bottoms or in the tractor. About twenty-five gallons of kerosene, costing eight cents a gallon, and three gallons of lubricating oil was used daily, while the tractor was in the sod field. An acre a day or at the outside an acre and a half would have been good work with a 4-horse team.

Following the plowing of this native sod, Mr. Jaques turned his attention to the task of plowing, disking and harrowing cornstalk land. It was prepared for oats with a disk and harrow. A 12-foot and an 8-foot disk could be comfortably handled, thus cutting a strip twenty feet wide every time the tractor crossed the field. As much as thirty-five and even forty acres were disked in a day on a fuel supply not exceeding twenty-five gallons, together with three gallons of lubricating oil.

When the disking was done a 30-foot harrow followed, drawn by the tractor. With this equipment Mr. Jaques found that he could cover eighty acres a day of ten hours. Our readers may calculate for themselves just what horse power it would take to harrow eighty acres in one day. Every man will concede that such a harrow is too heavy for a 6-horse team, and even though six sturdy drafters might handle it, they would scarcely be equal to the task of covering eighty acres a day. In hot weather they could scarcely cover more than half this area, but, as Mr. Jaques says, "The tractor never sweats nor do you ever have your feelings lacerated, as in the case of horses when you are obliged to push them hard."

When it came to plowing old ground, the three-bottom plow came into use, and from ten to twelve acres was a day's work. There were no breakages in performing any of these tasks, so that the tractor was kept on the move practically ten hours every day. As a result, the land was prepared quickly for the crop. The plowing was done early, thereby affording an ideal opportunity for the growth of weeds. All Mr. Jaques' spring plowing was disked and some of it double-disked with the tractor. And as for harrowing, the seed bed was literally as fine as an onion patch.

NO DIFFICULTY IN HANDLING A "LOADED"

NO "WINDING" OF TRACTORS, BUT A STEADY, HONEST GAIT ALL DAY.

As before stated, there were seven horses on this farm besides the tractor, though but six were required. This number will be split up into three 3-horse teams for corn cultivation with an extra horse available when needed. A third man will be required during the cultivation season, but with that exception, 135 acres of corn will be put in and cared for by Mr. Jaques himself and one assistant. A little extra help will be needed at husking time, but there never will be occasion during the whole season for using more than the seven head of horses.

Not only has the tractor in this case saved the cost of an extra hired man and five or six horses, but its use has meant the cutting out of a lot of extra labor. It requires rapid work to properly care for and harness six or even four horses in an hour, and this is work that must be performed regularly every morning. Horses working hard, if they are kept in condition, will need at least an hour's work in the evening. The stable must be cared for, the stalls bedded down and every man who is worthy the name of teamster, will spend anywhere from ten to fifteen minutes on every horse daily with a currycomb and brush. Men who take pride in their horses will not hesitate to perform this labor and even then horses will be reduced in flesh, they will, in many cases, have collar galls, and when the corn crop is laid by, their bones will be showing through, even though they were sleek and fat in the spring.

In the past, this is a situation that has been accepted by the average man as a matter of course—as part of the game, as it were—but it looks now, as if the tractor will very soon change this situation on many farms. A few minutes spent in turning down the grease cups and putting in a supply of oil, is all the time that the tractor requires before it is ready for action. At regular intervals during the day it will require some attention, but the time lost will be infinitesimal compared with the time taken out on a hot day in "winding" horses. Skill is needed, to be sure, but who has ever seen a farm boy who could not handle an automobile if given a chance, and we have enough faith in the lads that are coming on now, to believe that they will literally take to the tractor like a duck to water. With a little experie[illegible] wear and tear comes and they [illegible] lubrication.

The life of the tractor will de[illegible] automobile, a good tractor will [illegible] bodies change, making a machi[illegible] out of date next year, thereby [illegible] buyers, but you will never find [illegible] farm tractor. If it will give se[illegible]

It is not purchased in the first pl[illegible] use, and every man who buys on [illegible] in proportion to the service that [illegible] do his plowing and disking and [illegible] can be found for it.

There is no depreciation with [illegible] with horses. The horse wears o[illegible] but the tractor only wears. Af[illegible] strenuous service referred to at [illegible] and no loose parts. Bearings [illegible] no expense from breakage. His [illegible] to the binder just as fresh and [illegible] it onto his farm. He does not k[illegible] years of service are locked up in [illegible] be five and it might be ten. In [illegible] outstrip in years of service the [illegible] wheels stop the expense stops. [illegible] when the tractor moves, but wit[illegible] almost as expensive as are the h[illegible]

Mr. Chas. G. Cockerill is also [illegible] tractor map. He is having his s[illegible] tractor and his success thus far [illegible] the kind of service that it has g[illegible] from ten to fifteen acres a day [illegible] ease. In preparing ground for s[illegible] singularly successful in operati[illegible] Two 8-foot disks and a 16-foot [illegible] thereby leaving the seed bed in [illegible] the result of one dual-purpose [illegible] twenty-two gallons of kerosene [illegible] pare anywhere from fifteen to tw[illegible] doing the work quickly when t[illegible] greatly reducing the chances o[illegible] rupted by rain.

Even on rolling ground Mr. Co[illegible] satisfaction. To be sure, the loa[illegible] ditions, but even then, an 8-foot [illegible] and this would make a load requ[illegible] again to the combining of the dis[illegible] that at least eight horses would

a day as Mr. Cockerill has been able to do with his tractor. This, of course, is on level land and we call special attention to it for the information of those who are anxious to ascertain the exact truth regarding the number of horses that a tractor will displace. This might be considered an extreme case, but it shows the possibilities, and not only does the use of the tractor mean that the number of horses is greatly cut down but, as before stated, it means an important reduction in the number of hours that must be devoted to choring every day where horses are used. Even if you have an

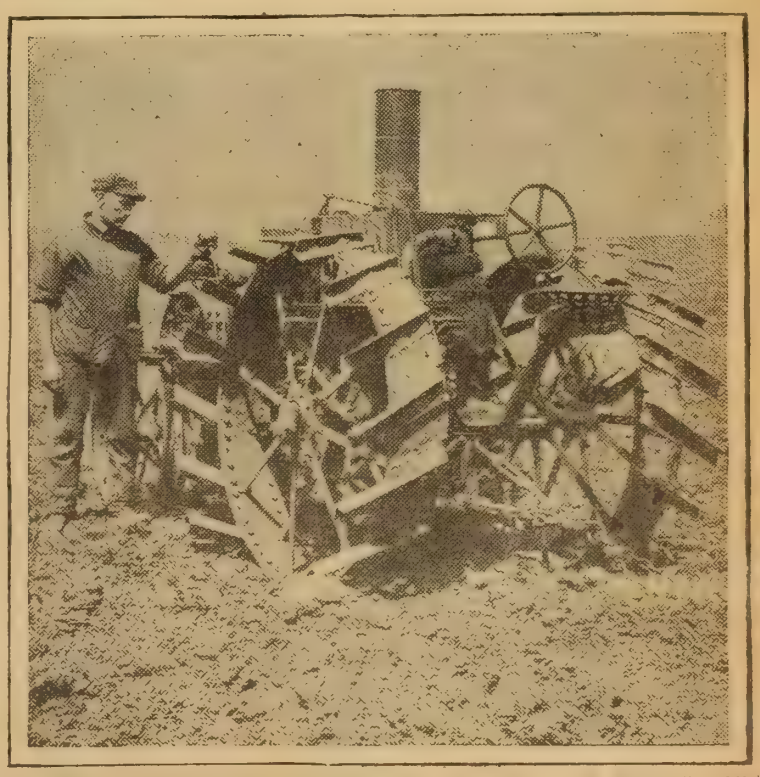
occasional breakage, you are still on the safe side, because, and as Mr. Cockerill puts it, "It is not an unheard of thing for a horse to lie down and die when you are right in the middle of your busy season. In case you have a break, your tractor is idle only two or three days, and if parts for it are kept locally, you may be out of its use only a few hours."

On both Mr. Jaques' and Mr. Cockerill's farms you will find the men who operate the tractors most enthusiastic over the kind of service that they are getting out of them. These men appreciate what it means to them at chore time both morning and evening, and they see the day dawning when farm work will not mean a sixteen-hour-a-day grind but, on the other hand, a rational, reasonable, comfortable day—strenuous to be sure, while it lasts, but still affording time and opportunity for rest and recreation, as well as for social pleasures even during the strenuous crop seasons. As these men see it, the tractor is bound to multiply the farmer's efficiency and returns are sure to be amplified because work can be done more quickly and more seasonably. Furthermore soil can be tilled more deeply with this form of power than with horses. In this respect, we must pay to the tractor the highest compliment of all. In the past, the surface only has been skimmed with our tillage implements and no man can accurately predict to what extent production will be increased by bringing under tillage forces a few more inches of soil and subsoil.

Soil packing is a question that instantly comes to the mind when the tractor is mentioned. There is a suspicion that soils will be ruined by firming them with the heavy tractor wheels, thereby undoing the very thing that we are trying to accomplish by frequent and thorough tillage. A very close investigation of this phase of the tractor problem reveals the fact that there is but little foundation for this fear, at least where the 5,000, 6,000 or 7,000-pound tractor is used. Instead of producing harmful results, several instances have been called to our attention where better returns were obtained on that part of the soil passed over by the tractor wheels. In endeavoring to obtain a deep, friable seed bed, there is such a thing as getting the soil too loose for the first crop, so that the use of the tractor renders deep tillage possible on the one hand, and on the other a certain degree of soil compaction required for thrifty growth is obtained. If under certain conditions there should be soil impaction to an injurious degree then it can be said that the greater ability of the tractor to stir a soil deeply much more than offsets this damage. If our plowing in the future is done at three or four inches greater depth than in the past we will have as one result of this greater depth a great wealth of mellow soil in the seed bed irrespective of the effect of the tractor wheels brought about in the process of tillage.

In considering tractors, there also comes to the mind the problem of operating them on soils that are wet. Those who have fought the introduction of the tractor, feeling that it would injure the horse industry, have been diligent in pointing out the helplessness of the tractor on a wet soil. As a matter of fact, there is no reasonable grounds for criticizing the tractor in this regard. In the great majority of instances, it is ruinous to till a soil when it is sticky and wet. This applies to all our clays and to nearly all clay loams. One had better turn his horses into the pasture or allow them to stand idle in the stable rather than to puddle the soil when it is wet or endeavor to mud in a crop when conditions are ruinously unfavorable. If a tractor of anything like reasonable weight cannot be used because the soil is soft and sticky, then there should be grounds for pause before implements of tillage are put into that same field and operated with horses. The sensible handling of the soil implies always that it should not be stirred when it is sticky, because this means its compaction into impervious chunks that cannot possibly be rendered friable until the amelioration process is brought about by the frosts of winter. Crop rootlets can make no headway in attacking these lumps, and plant food is locked in their hearts in a form that is not only physically inaccessible, but at the same time chemically impossible in so far as is concerned its availability for plants. On the score, therefore, of cultivating and tilling wet soils, it is but fair to say that there is an even break between the tractor and the horse. The possibility of the tractor increasing the number of working hours in a day means that advantage may be taken of the favorable weather spells in rushing the work because on a pinch it may be operated both night and day with a change of operators only.

There is scarcely a quarter section owner in the corn belt today who does not find his interest in the tractor more or less aroused. Thousands and tens of thousands will turn up at the various tractor demonstrations during the summer and fall. Many a man will meet his neighbor at one of these demonstrations, each having no thought in mind that the other would be there. First-hand information is being sought, and when investment is made it will be, let us hope, in a piece of machinery capable of giving service during every season of the year and repeating it year after year. They are looking for sturdy types that can handle a good load without strain and with but little wear.



A FEW MINUTES FOR "OILING UP" AND YOU ARE READY FOR BUSINESS.

Use A Wood Tire Hollow Wall Silo

Cannot Sag, Blow Down or Rot.

Cures and preserves silage perfectly. Prevents freezing of silage. Easy to construct. A real farm building, permanent and rigid. No hoops to get loose. No guy wires. No staves to shrink or swell, but a smooth, double wall from base to roof, the inner wall being of *California Redwood.*

Guaranteed for 20 Years

"But Lasts a Lifetime"

The patented wood "tire" is built up of inch boards, and shipped in sections. The boards overlap in step formation at both ends. When nailed together, these sections form a ring of unusual strength. The silo frame forms its own scaffolding.

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

AILING ANIMALS.

Scouring in Calves.

Please tell me what should be done for scours in calves.

The treatment of scours in calves depends upon the cause and the length of standing of the trouble. If the calves are real young and have been affected a short time would advise you to give one or two ounces of castor oil, according to size and age, and follow immediately with some carminative and demulcent agent, such as one dram anise water, one dram nitrate of bismuth and one dram gum arabic three times a day. The use of the remedies containing opium are good to use following the use of the oil, but opium preparations should be gotten through the veterinarian.

Shoulder Lameness.

I have a black four-year-old mare in foal. About a week ago I noticed after working her about three hours that she dragged her left front foot and limped on it. This condition has continued. The lameness does not seem to hurt her unless she has worked a little while or has to pull hard. I have examined her shoulder and leg, but cannot find anything that would hurt her. What do you think is the cause of this lameness, and what should I do for it?

Your animal is in all probability affected with what is commonly known as shoulder lameness. She should have complete rest and a good stimulating liniment applied over the shoulder region. These cases of lameness are often seen where very little soreness to touch is apparent. If your animal becomes sweenied from the injury you should have your veterinarian treat her.

Mange.

I have an old mare on which mange started last winter. The disease has spread to the rest of my horses. The hair rubbed off in patches on the hips, shoulders and back around the tail. The younger horses rub and bite themselves and the hair is loose all over. The skin is dry and covered with dandruff. The first treatment used was lard, sulphur and carbolic acid. Now I am using dip rubbed on with a brush. I find that rather strong. The horses are run down on account of poor hay this year. The old mare is with foal.

A great number of remedies have been prescribed for this disease and success has attended their repeated application in many cases. If there is any scab formation this should be removed before treatment is begun. This scab may be removed by applying cottonseed oil with 5 per cent creolin overnight. Remove scabs with green soap and water next morning. Now run in one of the following remedies with brush and when rubbed off by animal re-apply daily for a week. Then wash off and after a few days repeat the treatment two or three times. Soft soap and alcohol, each two ounces, may be used or creolin and soft soap, each one ounce, with alcohol eight ounces. You should be careful about using the dips in concentration, as they will do more damage than good.

Scours in Calves.

We have eleven calves that all have the scours. I have been feeding raw eggs, also flour and water mixed. I would be pleased if you would tell me some remedy that would be good for them. They suck the cows. We take all the milk except one teat.

Where a number of calves are scouring they should not be let go so long without drastic treatment being started. When they are let go for a couple of weeks they become weak and the disease is not so easily handled. Pay special attention to the diet and limit the amount of water for a few days. Give those that are not too weak about one-fourth pound of magnesium sulphate. Give this in a pint of warm water, and as soon as the physic has worked give the following: One teaspoonful of creolin and twenty grains of subnitrate of bismuth. Give this amount to each calf. The creolin and bismuth should be given every four hours. The use of two ounces of blackberry brandy and flaxseed tea would also aid in recovery. If the trouble has not become of an infectious nature the above treatment should aid in recoevry.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

White Diarrhea.

"Mrs. William Z." is experiencing wholesale losses in her flocks of small biddies from that dreadful scourge, white diarrhea. She writes:

Can you tell me a sure cure for white diarrhea? My young chickens after they are about five or six weeks old begin to die and in a short time the whole flock is dead. The crops bloat and they begin to tremble and in a day there will be a loss of from ten to twenty. My second hatch is going the same way. I have been feeding bran, mixed chick feed, hard boiled eggs and limewater. They have been kept warm enough so that they would not crowd. Can you tell me the cause?

The trouble is caused by a pesky little "bug," which scientifically is known as bacterium pullorium, and we regret to say that if there is a certain cure the writer has never heard of it. Ever so long there will be something new bob up that is certain death to the cause of this terrible disease, but so far, nothing has proved out. However, there are remedies, no doubt, that are a great help to keep the trouble in check. When there is a certain cure, if that time ever comes, the experiment stations will tell us all about it without price.

Another thing. Even if it were possible to cure those chickens, it would be the last thing on earth to advise. In a few cases they do not die, more's the pity. They are always stunted, distressed looking creatures, fit for neither food or to keep to raise from.

In most cases perfect sanitation and disinfection will finally win out. This is a rather sweeping problem, anl it may be that you think your houses are reasonably clean. They may be, but there is something to fight that is worse than all the sure enough live bugs in existence. Rake and burn all loose litter, clean and spray every available inch of space about the buildings, coops and yards. Leave no stone unturned to harbor the germs. This does not mean once, but many times, if you wish to get ready for business as far in advance as another season. It is assuredly too late to do any successful rearing this season.

Before storing your incubators wash them with a strong disinfectant, and again next spring when they are to begin operations. Wipe the eggs to be incubated with a cloth just dampened in a 90 per cent solution of alcohol.

These are only the elements of prevention; put your wits to work, and ways and means will open up once you understand the situation. It is possible to get rid of the trouble unless the hens are affected, and in this case the eggs are infected before being laid, and the chick only comes into the world to certain death. White Diarrhea in chickens and blackhead in turkeys are the bane of the poultry people today. The former so named because the evacuations are white, and the latter because the heads turn black.

If you are so unfortunate as to have any more chicks come off, try giving a teaspoonful of salts to a flock of fifteen or twenty, and remove them far from the yards where the other coops have been. Burn every dead chick, and isolate any that appear the least droopy. At the experiment station of Illinois sour milk is given to the chicks, and there has never been a case of white diarrhea.

Watch developments and try to learn whether infection rests with the hens; if so, all there is for it is to clear the place and start all over with stock that is known to be perfectly free from the trouble.

Good Record of Pullets.

To the Editor:—I have a bit of news that might be of interest to you and chicken fanciers.

I have ten Single Comb White Orpington pullets that were hatched April 2, 1915. On April 1, 1916, they had laid 870 eggs trap-nest count. They would have had a higher record if some of them had not been taken from the laying pen and entered in three different shows. It seems to me that is a good record, as the eggs were laid through the winter season. I would like to have you print letters from fanciers who can have beaten this record.

EGGS for hatching from Barred Rocks, E. B. Thompson's Ringlets, $1.25 per 15, prepaid. D. S. Thoreson, Bear Lake, Wisconsin.

DAIRY

Guernsey Cattle Club Meeting.

The American Guernsey Cattle Club held its annual meeting in New York City May 10th. Reports of the secretary and treasurer showed a prosperous condition of the club's business. Within the fiscal year ending April 29, 1916, 1,745 more sets of papers were listed than the previous year. There were 333 more bulls and 155 more cows added to the register than in the preceding year. There were 1,313 more transfers than were recorded in the year ending April 29, 1915. A good showing has been made with the Journal and there is an increased balance of cash in the treasury. The club membership is now 530, a gain for the year of sixty-four. The register of bulls now number 37,862 and cows 63,954, making a total of 101,816. Five years ago there were only 44,286 animals on the register. This means a gain of 130 per cent in the herd book in five years. Ten years ago there were only 31,481; twenty years ago, 13,327; while in 1894, when the present secretary was chosen, there were only 1,029 recorded.

The war has had considerable effect on importations. Only two bulls and 130 cows came from Guernsey; three bulls and 136 cows from England, or a total of 244 animals for the past year. There have been imported since 1840, 466 bulls and 7,121 cows. This is a total of 7,587 animals, or less than 7.5 per cent of all the Guernseys now on the register. Certificates of 4,198 cows in the advanced register have been issued, 949 of which were issued the past year.

The average yield of 47,119 records is now 8,805.91 pounds of milk and 439.15 pounds of butter fat. This has been raised during the year by 138.18 pounds of milk and 5.24 pounds of butter fat. There are now 1,173 cows, representing 270 breeders in twenty-eight states, under test.

There are ten cows with four yearly records which average 11,915.7 pounds of milk and 360.93 pounds of butter fat. The Guernsey cow is making a splendid record for persistency, as attested by the following re-entries: 473 cows have two yearly records; seventy-three cows have three yearly records; ten cows have four yearly records; one cow has five yearly records. The last cow is Selma of Pinehurst 4th, 25703, A. R. 1235, whose records average 9,878.24 pounds of milk and 501.02 pounds of butter fat.

The secretary reports splendid progress with the Journal, which has gained something like 9,000 since 1910. It is proposed to raise the advertising rates in the Journal. Mr. F. B. Hills; assistant professor of dairy husbandry at the Delaware College, will join the American Guernsey Cattle Club organization next month. Mr. M. F. Rogers, who has been connected with the publicity work, has resigned and the details of the Journal are now in charge of Mr. Hurlburt. Considerable good has been accomplished in the way of increasing interest in the Guernsey breed on the Pacific coast. Among the new list of members are two from California, three from Oregon, two from Washington and one from Utah. The following officers were elected:

President—Mr. Jas. Logan Fisher, Alney P. O., Philadelphia, Pa.
Vice Presidents—Mr. W. D. Hoard, Fort Atkinson, Wis.; Mr. S. M. Shoemaker, Eccleston, Md.
Secretary and Treasurer—Mr. Wm. H. Caldwell, Peterboro, N. H.
Members of Executive Committee for four years—Mr. Rob't Scoville, New York, N. Y.; Mr. F. L. Ames, North Easton, Mass.; Mr. M. T. Phillips, Pomeroy, Pa.

Mixing Morning and Night Milk.

A Wisconsin subscriber, Mr. W. Aubry, asks for information concerning the advisability of mixing morning milk and night milk when using the product for cheese making purposes. In discussing this matter Prof. E. H. Farrington, of the Wisconsin Experiment Station, says that if cows are milked in the summer time about seven p. m. and then early in the morning at say five a. m., the difference in the number of hours between milkings is greater than during the winter season when the cows are milked about six o'clock in the morning and six at night. This difference in the number of hours between milkings has a tendency to make the morning and night milk vary in richness, but when approximately the same number of hours elapse between milkings, the milk from both is usually about the same test.

In the summer time when cows are milked early in the morning and late at night, the morning milk is usually richer than the night milk because there is a shorter time between milkings.

Any farmer will find that the number of hours between milkings is the important factor in determining the uniformity in test or the variation in test between the morning and the night milking.

There is usually an objection to the mixing of morning milk with night milk because of the difference in temperature. The night milk has been cooled, and if the warm morning milk is poured directly into it, the mixture will be just about warm enough to start the souring fermentations and may spoil both lots of milk for making the best kind of cheese, while if the two have been kept separate and cooled before mixing, the quality of the cheese will not suffer on this account.

Brown Swiss Cattle.

To the Editor:—There are about 100 breeders of Brown Swiss cattle in Wisconsin. Twenty-nine of these got together at the college of agriculture and organized a Wisconsin Brown Swiss Cattle Breeders' Association for the purpose of promoting the interests of their breed in this state. This meeting was held on February 11, 1916. The purpose of the organization is to educate farmers of the state of Wisconsin to know the value of the Brown Swiss as dairy cattle. It was, furthermore, the purpose to emphasize the dairy ideal among the members of the association. The Swiss are not properly called dual-purpose animals, but are properly called hardy dairy cattle.

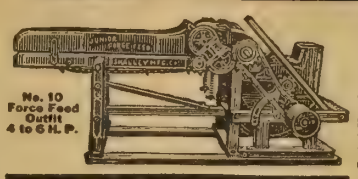
The Michigan Agricultural College keeps a herd of Brown Swiss cattle and have one cow, College Bravura 2d, with a record of 19,460.6 pounds of milk and 798.16 pounds of fat; another Brown Swiss cow, Ethel B., with a record of 18,816.2 pounds of milk and 779.97 pounds of fat. However, these high records are not what the Brown Swiss breeders are pushing for. What they want is to build up healthy herds of cattle which will average between 10,000 and 12,000 pounds of milk per annum for the herd and what is claimed for the Brown Swiss cow is that she is a persistent milker, little subject to fluctuations because of changes in weather and because of her hardy characteristics especially well suited to dairying in Wisconsin. The calm way in which the Brown Swiss cow spends her life results in a long period of usefulness. It is common to find Brown Swiss cows fifteen years of age bearing valuable offspring and producing a good flow of milk.

As is indicated by their name, the Brown Swiss cattle originated in Switzerland and have been introduced into the United States only recently. There were importations in 1869, 1882 and 1884. The largest importation was made by the late E. M. Barton, of Hinsdale, Illinois, in 1906. All told, 150 head of Brown Swiss cattle have been imported from Europe, but at the present time 13,000 have been recorded in this country. If the past rate of increase continues Brown Swiss cattle will be abundant in this country before the end of the present generation.

Based on herd averages I believe the Brown Swiss to be as productive of fat as the Holstein. Their milk averages about 4 per cent. This means that on the basis of herd averages the quantity of milk will be somewhat less, but the fat test will be enough higher to make up for the difference. Furthermore, the test made at the University of Wisconsin shows these cows to be most efficient, that is, they produce the maximum of butter fat per unit of feed consumed.

H. C. Taylor.

Here's A Silo Filler That Makes Alfalfa Chop

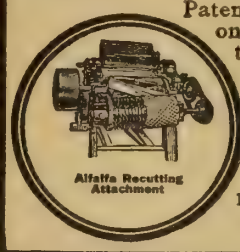


Thousands of farmers fatten cattle, sheep, hogs and poultry with wonderful alfalfa meal made by patented recutting attachment on the Smalley. Handles leaves, stems and all without waste or injuring color of hay. Enables you to sell No. 1 hay and mill off-grades for feeding. Makes combination feed from clover, rice straw, bean straw, pea vines, oats, rye and dried cornstalks. Capacities 1200 to 2700 lbs. meal per hour. Junior Mill makes 500 to 800 pounds of meal per hour with 5 to 8 H. P. engine. Grip Hook Table feeds cutter automatically, saving wages and board of at least two men on big outfits. Paddle roller grips a bundle of corn in record time.

Powerful Smalley Silo Filler

Chain Drive—Grip Hook Force Feeding

Blower built independent of cutter. Fan speed can be increased or decreased without changing speed of knife shaft.



Patented low speed one pulley chain drive on blower cuts down power cost 1-5 to 1-4 and saves needless wear on belt. Extension Table on hopper prevents accumulation of litter.

Steel in castings makes machine one-fourth heavier and far more durable than any other.

Save piles of money by sending for handsome, illustrated FREE Book NOW.

Smalley Manufacturing Co.
Dept. 28 Manitowoc, Wis.

Draws Milk In Spurts

THE sucking calf, the hand milker and the Empire Milker all draw milk in spurts. Between spurts the teat is given an instant of rest. Thus there are no ill effects—nothing unpleasant. The Empire has a gentle, massaging, uniform, natural air pressure that really increases the milk flow.

EMPIRE
Mechanical Milker

One double or two-cow unit takes care of 20 to 30 cows per hour. One man can operate two double units. The Empire cuts down hired labor and increases your profits. The Empire is easy to install and to operate, requiring but one tank and one pipe line. Farmers owning prize herds favor the Empire because it cannot injure the stock in any way—cannot cause sore or inflamed teats or udders. Insures clean, sanitary milk, free from dirt, germs and stable odors.

Let us send descriptions and pictures, showing the Empire Milker and Empire Separator in use. We will also send you our offer on Empire Gasoline Engines and Empire Star Feed Mills.

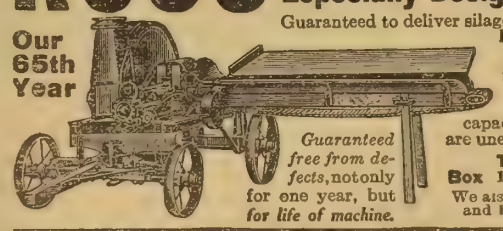
ROSS SILO FILLING MACHINERY

Especially Designed for Gas Engine Power

Guaranteed to deliver silage into the silo at 50% less speed and 30% less power than ordinarily required.

Our 65th Year



Guaranteed free from defects, not only for one year, but for life of machine.

Cuts the silage in uniform lengths, which insures the Best of Feed. Silage packs closer, which permits of more tonnage into the silo. For strength, durability, capacity and easy-to-feed—Ross Machines are unexcelled. Write for catalog.

THE E. W. ROSS CO.
Box 154 Springfield, Ohio

We also manufacture the Ross Wood and IN-DE-STR-UCT-O Metal Silo.

ZYRO Metal Silos

Keep silage sweetest and better tasting because air-tight. The loss is less. ZYRO Pure-Galvanized-Iron or Black-Enameled Silos are proof against wind, fire, shrinking, swelling, collapse and repair. Anti-corrosive, rust-resisting.

Cost less to erect

Flanged metal sheets fit easily and are fastened in place by two men. Positively air and moisture-tight. FREE BOOKLET tells whole story why ZYRO Metal Silos give best results. Write today for your copy.

The Canton Culvert & Silo Co.
Box 714 Canton, Ohio. Makers of ZYRO Corn Cribs and Grain Bins.

ARE YOU GOING TO BUY LAND?

IF so, get a copy of our journal first. It has lands, city property and stocks of goods advertised in its columns from nearly every state, so that you can find just what you're looking for in its columns. Established 19 years and reaches 76,200 readers. Send 25c for one year's subscription or $1.00 for five years. Department F, Farm and Real Estate Journal, Traer, Iowa.

IMPROVED FARMS

$1000 TO $8,000 in TAYLOR, Marathon, Lincoln and other counties. Very liberal terms. Trades made. We are OWNERS. We sell horses, wagons, etc., on liberal terms; also choice holdings of unimproved, $15 to $30 per acre. LOEB-HAMMEL REALTY COMPANY (not inc.), Medford, Wisconsin. Write Chicago office: 343-3 Marquette Building. Live agents wanted.

IF YOU ARE WANTING

A PIECE of unimproved land, a partially improved or wholly improved farm at prices ranging from $10 to $25 per acre for the former, and from $35 to $100 per acre for the latter, I have the place you want. Write for my booklet describing more than 100 choice places on easy terms in the best part of Wisconsin. W. E. Webster, Hudson, Wisconsin.

COME HERE

A BETTER soil, a pleasanter country. Lands much cheaper. Aitkin county. Paradise of the farmer and dairyman. Our company's lands. Lowest prices. The easiest terms you ever saw. For illustrated literature, write Arnold, Land Agent, Rock Island Ry., 151 Wolvin Bldg., Duluth, Minn.

POSITIONS WANTED. Do you need farm help? We have many able-bodied young men, experienced and inexperienced, who want farm work. Ours is a philanthropic organization; no charges to employer or employe. If you need good, steady, sober man, write to Jewish Agricultural Society, 707 Twelfth St., Chicago, Illinois.

ADDRESS a postal simply "1590 First Nat. Bank Bldg., Milwaukee, Wis.," and ask for U. S. crop reports showing larger yields on upper Wisconsin cheap lands than on high priced middle western land and free state map. That is all.

FOR SALE—Fine, high-grade, Chickering make upright piano, used as sample but good as new. Will sell for $165.00. Address Ella Mae Fredrikson, 879 Algoma St., Oshkosh, Wisconsin.

WANT TO BUY LAND? Get in touch with our company. Cut out the middleman. Maps. Prices. Literature. Arnold, Land Commissioner, 513 Wolvin Bldg., Duluth, Minnesota.

FOR sale, slightly used Kimball upright piano, beautiful case, in perfect condition, used about year, $150 cash. Flora Pfingston, care this paper.

WANTED FARMS—Have 3,357 buyers; describe your unsold property, give price, acreage, location. 769 Farmers' Exchange, Denver, Colo.

FOR Minnesota improved farms and land bargains, write or call on H. A. Hanson, 242 Temple Court, Minneapolis, Minnesota.

IMPROVED and unimproved farms for sale. Call on or address Fred L. Arduser, Route 1, Grantsburg, Wisconsin.

Further Interest in Land Clearing

Large Number of Farmers and Settlers Attended the Land-Clearing Demonstration at Elcho, Wis.

GREAT interest was manifested in land clearing methods by farmers and visitors who attended the demonstrations at Elcho, Langlade county, Saturday, May 20th, and Monday, May 22d. There were nearly 300 present on Saturday afternoon and over 200 Monday. Practically all the surrounding towns were represented, coming in from Kempster, Summit Lake, Post Lake, Pearson, Parrish, Enterprise, Pelican and other towns. The visitors were

POWER PULLERS AND PILERS AT WORK.

very much pleased with the demonstrations. They were especially impressed with the great power of the horse and man-power machines and the rapidity with which the clearing was accomplished. The value of electric discharging and blasting large stumps also made a particular appeal. All of the stumps in the demonstration field at Elcho were pine, having been cut over twenty years. There was a little difficulty with dirt clinging to the roots, an objectionable feature in the green stumps pulled in the Morrisey fields at Antigo.

The power machine made a splendid showing on Monday, each one moving the stumps over a wide radius. A rain storm softened up the ground to such an extent that it made walking rather difficult for horses in the sweeps and consequently interfered with the pulling. Despite this fact, a large number was pulled and was a great surprise to many.

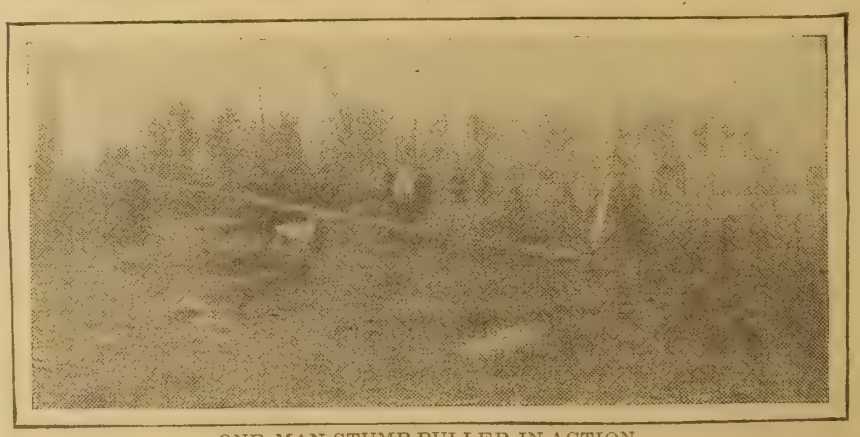
A representative of one of the large powder companies blasted a seventy-five-foot ditch, showing the possibilities of high-power explosives used in ditching. The demonstration showed that low power dynamites, viz., 20 per cent, farm powder, and 30 per cent have a distinct place. Under certain conditions they can be used at a decided saving to the farmer. The value of dynamite and power machines being used together is also shown in the demonstrations.

Dynamite is being used to crack stumps and shake off much of the dirt, the power machine later removing the stump in sections. Any one of the machines exhibited possessed ample power to handle any stump that would be encountered under average conditions.

The stump piler appealed very strongly to the farmers. "I'm not interested so much in the pullers as I am in the pilers," declared a spectator. "I'm sure I can get the stumps out, but what bothers me is getting them into a pile to be burned." This man saw the stump drawn to the top of the swinging arm of the piler and then suddenly released and dropped by a simple arrangement devised for the purpose. The drop to the pile, a distance of fifteen feet, shook off much of the clinging dirt and left the stump practically clean.

Small farmers especially took to the man power pulling device. Its cost and the fact that it can be operated without horses appealed to him.

PLENTY OF POWER FOR ALMOST ANY STUMP.



ONE-MAN STUMP PULLER IN ACTION.

Solving Farm Woman Problem.

The department of agriculture has begun to recognize the farm woman to the extent of asking her why she is not satified on the farm, and ponderously giving the composite answer of discontent on the farm as isolation, says Elizabeth Sears.

It isn't isolation. Where you are happy and busy you cannot be isolated. It isn't lack of advantages or hard work, or any of the other answers that have been given, because the farm women don't know exactly what is the matter with them. It is lack of adjustment.

When we farm women use our brains we see the folly of educating and drudging our children off the farm. When we recognize the necessity of making it attractive enough to make our children glad to return to the farm, and educating them back to the farm instead of away from it, we have solved a part of our problem.

Eight years two-thirds of the students at our agricultural schools were studying to be engineers and stenographers and teachers and nurses. Then the pendulum swung back, and two-thirds of them were studying agriculture, but studying to become instructors instead of farmers.

Having swung to both extremes, the pendulum is coming back where we hope to keep it; we emancipated farm women that love our work, right where our children can be educated to see all the possibilities in the farm and to realize that moving pictures and bright lights and theaters and fox trots are only a small portion of the recreation of life, not its principal ingredients.

LIGHTNING ROD DEALERS Get Our Proposition

NO matter whom you represent, it will be to your interest to get our proposition. In appearances and quality our line of goods is unexcelled and our cables are guaranteed over 98% Pure Lake Superior Copper. Our unequaled shipping facilities assure you quick delivery.

Weather Is Still Too Cold and Wet For Crops.

(Continued from page 9.)

clover wintered nicely. Alfalfa is about ten inches high; the crop will be heavy, but later than usual. Old hay is scarce and hard to get; the selling price is from $10 to $14 a ton. Corn planting is just starting. Not many gardens have been planted. Live stock, especially milk cows, are in good condition. Calves and lambs are doing well and little pigs will be about 80 per cent of a normal crop. Fruit blossoms are coming out, and prospects are good.—Wallace Fountain.

Price County.—Spring is late and weather is wet and cold. Much low land is still too wet to work. All grain seeding is from three to four weeks late. Cold rains on the 14th and 17th have delayed farm work. Early potatoes were planted by the first of May; late potatoes will be put in about June 1st. Many farmers are laying foundations for silos and this indicates that a good corn acreage will be planted. Young pigs are quite plentiful and doing fine. Cows are in good demand and sales are well attended. An increase in the number of colts is noticeable; all good mares were bred last year. Recent winds have done considerable damage to buildings and timber.—J. W. Fox.

Richland County.—Weather is still wet and cold. Little corn has been planted. Pastures are quite good; stock can live on them without hay. Meadows and oats look good. Some early potatoes are up. There will be some fruit if conditions are favorable, but not as much as last year; apple and plum trees are blossoming. Many veal calves are being sold, as this is principally a dairy country.—E. C. Stewart.

Sauk County.—Corn planting is progressing slowly; a small acreage was planted last week. There is an apparent shortage of good seed corn in this locality. Pastures and meadows are looking fine; so are winter wheat and rye. Oats and barley are starting in good shape. The weather continues wet and cold.—R. F. Klemm.

Sheboygan County.—Pastures are backward and many farmers are planning on not using them before June 1st. Alfalfa winterkilled badly. Old clover seedings are poor, but the new seeding is fairly good. Seeding of small grain was delayed, but it is nearly finished now, except in low spots. Grain sown by the middle of April is not very high yet, because of cold weather. Winter wheat is poor. Practically no corn has been planted, and much corn land is still to be plowed. Some potatoes are in. There is a heavy demand for early pigs, and the supply is not large—spring pigs sold for $4 or $5 at from six to eight weeks old.—M. J. Hoppert.

Taylor County.—The general condition of farm crops is good; clover and timothy are doing especially well. Oats and barley are practically all sown and are coming up. The ground is too wet and cold to plant potatoes and corn. Pastures are in fair condition. There have been no extremes of rain or drouth, but the weather has been too cold, particularly for fruit and vegetables. The crop of young pigs is about normal, but the demand exceeds the supply. Veal calves for shipping are high and the demand brisk. Losses of young pigs and calves have been light. The interest in better live stock is increasing.—John E. Miller.

HEPSEY BURKE--A Sister to David Harum

By G. N. Wescott, the Brother of the Author of "David Harum."

(Copyright 1915.)

CHAPTER XXII.

Hepsey's Diplomacy.

I DON'T rightly know what's got into Virginia Bascom," remarked Jonathan, as he sat on Hepsey's side porch one evening, making polite conversation as his new habit was. "She's buzzin' round Mrs. Betty like a bee round a flower—thicker'n thieves they be, by gum."

"Yes," cogitated Hepsey, half to herself and half in response, "the lamb's lyin' down all right and it's about time we'd got the lion curled up by her and purrin' like a cat. But I don't see the signs of it and I'll have to take my knittin' tomorrow and sit right down in his den and visit with him a little. If he won't purr I've got what'll make him roar good and proper or I've missed my guess."

"Now Hepsey, you go easy with my church partner, the Senior Warden. When his wife lived he was a decent sort of a feller, was Sylvester Bascom, and I reckon she got him comin' her way more with molasses than with vinegar."

And, though Hepsey snorted contempt for the advice of a mere male, she found the thought top-side of her mind as she started out next morning to pay Bascom a momentous call. After all, Jonathan had but echoed her own consistent philosophy of life. But with her usual shrewdness she decided to go armed with both kinds of ammunition.

Mrs. Burke puffed somewhat loudly as she paused on the landing which led to the door of Bascom's office. After wiping her forehead with her handkerchief she gave three loud knocks on the painted glass of the door which shook some of the putty loose onto the floor. After knocking the third time someone called out "Come in," and she opened the door, entered, and gazed calmly across the room. Bascom was seated at his desk talking to a farmer and when he turned around and discovered who his visitor was he ejaculated irreverently:

"Good Lord deliver us!"

"Oh, do excuse me!" Mrs. Burke replied. "I didn't know that you were sayin' the Litany. I'll just slip into the next room and wait till you get through."

Whereupon she stepped into the next room, closed the door, and made herself comfortable in a large armchair. There was a long table in the middle of the room and the walls were covered with shelves and yellow books of a monotonous binding. The air was musty and close. She quietly opened one of the windows, and, having resumed her seat, she pulled a washrag from her leather bag and began knitting calmly.

She waited for some time, occasionally glancing at the long table, which was covered with what appeared to be a hopeless confusion of letters, legal documents and books opened and turned face downward. Occasionally she sniffed in disgust at the general untidiness of the place. Evidently the appearances of the table in front of her was getting on her nerves and so she put her knitting away as she muttered to herself:

"I wonder Virginia don't come up here once in a while and put things to rights. It's simply awful!" Then she began sorting the papers and gathering them into little uniform piles by themselves. She seemed to have no notion whatever of their possible relation to each other, but arranged them according to their size and color in nice little separate piles. When there was nothing else left for her to do she resumed her knitting and waited patiently for the departure of the farmer. The two men seemed to be having a rather warm dispute over the interpretation of some legal contract; and if Bascom was hot-tempered and emphatic in his language, bordering on the profane, the client was stubborn and dull witted and hard to convince. Occasionally she overheard bits of the controversy which were not intended for her ears. Bascom insisted:

"But you're not such a fool as to think that a contract legally made between two parties is not binding are you? You admit that I have fulfilled my part and now you must pay for the services rendered or else I shall bring suit against you."

The reply to this was not audible, but the farmer did not seem to be quite convinced.

After what seemed to her an interminable interval the door banged and she knew that Bascom was alone. She did not wait for any invitation, but rising quietly she went into the inner office and took the chair vacated by the farmer. Bascom made a pretense of writing, in silence, with his back towards her, during which interval Hepsey waited patiently. Then, looking up with the expression of a deaf mute, he asked colorlessly:

"Well, Mrs. Burke, what may I do for you?"

"You can do nothing for me—but you can and must do something for the Maxwells," she replied firmly, but quietly.

"Don't you think it would be better to let Maxwell take care of his own affairs?"

"Yes, most certainly, if he were in a position to do so. But you know that the clergy are a long-sufferin' lot, more's the pity; they'll endure almost anythin' rather than complain. That's why you and others take advantage of them."

"Ah, but the earnest minister of the Gospel does not look for the loaves and fishes of his calling."

"I shouldn't think he would. I hate fish, myself, but Maxwell has a perfect right to look for the honest fulfillment of a contract made between you and him. Didn't I hear you tell that farmer that he was a fool if he thought that a contract made between two parties is not legally binding and that if you fulfilled your part he must pay for your services or you would sue him? Do you suppose that a contract with a carpenter or a plumber or a mason is binding, while a contract with a clergyman is not? What is the matter with you, anyway?"

Bascom made no reply, but turned his back towards Hepsey and started to write. She resumed:

"Donald Maxwell's salary is goin' to be paid him in full within the next two weeks or——"

Mrs. Burke came to a sudden silence and after a moment or two Bascom turned around and inquired sarcastically.

"Or what?"

Hepsey continued to knit in silence for a while, her face working in her effort to gain control of herself and speak calmly.

"Now see here, Sylvester Bascom, I didn't come here to have a scene with you and if I knit like I was fussed you must excuse me."

Her needles had been flashing lightning, and, truth to tell, Bascom, for all he dreaded Hepsey's sharp tongue as nothing else in Durford, had been unable to keep his eyes off those angry bits of sparkling steel. Suddenly they stopped—dead. The knitting fell into Hepsey's lap and she sat forward—a pair of kindly, moist eyes searching the depth of Bascom's, as he looked up at her. Her voice dropped to a lower tone as she continued:

"There's been just one person, and one person only, that's ever been able to keep the best of you on top—and she was my best friend, your wife. She kept you human and turned even the worst side of you to some account. If you did scrape and grub, 'most night and day, to make your pile and was hard on those that crossed your path while doin' of it, it was she that showed you there was pleasure in usin' it for others as well as yourself, and while she lived you did it. But since she's been gone,"—the old man tried to keep his face firm and his glance steady, but in vain—he winced—"since she's been gone the human in you's dried up like a sun-baked apple. And it's you, Sylvester Bascom, that's been made the most miserable, 'spite of all the little carks you've put on many another."

His face hardened again and Hepsey paused.

"What has all this to do with Mr. Maxwell, may I ask?"

"I'm comin' to that," continued Hepsey, patiently. "If Mary Bascom were alive today would the rector of Durford be livin' in a tent instead of in the rectory—the house she thought she had given over, without mortgage or anything else, to the church? And would you be holdin' back your subscription to the church and seein' that others held back, too? I never thought you'd have done, when she was dead, what'd have broken her heart if she'd been livin'. The church was her one great interest in life, after her husband and daughter, and it was her good work that brought the parish to make you Senior Warden. After you'd made money and moved to your new house, just before she died, she gave the old house, that was hers from her father, to the church, and you were to make the legal transfer of it. Then she died suddenly and you delayed and delayed—claiming the house as yours, and at last sold it to us subject to the mortgage."

The old man stirred uneasily in his chair.

"This is all quite beside the mark. What might have been proper to do in my wife's lifetime became a different matter altogether after her death. I had my daughter's welfare to think of; besides——"

"I'm not talkin' about your legal right. But you know that if you'd wanted to have it you could have got your interest on the mortgage quick enough. If you hadn't held back on his salary other's wouldn't have; or if they had you could have got after 'em. What's the use of tryin' to mix each other up? You couldn't keep Maxwell in your pocket and because he didn't come to you every day for orders you reckoned to turn him out of the parish. You've not one thing against him and you know it, Sylvester Bascom. He's shown you every kind of respect as his Senior Warden and more patience than you deserved. He let himself be—no, had himself—bled, to save your life. But instead of making him the best young friend you could have had and makin' yourself of real use to your town and your neighbors through him and his work you've let the devil get into you and when your accident come you'd got to where you were runnin' that fast down a steep place into the sea that I could 'most hear the splash."

She cocked her head on one side and smiled at him whimsically, hoping for some response to her humorous picture. A faint ghost of a smile—was it, or was it not?—flickered on the old man's lips, but he gave no sign of grace.

Hepsey sighed and paused for an instant. "Well—we can't sit here talkin' till midnight or I shall be compromisin' your reputation, I suppose. There'll be a meeting of the parishioners called at the end of this week and the rector won't be present at it, so, Warden, I suppose you'll preside. I hope you will. I've got to do my part—and that is to see that the parish understands just how their rector's placed, right now, both about his house and his salary. He's workin' as a laborer to get enough for him and that little wife of his to live on, and the town knows it—but they don't know that it's because the salary that's properly his is bein' held back on him, and by those that pay their chauffeurs more than the rector gets, by a good piece. I shall call on everyone at that meetin' to pay up; and I shall begin with the poorest and end up"—she fixed Bascom's eye significantly—"with the richest. And if it seems to be my duty to do it I may have somethin' more to say when the subscription's closed—but I don't believe—no," she added, opening her bag and rummaging about among its contents till she hit upon a letter and brought it forth, "no, I don't believe I'll have to say a thing. I've got a hunch, Sylvester Bascom, that it'll be you that'll have the last word, after all."

The old man's glance was riveted upon the familiar handwriting of the faded letter and without a word Hepsey started to read it, date and all, in a clear voice:

Willow Bluff, Durford.
September —, 19—.

Hepsey Dear:

I suppose you will never forgive me for making the move from the old house to Willow Bluff, as it's to be called, while you were not home to help me. But they got finished sooner than we thought for and Sylvester was as eager as a child with a new toy to get moved in. So here we are and the first letter I write from our new home is to you, who helped more than anyone to make the old home happy for me and mine—bless them and bless you!

Everything is out of the old house—"The Rectory" as I shall call it now—except such pieces of furniture as we did not want to take away, and we thought might be welcome to the parson (or the parsons, I suppose) who may occupy it. Sister Susan thought it slighting to Pa's generosity to give the house to the church, but I don't look at it like that. Anyway, it's done now and I'm very happy to think that the flock can offer a proper home to its shepherd as long as the old place stands.

If you get back Thursday I shall just be ready for you to help me with the shades and curtains if you care to.

Your friend,
Marion Anderson Bascom.

P. S. Ginty sends her love to Aunt Hepsey and says "to come to Boston quick!" She's a little confused, some way, and can't get it out of her head that we're not back home in Boston since we left the old place. I hope you are having a nice visit with Sally.

As Hepsey read, Sylvester Bascom turned, slowly, away from her, his head on his hand, gazing out of the window. When she had finished reading the letter was folded up and replaced in the bag along with her knitting. Then, laying her hand with a gentle, firm pressure on the old man's shoulder, Mrs. Burke departed.

(To be continued.)

PREPAREDNESS
Produces Victory
The Red River Special
IS PREPARED

In the trenches of a great army or in the threshing of a great crop those who are rightly prepared do not go down to defeat.

Beat off the nation's enemies.—BEAT OUT THE NATION'S GRAIN. It must be done if the nation is to live.

In either event it is preparedness with "the Man Behind the Gun" that does the work.

This patented device, found only in the Nichols & Shepard Company's threshing machinery, can show more preparedness for securing and more actual capacity in securing and saving grain than any other separating mechanism that inventive ingenuity has yet produced.

Are you prepared for a financial victory when this year's crops are threshed?

Preparedness is now a great national issue. Some of your own neighbors have quietly provided the means to take advantage of this fact by saying "never again" to the thresherman that doesn't own a Red River Special machine. Send for the "extra" Home Edition paper that tells you about it. You might as well ask for a Big Catalog at the same time. Both are free.

NICHOLS & SHEPARD CO.
(In Continuous Business Since 1848)

How to Protect Rose Bushes From the Rose Aphis.

When new growth starts on the rose bushes in the spring and throughout the summer and fall, the young growth and the flower buds and stems are often covered with a small green or pinkish plant louse, known as the rose aphis, which sucks the sap from the tender portion of the plant and causes an unhealthy curled condition of the foliage and disappointment in the number and quality of the flowers produced.

The rose aphis passes the winter in the egg stage on the stems and dormant buds of the rose bushes, according to A. D. Hopkins, forest entomologist, United States Department of Agriculture. The insects hatching from these eggs reach maturity in about fifteen to twenty days. At this stage they begin to produce living young, and the reproduction process goes on at such a rapid rate that if prompt attention is not given to the rose bush all the tender new growth becomes literally coated with these pests.

The aphis thrives best in cloudy, humid, warm atmosphere, hence with the appearance of a hot and dry spell they often disappear as suddenly as they appeared. Driving rains, winds, etc., also decimate their numbers, but sometimes these natural checks come too late to save the flower crop, and it is advisable, therefore, to apply remedies as soon as the aphis is discovered. The presence of ants on the rose bushes is an indication that the aphis is present, because the ants collect the honey dew from the aphids.

Fortunately the rose aphis readily succumbs to artificial methods of control and, with the different styles of spray pumps on the market, there is no excuse for allowing roses to suffer from these insects.

The simplest, most commonly used, and often quite effective remedy is to turn a fine but forceful stream of water on them by means of the garden hose. Applied often enough this gives satisfactory results.

Solutions of fish-oil or cheaper grades of soap are often useful as a prompt remedy. The soap is used at the rate of one pound to four gallons of water. To make the solution, shave the soap into the water and dissolve by heating, adding enough water afterwards to make up for evaporation.

The best remedy for the rose aphis is 40 per cent nicotine sulphate (a liquid which can be purchased in most seed stores) diluted at the rate of one part to 1,000 to 2,000 parts of water, with fish-oil soap or laundry soap added at the rate of one pound to fifty gallons of the spray mixture. The simplest way to prepare the spray in small quantities and secure satisfactory proportions of the ingredients is to put one teaspoonful of the nicotine sulphate in from one to two gallons of water and then add one-half ounce of laundry soap. One spraying is usually 100 per cent effective, but if the first application has not been thoroughly made, a second one may be necessary.

In order to prevent the possible development of mildew as a result of frequent spraying it is advisable to make the applications in the early morning so that the spray will dry off the plants promptly.

The spraying device to use depends on the amount of spraying necessary. A cheap atomizer, such as can be bought in any seed store, is quite satisfactory for small plants and gardens. Good knapsack and barrel pumps are available for commercial growers.

An Ice Club.

A number of enterprising farmers formed an ice club made up of men who join in purchasing a wagon load of ice from a neighboring town and distribute it to the members of the club. In some sections a possible outgrowth of the idea might be a community ice house, especially if a group of homes were clustered about a crossroads, but where artificial ice is available it is often cheaper and always more sanitary than that obtained in winter from ponds or streams.

Help Sharpen the Scissors.

A few days ago while an organization of women who work every day making surgical dressings for the wounded soldiers in Europe were busily engaged, a swarthy, brown-eyed scissors grinder entered the room and asked the privilege of sharpening all the scissors which they used. He was too poor, he said, to contribute any money but he longed to do what he could for the sufferers across the seas —and so he sharpened the scissors.

Every day that the war continues adds new lists of wounded and suffering men and women and children, and great, free America is doing her part in the relief work. Perhaps not all of us are able to help by giving money but each of us can in one way or another "sharpen scissors."

Baby Will Be Well and Happy If He

Has clean, pure food.

Has a bath every day.

Is kept dry and clean.

Has his meals and sleep on time.

Sleeps alone in a cool, quiet place.

Breathes fresh air day and night.

Is given pure, cool water to drink.

Does not have to be shown off for visitors.

Is dressed according to the weather.

Is kept away from sick folks and crowds.

Is not exposed to diseases carried by flies and mosquitoes.

Is not exposed to the danger of your careless coughing and sneezing.

And if nobody kisses him on the mouth — not even his mother.

Reduce the High Cost of Living by Saving Fuel.

If asked about her fuel bills the average housewife will say, "I am just as careful as possible about wasting fuel." Most of us are careful about the large things, but "it is the little leak that sinks the great ship." Care about small wastes will become such a habit that the larger ones never occur.

In many towns, gas is so reasonable that anyone can afford to use it for cooking. Electricity is becoming more and more reasonable, and even in country homes, in many places, is being used in some measure for cooking.

Where neither of these fuels are obtainable there is always kerosene or gasoline. The modern, up-to-date oil range with the four griddles is an ideal stove. The heat is intense and the ovens so well made that the baking is even and satisfactory. With kerosene at 12 cents a gallon it costs 8 mills to run one burner an hour; that certainly is within the reach of our farm women everywhere.

One of the little wastes noted, which is most common, is the failure to turn off the heat before the dish is removed. With gas and electricity it should not be turned on until the dish is on the burner. In many foods when baking, the heat that is generated will finish the baking with the heat entirely turned off ten minutes before taking from the oven. On ironing day if one burner is used, as it should be for most families, arrange the irons on a steel plate which can be bought for a few cents, then cover with a saucepan with a handle to conserve the heat. There are patent arrangements that one may buy for ironing, but the homemade affairs answer fully as well.

When using the coal or wood range for ironing, it is a good time to have a large share of the oven baking done. Beans may be baked, casserole dishes, Indian puddings, and dishes that take a long time to bake. By tempering the heat almost any degree may be maintained.

The woman who plans to use the whole range, oven and top, with her cooking is one who gets the best results from her fuel, when burning coal or wood. The triplicate dishes which set on one burner are great fuel savers if one is using gas, electricity or oil, as three dishes are all cooked with the heat from one burner. Getting a meal on a gas or oil stove and wishing to keep the dishes warm is not always easy.

One method is to have a large pan of hot water to set the food in, cover it and it will keep hot for twenty minutes. When buying an oil stove it is well to see that the burners run up near the dish, otherwise the cooking takes too long.

A careful study of any stove used should be the first work of the cook. Learn the dampers, how to regulate the oven, study the drafts and checks. There are still women who have used a stove for years that do not understand its simple mechanism.

When purchasing a new stove it should be thoroughly gone over with the salesman, who should be qualified to make everything clear in regard to dampers, checks and drafts, heating the oven and cleaning out the ashes from under the oven, if it is a coal or wood range. If oil, the cleaning of the burners, and regulating the oven is important. With a thorough understanding of her stove and a disposition to economize there is no need of waste on fuel bills.—[Nellie Maxwell.

Clean Sweater With Dry Cleaner.

To the Editor:—Will answer the inquiry as to how to wash a sweater. Get a bottle of dry cleaner and use it in gasoline as soap is used in water. The directions are given on the bottle.

Use a granite or earthenware dish and put the garment to soak for an hour or more. Cover tightly so the gasoline will not evaporate. Rub with the hands and rinse well in clear gasoline. The same mixture can be used a number of times by letting it settle and draining off. When ready to use again add a little more cleaner.

This should be done in the open air and the gasoline should be kept in fruit jars or bottles in an outhouse. The cleaning should be done in the morning so as to have plenty of time for the goods to air.

If a dress is cleaned press by using a damp cloth over it.

This cleaner can be bought at any drug store. If a garment is extra soiled rinse a second time or until it leaves the gasoline clear.

This will clean any combination of goods or colors without fading or shrinking. It is hard on the hands, so it is well to wash them in warm water afterwards and rub well with an oily substance; I prefer vaseline.

Will send a good polishing preparation. Mix together equal parts of turpentine and kerosene and add about four times that amount of raw paint oil. Keep in a covered can or bottle and shake well before using. Use a soft cloth dampened with this and you will find it much cheaper and just as good as what you buy. Keep a separate cloth and can in the garage for the men to use on rainy days.

H. B.

Dry in the Dark.

To the Editor:—In a recent number I saw a request by Y. Z. for directions for washing a child's woolen sweater. I have had excellent results with the following:

Shave one-half bar of good soap, cover with a pint of water and boil ten minutes. Strain and add to a large pan of warm (not hot) soft water. Place your sweater in the suds and squeeze gently. Do not rub. Let it stand in the suds for half an hour. Squeeze the suds through the soiled spots until they disappear. Rinse carefully in warm, soft water and squeeze dry.

Place on a clean folded sheet in a warm, dark place. The sun is apt to turn the wool yellow. Straighten the sleeves and bottom of sweater. Do not pull, but push the cloth so that it is not stretched in any place. Let stand until fairly dry. It will need a little more straightening before it is entirely dry, to avoid any pressing or ironing.

If the colored sweater is of good quality this will not hurt it in the least. Mrs. L. C. Hutchins.

Cleans Knit Goods With Flour.

To the Editor:—I am a reader of your paper and have just noticed the inquiry of Y. Z. as to the best method of washing fine white wool sweater.

I cleaned my baby's white wool knit suit and cap with hot flour. Just heat the flour hot in the oven and put the articles to be cleaned in a pan with the flour, rubbing gently as though in water, going over all parts thoroughly. Then leave dredged with flour overnight, covered with a clean cloth. After thoroughly shaking the articles the next morning they will look like new, and without the wear and tear of soap and water.

Mrs. Chas. R. Tyler.

Starting Begonia.

To the Editor:—As this is such a helpful corner I come to see if anyone can tell me how to start a new or extra bulb from my tuberous rooted begonia. A friend gave it to me, so I do not know its name. First, it got one crown or shoot and then two. Now this year it has started three. Could I not start one of these for a separate bulb? My plant dies down every fall, then in March I replant it. It blooms all summer. I. E. K.

Helps For You.

Pulverized chalk moistened with ammonia will remove yellow stains from porcelain.

An excellent foot bath for tired feet is made by adding one ounce each of borax and sea salt and one-half ounce of alum to a simple hot foot bath.

An iron cement suitable for mending cracks in stoves or openings around pipes may be made from equal quantities of common salt and sifted wood ashes wet to a paste with cold water and a bit of stove polish to color. Let set before heating the iron.

Brittle finger nails should be treated with olive oil or almond oil. Dip them in the oil and keep them there for five or ten minutes. This will keep them soft. Never pull hangnails off. When absolutely necessary, cut them with small, curved scissors. Pulling them is injurious and it will only make them

sore and more painful than they were.

Have a wire spoon to remove croquettes or other fried food from deep fat. Have, also, a wire frying basket in which food to be fried can be put and then immersed in the hot fat.

Recipes.

Rhubard Conserve.—Four pounds of rhubarb, five pounds of sugar, one pound of seeded raisins, two oranges and one lemon. Wash and peel the stalks of rhubarb and cut into one-inch pieces. Put into a kettle, sprinkle with sugar, and add raisins, grated rind and juice of oranges and lemons. Mix, cover, and let stand for one-half hour. Place on the stove and bring to the boiling point. Let simmer for forty-five minutes, stirring almost constantly. Pour into glasses and seal.

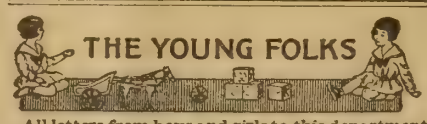
Boston Brown Muffins.—To two cupfuls whole wheat flour add one-half teaspoonful of salt, two well-beaten eggs, one-half cupful of sweet milk, two tablespoonfuls of melted butter, one-third cupful of molasses and one teaspoonful of soda dissolved in two tablespoonfuls of warm water. Mix well and bake in greased gem pans in a hot oven.

Cottage Pudding.—Two eggs, one cupful of sugar, one-half cupful of butter, one cupful of sour cream, two and one-half cupfuls flour, one teaspoonful soda, one teaspoonful cream of tartar. Mix thoroughly and bake in a long pan twenty minutes. Serve with cream or lemon sauce.—Mrs. H. J.

Frozen Pears.—Without opening, pack a can of pears in ice and salt, as for ice cream, for three or four hours. When taken out, cut can open around the middle. If frozen very hard, wrap with a towel dipped in hot water. Then the contents can be taken out without being broken. Cut into slices and serve with a spoonful of whipped cream on each slice.

Banana Cantaloupe.—Two tablespoonfuls gelatine, one-half cupful cold water, two egg whites, one-fourth cupful sugar, three-fourths cupful hot cream, two-thirds cupful sugar, four bananas, one tablespoonful lemon juice, three cupfuls whipped cream, lady fingers. Put the gelatine to soak in the cold water. Beat egg whites, add one-fourth cup sugar and hot cream. Cook over boiling water until it thickens. Then add the softened gelatine and two-thirds cupful sugar. Strain into a pan, set in ice water, add mashed bananas and lemon juice. Stir until it begins to thicken. Then fold in the whipped cream. Line a mold with lady fingers, turn in the mixture, spread evenly and chill.

Stuffed Egg Croquettes.—Take out the yolks from six hard-boiled eggs and put the whites carefully away on a plate until you are ready to use them. Rub the yolks smooth with a tablespoonful of melted butter, two tablespoonfuls of finely minced ham or tongue, a little chopped parsley, a few drops of onion juice, salt and pepper to taste. Fill the whites of the eggs with this mixture, press the halves together and stick the edges with a little beaten egg. Roll the eggs in fine crumbs, then in beaten egg, then again in the crumbs, lay in the frying basket and cook to a fine brown in boiling deep fat. Serve immediately.



All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

The Raggedy Man.

O the Raggedy Man! He works fer Pa;
An' he's the goodest man ever you saw!
He comes to our house every day,
An' waters the horses, an' feeds 'em hay;
An' he opens the shed—an' we all ist laugh
When he drives out our little old wobble-ly calf;
An' nen—ef our hired girl says he can—
He milks the cow fer 'Lizabuth Ann.
Ain't he a' awful good Raggedy Man?
Raggedy! Raggedy! Raggedy Man!

W'y the Raggedy Man—he's ist so good,
He splits the kindlin' an' chops the wood;
An' nen he spades in our garden, too.
An' does most things 'at boys can't do.
He climbed clean up in our big tree
An' shooked a' apple down fer me—
An' nother'n, too, fer 'Lizabuth Ann—
An' nother'n, too, for the Raggedy Man.
Ain't he a' awful kind Raggedy Man?
Raggedy! Raggedy! Raggedy Man!

An' the Raggedy Man, he knows most rhymes,
An' tells 'em, ef I be good, sometimes;
Knows 'bout Giunts, an' Griffuns, an' Elves,
An' the Squidgicum-Squees 'at swallers the'rselves!
An', wite by the pump in our pasture lot
He showed me the hole 'at the Wunks is got,
'At lives way deep in the ground, an' can
Turn into me er 'Lizabuth Ann!
Ain't he a funny old Raggedy Man?
Raggedy! Raggedy! Raggedy Man!

The Raggedy Man—one time, when he
Was makin' a little bow-'n'-orry fer me,
Says, "When you're big like your Pa is,
Air you goin' to keep a fine store like his—
An' be a rich merchunt—an' wear fine clothes?—
Er what air you goin' to be, goodness knows?"
An' nen he laughed at 'Lizabuth Ann,
An' I says, "'M go' to be a Raggedy Man!—
I'm ist go' to be a nice Raggedy Man!"
Raggedy! Raggedy! Raggedy Man!
—James Whitcomb Riley.

For Margaret.

To the Editor:—I thought perhaps the little girl by the name of Margaret, who sent the recipe for the devil's food cake, would be pleased to know that it has been tried, and with the best of success. I like it better than any I have tried.

We enjoy your paper very much, and I want to thank little Margaret again for her good cake recipe.

Mrs. W. B. Anderson.

Jim Crow a Mischief Maker.

Dear Young Folks:—I live on a farm and have two brothers and three sisters. I have several pets but am going to tell you about the one I like best. His name is Jim Crow. He is always causing trouble for someone.

One day last summer he found mamma's sewing basket sitting in the window where she had been using it the day before. He searched every part of the basket. The next time mamma went to sew her thimble was missing. We searched everywhere for it but all in vain. It was nowhere to be found. So mamma had to borrow one from one of the girls. When she was through with it she put it in her basket. It disappeared in the same way as the others. She also missed her buttons, small scissors and other little thing in her basket. In the same room my brother kept his marbles. They were missed too, which was displeasing to Frank.

One morning I ran into this room and who do you suppose I saw? No one but Jim, the crow. I watched him on the sly. After a while he found a button. He wandered out in the yard, then to the garden, then over under the sage bush, where he laid down his button and covered it with some leaves. After he was gone I searched in his hiding grounds and found buttons, thimbles, scissors, marbles and some nuts.

One time he went off with a bunch of wild crows and was gone about two weeks, but finally came back. He eats with the chickens, but roosts in a little house built on the south wall of the barn.

There is a small spring just a few yards from our house. During the summer Jim takes a bath in this spring every morning. With the drops of water among his feathers and the sun shining on him he looks like his feathers were dotted with diamonds. I think him rather cute even if he is a little mischief maker. —Alta.

A Visit to Colorado.

Dear Young Folks:—I have been reading the letters in the Young Folks' Department for so long and have enjoyed them so much that I thought I would write one too. I will tell you about my trip to Colorado.

My father, mother, grandpa, aunt, uncle and I started on Wednesday afternoon and reached Denver the next afternoon. We tried to get rooms and after a while we got some splendid ones.

The next morning we went on top of the Rocky mountains. We went in an auto, and stopped every now and then to see what was going on. We stayed about thirty-five minutes at the top to see the sights. As we were going back we saw an aster farm and many other beautiful things.

After lunch we went to the city park, which covers 350 acres. We first went to a small lake where we took a ride in a steamboat. Then we went to the museum where there were stuffed animals of all kinds. There were also live animals, such as the mountain goat, elk, buffalo, bear, wolf, monkey and birds of all kinds, including the beautiful green and yellow parrot. We also saw some beautiful flowers and the play grounds for the children. As we were watching the children play we ate some delicious ice cream.

When evening came we went back to our rooms in a street car. The next day, on Saturday, we went to Colorado Springs where we saw the Cave of the Winds, Garden of the God's, Pike's Peak, and Seven Falls.

We came home on Tuesday and we were glad to be home again even though we had had a nice time.

—Jennella.

The strawberry area in nineteen states, as reported by the department of agriculture, is 111,543 acres, 19.7 per cent more than a year ago. The Missouri area is 6,300 acres, an increase of 45 per cent. Tennessee leads as a strawberry state with 17,496 acres; Louisiana is second with 16,540, and Arkansas third with 13,880. The crop condition in nearly all important states is high.

SAFETY
STORM BLAST
LANTERN FREE

This Safety Lantern cannot catch fire or explode. It is absolutely safe at all times and on all occasions. If you drop it in the hay loft, no oil can escape; if the cow kicks it over, it goes out at once.

It cannot blow out in a cyclone because of the storm blast feature. It is just the kind of a lantern every farmer needs about the house and barn.

Patent opening device raises and swings the globe free for lighting, filling and trimming. This lantern is fully guaranteed and is endorsed by the highest authorities on fire insurance, fire fighting and explosives. If dropped or turned over it immediately goes out. Oil cannot run. Impossible to catch fire. A lantern you will always feel safe with in the house or barn.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and inclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery.

CATALOG OF SPRING AND SUMMER FASHIONS.

Send 10 cents in silver or stamps for our up-to-date 1916 large spring and summer catalog, containing over 400 designs of ladies', misses' and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, MADISON, WISCONSIN.

1720—Ladies' dress. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 36 will require 6 yards of 44-inch material.

1407—A dainty frock for mother's girl. The pattern is cut in 4 sizes: 6, 8, 10 and 12 years. It requires 3½ yards of 36-inch material for a 10-year size, for the dress and ¾ yard for the bolero.

1716—Ladies' kimono. The sleeve is lengthened by a gathered ruffle. The pattern is cut in 3 sizes: Small, medium and large. It requires 5⅝ yards of 36-inch material for a medium size.

1697—Ladies' dress with sleeve in either of two lengths. The pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 6⅛ yards of 44-inch material for a 36-inch size.

1695—A dainty frock for mother's girl. The dress is a one-piece model, gathered at empire waistline. The pattern is cut in 4 sizes: 2, 3, 4 and 5 years. It requires 2 yards of 36-inch material for a 4-year size.

1365—An attractive apron model. If desired, the back portion of the bib may be omitted. The pattern is cut in 3 sizes: Small, medium and large. It requires 4½ yards of 36-inch material for a medium size.

1710—Girls' apron. The pattern is cut in 5 sizes: 2, 4, 6, 8 and 10 years. It requires 2¼ yards of 36-inch material for a 6-year size.

1707—Ladies' princess slip with neck edge in round or square outline and with or without flounce. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6¾ yards of 36-inch material with 3½ yards of flouncing for a 36-inch size.

1419—Girls dress with sleeve in either of two lengths. The pattern provides a chemisette for high neck finish. The pattern is cut in 4 sizes; 6, 8, 10 and 12 years. Size 8 years requires 3 yards of 44-inch material.

1706—Dress for misses and small women. The pattern is cut in 3 sizes: 16, 18 and 20 years. To make as illustrated will require 4⅜ yards of 44-inch material for full portions of skirt, vest, collar, sleeve extension and skirt yoke, and 3⅜ yards for panels, sleeves, waist portions and drapery for an 18-year size.

Waist 1692, Skirt 1694—A smart and becoming dress. Waist 1692 cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 1694 cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It requires 8½ yards of 27-inch material for a 36-inch size. Two separate patterns 10 cents for each pattern.

1521—A trim and popular suit for mother's boy. The trousers are made with side closing. The pattern is cut in 4 sizes: 3, 4, 5 and 6 years. It requires 2¾ yards of 36-inch material for a 4-year size.

The Mother.

The light of the mother's smile will survive our sun—the thrill of her kiss will last beyond the thrilling of stars; the sweetness of her lullaby will endure in the cradle songs of worlds yet unevolved; the tenderness of her faith will quicken the fervor of prayers to be made to the hosts of another heaven—to the gods of a time beyond time. And the nectar of her breasts can never fail; that snowy stream will still flow on, to nourish the life of some humanity more perfect than our own, when the milky way that spans our night shall have vanished forever out of space.

International Sunday School Lesson.

Lesson for May 28, 1916.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

THE COUNCIL AT JERUSALEM.

LESSON TEXT—Acts 15:1-35.

GOLDEN TEXT—For freedom did Christ set us free.—Gal. 5:1.

The events of this lesson are outstanding in Christian history. Paul's appeal to the Gentiles and the large number of them who accepted the Gospel made most acute the question, "Must Gentile believers become Jewish proselytes upon accepting the Christian faith and be governed by Jewish law and customs?" It would be exceedingly interesting to divide a class and let them debate this controversy stated as follows: "Resolved, That the Mosaic law should not have been imposed upon Gentile Christians." The date of this council was A. D. 50 or 51, and the scene is laid first in Antioch of Syria and then in Jerusalem.

I. A Division of Opinion (vv. 1-6). Luke does not name those who agitated and precipitated this controversy, but clearly indicates how the Holy Spirit dealt with the situation. "Is a man justified by faith, or by the works of the law?" is a similar question with modern application. The Holy Spirit, to avoid a rupture in the yet weak church, directs that Paul, Barnabas, Titus (Gal. 2:1) and "certain others" who are not named, should carry the question to the apostles and elders in Jerusalem. Those to whom they went were "of reputation" (Gal. 2:2), the "pillars" (Gal. 2:9) and they received the delegation from Antioch in public (15:4), also heard Paul in private (Gal. 2:2).

II. The Argument (vv. 6-18). It will not do to be harsh in condemning Paul's accusers. The Pharisees felt deeply their position. As God's chosen people they were marked by circumcision. Jesus, the promiseed Messiah, was a Jew. Social, religious and racial differences are hard to reconcile in one church today. But little was asked of the Gentiles in contrast with all they received. Entrance to church membership would not be too easy if circumcision were imposed as a test of their sincerity. Peter brought forward the plea before the council that God had given the Holy Spirit to the uncircumcised Christians, "and put no difference between us and them, purifying their hearts by faith" (vv. 8, 9). God bears the same witness today to those who refuse to be bound by Mosaic traditions as regards the seventh day and other such details. Paul's argument was that God had wrought signs and wonders among the Gentiles and thus set His seal upon his preaching of salvation as apart from legalistic works (v. 12). Read in this connection Gal. 2:16, Titus 3:20, 8:3, 10:4, and Phil. 3:9. The apostle James presented the third argument in connection with the verdict he pronounced. It was that it is according to Old Testament Scripture that God will take a people for his name from among the uncircumcised Gentiles as well as from among the law-keeping Jews (vs. 13-17). With Paul this was a vital question, and we can at least imagine his feelings as he puts forth a life-and-death struggle for the truth. As Peter reminded the people of the occasion when "the Holy Spirit came upon Cornelius and his household" he caused them to keep silence.

III. A Wise Decision (vv. 19-29.) It was James the Just, brother of our Lord, the writer of the epistle and the bishop overseer of the church at Jerusalem, who rendered the decision. In his argument (vs. 13-18) he saw in these Gentile converts reported by Barnabas and Saul a fulfillment of the prophecy of Amos, and to use the language of today he "made a motion," viz., that these Gentiles be not disturbed except in such matters as would tend to more fully separate them from the heathen idolatry they had just left, (a) "Pollution of idols," i. e., flesh offered in the sacrifices (b) "from fornication," the immorality connected with the pagan worship of Aphrodite and Cybele which actually consecrated vice, and (c) "from things strangled," for the heathen did not, as the Jews did, look upon the blood as life, the seat of the soul. The church readily agreed to this motion and took such precautions as were needed that no misrepresentations of their decision be carried back to Antioch. This consisted of a spirit-led choice of messengers and in a written statement of their decision (vs. 22, 23).

IV. The Result in Antioch (vv. 30-35). Great joy greeted the conclusion of this question.

It produced pleasant harmony in place of discord and in place of the irksome bondage of the law it gave the joyous liberty of the Gospel.

Jewish legalism gave way to Christian liberty. Judas and Silas, Spirit-filled, gave much profitable exhortation and instruction.

Silas after reporting to the Jerusalem church (v. 32) seems to have returned to his new-found friends (v. 34) and later became, along with Paul, a missionary (v. 40).

Thus the evil Paul's enemies thought to accomplish worked out to the good of all (Rom. 8:28).

More Red Poll News.

BUSINESS is booming"—such was the reply when we recently called on L. C. Underwood, Avoca, Wis., and asked him how business was. All breeders of Red Poll cattle seem to use this phrase very frequently this year for they have all enjoyed good business. We think we are safe in saying that Mr. Underwood has one of the best herds in the state or for that matter in the Northwest. The Underwood farm has been the home of the Red Poll since 1893, and, as the owners have been progressive in their breeding operations, their herd now ranks among the very best. In this herd the get of the good bull, Champion, is very prominent. The heifers and young bulls we saw are very uniform, are of the desired color—deep red—and have more size than many individuals in the herds we have seen. Champion is by Dewey, he by the show bull, Cremo. His dam traces to Corporal, consequently he comes from a line of breeding that is popular with the Red Poll men. Among the A. R. cows in the herd there are two that appealed to us very much. One named Helen, sired by Teddy has a record of 350 pounds fat and Flora by Peter Muggins has the same official record. These cows are most excellent specimens of the breed. Other cows in the herd have records from 294 to over 300 pounds of fat with milk records of between 8,000 and 9,000 pounds. Mr. Underwood's records show that he has several cows that gave forty pounds of milk a day and one of these tested 4.8. His sale report shows that he has shipped cattle to Iowa, Illinois, Michigan, Minnesota, both Dakotas and as far south as Texas and he now has an order for five females from a party in Canada. We simply mention this to show that "Underwood Red Polls" have more than a local reputation. At this time he has a few bull calves and a few cows and heifers that he is pricing and the advocates of this breed that desire to strengthen their own herds will do well by adding some of these good cattle that are being offered. His advertisement appears in this issue and if you write for further information and prices kindly say you saw the advertisement in The Wisconsin Farmer. See page 22.—Adv.

Free Machinery Shed Plans.

THE trade extension department of the National Lumber Manufacturers' Association is issuing a series of bulletins to farmers. The subjects covered are various types of farm buildings. The most recent bulletin is that which treats of implement sheds, and the text is written by Mr. J. T. Ekblaw. Mr. Ekblaw has carefully figured out the space required by the different types of implements which may be found on the average farm. Furthermore, he has discussed the types of implement sheds in a very interesting and practical way. If any reader of this paper has an idea of building an implement shed in the near future it will pay to get hold of this bulletin as it provides a very comprehensive study of the subject. No matter what type of implement shed one may desire to build it will be interesting to look over the plans which Mr. Ekblaw has worked out. The bulletin to which we refer is known as Farm Bulletin No. 1 on Farm Structures, and a copy may be had free by writing to the National Lumber Manufacturers' Association, Chicago. A prompt reply to your letter will be insured by mentioning the fact that you saw this notice in this paper.—Adv.

Burn Brae Farm Jerseys.

A RICHLY bred Jersey bull is advertised for sale on page 22 by Chas. A. Peterson, Rosendale, Wis. He combines the blood of many of the best known Jerseys ever owned in Wisconsin. He traces closely to Brown Bessie, that won first at the Chicago World's Fair; Double Time, a noted cow owned by F. Stubley; King Sappho King, one of the great bulls of the breed. He also carries the blood of Exile of Shomet which gives him the famous Olive Dunn breeding. This young bull is very growthy for his age and is of good, straight, level type. For pedigree and price write to the above address.—Adv.

Timblin's Short-horns.

A FINE yearling Short-horn bull is advertised for sale on page 22 by Timblin Bros., Eden, Wis. He is a growthy, straight, level youngster and is very well bred. His sire is Clara's Prince by Spicy Prince. His half-sister is owned by May & Otis and won second in the milking class at the International. She gave over 11,000 pounds of milk in a year. The dam of the bull offered for sale is a fine big cow, weighing 1,500 pounds as a three year old. For further information in regard to this animal write to the above address.—Adv.

Demand for Red Polls Continues.

WE have just received a letter from J. W. Salter & Sons, breeders of Red Polled cattle at Unity, Wis., advising that they sold the bulls they were advertising and to change their advertisement. They say that they will sell a few choice heifers, bred and open. Only a few will be offered and if you are interested you had better attend to this without delay. We have had some very encouraging letters from our Red Polled advertisers which shows that there is a growing demand for cattle of this breed. Write the above firm your needs and you can rest assured that they will tell you just what they have for sale and you will find the cattle just as represented. See page 22.—Adv.

Lawson's Guernseys.

ROSENDALE, WIS., has long been famous as a center of Guernsey breeding, and the herd of W. A. Lawson is one that will continue to keep Rosendale prominent as a Guernsey center. The herd is of very uniform type and noticeably good in udder and veining development. Advance registry testing has been done and some very creditable records made. The herd consists of both imported and home-bred cows, both of which have qualified with good A. R. records. The records are unusually valuable, as they represent the true ability of the animals under ordinary farm conditions. No attempt has been made at forced feeding and the cows were milked only twice a day. The herd is headed by Richmond Lion 15604, whose tested dams average 503 pounds of fat in a year. This bull has one A. R. daughter that made 373.74 pounds of fat with first calf. At the present time Mr. Lawson is offering a number of fine yearling bulls from advanced registry dams for sale. He is also offering a few heifers ranging in age from two months to two years. One of these bulls is from Maud G. 30521, the foundation cow of the herd. She has an A. A. record of 500 pounds of fat and two daughters with A. R. records of 373 and 380 pounds of fat as two and three year olds. An interesting sale list is issued giving a short description of each animal. Those of our readers who are in the market for Guernseys should send for this list. See page 22.—Adv.

Practical Mechanical Milking.

THE dairyman or farmer who wants to solve the problem of labor at milking time, but is not entirely convinced that he needs a mechanical milker, should send for descriptions and pictures of the Empire mechanical milker made by the Empire Cream Separator Company, Bloomfield, N. J. From these he can learn the principles upon which the machine operates and how other farmers have increased their profits and decreased their labor costs through its use. An important point with regard to the Empire is that it draws the milk in spurts like the calf sucks and the gentle, massaging pressure tends to increase the milk flow rather than decrease it. There is no need to fear that the Empire will cause sore teats or udders—experience proves that it does not. Then the clean, sanitary milk, free from germs and stable odors, is an advantage which must not be overlooked. The machine is easy to install, requiring but one tank and one pipe line, and one man can take care of at least thirty or forty cows an hour. When writing for the descriptions and pictures, ask also for Catalog No. 56M, as indicated in the advertisement on page 15.—Adv.

Shoo-Fly Protects Live Stock From Flies and Other Insects.

SHOO-FLY is a fly exterminator and skin disinfectant. When sprayed over cattle and horses it protects them from flies and other insects and keeps away irritating sores caused by rubbing and stamping. For dairy cows it is especially valuable, because annoyance from insects seriously affects the milk flow. A three-tube gravity sprayer and enough Shoo-Fly to protect ten cows for two weeks can be purchased for $1.25, express prepaid, at all points east of the Mississippi river; west of the river the price is $1.50. The saving value in milk or flesh will be many times this amount for each cow. Shoo-Fly may also be used to rid the poultry house of lice and mites. Send for the free booklet telling all about this wonderful insect exterminator made by Shoo-Fly Mfg. Co., Philadlphia, Pa. If you so desire, order direct from the advertisement on page 14 and you will receive prompt service, if you mention this paper.—Adv.

Silo Machinery Built Upon Sixty-five Years' Experience.

THE E. W. Ross Co., Springfield, Ohio, has been in the manufacturing business for sixty-five years and the vast fund of experience it has acquired in this time is offered to farmers in the famous Ross silo-filling machinery. Ross cutters and fillers work rapidly, but are very economical of power; they cut the silage in uniform lengths, which makes better feed and permits the storing of a greater tonnage in the silo. For durability, ample capacity, ease of operation and economy the Ross machines are hard to beat. Write for the catalog which tells all about these machines, also the Ross wood and In-destr-uct-o metal silos. See advertisement on page 15.—Adv.

Kitty Clay Durhams.

THE Kitty Clay herd of Polled Durhams is one of good type and heavy with producing ability. Many of the cows produce from 8,000 to 9,000 pounds of milk per year. One of the foundation cows in the herd is Kitty Clay 47th and her son is now at the head of the herd. She was by Duke of Aurora, whose dam gave eighty-four pounds of milk in one day. Her own dam, Kitty Clay 29th, won first prize as a two year old at the six-months butter contest at the St. Louis World's Fair. Her dam's dam, Kitty Clay 10th, won first prize as an aged cow at St. Louis and her great-grandam, Kitty Clay 7th, was a winner at the Chicago World's Fair. The great production of her great-great-grandam, Kitty Clay 4th, is known to all Short-horn and Durham breeders. She won third against the world and against all breeds as a milk producer at the Chicago World's Fair. The Kitty Clay family are descendants of the great cow, Fill Pail. One-fifth of all the dairy Short-horns shown at the Chicago World's Fair and nearly one-half of those shown at St. Louis were descendants of this cow. Many of the cows in this herd are daughters of Prince of Rosendale, a strongly bred Polled bull. He traces closely to Young Hamilton, and twice to the cow, Nellie Gwynne, two of the five original Polled Durhams. He also traces to Wild Eyes Duke and Bright Eyes Duke, two Bates bred bulls that have placed the Short-horns high in the ranks as milk producing animals. The Kitty Clay herd is unique in that it is a Polled herd of rich Bates breeding and high milk production ability. At the present time a very fine yearling bull is advertised for sale on page 22. For pedigree and further information write to J. Warren Hoyt, Rosendale, Wis.—Adv.

Excellent Ayrshire Bull for Sale.

IF you are interested in Ayrshire cattle you will be interested in the herd owned by Jas. Van Etta, Lima Center, Wis. He has the individuals that appeal to anyone that admires good stock, and a student of Ayrshire pedigrees can appreciate the value of the breeding in this herd. At this time a bull of serviceable age is being offered. He is mostly white, an excellent bull individually and is backed up with the very best breeding, being by imported Craigbrae Lord Roseberry and out of a daughter of imported Bargenoch Bonnie Scotland, a grand champion of Scotland, Canada and at Chicago. The grandam of the bull being offered has a 480-pound record as a three year old from 11,141 pounds milk. Now this bull is a real bargain at the price being quoted and if you want a bull of this breeding we don't believe you can equal it in the state. Mr. Van Etta has an excellent herd and your time will be well spent if you will spend a day at this farm. Write for further information and price and in so doing please mention The Wisconsin Farmer. See page 22.—Adv.

Are You Interested in Polled Durhams?

AT Kilbourn, Wis., there is a herd of Polled Durhams that is far above the average. This herd is owned by F. S. Bunker, a pioneer breeder of the the state and by far the leading Polled Durham man of the state. His cattle combine the blood of the noted Polled bulls and also the blood of the greatest Short-horn families. The present herd bull is a son of the noted Royal Silver, and is out of Missie Sultana, a Marr Missie cow. At this time he has six heifers for sale and they are dandies, two have the horns and are of the best Short-horn breeding and the balance are Polled. Some of these are by Grove 92d, a Cruickshank Butterfly and a grandson of imported Scottish Lady and Whitehall Sultan. Two bulls are being offered, nine and ten months old, sired by Red Sultan a grandson of Whitehall Marshall. Mr. Bunker has an excellent herd of breeding cows and his surplus is in demand, for during the month of April he shipped cattle to both Dakotas, Iowa, Minnesota, as well as many sales in Wisconsin. It is a pleasure to recommend this herd, for you will not be disappointed in the stock, even if you make a long trip to see them. Get his sale list and in writing will you please mention this publication? See page 22.—Adv.

The Smiley Poland Herd.

WM. SMILEY & SON are too well known to Wisconsin Farmer readers to need any introduction at this time. We recently spent a few hours at Walnut Grove Stock Farm near Albany and found the Messrs. Smiley with about 180 spring pigs. Naturally with this number, the ages vary but they have them sorted into bunches according to age and they are all doing nicely. Some of his pigs have as much size for their age as any we have seen, consequently we are sure they are getting good care. Three good boars are doing service in this herd. The senior boar, Wisconsin Jumbo 2d, is looking fine and we saw some good stuff on the farm sired by this boar. He comes from the best of big-type breeding being by Longfellow Jr. by Longfellow. Longfellow Jr. we believe, was the best of all the Longfellows. The dam of Wisconsin Jumbo 2d is Miss Mow that sold in Mouw's sale for $345. This boar is very large, yet he has smoothness and his get shows up well. Monarch is a full two year old and has several excellent points about him. He has a wonderful back and a good head and ear. He stands well on his feet and has good bone and is a boar with great depth and thickness. The pigs by him have a world of quality and plenty of size. Major Miller, a short two year old made the biggest hit with us, at this time, though he was not as fat as the other boars. He has plenty of stretch, a good back and feet and we believe he will make a grand boar at maturity. He is sired by Major Hadley and his dam, Miller's Lady Orange, was by the great old sire, Miller's Big Orange and out of Price Lady 2d by the one and only Chief Price 2d. The boar comes from a line of breeding that has made good. The most recent addition to this herd is a son of Golden Gate King. Mr. Smiley was at Henry Dorr's last winter and got the first pick of the fall boars sired by Golden Gate King, and he picked a good one when he got this fellow. He is the "Dorr type" and is full of quality combined with size. If he continues to do well he should make a creditable showing this fall. In all probability these gentlemen will have a show string out this fall and from the present outlook they will be strong contenders in many classes. For the benefit of those that want to buy pigs—boars or gilts—they are pricing some of the good ones at very conservative prices. They can sell you pairs or trios not related. They are good and will please you. Their advertisement appears in this issue. If interested write and please mention The Wisconsin Farmer. See page 22.—Adv.

Chester White March Pigs.

W. F. MILLER, West Salem, Wis., has a herd of Chesters that compare favorably with the good herds of the state. Of the spring pigs, he has about fifty that were farrowed in March and these are weaned and ready to ship at any time. They are good individually and are sired by good boars and if taken while they are young they won't cost you very much. He can sell you pairs or trios unrelated and a good guarantee goes with them. Get his prices and order before the tops are picked over. You can buy now and carry them over cheaper than you can by waiting until fall. Don't forget to mention The Wisconsin Farmer. See page 23.—Adv.

A Burnham Wagon Rack Cheaper than You Can Build One.

BEFORE buying a new wagon rack or building one yourself, write for the descriptive circulars and prices of the Burnham rack, which can be bought for less than the cost to build one at home. The Burnham rack is built of hardwood and fir finishing lumber and is securely fastened with bolts and rods—there are no nails to work loose. It is painted with pure linseed oil paint before assembling, in pearl gray and vermilion colors. Write for information to Burnham Mfg. Co., Charles City, Iowa. Mention of this paper is always appreciated.—Adv.

NEWS OF THE SALE RING

Birch & Thompson's Hereford Sale.

Birch & Thompson's second annual Hereford sale held Thursday, May 18th, at Lake Geneva, Wis., was well attended. Wisconsin breeders bought liberally of the better class of cattle. The top price bull, Refiner 11th, was sold to Ing R. Thorsgord, Westby, Wis. L. M. Scott & Sons, Bagley, Wis., purchased several very fine heifers. W. H. Fountain, Elkhorn, Wis., was a heavy bidder and took some of the best of the females. A. C. Bartlett added a number of choice females to his herd at Lake Geneva and other Wisconsin breeders bought well. There were buyers present from Michigan, Illinois, New York, Indiana, North Dakota, Montana, Iowa, Ohio and other states:

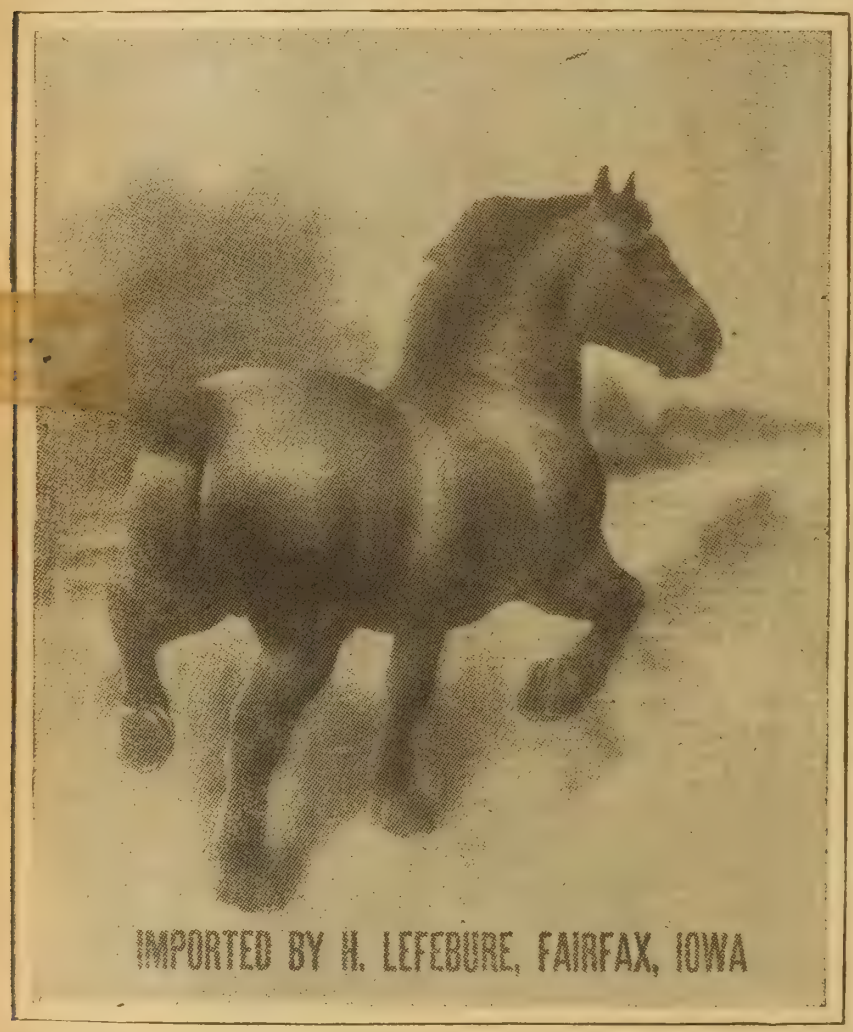
42 head average 286

Spraying Cherry and Apple Trees.

The shot hole disease affecting the cherry orchards of the famous Sturgeon Bay district, which has assumed threatening proportions in some sections of this area, is being investigated again this year by the growers themselves working in co-operation with specialists in plant diseases from the college of agriculture. Individual experiments will be resumed on a number of cherry plantations by E. W. Roark and assistants, with headquarters at Sturgeon Bay. Spraying tests will be conducted to control shot hole fungus of cherry and plum and some work will be conducted with the general diseases affecting blackberries and raspberries.

Co-operative spraying demonstrations, on the theory that two good apples saved will pay for a gallon of spray mixture, are being conducted this month on farms near Racine, Fond du Lac, Wyocena, Baraboo and Oshkosh by R. H. Roberts, of the horticultural department. In addition to the demonstrations with liquid sprays, the farmers who attend these meetings will have a chance to see the new dust spray apparatus in action. Powdered sulphur, arsenate of lead and a filler are the materials used and the dust is blown against the trees by a large power bellows mounted on trucks.

Mrs. E. E. Wells, of Vida, Ore., who without funds and at the age of seventy-one years, filed on a homestead near that place, has made final proof of residence and development of the tract. In the regular course of events she will receive title to the property. The money with which she paid for the work on the land she earned by "working out" for others.



THE above illustration is a likeness of the imported Belgian stallion, Farceur 7906 (77278), a bay with black points, weighing 2,400 pounds. He is a five year old and a winner in Belgium and at the Iowa and Minnesota State Fairs and at San Francisco. He and other good ones are offered for sale by H. Lefebure & Sons, Fairfax, Iowa. See advertisement on page 23

LAST CALL TO THE HOLSTEIN SALE
WAUKESHA COUNTY, JUNE 1ST

REMEMBER: That Waukesha county contains more tuberculin-tested cattle than any other county in the state; that so far as we know no tubercular animal have ever passed through our sales; that it is our aim to maintain this reputation; that no by-bidding is allowed; that this is a sale; that this is the place to buy foundation stock; and that we will treat you fair. Send for a catalog to W. L. Baird, secretary, Waukesha, Wis., or get one at the sale. Sale commences promptly at 10 o'clock on June 1st in city of Waukesha. Come and look the animals over before the sale.

HOLSTEIN-FRIESIAN CATTLE.

DUCHESS ORMSBY and ALCARTRA COWS

HOLD the world's 7-day and year records for both butter and milk. They have startled the world by their achievements during the past year. We are offering a few young bulls sired by King Pietertje Hengerveld Ormsby, that is a full brother to the former world's record cow, Pietertje Maid Ormsby. Several bulls are from Alcartra bred cows. **BONNIE MEAD STOCK FARMS, Randolph, Wis.**

Purebred Registered
HOLSTEIN CATTLE

Holstein merit the basic principle. The sound administration of the Holstein-Friesian Association since 1871, has been the helpful influence, the educational advance agent, and not the basic principle, for the basic principle of Holstein prosperity is the genuine and demonstrated superiority of the purebred registered Holsteins as the largest and most economical producers of milk and the most profitable dual purpose breed. All of the clever exploitation and the most prolific advertising in the world would not have placed the Black-and-White breed where it is, had not genuine superior merit been its foundation. Investigate the big "Black-and Whites."

Send for **FREE** *Illustrated Descriptive Booklet.*
The Holstein-Friesian Association of America
F. Houghton, Sec'y, Box 143, Brattleboro, Vt

YEARLING SON

READY for service of the 28-pound Holstein bull, Calumet Johanna Abberkerk Champion 105829, whose dam gave 623.70 pounds milk and made 28.71 pounds butter in seven days, and whose sire is a son of the $10,000 bull, The Milk and Butter King. The bull offered for sale is 3-4 white, good and straight and well grown.
A. G. Pingel **Chilton, Wis.**

POLAND CHINA SWINE.

Martiny's Poland China Boars

15 FALL boars of September farrow, sired by Wisconsin Jumbo, the 1st prize and Jr. champion boar at the Wisconsin State Fair, 1914. I believe he was the biggest boar of his age shown that year, he weighing 510 pounds at eleven months old. This will be the last chance to get a herd header from this great boar. The wise man will raise a few fall pigs this year if he never did before. I will sell these boars now for less than they will bring for pork after you get through using them next fall, as I wish to make room for my 100 spring pigs I already have on hand.
L. P. Martiny **Chippewa Falls, Wis.**

POLANDS

HAVE some fine fall **BOARS** to be sold at **BARGAIN PRICES** during the next month. Write. Everything guaranteed.
R. MEINKING - - BANGOR, WIS.

M. Bodenheimer & Co. **Green Bay, Wis.**

SHORT-HORN CATTLE.

FREE SHORT-HORN SERVICE

THE American Short-horn Breeders' Association invites prospective buyers to avail themselves of the free service offered by the Association's Extension Department. It invites Short-horn breeders to inform the Association from time to time of their salable stock. During the past twelve months, through the Extension Department, over 2,000 Short-horns have been placed in sections that would not have been reached by individual breeders. The demand for Short-horns is steadily increasing. The next number of The Short-horn in America will be published July 1st. Keep this publication on file. Address American Short-horn Breeders' Association, 13 Dexter Park Ave., Chicago, Illinois.

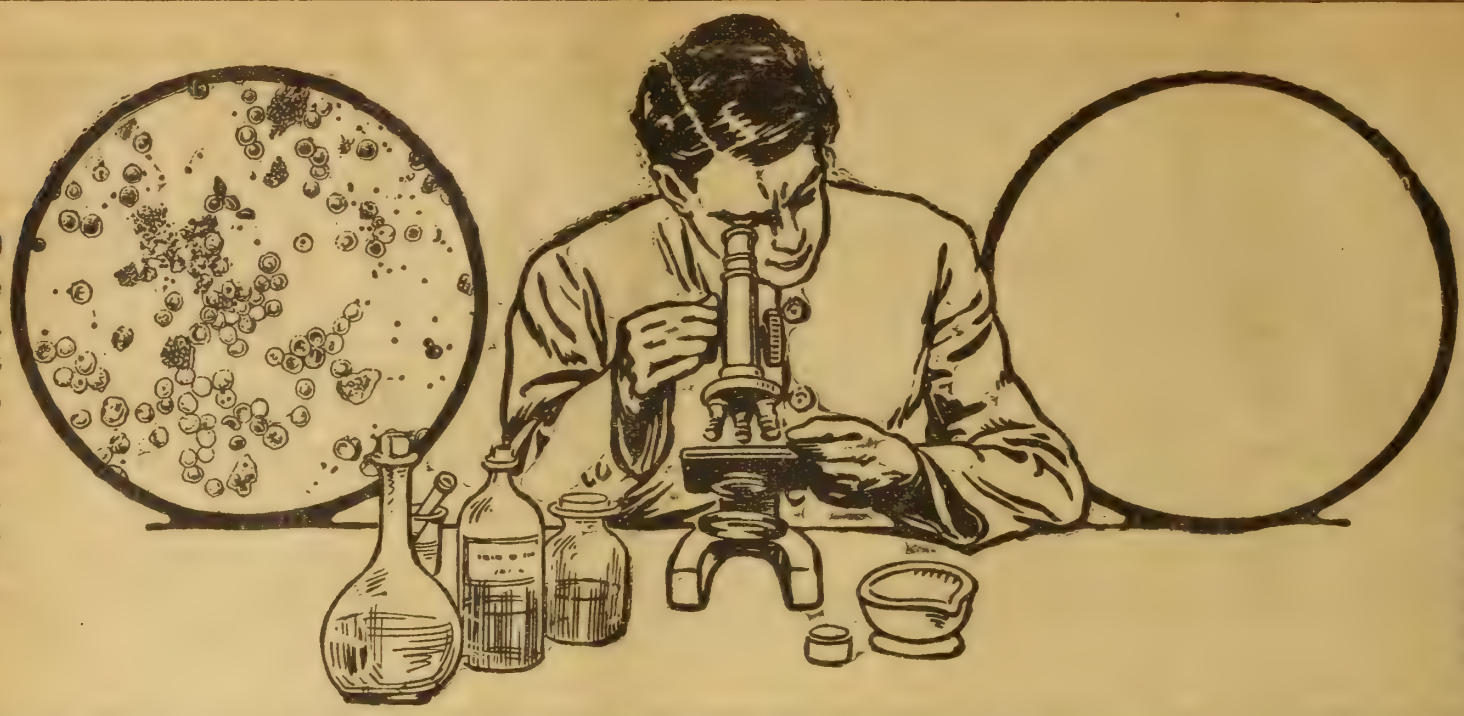
VOL. XLV. NO. 22. THURSDAY, JUNE 1, 1916. WHOLE NO. 1792

A WILLING POSER



Unrefined Serum looks like this. When you look at it through a microscope you see solid particles and germs which MAY cause dangerous diseases.

Mulford Refined Serum looks like this. When you look at it through a microscope you do NOT see anything. All the germs and solid particles have been removed. It is sterile and filtered.

Mulford Refined Hog Cholera Serum

MULFORD
FOR THE CONSERVATION OF LIFE
LABORATORIES

Living Up to An Ideal

The Mulford Laboratories stand for the conservation of life. Every Mulford product must be of the highest standard.

The history of the perfection of Mulford Refined Hog Cholera Serum may be cited as one instance of the lengths to which we go to raise the standards of Mulford products.

When we took up the production of hog cholera serum, five years ago, modern laboratories were constructed and the work placed in charge of trained, scientific men. The superior quality of our product was quickly recognized by veterinarians and hog raisers, and, in consequence, we became the largest producers of hog cholera serum in America.

For years our ideal was a hog cholera serum which would possess the full protective properties of the Dorset-McBryde-Niles Serum, and, in addition, would be refined and sterile (germ-free).

Two years ago we decided that until we attained our ideal of a refined, sterile hog cholera serum we would discontinue its production and sale, although we then had in stock ready for market over $300,000.00 worth of tested serum.

The extensive facilities of the Mulford Laboratories were devoted to this work, and after years of exhaustive scientific research and the expenditure of more than $100,000.00, covering thousands of tests and experiments by our expert scientific staff, we succeeded in producing a Refined, Sterile Hog Cholera Serum and have pleasure in announcing this fact to the world.

Milton Campbell
President
H. K. MULFORD CO.

Sterile and Filtered—Unlike Other Serums.
The Greatest Advance Since Introduction of Hog Cholera Serum.

MULFORD REFINED HOG CHOLERA SERUM is guaranteed to be potent, possessing the full protective properties of the Dorset-McBryde-Niles Hog Cholera Serum. In addition it is guaranteed to be—

STERILE (germ-free), containing no germs of any kind;
FILTERED AND CLEAR, freed of all the fibrin, clot and other insoluble, inert materials, which are not only valueless but positively harmful to your hogs.

The significance of this announcement, backed by the reputation of the Mulford Laboratories, will be appreciated by every veterinarian and hog-raiser.

The H. K. Mulford Company is the first and only house to offer for sale Refined Hog Cholera Serum, which being sterile (absolutely free of all germs), cannot possibly infect your hogs, if properly administered.

Mulford Refined Hog Cholera Serum, being filtered and free from all solid particles, is rapidly absorbed,—as soon as it is injected, while unrefined serums are absorbed slowly. Your hogs receive **immediate** benefit of the **full** dose and the dangers of causing disease, cysts and abscesses are removed.

Mulford Refined Hog Cholera Serum may be used either in the Serum-Alone (Single) treatment or in the Serum-Virus (Simultaneous) treatment. It is supplied in 100 c.c., 250 c.c. and 500 c.c. bottles, at a uniform price of two (2) cents per c.c. The average dose is 20 c.c. of serum for each 50 lbs. the animal weighs.

Only a sterile (germ-free) serum—free from all contamination or solid matter is absolutely safe to administer to your hogs

Mulford Refined Hog Cholera Serum **is sterile and is free from all solid matter—unlike other serums.** **Send for Free Booklet No. 9,**

THURSDAY, JUNE 1, 1916.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

CO-OPERATIVE BEGINNINGS.

I HAVE been making quite a study lately of the co-operative movement, as it applies to agricultural affairs and as farmers are becoming more and more interested in it. Not the least interesting chapter in the story is that which tells of the beginnings of this now world-wide movement.

It is a far cry from a hundred farmers banding together to buy a carload of flour for their own use, saving $78.90 thereby, as Mr. Hatch tells about in another column, and selling their produce in wholesale lots so as to dominate the market, to a little handful of poverty-stricken millworkers gathered together on a rainy November day in sheer desperation trying to devise some plan to better their miserable condition. Yet these are the two extremes of the co-operative story: The beginning and the present condition. Let me tell you the story as I gather it from authoritative sources.

Practical, common-sense co-operative work—such as has enrolled 5,000,000 people under its banner in America today, with farming giving the largest representation—began in a little, old, ramshackle building in a muddy street called Toad Lane, Rochdale, England, in 1844. Twenty-eight men, working in woolen mills for a wage that compelled them to live in poverty and destitution, made a solemn compact one gloomy November afternoon to save 4 cents a week for one year, the money to be used to start some kind of an institution that would enable them to buy the actual necessities of life a little cheaper. Each man made good his pledge and after twelve months of self-denial, saving a penny here and a penny there, they had in the treasury the sum of $140. After renting a little building and buying a few fixtures, they had $70 left to invest in a little sugar, a little pork, a little jam and a little oatmeal. And so the business was launched.

The business thus started is today the largest commercial institution known to mankind: The Wholesale and Retail Co-operative Societies of Great Britain, which, at the last available annual report, did a business for the year of $614,427,000, with a net profit of $66,446,520. The movement begun on that bleak, barren November afternoon by a handful of poverty-stricken millworkers has spread around the world, until today there is hardly a country which does not enroll thousands of advocates.

Aside from all question of co-operation, is there not inspiration here for all of us to do our very best, no matter how humble our sphere, to help ourselves and our fellowmen? Many of us have impulses at times which we fear or hesitate to follow because the task we would set about is so formidable and our efforts are so weak and puny. Yet think of the great movements which have grown from such humble beginnings as these millworkers staving off starvation in a ramshackle building more than seventy years ago. Should we hesitate to join hands with our fellowman and seek to remedy conditions when success in such notable measure has crowned the work often begun so humbly?

There is much that the farmer of today can accomplish if he will join hands with his neighbors (his brother farmers) and present a united front to those who stand between him and the ideal country life, the ideal farming condition. Shall we be discouraged, or fear that the obstacles are too great to be overcome, when a handful of millworkers can do so much with so few weapons at their command?

THE FREE-SEED GRAFT.

I AM glad to see that the United States senate has again taken a determined stand against the free-seed graft, cutting out the $200,000 appropriation therefor from the agricultural bill. The senate took similar action two years ago, and on that occasion I wrote:

> It is a question whether the free-seed custom ever did the farmer any good; of recent years it has been nothing more nor less than a political graft which should be ended without undue delay. Why, you ask me, do the senators and congressmen persist in continuing this practice? I answer that in my opinion Senator Kenyon was right when he declared that "the farmers resent it as a cheap method of currying favor at the expense of the government."

I stand back today of every word I wrote two years ago. There is no longer any reason or excuse for the government sending out miscellaneous assortments of all too often misbranded and infertile seeds which simply encumber the mails and serve no earthly purpose except to win favor for certain political candidates with some of the recipients. The government might just as well send out free pianos to music teachers or free gasoline to automobile owners.

In the beginning, there may have been a laudable desire to assist agriculture, but conditions have so changed that the plans of the originators of the scheme now miscarry most pitiably. Seeds are sent out broadcast over the country without any regard to their germinating ability in the climate and the soil to which they are consigned. As one of the senators pointed out to his confreres, two years ago, seeds which will propagate in one part of the country, under certain conditions, are absolutely worthless in other parts, yet they are sent out indiscriminately by congressmen. It is not only a waste of the seeds, but a big expense to the postal department and, in many cases, a waste of the land in which the seeds are planted.

The farmers of the grain belt are not asking any favors that they do not deserve. They are too independent and politically wide awake nowadays to trade their vote for a package of beet seeds which all too often grow into beans, if they grow at all. Instead of a package of garden seeds, farmers would rather have their representatives at Washington more truly represent them and their interests and serve the nation with more of an eye to the general welfare than to individual advancement. The lower house of congress will be playing the pettiest kind of politics if it restores the free-seed graft to the agricultural appropriation bill.

GRANGE VS. CLUB.

I AM indebted to my very good friend, Henry Hatch, of Gridley, Kansas, for a most timely communication on the relative merits of the grange and farmers' neighborhood clubs. You may recall that a few weeks ago I printed the letter of a subscriber suggesting that while the neighborhood club is good the grange is better, and that there is little or no need of scattering our efforts. At that time I invited a general discussion of this subject. Among all the numerous letters received none are more enlightening than Mr. Hatch's, which I print practically in full, as follows:

> The grange is better than a club, simply because incorporated in it are all the social features of the club, with the added advantages of organization, that is county, state and national in scope. This organization is of great benefit in legislative matters that affect the farmers as a whole, and also is becoming a great aid in co-operative buying and selling. We have found that when the granges of the state speak out in favor of or in opposition to some law that is before the legislature notice is taken of it. A few clubs, located here and there, with no binding in common, are not apt to "get together" so effectively, at least not if the time for action is short. The grange does not fight other orders or other trades, but it does stand up for the rights of the farmer, and whoever stands in the way of giving the farmer a square deal is naturally not looked upon with favor by the grange or its members. It often is said that you cannot get a bunch of farmers to stick together, but the hundreds of live grange organizations of Kansas furnish ample proof that such an idea is becoming obsolete.
>
> One of the "saving" features of the grange is the co-operative insurance it offers its members. We pay an average of one-third of what old-line insurance companies charge, and get prompt pay whenever we have a loss. The reason for this low rate is because we get it at cost.
>
> Buying and selling co-operatively is another great feature of the grange. We are making rapid progress along this line. The county has a general purchasing agent and each grange has its local agent or purchaser. We buy in car lots, and where one grange cannot use an entire carload of any commodity within its membership, neighboring granges club together. Tomorrow, weather permitting, the writer of this, as a local purchaser, will attend to the unloading of a car of flour, upon which the members of the grange will pocket a saving of $78.90. We feel that this money will do us as much good and will be used as intelligently in the upbuilding of the country as if it were donated by us to local merchants or middlemen. However, when local merchants treat us right we give them our orders, but so far most of them seem rather hostile to our efforts to save what rightly belongs to us when we buy for cash and in large quantities. With them, it seems anything to prevent us getting together; yet, a few are learning that their opposition only hastens what they try to prevent, and some have quotations to offer whenever we are in the market for a carload of flour, salt or produce of any kind.
>
> It does not seem to me that a club could do what our grange has done, at least not unless the same lines are followed as regards county and state organization. Since the grange has all the good features of the club socially and combines with it features that make it worth while financially, we consider the grange the better of the two.

Mr. Hatch is enthusiastic over the grange, and rightly so, for it has made wonderful progress in his part of the country, the county where he lives having twenty-four granges, with an average membership of seventy-five to 150. Here, in one county, we have between 2,000 and 3,000 farmers banded together for mutual advancement, buying and selling co-operatively and mingling together in the most friendly and sociable of relations. The advantages of such fellowship can hardly be overestimated. Still, I am inclined to believe there is room for both the neighborhood club and the grange. The one emphasizes the social and intellectual features, the other the political and economic; there seems to me to be a good field for both. To judge by the club meetings which I have attended and by the wonderfully enthusiastic reports which come to me from farmers' clubs all over the grain belt, there is an opportunity to do good with these community organizations, including the entire farm family, which cannot be overestimated. I am delighted to see that the programs of these club meetings are becoming more and more practical: The best variety of grain to plant, the comparative merits of different kinds of silos, the pros and cons of the road situation, the best breed of hogs and cattle, and so on. The grange does, indeed, find farmers banded together to make farming take higher rank among the useful and honorable professions, to make the great farming body secure more widespread recognition, but there remain a thousand and one of the little, intimate details of farm life which can be discussed at neighborhood club meetings (with their attendant problems solved there) better than any place else, in my opinion.

May I hear from more of my readers on this very interesting matter?

KNEE DEEP IN JUNE.

COULD I do any better, at the threshold of another June, than to print a part of James Whitcomb Riley's "Knee Deep in June"? I wish I had the space for all the stanzas, but here are five, which will have to suffice:

Tell you what I like the best—
'Long about knee-deep in June,
'Bout the time strawberries melts
On the vine,—some afternoon
Like to jes' git out and rest,
And not work at nothin' else!

Orchard's where I'd ruther be—
Needn't fence it in fer me!—
Jes' the whole sky overhead,
And the whole airth underneath—
Sort o' so's a man kin breathe—
Like he ort, and kind o' has
Elbow room to keerlessly
Sprawl out len'thways on the grass
Where the shadders thick and soft
As the kivvers on the bed
Mother fixes in the loft
Allus, when they's company!

Jes' a-sort o' lazin' there—
S' lazy, 'at you peek and peer
Through the waven' leaves above,
Like a feller 'at's in love
And don't know it, ner don't keer!
Ever'thing you hear and see
Got some sort o' interest—
Maybe find a bluebird's nest
Tucked up there conveenently
For the boy 'at's ap' to be
Up some other apple tree!
Watch the swallers skootin' past
'Bout as peert as you could ast;
Er the Bob-white raise and whiz
Where some other's whistle is.

Plague! If they ain't somepin' in
Work 'at kind o' goes ag'in'
My convictions!—'long about
Here in June especially!—
Under some old apple tree,
Jes, a-restin' through and through,
I could git along without
Nothin' else at all to do
Only jes' a-wishin' you
Wuz a'gittin' there like me,
And June wus eternity!

Lay out there and try to see
Jes' how lazy you kin be!—
Tumble round and souse yer head
In the clover-bloom, er pull
Yer straw hat acrost yer eyes
And peek through it at the skies,
Thinkin' of old chums 'at's dead,
Maybe, smilin' back at you
In betwixt the beautiful
Clouds o' gold and white and blue!—
Month a man kin railly love—
June, you know, I'm talkin' of!

I am a great lover of flowers and of poetry; that is why I so often print portions of my favorite poems here on this page of mine. Along about June most of us are too busy to "jes' git out and rest, and not work at nothing else," yet is there one among us who does not feel the desire to do no more than this some of these beautiful June mornings?

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-In-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Ave. Des Moines, Ia. | 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscription advertising may be addressed.

MEMBER AGRICULTURAL PUBLISHERS' ASSOCIATION
MEMBER AUDIT BUREAU OF CIRCULATIONS

SUBSCRIPTION RATES—Single subscriptions, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of fifty or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription prices in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as you have before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address WISCONSIN FARMER, MADISON, WISCONSIN

Splendid Co-operation in This Wisconsin County.

IN ANOTHER column of this issue of The Wisconsin Farmer Mr. Allen B. West writes concerning the corn contest work in Rock county. His articles give a splendid example of what co-operation will do. The work was started by a newspaper, the Janesville Gazette. Wide-awake editors with a vision of agricultural possibilities have a wonderful opportunity in a state like Wisconsin. Mr. Bliss, of the Janesville Gazette, is such an editor. Having started the movement for more corn to the acre and a better grade of corn in Rock county, this editor found that his ideas were soon appropriated and enlarged upon until the present plans have been worked out. It did not take the business men of Janesville long to see the value of the work which Editor Bliss was trying to do. The county superintendent of schools soon noted the beneficent effect of this work. The secretary of the county Y. M. C. A. was anxious to have a part. Best of all farmers began soon to appreciate the value of this work and to take a lively interest. This has been evidenced by the meetings which have been held. It has not been an easy matter to get the interest started among the farmers of the county. Not infrequently a good farmer was heard to say that he didn't expect the town folks would be able to teach him anything about raising corn. As a matter of fact the town folks were not able to teach him along this line. That notion is a mistaken one entirely. All that the town folks are able to do is to put the farmer in touch with certain agencies which have been studying corn cultivation for years, and give him the benefit of results which have been worked out by these agencies. The state of Wisconsin is spending a great many thousands of dollars each year in order that good conscientious men may devote all their time and energies to a careful and painstaking study of agricultural problems. The farmers are helping to pay this expense. Does it not seem reasonable that they should avail themselves of as much of this information as they can secure?

The clincher argument, however, is when the farmer boy raises seventy to 100 bushels of corn to the acre and the father knows his corn has been averaging about thirty to thirty-five bushels to the acre. The writer has had the pleasure of visiting Janesville when the final exhibits of corn in these contests have been held. It is a very great pleasure to see how proud the fathers and mothers are of the boys who won—in fact, of all the boys, as they all make a good deal better showing than the average corn yield of the county.

Rock county can easily raise the average production of corn ten bushels to the acre if proper attention is paid to seed, use of manures, and cultivation. The business man, of course, is selfishly interested in seeing this result accomplished. But give him credit with being interested from the standpoint of the county as a whole, rather than from the standpoint of the additional profits which might accrue in his individual enterprises.

Sudan Grass in Wisconsin.

THE WISCONSIN FARMER has had several inquiries relative to growing Sudan grass in this state. A good many of these letters were prompted by a communication in our Farm Forum Department, from H. E. Krueger, of Beaver Dam. There was also a great deal of interest in an article which appeared in The Wisconsin Farmer March 2d, and which was written by George B. Mortimer, of the Wisconsin Experiment Station. Both of these gentlemen say that Sudan grass will do well in Wisconsin. They write that Sudan grass needs a warm season with a fair amount of moisture, and a soil of reasonable fertility.

The Sudan grass grown at the Wisconsin station last year was sown rather late, but it yielded three and a half tons of hay to the acre. One advantage of Sudan grass is that it will stand considerable drouth. This, of course, was not any particular advantage last season. For the best growth, Mr. Mortimer writes that Sudan grass should have plenty of bright weather. In the ordinary season this crop should be sown between the middle of May and the first of June. With the season late, as it is this year, it would probably be all right to sow at once, provided, of course, the weather was favorable for the balance of the season. If broadcasted the authorities generally recommend twenty to twenty-five pounds to the acre. The seeding last year at the experiment station was June 23d and the yield reported was from one cutting. The seed was broadcasted at the rate of ten pounds to the acre. The portion of the experimental field where thirty-five pounds to the acre was sown yielded only two and a half tons of hay. From these tests it would appear that it is as bad to sow too much as too little. As with other grasses for which Wisconsin has already become famous, there is considerable opportunity in the seed proposition on Sudan grass. This part of the business has not yet received any attention in this state, but doubtless will when our farmers get to using any considerable amount of Sudan grass.

Wisconsin Bank's Potato Contest.

THE WISCONSIN FARMER has repeatedly called attention to the great work which bankers of the state have been doing to advance the interests of the farmers. One of the progressive banks in the state is the Old National Bank of Waupaca. The Wisconsin Farmer has a letter from Mr. William Dressen, cashier, in which he states that for fifteen years this bank utilized old-time publicity methods. More recently the bank officials inaugurated, in lieu of their former publicity plans, a potato-growing contest, and they hope to make it an annual affair. This contest is open to all school children between the ages of ten and eighteen years, living in ten townships immediately adjoining the city of Waupaca. The total of cash prizes awarded is $100; the first prize being $35, the second $25, the third $15, the fourth $10, and the fifth, sixth and seventh prizes, $5.

Those who engage in the contest make the following argument:

To attend all field, local and county meetings of instruction whenever possible.
To follow carefully instructions on club plat, crop management, sale and care of products.
To keep an accurate account of all items of expense, receipts, observations and experiments in connection with club plat.
To use only pure-bred seed of standard variety.
To charge expenses according to the following table:

Cost of horse labor per hour	$ .15
Cost of man labor per hour	.20
Load of ordinary barnyard fertilizer	1.00
Rent of land per acre	10.00
Rent of all farm implements per acre	2.00
Paris green and Bordeaux mixture to be charged according to actual amount used.	

Congressman Edward E. Browne, of Waupaca, representing the eighth Wisconsin district, has enlisted the co-operation of the federal department of agriculture. All of the information gathered by the department of agriculture will be available to each child who has entered in the Old National Bank potato contest.

Studying Farm Management in Wisconsin.

A SPLENDID opportunity for still further study of farm management has been afforded by the Wisconsin Farm Management contest which concludes with a meeting at Fort Atkinson June 5th. Several winners in the various county contests have already written articles for The Wisconsin Farmer, and these have been published in our Forum department. Following the meeting at Fort Atkinson there will be an opportunity for studying the management of successful and profitable farms. Methods of crop production, of handling live stock, and the influence of these matters on the success of the farm will be discussed from a practical viewpoint. Special emphasis will be placed on the labor-saving devices, both upon the farm and in the farm home. There will also be a special feature pertaining to the construction of farm buildings, and the construction of farm homes in particular. A large attendance is expected on the tour. The trip will include visits to Eau Claire and Barron counties, where the county representative work is in full blast.

During the state meeting at Fort Atkinson a visit will be made to the Hoard farm and to the Hoard's Dairyman plant. The plant of the James Manufacturing Company, makers of barn equipment, of the Creamery Package Manufacturing Company, and other points of interest at Fort Atkinson will be visited. Prizes will be awarded to those who have won in the state contest. Addresses will be delivered by J. A. Craig, H. V. Gunn, D. H. Otis, Miss Elizabeth Kelley, and by Prof. C. G. Hopkins, of the University of Illinois.

Drainage Paid Big Profits.

THOSE farmers who are taking the drainage question seriously and who are tile-draining their lands according to a definite system are finding that they are well paid for their work and cost. Our attention has been called to a statement by Mr. A. B. Wolff, who resides in Renville county, Minnesota. The Minnesota station makes the following comment on Mr. Wolff's drainage experiment:

As a first experiment in drainage, Mr. Wolff tiled a pothole of eleven acres at a cost of $184. This land has produced an average of about two tons of hay a year, but since he put in the drainage system, it has become the most productive land on the farm and has risen in value from almost nothing to $125 an acre.

Drainage has made not only the waste land productive; it has made the surrounding land yield more and has improved the field in general. What was formerly a broken-up section is now the best field on the farm. Physically the field has been made granular, porous and friable. The soil has become warmer, for there is less evaporation. The planting season is from one to two weeks earlier every year. On account of the warm soil, the seed germinates more readily and a better stand is secured than usual. The land can be cultivated sooner after a rain, as well as earlier in the spring.

From the dollars and cents point of view, the drainage has been satisfactory. The land produced sixty bushels of corn in 1915, worth then $36, an acre. Some of this corn has been sold for seed this spring at $10 a bushel. The cost of producing the crop was less than on the usual acre, because cultivation was easier in the field than in one broken up by sloughs and heavy with moisture until late in the season.

Since making that experiment, Mr. Wolff has installed a drainage system that takes in every part of his farm.

Drainage may be viewed in practically the same light as every other farm proposition. A good many things are suggested for the farmer to do. In the last analysis the real question is whether these suggestions will add to the farmer's profit. The result in the case of Mr. Wolff, and his experiments with drainage, seem to be very satisfactory.

Wisconsin Young People's Course.

BEGINNING June 19th and continuing until the 23d the Wisconsin College of Agriculture at Madison, will conduct a Young People's Course in Agriculture. This is the sixth annual course of this nature, and previous courses have resulted in a great deal of good. Last year there were eighty-five boys and girls registered and this year there will probably be over 100. A good many scholarships have been awarded in this course to boys and girls who have competed in agricultural and home economics contests. In a number of instances the personal expenses of those who attend the course will be paid by organizations in the counties from which the students come.

The program includes an introductory talk Tuesday, June 20th, by T. L. Bewick, who is in charge of the boys' and girls' agricultural contest work in the state. Other lectures and addresses which have been set for the week are as follows:

TUESDAY, JUNE 20TH.

Opportunities for Farm Boys and Girls	R. A. Moore
A Talk on King Corn	G. B. Mortimer
Bread Making	Elizabeth Kelley
Care of Calves at University Farm	A. C. Oosterhuis
Vegetable Gardening	J. R. Helper
Raising Chicks	J. G. Halpin
Moving Pictures on Farm Topics	J. A. James

WEDNESDAY, JUNE 21ST.

How to Prepare a Club Exhibit	T. L. Bewick
Exercise in Calf Judging	E. W. Fox
Food Principles	Miss Kelley
How to Grow a Prize Pig	J. G. Fuller
Canning Vegetables, and Meat	Miss Kelley
Beekeeping	C. W. Aeppler

THURSDAY, JUNE 22D.

Morning addresses by Dean Russell and C. P. Norgord	
Corn Judging	J. I. Etheridge
A Study of Pedigreed Grains	G. B. Mortimer
Wisconsin Potato Growing for Club Work	J. G. Milward
How to Know a Laying Hen	J. G. Halpin
Kindness to Dumb Animals (Illustrated)	A. S. Alexander

FRIDAY, JUNE 23D.

Health for Boys and Girls	C. L. Harper
A Study in Weeds	A. L. Stone
Sewing	Miss Kelley
How to Tie Some Rope Knots	F. M. White

The program skeleton as given above simply gives an idea of the course of studies and lectures. These talks will be supplemented by demonstrations at the University Farm, and there seems to be no doubt that the boys and girls who take this week's course at Madison will have a very profitable time.

Wisconsin Furnishes Good Men.

WISCONSIN has been furnishing a good many county agents for other sections of the country. The following list contains names of men who have attended the Wisconsin College of Agriculture and have been chosen for responsible positions in Wisconsin and other states:

W. M. Bewick, Berkeley county, W. Va.; Adrian A. Brown, Hampshire county, Mass.; Frank M. Foote, Raleigh county, W. Va.; J. N. Lipscomb, Greenbrier county, W. Va.; Paul C. Rouzer, Tyler county, W. Va.; T. M. Olson, Butler county, Mo.; J. E. Wethington, Cabell county, W. Va.; J. F. Kadonsky, Gogebic county, Mich.; W. E. Morris, Renville, county, Minn.; A. J. Gafke, McHenry county, Ill.; D. O. Thompson, McLean county Ill.; R. R. Marshall, Gibson county, Ind.; H. S. Smith, Alpena county, Mich.; S. Rosencrans, Fountain county, Ind.; J. M. Humphreys, Lamoure county, N. D.; W. A. Ostrander, First Congressional District, South Dakota; E. W. Hall, Spink county, S. D.; W. B. Richards, Dickeye county, N. D.; Oscar Gunderson, Vilas county, Wis.; W. D. Juday, Oneida county, Wis.; C. B. Post, Ashland county, Wis.; Griffith Richards, Price county, Wis.; John M. Walz, Douglas coutny, Wis.; R. L. Cuff, Barron county, Wis.; G. M. Householder, Rusk county, Wis.; L. L. Oldham, Walworth county, Wis.; R. A. Kolb, Taylor county, Wis.; F. G. Swoboda, Langlade county, Wis.; J. S. Klinka, Polk county, Wis.; E. L. Luther, state supervisor of Wisconsin county representatives; W. F. Handschin, state leader of Illinois; A. J. Meyer,

secretary of agricultural extension in Missouri College of Agriculture, Columbia.

The county agency work offers an interesting field of labor and one which is becoming more remunerative.

Alfalfa Shoots Indicate Cutting Time.

THOSE who have made a close study of alfalfa problems are most emphatic in their recommendations that alfalfa should be cut when the young shoots begin to make their appearance at the base of the plants. The Iowa station is emphasizing this matter more than ever this spring. In a recent press bulletin special attention is called to the fact that in many instances the bloom is entirely misleading, because sometimes the shoots make their appearance before any of the blossoms open out. It is true that under ordinary conditions a little of the bloom is showing when the buds begin to show up, and not infrequently one-tenth of the alfalfa is in blossom at the proper time of cutting.

If the alfalfa is cut before the shoots start the next cutting will be lessened materially while, on the other hand, if cutting is delayed until the shoots are three or four inches tall many of these will be cut off and this will reduce the yield of the next cutting.

There is still another factor that must be taken into consideration, namely, the quality of the hay. If alfalfa is allowed to get too old it will mean that the hay produced will be more or less woody. It will not be palatable, and such hay does not possess the nutritive value contained in alfalfa hay that is cut at the right time. It does not call for expert knowledge to determine the exact time of cutting, as it is simply necessary to go into the field and examine the roots closely. You will quickly detect the appearance of the root buds and the opening out of these is the signal for sharpening the mower sickle and getting haying machinery into working condition.

Available and Unavailable Plant Food.

A VERY successful crop grower had learned from experience to recognize from the physical appearance of a soil whether it will be productive or not. He may not have chemical terms on his tongue's end to describe the condition, but he knows it just the same. In a bulletin published some time ago by the Missouri station F. M. Miller discusses the question of plant food, describing two forms of it, namely, that which can be taken up by plants and that which cannot. On this subject Mr. Miller says:

Plants take up mineral plant foods only in solution in the soil water. In other words the mineral grains in which the bulk of this plant food is locked up, must gradually dissolve and give to the soil water these materials in solution if they are to be absorbed by the plant roots. This means that there exists in the soil first what is termed unavailable plant food, or that existing in these mineral grains and in the humus in more or less insoluble form; and, second, available plant food or that which is gradually dissolved from this rather insoluble supply. The larger part of the mineral plant foods in all soils exists in this unavailable form and, since the dissolving action goes on very slowly, there is in most soils only a very small part of the total supply that is soluble or available at any one time. The problem of the farmer is, therefore, to keep within the soil sufficient soluble nitrogen, phosphorus and potassium for maximum yields.

There are certain agencies which aid in making available the insoluble plant food of a soil, the most important being the action of decaying humus. When humus decays, certain organic acids are set free, which, as they are taken up by the soil moisture, enable it to dissolve this mineral plant food more rapidly. Other agencies have a place in this action, but it is to the presence of considerable quantities of decaying humus that the larger part of this dissolving action is due. Considerable quantities of plant food are also fixed within the humus itself, and as it decays these are made soluble. These two factors are in large measure responsible for the great productiveness of virgin soils containing large amounts of humus, as well as for the very beneficial effects of adding humus to a worn soil.

The fact that the supply of available plant food in a soil is largely determined by the quantity of humus present, gives to this constituent of soils a very great importance. Moreover, there are various other ways in which humus acts beneficially, such as in preserving a friable condition of the soil, in conserving moisture and in preventing washing. Humus is almost invariably associated with fertility. It is to the presence of humus that the dark color in soils is usually due and a dark color is almost always indicative of a fertile soil.

Unfortunately, the humus supply may be rapidly reduced in a soil by exhaustive systems of cropping. The continued culture of any crop which necessitates a considerable stirring of the soil, such as corn, or in a lesser degree small grain, will rapidly reduce the humus supply. When a soil is stirred frequently the conditions are most favorable for a rapid decay of the humus. Naturally in this decay considerable quantities of plant food are set free and this is one of the immediate benefits from cultivating corn, but when this practice is continued year after year on the same land the supply of humus ultimately becomes so low as to reduce the productiveness below a profitable basis. It is, of course, true that the constant removal of crops from the land removes large quantities of immediately available plant food and this has much to do with the decreasing productiveness of such soils, but the most important reason for its condition is the reduced humus supply which lessens the available plant food, allows the soil to become hard and compact and increases the amount of surface washing. One of the most disastrous effects of a decreased humus supply is this tendency to wash. Farmers must learn the methods of maintaining humus and of reducing washing if their soils are to remain permanently fertile.

It will be observed that the liberation of plant food is largely determined by the presence of vegetable matter in the soil. If it is assured that a soil is reasonably well drained it is then safe to conclude that a supply of humus such as comes from the plowing under of crops or from the addition of manures or from the decay of plant roots means that the mineral elements, such as potash and phosphoric acid, will quickly be brought into a form or condition so that plants can use them. The continuous growing of grain crops and the removal of the same without any return of vegetable matter to the land means harshness in soil texture and tardiness in plant food liberation. It is because vegetable matter is absolutely necessary if profitable crops are to be grown that short rotations are more and more being emphasized by students of soil problems. Working in a legume crop every four or five years and allowing its roots to thoroughly fill the soil and the upper subsoil means a great addition of vegetable matter, resulting from root decay. This, in turn, is the agent of activity in dissolving mineral substance so that they become available for crops.

Collar Galls Need Sensible Attention.

IT REQUIRES expert horsemanship to take horses through the busy spring season without collar sores or galls. The average farm horse is started into work in the spring plump and well fleshed, and a reduction in weight of 100 or even 200 pounds per horse is the rule and not the exception. Under such conditions the collar that fits well in the beginning is too wide later on and it is the wide collar that always causes the trouble.

Dr. C. C. Lipp, of the South Dakota station, compares the fitting of the collar to the adjustment of the shoe to the human foot. In a recent press bulletin he points out that the feet of no two persons are alike, consequently they cannot wear the same shoes comfortably unless they are first adjusted by several days of preliminary wear. During this period of adjustment the wearer's feet become tired, and blisters, callouses and corns may appear. Horses' shoulders are like men's feet in this respect. A horse wears a collar today that fits him, tomorrow one that is too small, and the next day one that is his size, but does not conform to his shoulders. The result of such management is sore shoulders and necks that refuse to heal even with the diligent application of a never-failing cure. It follows, therefore, that the first requisite for the prevention of sore shoulders is a perfect fitting collar.

There are numerous remedies for sore shoulders that give satisfactory results, providing all other conditions are favorable. The application of white lead ground in linseed oil, the kind used for mixing paint, every evening after the collar is removed, has proven satisfactory. A lotion composed of six drams of lead acetate and the same quantity of zinc sulphate in one pint of water makes a satisfactory wash for sore necks. Apply it three times a day. Oxide of zinc ointment is also very good applied several times daily.

When any medical treatment is applied it must be remembered that good results follow only when the collars fit perfectly and are kept scrupulously clean on the bearing surface by daily washing if necessary.

It should be said in fitting a collar that the main consideration is to keep it close to the sides of the neck. If this is not done the draft lands irritatingly on the point of the shoulder where there is motion at every step. This is bound to lead to galls and sores and unless the draft is changed it is an exceedingly difficult thing to cure these sores while the horse is still at work. It is necessary, therefore, to pull the collar in regardless of every other consideration so that the draft will come on the soft, fleshy tissue of the shoulder so that the collar will be stationary even while the horse is in action.

Lessening the Hours of Labor.

IN THE very nature of the case farm work calls for a relatively long workday during certain seasons of the year. The individual who is not willing to "speed up" during seeding and harvesting operations will sooner or later be compelled to change his occupation. However, the necessity for leading the strenuous life at certain seasons in too many instances fixes a habit which converts congenial employment into drudgery, and it is this phase of the matter to which we wish to call attention at this time.

In many cases advantage is not taken of the principle that work horses may be speeded up to some extent and the day thereby lessened in length so that the task of choring may be accomplished without running the hours of labor into the night. Excepting under rare conditions, it is too much to expect an individual to spend ten hours in the field and in addition do two hours' choring in the morning and the same in the evening. It is entirely practicable in most cases to step horses along a little livelier in the afternoon so that almost a full day's work can be accomplished even though the day in the field is shortened an hour or even two hours. To be sure this cannot be done in certain kinds of work. A good example of this kind is found in cultivating corn the first time through. So much care is required if the work is well done that it is impossible to speed up, but such does not apply in later cultivations or even in preparing soils for crops.

In the end the individual who depends upon hired help will find it greatly to his advantage if he plans his work during the rush season so that the hours of labor are reasonable and rational. Every farmer makes a reputation for himself along this particular line, and those who cannot get along unless everybody around the farm works fifteen or sixteen hours a day are having great difficulty in obtaining sufficient help to carry on affairs.

We have in mind one instance where a section of land is successfully farmed and the work of practically every day is completed by 6:30 o'clock in the evening, and never later than 7 o'clock. This is a stock farm, though as much as 150 acres of corn are grown annually, but in spite of this the plan is never adopted of using the hours of the night for labor as well as those of the day. In this case the labor of two men is required every morning to care for the live stock, and these men do not reach the field with their teams until eight and in some instances nine o'clock in the morning. To some extent they can make up for this lost time in the field, because the horses are fresh and are ready for strenuous toil. These men unhitch in the afternoon at 4:30 o'clock, and the tasks of choring are again taken up. As a rule, the work of the day is completed in good time, and not only is it a good arrangement from the standpoint of those who labor on the farm at outside work but it fits in admirably with the requirements of the home. In the past too little attention has been given to this matter and many a housewife has been prematurely worn out because of the long hours of toil required of her during the busy season.

If anything like a sufficient supply of farm help is obtained in the future more attention will have to be given to this matter of cutting down the work hours. It is just as important that the matter be emphasized where there are growing boys and girls, because the average free-spirited farm lad is not going to make a drudge of himself if he can avoid it, and farm work may be planned and often is planned so that it is congenial during all seasons, partaking even less of the nature of drudgery than are most forms of labor performed in our towns and cities.

The matter is something that should be made the subject for consultation by all concerned so that the work must be kept right up to season and at the same time may be enjoyed by all concerned, and particularly that it shall be carried on so that "mother" and "sister" may find themselves liberated by a material shortening of the hours of work.

Campbell Urges Better Drainage.

A. D. CAMPBELL, manager of the Wisconsin Advancement Association, urges better drainage as a most important feature in securing better roads in Wisconsin. He has issued the following letter to Wisconsin editors:

The writer wishes at this time to call attention to some phases of the highway situation. We are all for better roads, some thinking of expensive ones, others of moderate cost ones and still others of cheaper ones.

But we are all for better ones and in this connection I desire to suggest that as a slogan we can stand for and call for better drainage. During April and early May I drove a thousand miles in southern Wisconsin and northern Illinois, doing this when the roads were at their worst so that I might better understand the road problem.

Some talk concrete, some macadam, some surfacing, some oiling and some dragging, but after this thousand miles of strenuous driving—and being pulled out of the mud more than once—I want to talk drainage, just simple, plain, everyday drainage, such as can be made with a plow—that is the cure for most of our road trouble.

It was singular of this thousand miles of April and early May roads that a vast percentage of the almost impassable places were at the highest points—the very crown of the ridges. Why? In most cases twenty minutes' work with a plow—if done at the right time—would have kept these spots in good condition.

Think of it! Miserable holes on the crowns of ridges!

Now, it seems to me that every newspaper in the state ought to join in a campaign for road drainage, which costs almost nothing, but which in this case would have removed nine-tenths of the unpleasantness of this thousand miles of driving.

The Wisconsin Advancement Association is just completing a comprehensive system of route marking, a map of which will soon be published. We are doing this at a financial loss, but expect it will bring thousands of tourists into the state where they will spend a large aggregate of money each year. Can we not have the bad places (anyhow those on the crowns of the ridges) drained so that drives through the state will be pleasant?

Mr. Campbell has a laudable ambition to unite the best people of Wisconsin in enterprises which will advance the interests of the state as a whole. His letter is well worth reading and should receive attention. As pointed out, better drainage cannot be objected as an overexpensive proposition. Get the water off the average Wisconsin road and a big step toward good roads will have been made.

Over 125 farmers of Rock county, Wisconsin, joined in Alfalfa Day recently. L. F. Graber, secretary of the Wisconsin Alfalfa Order, said it was the finest turn-out he had ever seen in Wisconsin. Weather conditions were ideal and the gospel of more alfalfa for Rock county farms was preached to excellent effect. This series of farm meetings is a part of a general plan worked out by Mr. Graber to interest a larger number of farmers in Wisconsin in growing alfalfa. Other similar meetings and tours will be held in other counties of the state.

Building Roads in Rock County.

More Than One Hundred Thousand Dollars Annually Spent on Highways and Bridges Helps to Make Farm Life Easier and Far More Profitable.

ROCK county, Wisconsin, spent in round figures $100,000 on highways and bridge construction in 1915. Road work constituted the chief engineering and construction problem of the year in the county and provided a considerable amount of employment. This was not a one-year splurge on the part of Rock county. There was not quite so great an outlay in money as in 1914. A larger fund will be spent in 1916. Road building has become an established industry in the county, with an annual expenditure of $100,000 to $150,000 for new roads and for repair of roads and bridges. The Wisconsin Farmer is indebted to the Janesville Gazette for information contained in this article and for the illustrations which appear herewith.

As the result of four years of road building in the county under the present system and four years under the former county aid system there is completed a total mileage of 200 miles of macadam highways out of a system of something like 300 miles. Approximately forty miles of new construction work and resurfacing was completed in 1915, indicating the rapid pace at which the county is now building its modern thoroughfares. At this pace, allowing for probable extensions of the county system, the entire mileage will be constructed within the next four years. Then the problem which will confront the county will be, as it is now, repairs and maintenance, with the probable additional problem of building permanent roads.

It has been the county's policy during 1915, as during previous years, to construct its highways out of native material. Until this year, when the first experiment was made in concrete pavements, all roads of the county were of the macadam type, either being built of pit-run gravel, crushed gravel, rock and calcareous clay, or crushed limestone. All of these surfacing materials have been found close at hand in the various localities where highways have been constructed and it has been deemed economical to make use of them. The result, in the opinion of road experts, has been for the most part satisfactory and Rock county is favored with some of the best macadam pavements in the state. In many instances these roads have withstood traffic in excellent manner for as long as three years with scarcely any attention beyond the filling up of a few ruts.

It has, therefore, been the program to continue road building in Rock county along these lines until the entire county system has been finished. Then the problem will be, say the road experts, the maintenance of the thoroughfares already constructed and their replacement by a more permanent type of highway, such as concrete. The reason for a more permanent style of road is twofold: First, the excessive traffic which is continually increasing year after year, is terrific in its destructiveness of macadam surfacing; and, second, the native materials are becoming exhausted. The road builders of the next decade in this section will doubtless see a considerable amount of concrete pavements laid on the county system, replacing the admittedly temporary macadams with a more durable and permanent type of road, if experience proves cement to be the material which it is now heralded to be.

In the meantime, Rock county is "getting its hand" into the concrete construction work so that cement pavements may be tested out and proved satisfactory or unsatisfactory, as the case may be. This experimenting is also of value to the road contractors and the highway commissioner and his aids, since it gives them some knowledge of the method of laying concrete pavements. Three jobs of concrete paving were completed in 1915 in Rock county—4,000 feet of nine feet wide pavement in the town of Turtle, 836 feet of spillway at Hanover and two pieces of paving in the city of Edgerton.

The cost of cement paving in Rock county is comparatively cheap, owing to the fact that that material is readily available. The work in the town of Turtle this year cost at the rate of $6,200 per mile, which is three times the expense of laying macadam. A summary of the work in Turtle shows the cost as follows:

4,050 square yards of concrete. (The amount paid contractor)	$3,204.00
1,047 bbls. cement at $1.65	1,334.76
Gravel shoulder	493.40
Total	$5,068.16

Sand and gravel was purchased by the contractor from a sand and gravel company whose pit was in that vicinity. It would be the better practice to buy sand and gravel from the sand companies where it is properly screened, rather than have the contractor attempt to dig out the sand and gravel and screen it for each job.

County Highway Commissioner C. E. Moore favors a certain amount of concrete construction each year, but entertains the opinion that the county will be better satisfied with results if the present program of securing a good type of macadam road for the whole system is followed out, since it will mean but a few years when the entire county will be traversed by roads of excellent grade and a surfacing which will last for some years under proper care. Mr. Moore as well as county board members who are familiar with the road situation are confident that the life of the county macadam highways can be materially extended by oiling, which was given its first tryout on an extensive scale during the past season, although conditions were far from favorable. Oil will prevent the erosion of the macadam surface and at the same time aid in withstanding the effects of heavy rains.

Under new methods now being pursued Rock county is securing at the minimum amount of expense, as compared with the other counties of the state, a first-class system of roads which are yielding immediate returns to the community. In other words, the farmers and traveling public are getting the use of first-class thoroughfares without waiting for the expensive concrete pavements which could be laid only at the rate of a few miles a year unless the county assumed a heavy bonded indebtedness, which is generally considered impracticable. In fact, such a proposition is not considered at all among officials connected with the county highway extension.

Work done in Rock county during 1915 is summarized in the report of Highway Commissioner Moore to the state highway commission as follows:

Type of surfacing	Feet	Miles
Concrete	7,150	1 1-3
Crushed stone, macadam	23,450	4½
Crushed gravel, macadam	60,020	11½
Pit run gravel, macadam	116,068	22
Total	206,668	39 1-3

Number of miles oiled, twenty, at an average width of twelve feet.

Total gallons used, 40,000; total cost of surface treatment, $4,505.45.

Average number of men employed during construction, 160.

Number of road gangs employed, exclusive of bridge crews, thirteen.

Average number of teams employed during construction year, eighty.

Average daily wage paid to foreman, $3.

Average daily wage paid to laborers, $2.

Average daily pay for teams, $5.

Cost of state aid road construction	$80,104.82
Cost of county maintenance of roads and bridges	8,362.75
Cost of state and bridge construction	8,942.88
Total expenditures supervised	$97,410.45

Other counties in Wisconsin are doing good road improvement work, but the work in Rock county is fairly representative of what is being accomplished.

Experience With Three Tractors.

To the Editor:—I have owned three styles of tractor gangs. The first I bought was two gangs, three plows in a gang, that I ran with a side crank steam engine rated twelve years ago as twenty horse power, but now the same company has to rate the same engine at sixty horse power, because our legislature passed laws compelling manufacturers to brand their engines for just what they could pull, consequently manufacturers had to put their engines under brake tests. One horse power is an engine that can raise 33,000 pounds one foot per minute, so my twenty horse power engine that was rated twenty horse power could develop sixty horse power and has to now be so rated.

The second outfit I bought to take out to South Dakota was 110 horse power side crank, self-steering steam engine with big engine gang with ten breaker bottoms for breaking up wild prairie sod and I tell you it takes power to pull a rig like this, but this tractor certainly did the work. Sometimes we had a little trouble in soft footing and it encountered a little difficulty through gumbo patches.

Three years ago I bought a 20-40 gas tractor, that is, twenty horse power on the pull and forty horse power in the belt, for threshing and plowing. I first tried on a four-bottom plow all in one gang and it lifted with one lever. I did not really like this, because it lifted so hard. Then I bought a six-bottom gang, three gangs and two plows in one frame, and, of course, three levers to raise the plow out of the ground. At the time I bought this outfit plowing matches were scarce and plowing with tractors was in its infancy and I had to be guided by circulars. Last fall I went to a plowing match with tractors in Rock county. I live in Walworth county. A big manufacturer had his agents at the plowing match with his gang plows. I pointed out to him where his gangs failed and he owned up I was right. They are now making smaller gangs and engines for pulling than I have had any experience with. I have always advised all prospective buyers to purchase a little larger engine than they thought their work needed, for when you are stuck with an engine it does no good to swear and pound around. It is never possible for you to get anything out of the engine that is not in it. I have read in the papers that there is to be a big plowing contest this fall near Madison. If I am able to go I intend to be there. I have squandered a lot of money in the last fifty years I have followed threshing. I have been running steam and gas engines ever since 1877 and before that I run horse power rigs. According to what I read, I understand there are about eighty different manufacturers. I have only had experience with one gas tractor and the one I have had, I think, is as good as is made. I own 320 acres and my gas tractor is speeded low two miles per hour and high speed three miles per hour and pulls six fourteen-inch turf and stubble bottoms. It plows a strip seven feet wide. If the land is in the right condition it will pull it on high. If it is heavy plowing you will have to pull it on low. The tractor has a never-tiring power. About three or four gallons of gasoline is consumed per hour. My lands are pretty level and they are one-half mile long. One objection is that I cannot back up my plows, but there are small tractors that are so arranged that the plows are raised up and you can back up at the corners and plow all around. I have not seen these, but have looked over their circulars and read what they claim for them. I did not buy my gas tractor for plowing alone, but for threshing, hauling, shredding, filling silos and running portable saw mills, etc. Of course, gasoline is high now, but you can't feed a team for what gasoline will cost and oil is cheap. The more jobs you can work your tractor at the more profit. I would not advise a man with a very hilly farm to buy a tractor, for if the hills are very steep you could not climb them and pull the load. The tractor will pull an awful load in the highway on hard roads, but you must remember when plowing your land is a great deal softer than the highway land and all this reduces your power. I have not been able to use my tractor much in the rainy weather lately. I had seventy-five acres I wanted to plow, but it was so wet I had to put my teams to work and I am only about half through. I expect I will have to finish with teams the way the rain is rattling on the roof tonight. My land is mostly black prairie land. It is all underlaid with gravel and we have to go fifty to 120 feet to water. It is gravel all the way, but four to eight feet on top. I have plowed with a tractor when it was very wet, but it did not seem to do much harm. If it is too wet it takes your power away so you can't do much business. I think clay soils would be harmed if plowed wet, but black loam soil would not be harmed very much unless it was very wet. Most manufacturers have guarded against poor lubrication, but the operator must look after this or trouble will result. The worst place for dirt and grit is in the gearing. You should see that this is well protected.

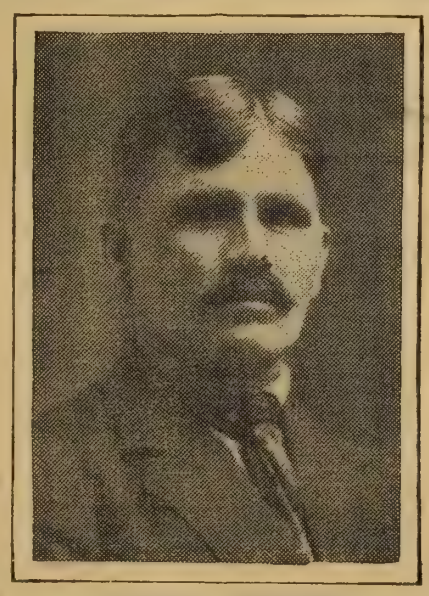
Surest Profits in Diversified Farming.

To the Editor:—I will endeavor to give some of my experiences in farm management. I think one of the most important factors in increasing farm



CHARLES LUNDBERG.
Winner in Polk County, Wis., Farm Management Contest.

profits is properly marketing the crops. The question of marketing the crop receives too little attention by the average farmer and, therefore, he does not receive the highest possible price. There are two things that tend to bring better prices for your crop. They are quantity and quality. Grain or live stock sold in carload lots brings a considerably higher price than in small lots. In case one farmer has not a carload of one commodity to sell he can easily co-operate with one or two neighbors. The other factor is quality of the goods. Of course, the best quality demands the highest price, and much can be gained in quality by grading and sorting at home.

To grow a crop that will be profitable it must yield well and be of good quality for market. In order to best insure this it is necessary to have good seed and to have the soil in good condition, both physically and chemically. Then when you have these sow your crops at the proper time. In my experience I have found early seeding the best. Many farmers make the mistake of planting too much of their farm to one crop. Some years they hit it, but more often they miss it, as the corn men did last year. More and surer profits can be expected in diversified farming. Work out a system of rotation which fits your conditions and follow it. Endeavor to build up the soil by growing legumes and keeping a lot of cattle.

Another factor which I find important is that of harvesting the crops. Every practicable means of lessening the cost of production is necessary for the highest profits. One of the methods of harvesting which I have tried and which has proved very satisfactory is to feed the corn to young stock and steers in the form of bundles and provide plenty of clover pasture. I find that two acres per grown head is none too much of clover for a season. Last fall I tried a new method of feeding a bunch of steers. I turned them into a field of soft corn and let them harvest it. The steers did very well from it and I think it is a good method of feeding corn.

We have a farm of about 400 acres, with about 300 under cultivation. I trust the above items may be of interest to some of your subscribers. Would be glad to have any of them give their experiences along these lines through the Farm Forum.

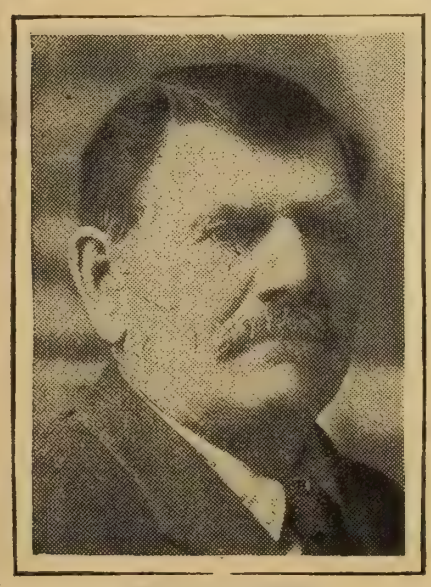
Showing Is a Big Help.

To the Editor:—The peck of Wisconsin pedigree barley which won sweepstakes at the state show of the Wisconsin Agricultural Experiment Association held at Madison this year, was the result of good seed, well



WILLIAM MOOS.
La Crosse County Wis., prize grain grower.

adapted and prepared soil properly handled. Of course, careful handling of the corn in harvesting and attention to fitting for the shows were also important factors in placing this particular barley above all others.

For a number of years we have been interested in pedigree grains and each year we have come to realize to a greater extent their value. Along with this realization has come a desire to make these grains better by forcing them to produce a greater number of bushels of better quality grain to the acre.

A year ago last fall we plowed a piece of potato ground that had manured clover sod turned down for potatoes in the spring. Early last spring this fall plowing was disked deeply and harrowed once before seeding. After carefully cleaning and grading the barley for seed, we sowed it broadcast with a seeder at the rate of one bushel and three pecks to the acre. After seeding we harrowed the field twice, which left it in an excellent condition.

When the barley was well ripened it was cut with a binder and shocked at the rate of nine bundles to the shock. Each shock was well capped with one or two bundles. While very little was damaged before threshing, all was badly discolored, due to the exceptionally wet year.

Each year for a number of years a corn and grain show has been held at our county school of agriculture at Onalaska under the auspices of the county order of the experiment association. These shows, the work of the school and the talks given by the speakers on the programs at these shows have been invaluable to me in my effort to improve my grains and to fit them for showing. Especially have the talks and judging work of Prof. R. A. Moore and Supt. C. P. Norgord been of great benefit.

Many feel that they have good small grains and corn, but until they get into competition they never know nor appreciate what a good sample really is nor what is required to produce it. There is nothing that will cause farmers to improve faster than to do some showing. They may not win at first, but by hard work and an effort on their part to learn finally succeed. To succeed in this work means to have improved—the showman must improve his products every year.

Increasing Farm Values.

To the Editor:—Intelligent and energetic farmers are fast learning that dynamite has a use, or should have a use, on every farm and that the farm equipment is not complete without a few augers, a blasting machine, a case or more of explosives and other blasting supplies.

By experience I find this one of the quickest and cheapest ways of increasing farm values.

That stumpy farm of yours which you have offered for sale will bring you considerably more money if you will spend a few dollars for dynamite and the services of a competent blaster.

The blaster who is really out for business is well supplied with proper tools and a blasting machine and with the aid of another hand or two can blast from fifty to 100 stumps per day.

A middle Tennessee farmer bought a farm merely for speculative purposes. For this he was offered $7,000. He refused this offer, asking $7,500. An experienced blaster finally persuaded him to have all the stumps cleared, pointing out to him that it would probably be a good investment. The blaster contracted to blast them into shape for hauling at 15 cents per stump for tools and labor.

The cost of explosives and other supplies cost this farmer $37.80. After the job was completed the cost of both material and labor was $157.80. The farmer then asked the man who had offered $7,000 for the farm to come again and look it over, which he did, and seeing the land in such shape that he could use modern machinery on it offered and paid $8,000 for it. The original owner's profit on the investment of $157.80 was $842.20, that being the amount he got for his farm net above what the purchaser had been willing to give him with the stumps on it.

Last winter I went to solicit a blasting job of a fellow. It being somewhat a new game with him he would not give me much satisfaction until I could prove to him what I could do with my guns, as he would call them. He at once became interested in seeing chunks fly into the air and I secured a nice job of work which lasted several days. He was real pleased with the job and cost.

A. H. Harris.

Failure to Get Catch of Clover.

Decrease in Clover Production in Some States, But States With Cool Climate Like Wisconsin Show No Loss.

THE federal department of agriculture has called attention to the serious decrease in the area devoted to red clover. In the northeastern states, for example, the acreage decreased 20 per cent in the ten years ending in 1909. In Ohio, an important clover state, the production of red clover in 1911 was only a little more than half what it was in 1897. Wisconsin and Michigan, however, showed a considerable increase in the clover area. In 1914 the total acreage was almost double what it was in 1897. However, during this same period the seed harvest in Illinois fell from 193,509 bushels to 42,409 bushels. This loss is attributed by the department officials to the increase in difficulty in getting a stand and in the less satisfactory growth of the crop when the stand is secured. Failure to get a catch of clover means loss of the money spent for seed and also loss of the anticipated benefit to the soil and loss of the hay crop for the year following the sowing. Professor Hughes, of Iowa, is quoted as saying that farmers of his state suffered a loss of one and three-quarter million dollars in 1910 and 1913 because of failure of the clover crop. In these particular years failure was due to drouths.

One reason for the increase of clover in Wisconsin and Michigan is that the failures referred to in other states have not occurred to any extent in this section. In Wisconsin the temperature and moisture conditions are right, as well as the soil. Clover delights in a cool, moist climate and in a fertile loamy soil containing plenty of vegetable matter, lime and phosphate. Inasmuch as one of the chief uses of clover is to improve the soil by putting vegetable matter into it farmers have a right to expect clover to grow at least reasonably well on soils whose fertility they wish to maintain or increase. The study made by the department, however, showed that it is a mistake to suppose that clover will grow on any soil, however much run down. Clover demands lime and phosphate. Farmers' bulletin No. 455, which may be secured by writing to the department of agriculture, Washington, D. C., says the following:

There are, it is true, conditions under which clover thrives on acid soils. These conditions are not yet fully understood, but they appear to be related to cool summers and plenty of moisture, which cannot be expected in most of the clover belt.

It is not always easy to tell when a soil has enough lime. There are several methods for testing the "lime requirement" of soils;, but for practical purposes, this may be roughly determined by the kind of plants growing on the land. If trouble has been experienced with red clover, but if a fair growth of timothy and of alsike clover can be gotten, the land probably needs some lime, say 1,000 pounds of ground limestone per acre; if timothy and alsike clover are crowded out by redtop, or if such weeds as sorrel are abundant, the land needs plenty of lime, at least a ton of ground limestone to the acre, and probably more. While the functions of lime both in the soil and in the plant are not thoroughly understood, we can confidently say that the clover plant is healthier when there is plenty of lime than when the soil is sour, and being healthier the young plants will withstand a dry spell better, and the old plants will come through the winter better than plants growing on sour soil. To sow red clover seed on so-called acid soils is usually to waste time and money.

The addition of phosphates has also been found to be very beneficial, but here again there is no way to tell how much is needed without trying. If clover has not done well on a farm, the need of lime or phosphorus or perhaps both is indicated and the farmer would do well to buy a bag or two of ground bone or of superphosphate and a ton of fine ground limestone and apply separately or in combination to a part of the field. The growth of the clover during the following season will tell the story of the needs of his soil. The bone meal a..d phosphate may be applied at the rate of 200 or 300 pounds per acre. Of course, if there is time and opportunity it will be well worth while to try different rates of application so as to find what rate will give best returns at smallest expense. On sandy soils potash may also be needed. For the healthy growth of the clover plant then, lime, phosphorus and potash must be present; the presence of nitrogen is of minor importance, though, of course, the young plants will do better if nitrates are available. If clover has not been on the land for many years it will be wise to scatter dirt from a clover field or to inoculate the seed with the nitrogen germ. When this is present the clover plant can draw on the nitrogen of the air.

The mechanical condition of the soil must be good; a soil that becomes hard, excluding the air from the roots, will not grow good clover. Lime will help loosen up such a soil, but decaying vegetable matter or humus is the greatest need of such land. This can be furnished in stable manure or by turning under other crops that are not as sensitive as is clover. A soil without humus will dry more readily than one with plenty of vegetable matter, and in a dry season this fact may be all important to the young plants. Most of our partly run-down soils have lost much of the organic matter they had originally. The growing of wheat and corn uses up the soil humus at a rapid rate and so the time comes when a severe drouth destroys the plants on a soil that does not hold the mosture to the extent that it formerly did. Then the plants die and the farmer blames the dry weather. While it is true that a severe dry spell may kill all vegetation, even when the soil is in good condition, it is just as true that clover plants can endure drier times and hotter weather on soil that has lime and humus, and that consequently produces stronger plants and holds what moisture there is, better than on a soil worn out by overcropping.

Good seed should, of course, be used; even though seed is high in price this year, poor seed is relatively higher than good seed, and should never be used. Clover seed is small and only those seeds can be expected to make plants that are dropped within a half inch or an inch below the surface. This is for the average land of clay loam soil; in sandy soil a little deeper planting will do no harm. Seeds dropped on the surface will sprout, if there is moisture, but the small plant is subjected to all the chances of hot days and cold nights and to the drying winds that so often come in spring, and they may be killed before they can get their roots down far enough for safety.

Clover is usually seeded on winter grain or with spring grain. In either event it is much better to put the seed in with a drill than to sow it broadcast. If sown with a drill only about one-half as much seed is needed as when sown broadcast and with seed worth around 20 cents per pound this may become a very important item. Less seed is needed because the chances of loss by leaving the seed on the surface or by having it drop into the cracks of a honeycombed field so deeply as to be lost, are avoided. If broadcasted the seed should be covered by running a light harrow over the field. This will not hurt the wheat and it is better to delay seeding the clover until the land can be harrowed than to sow on the frozen or wet ground and let the seedlings take the chances of the weather. It often happens that seed sown early germinates and then the young plants are killed by a late freeze. All this may be avoided by seeding a little later and harrowing the seed into the soil.

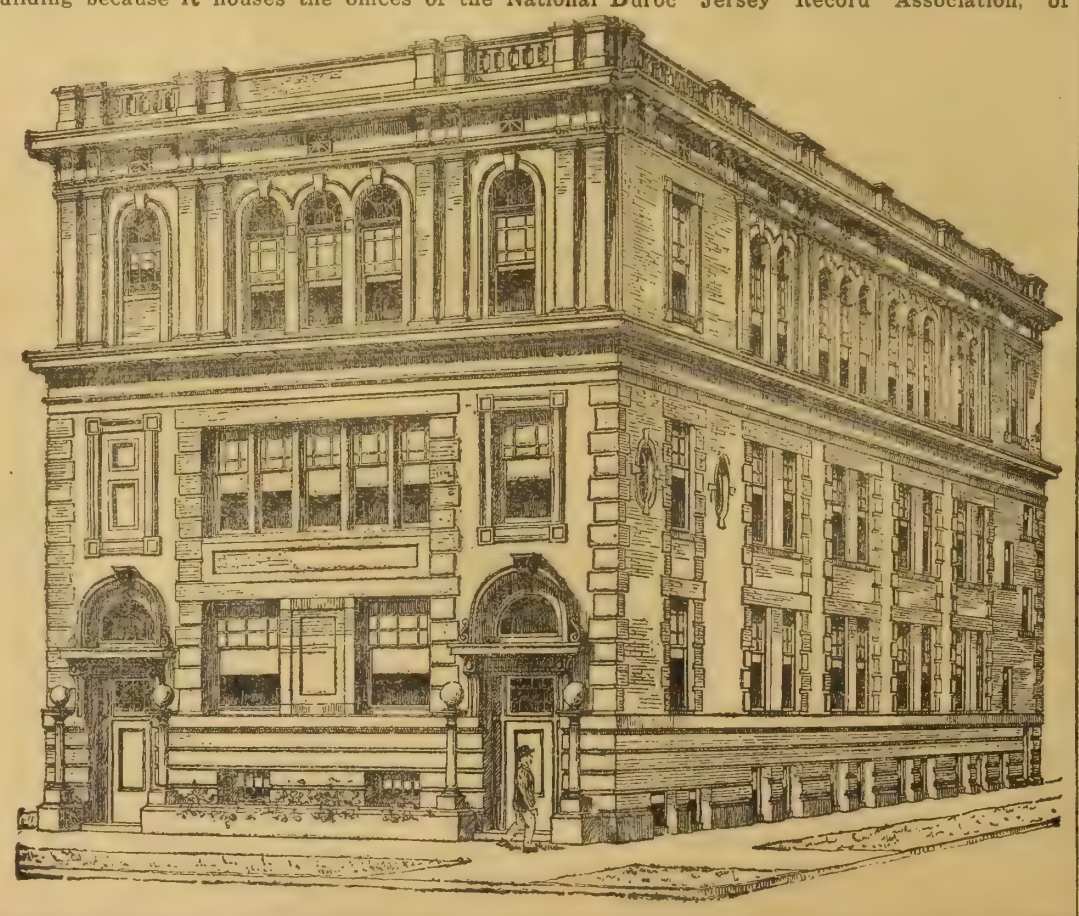
In many places, especially in the southern portion of the clover belt, clover is seeded in August, either in the corn or alone on a field from which small grain has been removed. This practice also has been successful as far north as Michigan and Connecticut, but is somewhat risky in those states. It is probable, however, that if rains follow the grain harvest it will pay to disk the fields at once and seed down to clover. Where this can be done by the first week in August there is every chance that the plants will grow strong enough to pass the winter safely.

The important facts that have been brought out by experience are, that seed should be covered as uniformly as possible and that the best depth in average soils is between one-half inch and one inch; that drilling saves seed and gives better results than broadcasting; that seed sown very early and left ly-

(Concluded on page 23.)

New Headquarters of National Duroc Jersey Breeders' Association, Peoria, Illinois.

A $50,000 building is shown in the accompanying illustration. Many readers of The Wisconsin Farmer have a special interest in this building because it houses the offices of the National Duroc Jersey Record Association, of Peoria, Ill. When the offices of the association are moved into this splendid structure it will be entirely paid for and it will afford ample room for expansion. The space not occupied by the offices of the association has already been contracted for with good tenants, so that the building, aside from its use in housing the offices of this important association, will bring in a splendid revenue. It is located two blocks east of the Peoria postoffice and it is in the same block with the Shrine temple. Secretary J. R. Pfander is most enthusiastic over the prospect of occupying this building about September 1st and in sending the accompanying illustration he assures The Wisconsin Farmer that Duroc Jersey breeders generally will take considerable pride in the new headquarters of the association because this building, in the opinion of Mr. Pfander, will stand for ages as a monument to the splendid achievement that has been attained by a great breed of hogs—a breed responsible for adding millions of dollars to the wealth of American swine breeders.

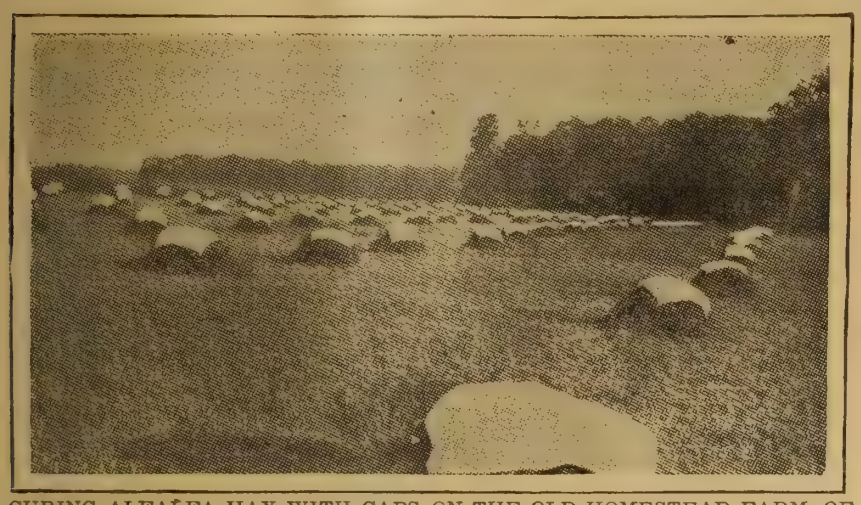


The Cutting and Curing of Alfalfa

Best Hay Is Made by Cocking and Covering With Hay Caps---By L. F. Graber, Wisconsin.

TO MAINTAIN a good stand of alfalfa nothing is so important as to cut the crop at the proper time. The first cutting will come in the early part of June —a trying time to cure the hay. The proper cutting stage is when the plants have just begun to bloom and the little shoots or sprouts at the crowns have made their appearance and are on the average not over an inch in length. To delay the cutting of alfalfa until the entire field is in blossom is a very poor practice. At this stage the little shoots or sprouts at the base of the stem which produce the second crop will have grown three to five inches in length. In mowing these will be clipped off and the second growth delayed two or three weeks. The third cutting will then not be ready until the middle or latter part of September. If the third crop is harvested at this time the alfalfa seldom secures sufficient growth before cold weather to withstand the winter. Many failures are due to late fall cutting. Alfalfa should never be cut after September 5th.

The best hay is made by cocking the alfalfa and covering it with hay caps, which insures protection against rains. The hay is bunched usually on the same day it is cut when in a good wilted condition. By allowing it to cure in this manner for two days, the leaves and stems dry out uniformly with little loss, and you get a bright green hay of the best quality.



CURING ALFALFA HAY WITH CAPS ON THE OLD HOMESTEAD FARM OF W. J. JAMISON & SONS, OUTAGAMIE COUNTY, WIS.

When alfalfa hay is harvested on a large scale, or if labor is scarce, hay caps are not always used. After the hay is well wilted it is raked into long windrows with a side-delivery rake and allowed to cure here for two days. It may be loaded with a drum hay loader or hauled in with sweep rakes. Alfalfa hay will stand more rain than either timothy or clover.

As a hay crop alfalfa excels all others in yields, feeding value, drouth resistance and soil enrichment. Yet it has its drawbacks and it is not always easy to get a good stand. It is a rather particular crop, requiring certain soil conditions and proper treatment. The beginner in alfalfa growing must first of all be a student of alfalfa. He must study the crop and learn its requirements. If he is not willing to pay attention to such important details as inoculation, liming, proper seeding methods, cutting at the proper stage and others to be mentioned he had better not try to grow alfalfa. Start in a small way with three to five acres and grow up with the business.

During the past three years over 1,000 reports on alfalfa growing in Wisconsin have been received by the alfalfa order, Wisconsin's Alfalfa Growers' Association. These reports clearly show that the principal causes for failures with alfalfa in Wisconsin are as follows:

1. Failure on part of farmer to inoculate the soil.
2. Attempting to grow alfalfa on sour or acid soils without liming the land.
3. Poor preparation of the seed and improper methods of seeding.
4. Weeds—heavy growths of which crowd out the alfalfa.
5. Too thick seeding of the nurse crop. Not over one bushel of grain should be sown with the alfalfa and if oats are used it should be cut for hay.
6. Late seeding. Seeding after August 15th is a dangerous practice. Sufficient growth is often not secured before cold weather sets in so that the alfalfa may stand the winter.
7. Late cutting. Cutting alfalfa after the first week in September has resulted in serious winterkilling of many otherwise good stands of alfalfa. Alfalfa should have at least six to eight inches' growth to afford sufficient winter protection.
8. Pasturing. Late and close pasturing are particularly dangerous.
9. Poor soils. Although alfalfa is a great soil enricher it requires at least a medium fertile soil. Poor soils should be well manured.
10. Low, flat, poorly-drained soils. Alfalfa requires a well-drained field. On flat, heavy clay soils which hold water from melting snows and heavy rains in the early spring alfalfa may be heaved out by alternate freezing and thawing weather. A sloping field which will provide ample run-off for surface water is more desirable.

For alfalfa choose a well-drained field having preferably a gentle slope so as to prevent an accumulation of water from melting snow or heavy spring rains.

Poor land should always be well manured. A medium clay loam is best. On heavy clays winterkilling is more apt to occur. Light, sandy soils generally require lime and manure. Alfalfa does well on river bottom lands but peat soils are too sour or acid.

It is best to have alfalfa follow some well-cultivated crop like corn, potatoes, tobacco, or sugar beets where the soil is freed of weed growth. Never put alfalfa on sod land, for the blue grass will cause difficulty. A virgin soil should always be first subdued by growing several cultivated crops to get the soil in good physical condition.

Inoculation often spells success where otherwise failure would result. It is easy to do and decidedly important. Spread a ton of soil taken from a successful alfalfa field or from the roadside where sweet clover is growing, on each acre of the land you are to seed to alfalfa. Do this just before sowing the alfalfa seed, and harrow it in. Then you have introduced the proper alfalfa bacteria in the soil which are so essential in securing a healthy, vigorous growing alfalfa crop. And, remember, a field once properly inoculated is always inoculated.

All farmers are advised to mix a quart of alfalfa seed per acre with the timothy and clover seed when seeding down, as this will get a few alfalfa plants established in the field which will become bacteria distributers and thus inoculate the soil for future crops of alfalfa.

Alfalfa will not do well on sour or acid soil. Before growing alfalfa the soil should be tested with blue litmus paper, which can be secured from a

The Remarkable Offer Once Again!

FREE TRIAL in Your Own Home

Only Because We are Big Enough

DARE WE MAKE SUCH A SACRIFICE

And we will do it—if we have to sell 100 pianos

Think of it! ONLY $302.00 for one of the very latest PLAYER PIANOS

and with it goes FREE all what you see around it!

We had so many requests to place this offer on once more—that we could not refrain from doing what so many wanted—and who can wonder at such earnest calls—because all who participated in the offer, are spreading the news from one friend to another—so will you WHEN YOU GET ONE—OH YES YOU WILL, unless you do not appreciate music, and a mighty value in the bargain. Read every word carefully, and remember, EVERY STATEMENT WE MAKE is BACKED UP BY A LIFETIME GUARANTEE, with TRUTH—VALUE and QUALITY as leading features.

the ENTIRE OUTFIT, mind you, like the above actual $550 worth for only

$302.00—Includes PLAYER—36 Rolls of MUSIC BENCH and CABINET ALL LATEST DESIGNING

Former Price Was $550

The PLAYER PIANO which we offer is by far the best ever marked at such a price—it could easily be sold for $550, but we are looking for big things—so make this ridiculous price—everybody knows the STORY & CLARK PIANO CO.—it's the house that makes right any misunderstanding—you are not required to keep the Piano if for any reason it is not as claimed—EACH PIANO is a masterpiece of piano construction—elegantly designed—full rich tone—very newest player parts—full 88-note—with the cases of selected woods—highly French polished—it's a delight to the eye and ear, a wonderful musical instrument—cleverly built for many years of hard wear. Each Piano has back of it the name of the $1,000,000 Story & Clark Piano Manufacturing Co., thus every Piano is fully guaranteed for 10 years, and every buyer is amply protected. Of course you'll try it, why wouldn't you?

$7.00 monthly payments is all that you are asked to pay if you keep the piano.

druggist. Take a handful of moistened earth from a few inches beneath the surface of the ground and press into a ball. Break this mud ball into halves and place a strip of blue litmus on one of the halves and cover with the other. After five minutes examine the litmus paper, and if it has changed in color from blue to a distinct pink or becomes spotted with pink spots the soil is acid and needs lime for successful alfalfa growing.

On sour soils from two to four tons of air-slaked lime or ground limestone rock or marl or lime refuse should be applied. Whatever form is used it should always be applied to the surface of plowed land and harrowed or disked in. It may be put on in the fall or early spring, prior to seeding the alfalfa.

For the beginner seeding the alfalfa alone gives the best results. The soil is plowed in the fall or early spring and limed if necessary. Then the field is disked and harrowed often enough up to the first of June or July to clean the land of weeds.

Especially on fields which has grown alfalfa successfully seeding with a nurse crop gives good results. Where a crop of early potatoes has been grown the alfalfa may be seeded after their harvest, but not later than August 15th. Seeding alfalfa after this date nearly always results in failure, as the crop does not get sufficient growth before the first killing frost to withstand the winter. In those sections where canning peas are grown and harvested in June or the first part of July the soil may be disked and harrowed and inoculated immediately the peas are harvested and the alfalfa seeded at the rate of twenty pounds per acre with good results.

New Combination Tool For Land Clearers.

The new branch of the agricultural engineering department of the Wisconsin College of Agriculture which is devoted entirely to a study of the problems connected with clearing cut-over lands, has just devised a handy new tool to be used in dynamiting operations. It is a combination fuse cutter, cap crimper and fuse slitter, all in one.

There has been dissatisfaction with some combination crimper and fuse cutter tools on the market because the cutting edges do not stand up under the wear. They become dull, pinch the fuse off and soon leave a very ragged edge.

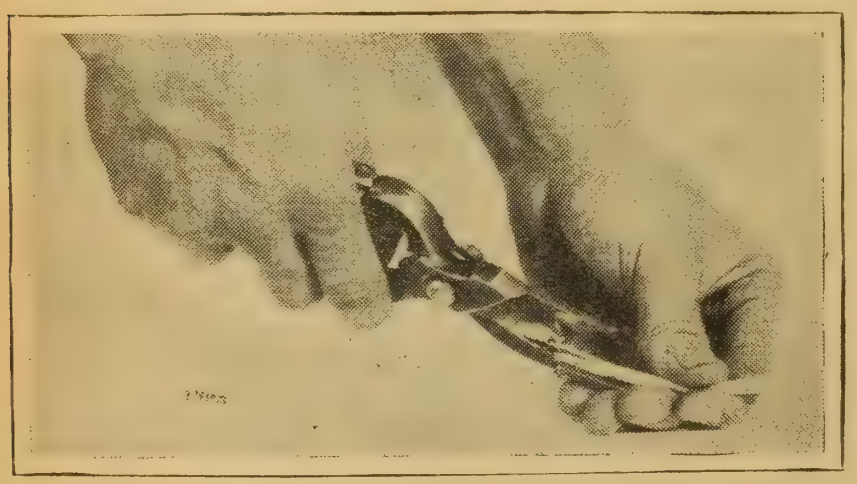
A blasting cup is one of the most sensitive agents employed in blasting operations. The white mercury fulminate contents should not be disturbed in any way. The fuse should slip easily into the cap and should never be punched or twisted against the explosive. Since the fuse is made just a little smaller than the cap there is no difficulty in using the cap on the fuse, if the fuse has been cut squarely. However, if the fuse end has been pinched flat or has a rough, ragged edge, it sometimes has to be worked into the cap, which means the fuse may be twisted against the fulminate. This is poor practice and may be avoided by having a clean cut, square fuse end.

The tool which is shaped on the pattern of a pair of pruning shears guarantees a clean cut. The cutting blade can be sharpened and adjusted. A cap is crimped on the fuse by the crimping device which is made directly under the axis. A firm, smooth and tight connection is made.

The idea of cutting fuse with a pair of pruning shears is not new, neither is the shape of the crimping device especially novel, but it is claimed that the slitting device on the end of the cutting blade is a new invention and very useful in splitting the fuse.

Ordinarily, when a fuse is to be lighted, the end is slit with a knife to expose the powder. If it happens to be a cold day the bitulitic cement used as a water proofing agent sometimes becomes very tough so that the knife often makes a poor opening. The fingers are often cut in performing this work.

The slit itself is not always satisfactory, because if the opened ends drop over the powder spills out and a quick split is not obtained. By using this new tool a slit is made only through one layer of fuse casing. After slitting the fuse may be left for considerable length of time on a dry day and the powder will not fall out. When all the holes have been loaded the operator can open the slitted end with the thumb nails and expose a small pan of dry powder. A match with a slow-burning head can be scratched near this little cup of powder and forced into it before the flare has finished. A sure "spit" can be obtained in this way on the windiest day, thereby making it safer to shoot more holes at one time.



HANDY NEW TOOL USED IN DYNAMITING OPERATIONS IN LAND CLEARING.

Towns Plan Ahead For Farmers' Week Programs.

Four towns have already made formal applications and have been granted one week farmers' extension courses to be held next winter. These are Algoma, Mauston, Grand Rapids and Grantsburg. Other towns are getting in line and it is expected that more than the usual number of farmers' courses and women's schools will be conducted in 1916-17 by the agricultural extension department, University of Wisconsin. According to the rules, a committee desirous of securing any of these agricultural or home economics courses for their town must file an application accompanied with a list of not less than fifty farmers or their wives, who are likely to be present at the sessions. Complete details regarding the courses may be obtained upon writing to K. L. Hatch, college of agriculture, Madison.

Crop Conditions Are Improving.

Grains and Grasses Respond to Warmer Weather---Continued Warm Weather Is Needed---Corn and Potato Planting Is Late.

Barron County.—Small grain is seeded and coming up nicely. Little corn has been planted yet because of wet weather. New seedings of clover and alfalfa wintered well and are making a good growth. About the usual acreage of potatoes will be planted; some farmers are treating seed potatoes with formaldehyde.—F. J. K.

Brown County.—Spring is cold, wet and backward. Seeding is nearly done, except on low lands. New grass seeding is good, but old meadows are poor. Rye winterkilled some and will be about 60 per cent of a crop. Corn and potato planting has begun. Pastures are short. Fruit prospects are good. Pure-bred live stock is in demand at good prices.—J. D. McAllister.

Clark County.—Abundance of moisture and warmer weather has caused a general improvement in meadows and pastures. Grain is up and looking thrifty. Winds have been severe, but the crops have not been damaged. A few silos were blown down and other buildings damaged. Some corn has been planted, but most farmers are still preparing the ground; considerable plowing is to be done yet. Some potatoes are in. Apple trees show an abundance of blossoms. Colts are exceptionally strong. A condensery at Neillsville will begin operations on July 1st.—Louis Buddenhagen.

Crawford County.—Corn planting is on in full blast. About the usual acreage will be planted. The spring seeding was a little late, but is now doing nicely. Pastures are in good condition and quite a few cattle have been shipped here to be put on pasture. Clover winterkilled badly. The alfalfa acreage is not large, but the crop wintered much better than clover. Many farmers seeded alfalfa this spring. There is a shortage of brood sows and the crop of pigs is light. Most farmers are buying grain and mill feeds and hoping for an early harvest. Interest in dairying is growing in this county; a cheese factory is being built near Prairie du Chien. Dairymen and hog raisers are prosperous.—A. M. Laird.

Douglas County.—Small grain is showing up fine. Meadows and pastures are doing well. Potato planting has scarcely started on account of cold, chilly weather. Cows are doing better as the pastures improve. Spring pigs are selling at $3 each. Heifer calves are in good demand.—J. N. Ottun.

Dunn County.—Grains and grasses are coming along with a rush, because of improved weather conditions for the last few days. Corn planting is nearly done. Fields that were planted early are sprouting nicely.—J. D. Millar.

Iowa County.—Oats, barley and other small grains are looking good; they are a little late because of cold weather, but the growth is even owing to the good rains during sowing time. Corn is backward because of cold, damp weather and poor quality of seed. Most of the farmers are through planting corn. Pastures are slow. Fruit trees are starting to bloom. Cattle came through the winter fairly well, considering the scarcity of feed.—J. M. Blotz.

Jackson County.—The cold, wet weather causes much delay; not more than 5 per cent of the corn is planted. Small grains are coming nicely and the grass looks good. The demand for seed potatoes has not been great as yet, which would indicate that the acreage will not be increased above the average.—P. W. Jones.

Juneau County.—Small grain is coming slowly because of the backward season. Heavy winds for the last two weeks has damaged the spring grains on sandy soil. Rains have delayed corn plowing, and cold weather has held back pastures. The hay crop will be good if warm weather comes. A good acreage of potatoes will be put in this season. Fruit trees have a fair bloom and should make half a crop at least. Stock are on pasture, but are thin for this time of year. Dairymen are doing well. Horses are in good condition, due probably to the extra good oats. Feed is high priced and breeding hogs are thin. Sheep are in good condition.—C. E. Haskins.

Langlade County.—Seeding of small grain is finished and most of it is up. Ground for corn and potatoes is getting into shape. Meadows and pastures are green, but short. Fruit trees have plenty of bloom. Farmers are having good luck raising colts. Weather is wet and cool.

Lafayette County.—Weather is getting warmer. Corn ground worked exceptionally well this year. Planting is nearly finished. Small grain, meadows and pastures are looking fine, but are late. Apple and plum trees have heavy bloom and small fruit prospects are good. Stock are on pasture.—W. J. Martin.

Manitowoc County.—Seeding of small grain is nearly done except in a few low places. Winter wheat and rye are not doing well because of recent cold, rainy weather, but a few warm days would work wonders with these crops. Pastures are short and barn feeding is continued. Farmers are preparing ground for corn; more corn will be planted this year, because many clover fields which killed out will be put in corn. Apple and cherry trees are covered with blossoms.—Edward E. Straka.

Outagamie County.—Early seeding of grain is coming up and looks fine; late seeding is just starting. Pastures and old meadows have improved. A great deal of the clover was killed by late frosts and sleet, and the land has been plowed up for corn. Only a small acreage of winter wheat is left. Little corn planting has been done, but if the weather continues warm, it will be rushed. The acreage of potatoes will be about an average. About half of the young colts have been lost. Pig crop will be about half normal. Fruit trees are in blossom and look fair; small fruits are doing well.—Harry Lepplu.

Rusk County.—Season is wet and backward. Over one-half the seeding is done. A few potatoes have been planted and some report that the seed is rotting in the ground. Some corn will have to be replanted; seed corn is scarce and poor in quality.—V. V. Miller.

Shawano County.—May has been cold and wet. Pastures are backward. Prospects are good for a heavy hay crop from the new seeding. Small grain looks fair. Corn is over half planted. The number of young pigs is less than usual; the litters are small. The percentage of calves is larger than usual. Farm labor is hard to get.—M. J. Walrich.

St. Croix County.—Weather continues wet and cold; a light frost occurred a few night ago, but no damage was done except to some of the fruit on low-lying land. Grain crops are looking fairly well; the stand is better than usual in the western part of the county. On heavy clay soil in the eastern half of the county, seeding is barely finished. Meadows look good, but the growth is slow because of lack of warm weather. Good acreages of corn and potatoes have been planted—more potatoes will be put in this year than last. The pig crop is short. Cattle are thin and good pasture is needed to bring them up in flesh. Dairying is receiving more attention than heretofore. The high price of dairy products will lessen the supply of beef cattle.—Stephen Everson.

Trempealeau County.—Season is late, but crops are starting nicely. Most of the winter grain winterkilled, but some pieces planted early are good. Spring grains are coming on nicely. Corn planting is about half finished. Old farmers say corn planting is unusually late this year. Wet, cold weather has delayed all spring work. Stock is in pasture and timothy, alsike clover and June grass pastures are splendid. Much clover of the new seeding winterkilled, and in some places which produced three tons last year, hardly a trace can be found. Because of the late spring, many farmers are short on ensilage and hay. Few gardens have been planted and some of the early vegetables were killed by frost.—John W. Lowe.

Corn Contest Work in Rock County

A Review of What Is Being Attempted in the Way of Improving Corn Yield--By Allen B. West, Agricultural Agent.

IN 1913 the Janesville Gazette inaugurated an acre corn growing contest among the Rock county boys under the management of Mr. Noyes Raessler, of Beloit. This contest created so much interest that in the following year, 1914, the work was taken over by the Janesville Commercial Club, who are now holding their third contest. Cooperating with them in this work are the agricultural department of the Janesville high school and the county Young Men's Christian Association. Mr. Allen B. West, teacher of agriculture at the high school, is director and secretary. L. A. Markham, of the Young Men's Christian Association is field manager.

The contest is limited to boys under twenty years of age who are residents of the county. Except in the case of young members each contestant must do all the work of preparing the ground, planting and cultivating an acre plot, which may be in a field alone or may be a portion of a larger field. The younger members who are unable to do the heavier work may hire it done and the others may have help in their work. The field manager appoints supervisors, one for each neighborhood, who advises the boys as to the care of the corn, measures the acres and weighs the corn as it is husked.

Each boy is to keep a complete and accurate record of his crop on blanks furnished by the committee.

These records give a description of the acre plot with the kind of soil and the drainage. It also gives the kind and amount of fertilizer used and the variety of corn planted. Dates of plowing and planting are recorded and number of times harrowing, rolling or floating is done. How the corn is planted is also recorded and the manner and number of times the corn is cultivated. Damage done by animals, insects or birds is noted and accurate expense account is kept in which all the labor is charged at 15 cents per hour with 10 cents for each horse and manure at $1 per two-horse load. Rent of land is estimated at $5 and cost of fitting and plowing $4.

The record also shows dates of husking and the number of pounds carefully weighed in the presence of the local representative, who also signs the report.

Seventy-five pounds of ear corn constitutes a bushel in the contest. The varieties recommended for planting are the Silver King (Wis. No. 7), Golden Glow (Wis. No. 12), Murdock's or Reid's Yellow Dent.

Entries must be made to the Janesville Commercial Club, Janesville, Wisconsin, on or before June 1, 1916.

The best ten ears are to be brought (or sent) to the office of the commercial club one week before the awarding of the prizes, which date will be announced later. The exhibits will remain the property of the grower and will be returned to him, but the commercial club reserves the right to exhibit them in other corn shows.

Prizes are awarded on the following basis:

1. Yield of bushels per acre	50 Points
2. Quality as shown by exhibit of best ten ears of corn selected from acre plot	20 Points
3. Financial account showing expenditures and value of labor in growing crop	20 Points
4. Written record of growing crop	10 Points
Total	100 Points

Suitable awards will be given the winners of the contest and an educational and recreational trip will be given all who complete the contest.

In 1914, which was a good corn year, forty-two boys completed the acre corn-growing contest, averaging eighty-nine and one-half bushels to the acre, thirteen of the boys raising over 100 bushels to the acre, the highest yield being that of 132 bushels and sixty-four pounds, which was not far from the record yield of the state.

The season of 1915, as we all remember, was a most unfavorable corn year. Nevertheless, about forty boys completed the contest and the highest yield was not so far from that of 1914, it being 123 bushels, this being the only acre yielding over 100 bushels. There were nine boys who raised over seventy bushels per acre, at a varying cost of from 15½ cents to 47 cents per bushel.

There are already about fifty entries in this contest for this year.

Beside the acre contest the commercial club of Janesville is also conducting a ten-ear corn contest for the younger boys and girls, or those under thirteen years of age.

In this the seed used is the Silver King and Golden Glow and is furnished free by the commercial club.

The teachers of the county are cooperating in this movement and the applications are made either through the teachers or to the county superintendent, O. D. Antisdel, Janesville, the applicant receiving a pint of pure-bred seed after making his application. A few days prior to the time set for awarding the prizes (to be announced later) the contestant is expected to send his best ten ears to the office of the commercial club. A list of twenty or more prizes will be offered to those showing the best ears.

This contest is proving very popular, there being already 220 entries. There is still room for others.

Vitrified Tile Construction.

Those farmers who have been making a study of construction materials have been greatly interested in vitrified tile for use in building barns, hog houses, henhouses, corncribs, silos, granaries, garages, machinery sheds, pump and power houses, ice houses, etc. Buildings erected of this tile are

A 10,000-BUSHEL CORNCRIB AT FARMERS' ELEVATOR, YALE, IA.

fireproof, rot-proof, warp-proof and vermin-proof. These buildings are warm in winter and cool in summer. They are easy to clean and handsome in appearance.

A special tile is now being made for various types of buildings. Accompanying illustrations show use of these tile for corncribs. Such a corn-

DETAIL OF TILE CORNCRIB CONSTRUCTION.

crib is not expensive to build. It has nearly 75 per cent of the wall surface open, hence the grain dries well and molding is prevented. This crib may be equipped with either outside or inside elevator and has built-in shoveling trenches. Such cribs may be built any size. It is not infrequent that they are built to hold 10,000 bushels. There is also being made a special tile to be utilized in silo building. These tile are burned hard and are waterproof. They are curved so that when laid end to end they make a true circle, leaving a smooth wall without angles to form an air-pocket. These tile are hollow. Each tile contains two separate dead-air spaces, which prevents any quick change of temperature in the silo. They hold the warmth in the silo and prevent freezing of the silage. Such construction is of a permanent character and such a silo is strong enough that it will not blow over. It needs no painting and repairing and will last almost indefinitely.

In addition to these special corncrib and silo tile the Adel Clay Products Company make two styles of special clay building blocks. One of these—Adel Texture Tile—is specially intended for residences. The other is suited to the erection of barns, garages, hog and hen houses and similar buildings. Both permit of fireproof construction and have all the advantages of any imperishable material.

ELECTRIC WHEEL CO., 65 Elm Street, Quincy, Ill.

IN AND AROUND WISCONSIN.

BEEHIVES ON THE NICK SCHLUTER FARM, MANITOWOC COUNTY, WIS.

The annual summer meeting of the La Crosse County Guernsey Breeders' Association will be held on June 10th at West Salem and Secretary Campion expects this to be the banner meeting of the organization.

The summer meeting of the Eau Claire County Jersey Breeders' Association will be held June 21st at the farm of C. C. Smith, four and one-half miles west of Augusta. W. H. Clark, the well-known Jersey breeder at Rice Lake, will be the speaker.

Rock county boys who are entered in the good roads contest are going to try an experiment this summer by growing beech nuts. George S. Parker, of Janesville, has distributed among the boys some nuts he secured directly from Denmark and they agreed to plant and look after them to see if they would grow in Wisconsin.

Charles Brown, of New Rome, Adams county, has taken a contract to furnish 200 crows to the United States Department of Biology, which is conducting an investigation to determine which species of birds is the most beneficial to farmers. They must be dressed under department regulations and for each crow he will receive 10 cents.

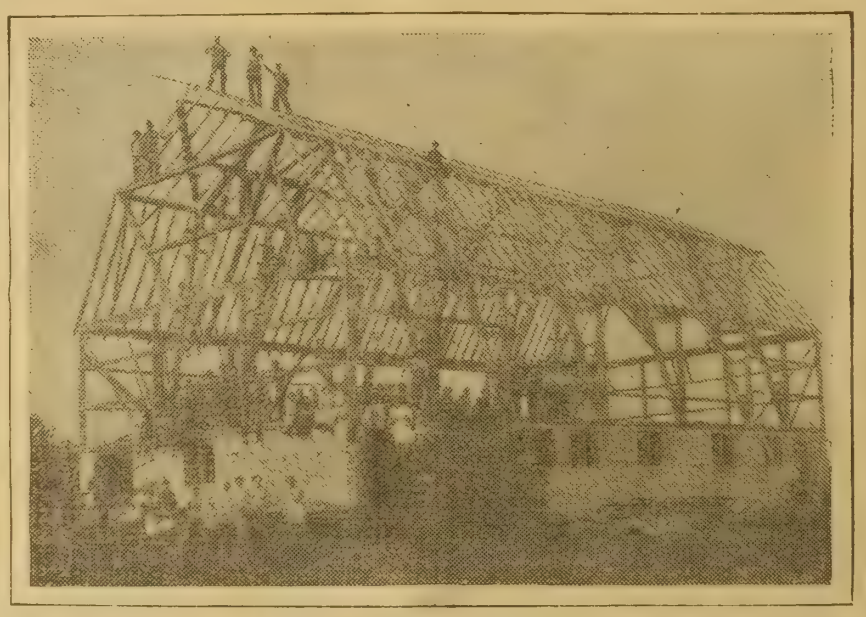
St. Croix county Guernsey breeders will gather at Roberts on June 6th at the farm of George Roberts for their annual summer picnic. Sec. Lloyd Rundell advises that twenty prizes have been offered for the high school judging contest and music will be rendered by the Roberts military band. He expects this to be the banner meeting of the association.

For the purpose of getting in closer touch with their rural neighbors the business men of Eau Claire set aside May 25th as "Farmers' Day." The day proved a big success and was enjoyed by many farmers and their families who took advantage of this hospitality of the Eau Claire business men. Everything was done to make visitors feel at home and automobile rides, free picture shows, etc., added to the entertainment.

Hardwood ashes, which are plentiful in Upper Wisconsin, are to be converted to the manufacture of potash at Antigo, Langlade county; where a plant has been located. The company expects to ship wood ashes from sawmills within a radius of from twenty to thirty miles. Ashes removed from the leaches still contain sufficient potash to be valuable for fertilizer. Unbleached hardwood ashes contain too much of this element to be used for fertilizer unless used very sparingly.

Stoughton, Dane county, is now assured a creamery through an arrangement with local boosters and farmers with the A. J. Olson Milk Company. Stoughton is in the heart of the tobacco-growing country and a campaign has been going on for several months to divert the attention of the farmers more to dairying. The operation of a creamery at Stoughton will do much along this line. Local enthusiasts have raised $25,000 to be held by them in trust for the building or purchase of the creamery. It is proposed to establish it in one of the tobacco warehouses there if it can be purchased and if not a new building, 40x200 feet, will be built. The creamery company expects it to be in operation before September 1st.

The Central Wisconsin Cheesemakers, Buttermakers and Dairymen's Association will hold a cheese scoring contest in connection with the meeting which will be held at Marshfield on June 10th. It is planned to make this the largest exhibition ever held by the association and a fine list of prizes have been offered for the winners.



JOSEPH NEUMEYER'S BARN 44x100 FEET ON HIS 200-ACRE FARM, MANITOWOC COUNTY, WISCONSIN.

Pierce county Guernsey breeders will hold their annual summer meeting at the farm of Rundell Bros. and their sister at Rock Elm, on Saturday, June 3d. Secretary Hammer notifies The Wisconsin Farmer that there will be a judging contest and an address by L. P. Martiny, of Chippewa Falls. Indications point to a successful meeting and a large attendance.

On June 17th the Minnesota State Horse Breeders' Association will meet in Lake City, Minn., in conjunction with the Horse Breeders' Association of Eastern Minnesota. Both associations have a large following of interested horsemen and since their interests are mutual much good is expected from the co-operative meeting.

The Portage Prairie Holstein-Friesian Association which will hold its summer meeting at Randolph on June 17th now has twenty-seven members interested in breeding pure breds and it is hoped to eventually conduct sales in that community. The officers chosen at the last meeting are: President, J. W. Hutchinson; first vice president, Jacob Burbach, Friesland; second vice president, W. W. Bird, Cambria; third vice president, E. A. Gibbs, Fox Lake; secretary, John Bradley, Randolph.

The fourth annual live stock show at River Falls, Pierce county, will be held on June 3d on the Normal school campus. Judging will be done by W. S. Moscrip, of Lake Elma, Minn., and G. C. Humphrey, of Madison.

CEDAR LOG, FOUR AND ONE-HALF FEET THROUGH, FIVE FEET FIVE INCHES AT BUTT, CUT ON BURKHARDT'S FARM, MANITOWOC COUNTY, LAST WINTER.

Frank W. Harding, of Waukesha; James W. Martin, of Gotham, and Fred Pabst, of Oconomowoc, represented Wisconsin on the International Stock Exposition Association Board. They attended a recent meeting at the Union Stockyards in Chicago, where arrangements for this year's International were discussed.

The Sauk County Farmer is the title of a new farm paper that has made its appearance. It is published at Baraboo and is edited by V. S. Pease and the first number of four pages is filled with interesting matter relative to the farm life of Sauk county.

The recent milk strike in Chicago has resulted in organization activity in Wisconsin districts which ship to that market and a new local has been formed among farmers at Beloit, Rock county, and another is proposed at Brooklyn, Wisconsin. There are 300 shippers at Brooklyn. The Milk Producers' Association is enlarging its territory every week and is reaching farther into Wisconsin, the plans being to reach into every outlying district from which milk may be shipped into Chicago and thus take care, during any crisis, of any "strike breaking milk."

Wisconsin contributed last year more members to the Guernsey Cattle Club than any other state in the Union. This announcement was made at the annual meeting of this organization which was recently held here. The members of the club voted to recommend fairs in 1916. In the list approved by the club appears the names of J. R. Danks, of DeSota, Vernon county; William Erbach, Athens, Marathon county; Frank E. Fox, Waukesha, Waukesha county; Charles L. Hill, Rosendale, Fond du Lac county; William M. Jones, Waukesha, Waukesha county, and Charles Solveson, Nashotah, Waukesha county.

In spite of the fact that to most of us Milwaukee suggests busy streets, manufacturing plants and well inhabited residence districts, an agricultural inventory will be taken of Milwaukee county this summer. According to the last official census figures, Milwaukee county has about 1,600 farms. The total area in improved land in the county is given at 60,700 acres. Land and farm buildings are valued at nearly $17,000,000 and constantly increasing. Land will be examined in all parts of the county and from the data gathered a soil map will be made to show the extent and distribution of the different types of soil. Samples of each kind of soil will be sent for analyses to Madison and to the United States Department of Agriculture at Washington.

Caring For Crowd at "National."

Realizing that the hospitality of Springfield and its neighbors will be on trial on the occasion of the National Dairy Show, October 12th to 21st, the Hotel Men's Association, the convention bureau of the board of trade and the directors of the Eastern States Agricultural and Industrial Exposition have united on a program which will guarantee suitable accommodations for every person who seeks reservations in advance of the opening of the show.

Making Farmers in a City School.

New Richmond High School, With Its Agricultural Course and Demonstration Work, Is Interesting More Than 100 Boys.

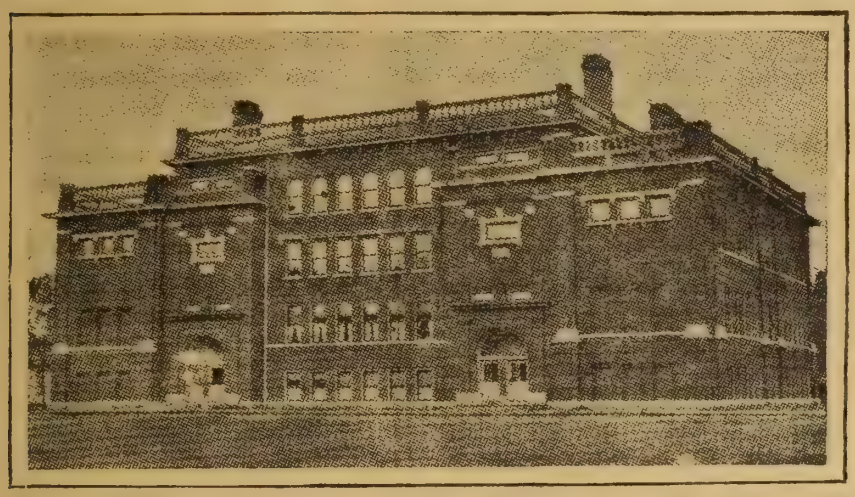
NEW RICHMOND, St. Croix county, Wisconsin, has a high school in which the farmers and the townspeople interested in better agriculture have reason to feel proud. The interest in which the farmers are taking is indicated by the large number of farm boys who are profiting by the course in agriculture provided in this city school which, aside from teaching them the fundamentals of a better agriculture, is giving them at the same time practical experience in various farming operations which will prove of inestimable value when they leave the school for the farm.

Steers and some of the boys in the New Richmond High School agricultural class. The feeding, care, etc., of these steers was left to the boys.

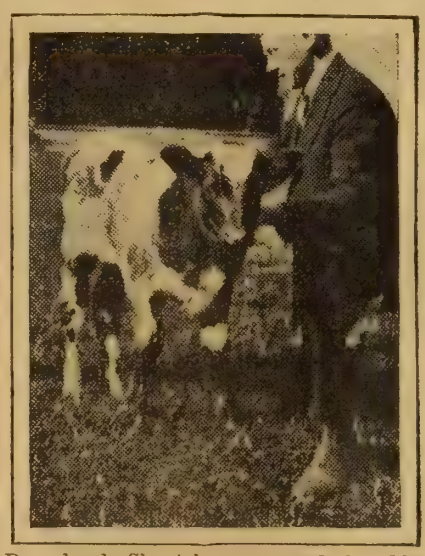
Wisconsin now has seventy odd city high schools which have agricultural courses, and the New Richmond school is among this number. All are doing good work while some are doing better than the others and the success at New Richmond has been the greatest the past year, which fact is due to the increasing confidence in the course and the knowledge that it is of practical value to a boy—not only one from the farm but also a boy in the city. There were over a hundred boys in the agricultural classes this past year. Many were from city homes and many from the farms in that vicinity but the work, under the direction of Harold M. Stephens, professor in agriculture, has been so laid out that it is of value to all boys. The same methods in planting, cultivating and harvesting potatoes are adapted on the city acre as on the farm ten acres; the same holds true of corn and other crops as well as the care of stock, and the boy who has finished such a course is certainly better fitted for work on the farm when he leaves school.

When Mr. Stephens took hold of the work two years ago he set out with one end in view, and that was to make the agricultural course of practical, everyday value. If this could be done and it has been done, he figured that the criticism often heard from farm boys that such courses are "too long on theory and too burdened with book agriculture" would be overcome. He also believed that more farm boys would take the course if it were made practical, and in this his hopes have been realized. Books are merely a part of the work. Just enough book work is given to teach the matters not available otherwise and then comes the actual experience of caring for cows, feeding steers, putting in and harvesting crops, etc. What is learned from the books is thusly put into practical use.

The first year Mr. Stephens arranged for some ground near the high school and there conducted an ear-to-the-row seed corn experiment with the boys. He also put in a half acre in potatoes and in this way got the boys interested in experimental work. Then each boy was required to care for a certain plot in connection with his father's farm or home garden. Each boy had to grow an acre of something—whether it be corn, potatoes, or something else. The choice of crop was left to the boys, and the fact that some of the boys took care of several acres demonstrates the interest shown in the work. With the experimental work carried on the two acres near the school this afforded each boy the opportunity to learn at first hand how to farm, and Mr. Stephens, pleased with the results, decided to go into the practical side on a little larger scale the following year.



NEW RICHMOND HIGH SCHOOL WHERE MORE THAN 100 BOYS ARE LEARNING THE A B C'S OF AGRICULTURE.



Pure-bred Short-horn owned by Mr. Stephens, instructor in agriculture.

Last fall, just before school opened, he rented on his own responsibility a twenty-acre farm adjoining the city and only a few blocks from the school. This farm was in pasture with an old barn, and Mr. Stephen's thought was to have the school boys do the chores about the farm, fix it up for cattle and do other work that is an everyday job on the average farm. Each boy, of course, was required to tend his acre as before, and this work is being carried on this spring. One boy on a quarter acre last year got a yield of sixty-two bushels of potatoes which was better than his father had.

The barn was in need of repairs, so the boys with their hammers and saws went to work and made the required improvements so that it would take care of several head of dairy cows. Stalls were built, a gas engine was set up to pump water to the tank in the barnyard and another gas engine was set up inside for grinding and cutting feed.

Mr. Stephens then arranged for a cow test which continued through the winter and will end in June. This was planned so the boys interested in dairying might get first-hand experience in caring for the cows. A cup was offered to the cow producing the most butter fat during that period at the smallest cost for feed. The management, feeding, etc., was left to the boys who were required to keep an accurate account of all the operations which in effect was a lesson in farm bookkeeping and farm management. Mr. Stephens had four cows of his own and arranged for the loan of the others.

Some were interested in the beef breeds and in experiments with feeding steers. So two steers were bought last fall, pastured and fed for seventy-five days and then sold at a net profit of $26.13. This work was also done by the boys.

Two other steers were fed during the winter and were recently disposed of when Mr Stephens and his class visited the stockyards at South St. Paul and witnessed the sale of two steers which they have been feeding since September 23, 1915. The animals, a grade Short-horn and a Galloway, sold creditably, one averaging 1,010 pounds, bringing $9.25 and the other, averaging 1,040, selling for $8.25.

The animals averaged 720 pounds when they were taken charge of by the high school lads. Their success today is expected to give the young men added encouragement to continue with their stock raising activities. The class was shown around the yards, the various market methods explained, and the members were present when their stock was disposed of.

Aside from the work he is doing in the school, Mr. Stephens has given his aid to other projects of interest to the farmers in that neighborhood, among them being the organization of the New Richmond Co-operative Cow-Testing Association. He also arranged with the boys in his class for an exhibit at the county fair last year.

The course extends through the four years in high school and includes crops, animal husbandry, agricultural chemistry, farm mechanics and farm management.

300 Home Plans FREE Satisfaction or MONEY BACK

Send today for our **two big plan books.** Show over 300 homes, **floor plans, color schemes, exact prices.** All sold **"direct-to-you"** by **Gordon-Van Tine Method.** Built hundreds of times—**in every State**—many near **you.** Local references. **Newest Architectural Styles.** All material **highest quality.** Prices lowest. RIDER AGENTS wanted in every locality to ride and exhibit a sample 1916 model **Ranger** furnished by us. **Do not buy** a bicycle, tires or sundries until you get our catalog and new special offers. **Write today.**

MEAD CYCLE CO., Dept. R-184 CHICAGO, ILL.

UPPER WISCONSIN

Douglas County Farm.

Douglas county, Wisconsin, is doing a splendid work in behalf of its farmers through demonstration and actual farm work carried on each year at the county farm six miles from Superior. The county board has been very liberal in its support of the county farm and the accompanying illustration shows the kind of a barn which has been provided to house the dairy herd here.

One of the problems confronting the settler in Upper Wisconsin is the securing of pure-bred seed grains, potatoes, etc., and in determining what varieties are best suited for the conditions. These problems Douglas county is endeavoring to solve for its settlers and farmers by carrying on experiments at the farm. The county board hopes to make the county farm one of the best in the upper half of Wisconsin so that it will serve as an ideal toward which farmers can strive.

The county board last year appropriated money for the purchase of a pure-bred Guernsey sire which was bought, and funds have now been set aside to buy pure-bred heifers which will be the start in building up there a fine pure-bred dairy herd from which farmers can secure foundation stock. The barn is equipped with the most modern equipment and has running water and electric lights.

During the year ending June 30, 1915, the farm realized a revenue of $1,600 from live stock and poultry and $776 from the sale of barn, farm and garden products in addition to the consumption at the county institutions of barn, farm and garden products valued at $12,441. Charging off 4 per cent interest on the farm properties the barn, farm and garden showed a net profit for the year of $5,362.74 when the value of the products consumed is taken into consideration.

The county is cutting its farm from the timber land just as hundreds of settlers in the county are doing today, and to date has 160 acres under cultivation. Clearing operations are being extended each year, and with a continuance of the present desire of the board to appropriate funds for improving the herd, etc., this farm should eventually become one of the best in the state.

Considerable attention is being paid to pure-bred seed grains and standardized, certified potatoes. Last year prize potatoes were grown on the farm, and this year nothing but pure-bred seed grains are being used. The result will be that the county farm will be in a position next spring to supply Douglas county farmers with good seed grains as well as seed potatoes.

MODERN EQUIPPED BARN ON THE DOUGLAS COUNTY FARM, WHICH FARM THE COUNTY BOARD IS STOCKING WITH PURE-BRED DAIRY CATTLE.

Discusses Fruit Varieties.

To the Editor:—I have just been reading an article in The Wisconsin Farmer where the Gregg raspberry is recommended as the black raspberry to grow. I have lived in Langlade county, Wisconsin, since Janury, 1889, and have tested almost every kind of berries, and as for the Gregg, it kills to the ground every winter and all the fruit you get from it you have to dig into the ground to find. That would hardly be a money-making crop. The only black raspberry that is a success here in Langlade county is the Cumberland Black. I have these on my place and I have just measured some of the canes. Some measure ten feet and two inches and are alive clear to the end bud and two feet from the ground the cane measures three and a half inches around. All the protection they got was the cold northwest wind. It is the only black raspberry that will pay up here. The berries are large and firm, of good quality and make splendid shippers.

There is another raspberry of the same hardiness and a very rank and vigorous grower. It is called the Columbian Purple and is of the same style as the Cumberland Black. It is a great favorite for canning or for any other use. These are the only two varieties I would recommend for the northern section of Wisconsin. I am seventy-eight years old and have been testing all kinds of fruit and shrubbery all my life. I came to Wisconsin in the early forties and my father located at Rolling Prairie when that section was occupied mostly by Indians, wolves and deer.

As for apples, the best paying variety for this section are the following: Duchess, Wealthy, Patten's Greening, Red Astrachan, MacMahon's White, Gideon, Northwestern Greening, McIntosh Red and the Yellow Transparent. Though the last-named variety is troubled sometimes with blight it is a money-maker for an early apple.

The only cherry that will do anything in this location is the Compass cherry. It is a cross between the plum and cherry and comes into bearing very young. It is an excellent fruit for canning.

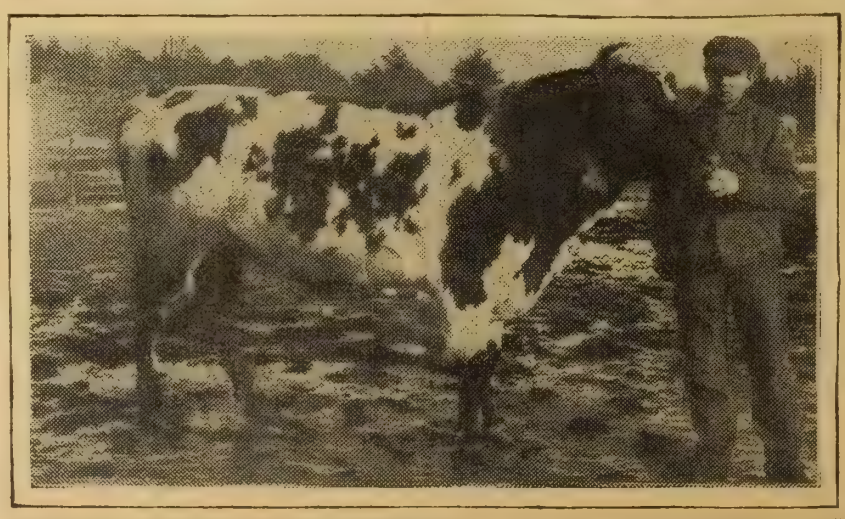
My choice of plums is the Forest Garden. I have three trees of that variety, about three inches through, and I have picked four bushels at a time from one tree. They are an annual bearer.

As for everbearing strawberries, I find the Superb and Progressive take the lead. The plants are strong growers and the berries are large and of good quality. These plants are always good yielders.

I have made fruit and shrubbery a life study and enjoy it as I do reading The Wisconsin Farmer.

The season is very late up here. Fruit trees are not in blossom, except a few plum trees. Apple blossoms have not yet begun to open, but the trees are loaded with fruit buds. We have had but a few warm, sunshiny days this spring, but I think we shall have a large fruit crop this season. About a week ago one farmer told me his alfalfa was over a foot high.

Langlade Co., Wis. H. F. Marsh.



THIS BULL, NORAH'S PRIDE, OWNEDBY W. D. RICE, BIG SUAMICO, WIS.

Hints on Home Grounds.

F. A. Aust, of the agricultural experiment station of the University of Wisconsin, offers these hints on home grounds planning: (1) The house is the central feature and should occupy the most prominent location. Other buildings are best put farther from the road and should, if possible, be screened off by trees and shrubs. (3) The lawn, being the foreground of the home, should look inviting, and should seem to say, "Come and rest," rather than "Keep off." (4) Shrubs are of good service, especially for filling in empty-looking places and screening off unsightly objects. (5) Vines give shade and beauty to the porch, and may be well used to cover fences, walks and outhouses. (6) Flowers lend variety and color, but as a rule should be made into borders rather than to occupy conspicuous places. (7) Walks, drives, etc., are best when inconspicuous. (8) Straight rows of trees or shrubs, and straight walks and drives are apt to be stiff and formal; curves are more graceful and pleasing. (9) Beauty lies, first of all, in simplicity and harmony. A few shrubs and trees arranged with some plan are more effective than a multitude scattered about aimlessly. Every single plant should fit in its place and not be out of tune with the rest.

OUR NEW SERIAL COMMENCES JUNE 15TH

Watch For It

"TOLD IN THE HILLS"

By Marah Ellis Ryan

The biggest, best story of the West ever written, full of romance and action, description and adventure. By the author of "The Bondwoman" and "That Girl Montana."

DAIRY

Contagious Abortion.

The federal department of agriculture attaches considerable significance to the spread of contagious abortion among cattle and announces in a recent bulletin that the annual loss from this source, as taken from the last reports, was $20,000,000. It is stated that contagious abortion bids fair to become one of the most important animal diseases. This disease has been quite generally considered in connection with dairy and farm beef herds, but, according to the federal department, has now found its way to the range, where losses in some instances have run as high as one-half of the calf crop. Conditions on the range make it difficult to control the disease. The department recommends sanitary and hygienic measures as means of control. Proper disinfection of premises and particular care of breeding animals are mentioned as important factors in minimizing the losses.

Inasmuch as the department of agriculture has given this matter considerable study, we quote portions of a statement recently sent out:

The organism which causes the disease may be conveyed from cow to cow by means of the bull or may enter the system with contaminated food. All aborting animals and all showing a discharge should, therefore, be isolated from the healthy members of the herd in order to eliminate, so far as possible, infective material. Infected stables should be thoroughly cleansed with a standard disinfectant applied with a force or spray pump, the disinfection of the contaminated stall being repeated after each abortion. Manure and contaminated litter should be promptly removed and plowed under to prevent access to it by other cattle.

Many herd owners fail to observe these precautions because they do not realize that the infection is present in their herds. The disease is insidious, it usually requires a long time to develop, does not reveal itself by warning symptoms, and does not, indeed, appear to affect in any way the general health of the animal. In consequence, it is quite likely that the infection will have spread throughout the herd before the owner is aware of any danger. There are, it is true, certain tests which can be employed to ascertain the presence of the infection, but from a practical standpoint these possess some drawbacks. All infected animals do not abort. Furthermore, after two or three abortions, cows appear to acquire a natural immunity, and are thereafter quite capable of normal reproduction, although they continue to react to the tests. A positive reaction, therefore, does not necessarily mean that a healthy calf will not be born.

On the other hand, the fact that several animals have aborted within a short period is in itself suggestive evidence of the presence of the disease. Furthermore, it sometimes happens that in cows which have acquired immunity, although apparently healthy themselves, the infection persists and they are able to transmit the disease to others. For this reason, when the infection has once established itself in a herd, the whole herd should be considered infected, and all abortions, retained afterbirths, and all tendency to sterility should be regarded as manifestations of the disease.

This does not mean, however, that all infected animals are to be disposed of. As a matter of fact, in herds in which the disease has gained a foothold, a cow that has aborted once or twice is in some ways more valuable than one that has not. It is safe to say that in practically no case do more than three abortions take place, and in the majority of instances there are not more than two. Cows which are not made sterile will in all probability resume normal reproduction. On the other hand, if they are removed to make way for fresh animals, there is a strong possibility that the newcomers already are, or soon will be, infected, and are actually further from immunity than the old ones. The elimination of infected animals is, therefore, not to be recommended as a means of controlling the disease, unless their value is not great enough to warrant the expense of treatment.

A train of complications often accompanies abortion, and of these retained afterbirth is perhaps the commonest. This, if neglected or improperly treated, may result in absorption of poisonous products, septicemia, and death. Also sterility may follow, ruining the cow for everything except slaughter. Calf scours, too, seems more destructive in herds affected with abortion.

These complications, together with the great loss in calves and the lessened milk production, make the wide and ever extending distribution of the disease a matter of tremendous importance both to the dairy and beef industries.

These studies by the department experts give us an idea of the serious nature of the disease. A good many inquiries come to The Wisconsin Farmer on this subject and these have been answered in our veterinary department.

June Dairy Scoring.

The quality of May butter and cheese made in a number of the factories of Wisconsin will be checked over from a commercial standpoint early next month, when the regular scoring exhibition will be held at the dairy school, college of agriculture, Madison.

Excessive moisture in cheese, which tends to defeat the aims of the cheesemaker by lowering both the grade and the resulting price received for the article, as well as "leaky" butter, a common fault of the spring's make, due to changing from stable feeds to pastures, will probably be overcome by a number of factories this year, where the best methods of manufacture are practiced. In others, however, these and other common errors in manufacture will doubtless creep in.

To aid factory operators of all degrees of experience by showing them how to improve their product is the real purpose of the scoring exhibitions. Thus it is not only the buttermaker or cheesemaker of experience who should submit samples for the tests, but workmen who have had difficulty in obtaining the high grade of product which they desire. Patrons of factories should also be interested in having samples of butter and cheese sent to Madison for the scoring exhibitions because an improved product should mean better prices for raw material.

The judging of butter and cheese will be done by men familiar with the requirements of commercial standards. Personal questions relative to any of the samples submitted will be answered as fully as possible.

Winnebago County Testing.

The Winnebago County Cow-Testing Association has just completed six months' work. According to Archibald R. House, official tester, a goodly number of boarders have been rooted out of the herds of members of the association. Of the cows in this association, belonging to different breeds, making a forty-pound record or better 36½ per cent are grade Guernseys, 26 per cent are grade Jerseys, 3.21 per cent are pure-bred Guernseys, 10.2 per cent are pure-bred Jerseys, 7.8 per cent are grade Durhams, 7.6 per cent are grade Holsteins, 1.7 per cent are pure-bred Holsteins, 6.1 per cent are natives and .6 per cent are graded Red Polled. The following is the last report for the month ending April 30th:

98% Of the World's Creameries Separate their cream with a DE LAVAL

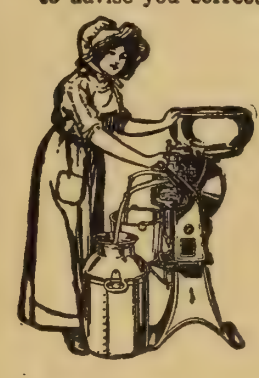
TEN YEARS AGO THERE WERE A DOZEN DIFFERENT MAKES of creamery or factory separators in use. Today over 98 per cent of the world's creameries use De Laval Separators exclusively.

IT MEANS A DIFFERENCE OF SEVERAL THOUSAND DOLLARS a year whether a De Laval or some other make of separator is used in a creamery.

EXACTLY THE SAME DIFFERENCES EXIST, ON A SMALLER scale, in the use of farm separators. Owing to the fact, however, that most farm users do not keep as accurate records as the creameryman, or test their skim-milk with the Babcock tester, they do not appreciate just what the difference between a good and a poor separator means to them in dollars and cents.

NOW IF YOU WERE IN NEED OF LEGAL ADVICE, YOU WOULD go to a lawyer. If you were sick you would consult a doctor. If you had the toothache you would call on a dentist. Why? Because these men are all specialists in their line, and you rely upon their judgment and skill.

WHEN IT COMES TO BUYING A SEPARATOR WHY NOT profit by the experience of the creameryman which qualifies him to advise you correctly? He *knows* which separator will give you the best service and be the most economical for you to buy. That's why 98 per cent of the world's creameries and milk dealers use the De Laval exclusively.



THERE CAN BE NO BETTER RECOMmendation for the De Laval than the fact that the men who make the separation of milk a business use the De Laval to the practical exclusion of all other makes of cream separators.

Your local De Laval agent will be glad to let you try a De Laval for yourself on your own place. If you don't know the nearest De Laval agency simply write the nearest main office, as below.

The HINMAN MILKER is so simple that it not only costs less than complicated machines; but it is easier to install. Also costs less to keep in order and operate. No machine will pay for itself if it wears out in 2 years' time. The HINMAN has had 8 years of success. Simple combination of **pump, vacuum in valve chamber in pail cover** and **teat cups**—no complicated mechanisms. No air tank or pipe lines.

Saves cost of hired help. Saves more time for field work. **Increases size of herd. Makes some cows produce more milk.**

If you have six or more cows to milk you will some day use the HINMAN.

Write now for catalog and full particulars.

EAGLE Safety and Service

Buy an EAGLE Ensilage Cutter first because the perfect control and EAGLE Safety Knife Head make it safe. **No danger of long delays and serious accidents** at silo filling time when hours lost mean dollars lost.

Buy an EAGLE because its non-winding, powerful-gripping feed rolls give far greater feeding capacity. Its positive roller-chain-driven blower does not clog and the whole machine is built to stand the work. In a word

EAGLE means SERVICE

Long Feed Table, large feed opening, four knives, four edged cutting bar, safety cylinder head, safety reverse lever, powerful non-clogging blower and easy adjustment for different length cuts. No belt-slippage.

You will find many other special features in these clean built, clean cutting, compact EAGLE Cutters.

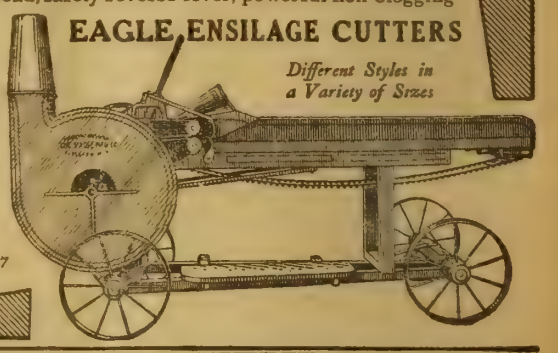
EAGLE ENSILAGE CUTTERS
Different Styles in a Variety of Sizes



APPLETON Silo Filler

Actual records prove that Appleton Silo Fillers cost the least

per ton of silage put up or per year of life. Tremendously strong construction makes an Appleton practically proof against breakdown. Solid oak and steel frame, mortised, braced and bolted, impossible to pull out of line. Many exclusive power and labor saving features, such as independent belt driven blower allowing speed to be adjusted for minimum use of power for any height silo; frictionless feed table running on chilled iron rollers; knives spiraled to give clean shearing cut, requiring least use of power. (10 lengths of cut, 5-16 to 2½ inches.) Lowdown cut-under frame, easy to handle. Both feed rolls and table controlled by single lever. Positive self-working safety device.

Two Books Free: One on silo building and silage crops; the other a complete catalog of Appleton Silo Fillers in four sizes for 4 h. p. gasoline engines and up. Write

Appleton Mfg. Co., 4122 Fargo Street, Batavia, Ill.

Guaranteed to do more and better work with less power than any other silo filler.

Potato Inspection Calls Are Due July 1st.

Applications for inspection of potato fields under the certification plan operated through the horticultural department, University of Wisconsin, must be sent in on or before the first day of July.

Last year more than 100 potato growers in the state raised several thousand bushels of certified seed stock which had been both field and bin inspected by officials of the horticultural department. This seed stock is bringing the best of prices this spring.

New rates for inspection have been adopted this year. For a field of four acres or less the fee is $6. More than four acres, up to and including eight acres, is rated at $9. Half of the total fee must be included with the application blank and the remainder is due immediately before the second examination is made at harvest time.

FILL SILOS QUICK

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

QUESTIONS AND ANSWERS.

Carburetor Floods.

I would like some advice as to what is wrong with my motor. It has a good spark, and seems to fire all right in the spark plugs, but when I run the motor it seems to flood. Is the carburetor to blame?

Answer.—If the carburetor does not flood so that the gasoline runs out of it when the motor is not running, the needle valve is open too far, and should be partly closed. Your trouble is probably with the way your carburetor is adjusted.

Storage Battery Rating.

Is a Westinghouse two-unit, eighty-ampere hour battery better than various other makes that do not state units or hours of storage?

Answer.—The quality of a battery does not depend upon volts, units, or ampere hours, but upon the design and mechanical construction of the battery. The "units" refer to the number of cells composing a battery, each cell being usually rated at two volts. The voltage varies with the amount of charge. The ampere hours refers to the capacity of the battery—the greater the ampere hours, the longer the battery will light a lamp. All batteries are rated in volts and ampere hours, or units and ampere hours, as these things describe the power of the battery.

Lighting System for Ford Car.

Please give me some information as to the best kind of lighting system for a Ford car. Would you advise a dry cell battery or a storage battery? How much would they cost and how would they be installed?

Answer.—The best outfit is a combination lighting and starting outfit. This may be purchased of a dealer in auto supplies for about $85. There are other outfits for lighting alone, complete with generator and storage battery, that sell for about $35. On Ford cars built since 1914, the magneto may be used for lighting. The manufacturers of the various outfits or the dealers can give you information for installing their systems. Dry cells would not be practical for auto lighting, and a storage battery would be rather expensive unless you have an outfit for charging it.

A Race Car.

I am thinking of converting my 1910 Model T. Ford car into a racer. What ignition system would you recommend? Would you advise taking off some of the cylinder rings? What changes would you make? Do Ford cars used as racers give satisfaction? What is the secret of successful racing?

Answer.—The Ford car is not designed for speed. The Bosch magneto has been used the most on race cars, but there are other magnetos that may be just as good. If your Ford magneto is in good order you should get good results from it. The following points on race cars may help you:

The pistons should fit the cylinder very loosely—about .012 inch loose on a four-inch piston. The piston should be made as light as possible. Often an inch or two is cut off the skirt. The rods also should be lightened as much as safety will permit. Rods must be of equal weight. Crank shaft must be in perfect balance, flywheel in balance, and pistons must be of equal weight. Use only one or two rings on each piston. Have special cams made, with a lift one-sixteenth inch higher than standard. If possible, use valves with one-fourth inch larger opening. File and scrape out all inlet and exhaust passages smooth. Fit rods, piston pins, etc., very free, but not loose enough to pound. Provide for an extra supply of oil and gasoline, having tanks with large openings, so that they may be quickly filled. See that every nut and bolt is properly cotterpinned or locked. Use a gear ratio of two and one-half to one, or three to one. The best ratio can only be determined by experiment.

Successful racing depends upon many things. The first thing necessary is a well-made car, with plenty of power, light moving parts, good lubrication, high-grade materials, and good riding balance and steering qualities. Equally important is a level-headed driver, who can cut the corners without burning his tires; who can feel just how hard he can drive his car without injuring it, and who can locate any defect in his car before it is too late. He must be a man of strong nerves and strong arms.

A Power Washer.

Please submit a drawing showing how I could run my washing machine with a one-horse-power engine. I have a "One Minute" washer, and a number of pieces of machinery from which I could obtain gearing. Could I make a friction wheel or clutch to use with it? Could I operate the engine on kerosene by pouring it into the tank after starting the engine on gasoline?

Answer.—Figure 1 shows a side view of the machine with a power attachment, and Figure 2 a top view of the attachment with the tub removed. A shaft is mounted on the bottom cross-pieces of the machine. This shaft—about three-fourths-inch diameter—has a tight and loose pulley D in the middle, a crank disc E at one end, and a small bevel pinion at the

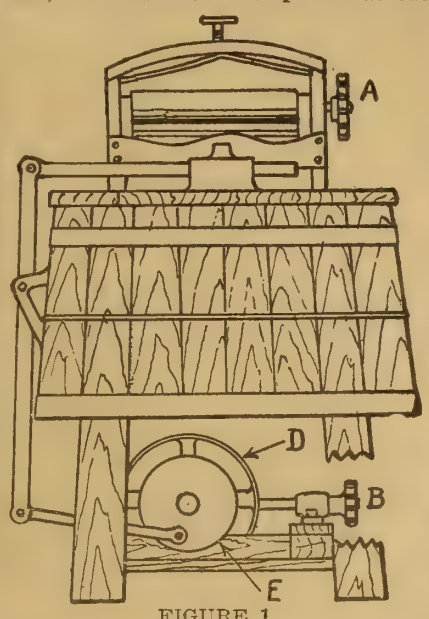

FIGURE 1.

other end. A is a sprocket wheel on the wringer, driven by a sprocket B on a shaft mounted as shown in Figure 2. This shaft is driven by the two bevel pinions C by a feather key, the pinions being mounted on a sliding sleeve. By shifting these pinions, the wringer may be run backward or forward, or stopped in the neutral position. The machine is started by shifting the drive belt from the loose pulley to the tight one. Many engines will run on kerosene after becoming warm. You can tell by trying. It should not cost you over five cents to

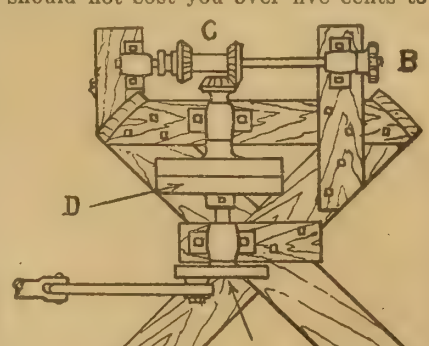

FIGURE 2.

do a washing, even at the present price of gasoline. The people who make the "One-Minute" washer, put out a power machine, and it might pay you to get their prices before making a machine yourself. A power washer is certainly a great labor saver.

A "Shocking" Question.

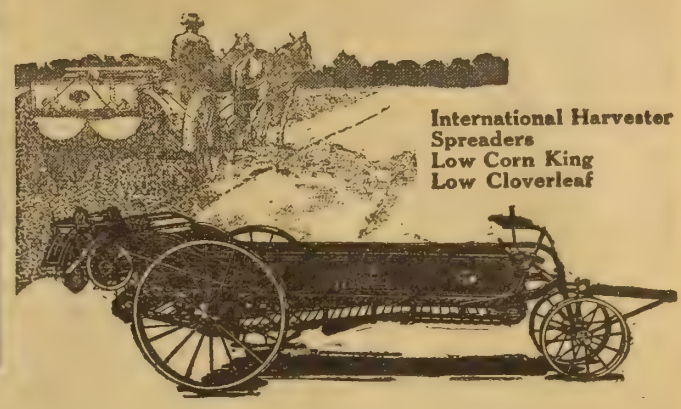
I wish to charge a chair so as to shock a person when sitting on it. I have a coil for six batteries that I can use. Please explain how this is done. I tried to make a sal ammoniac battery, but without success. I have made them before and made this one like the others. Can it be that the sal ammoniac was too old?

Answer.—The chair should have a metal seat or back, and wooden legs, which must be dry. The floor must be of sheet metal, or have metal strips on it for the person to stand on. Attach one battery terminal to the floor, the other to a switch. Run a wire from the switch to the "Bat" coil terminal, and ground the other coil terminal on the floor. Run a wire from the spark-plug terminal to the seat or back of the chair. Do not use over three dry cells. While considerable amusement can be obtained from this device under proper circumstances, it should be used with care. The operator, or perpetrator, should try it on himself first. It is possible that the outfit might have static capacity enough to cause a serious shock.

We suspicion that there was something wrong with your sal ammoniac more than age, as it keeps well. Dry cells are more suitable than any wet battery for starting tractors or auto engines. A dry cell is really a sal ammoniac battery, using very little water, and a "depolarizer" of manganese dioxide.

WON HIGHEST AWARD PANAMA-PACIFIC INTERNATIONAL EXPOSITION SAN FRANCISCO 1915

Eight Feet Wide, or Better



International Harvester Spreaders
Low Corn King
Low Cloverleaf

ONCE you have seen both kinds of work you will say: "There is certainly a wide gulf between the ordinary spreader and the modern **I H C** machine, with its good, wide-spreading device. Give me the up-to-date, time and labor-saving spreader."

International Harvester spreaders—Low Corn King and Low Cloverleaf—are made with wide spreaders that throw the manure out in a wide, even spread, and broken up into fine particles by the disks that give it a second beating. In this condition the soil takes up quickly and evenly the fertilizing elements.

Though they are narrow, conveniently handled spreaders, easy to drive right into stables for loading, they spread to a width of 8 feet, or better. This cuts the spreading time in half, increases the tractive power of the spreader by keeping the wheels off the slippery manure, and gives you the best machine made for top dressing. **I H C spreaders** are simply built, and very strong. They are low for easy loading. They are built in sizes to suit any buyer, and they do work that is uniformly satisfactory.

Be sure to see the **I H C** dealer who can sell you a **Low Corn King** or **Low Cloverleaf**—or write us for catalogue.

NOW Is The Time Your Stock NEED

SAL-VET

The Great Worm Destroyer — The Great Live Stock Conditioner

Right now the blood-sucking stomach and intestinal worms are working destruction in your herds. They cause indigestion, off-feed conditions, prevent your farm animals from thriving, and lessen their power to resist disease. SAL-VET destroys these thieving, profit-eating parasites. Just write me how many head of hogs, sheep, horses and cattle you have and I'll supply you enough to last them 60 days. You pay the freight charges—feed it according to directions and watch results. If SAL-VET has not done what I claim and you make a specific report in 60 days, I'll cancel the charge—you won't owe me a penny. Address

SIDNEY R. FEIL, Pres.

The Feil Mfg. Co., Dept. 137 Chemists Cleveland, O.

Lost No Lambs—No Sick Sheep

"I have fed SAL-VET all season and have not lost a single lamb, nor had a sick sheep since lambing time. This is the first time in five years that I have not lost between one and ten lambs, and an occasional ewe. SAL-VET has paid for itself several times over."

W. B. ELLSWORTH, Brookwood Farm, Ottawa, Ill.

SAL-VET Saved His Hogs

"My hogs were nearly dead with worms. I fed SAL-VET just as you told me to, and it has done them worlds of good. They are now sleek and fat, and in good condition. I also found it the best thing that I ever fed to my other stock."

HENRY PUNTMANN, Rt. No. 1, Biehle, Mo.

Prices: Ea. 40 lb. pkg. $2.25; Ea. 100 lb. pkg. 5.00; Ea. 200 lb. pkg. 9.00; Ea. 300 lb. pkg. 13.00; 500 lbs. 21.12. Extra discount in larger quantities. [251]

Not less than 40 lbs. sent on this 60-day offer. Shipments for 60 days' trial are based on 1 lb. of SAL-VET for each sheep or hog and 4 lbs. for each horse or head of cattle.

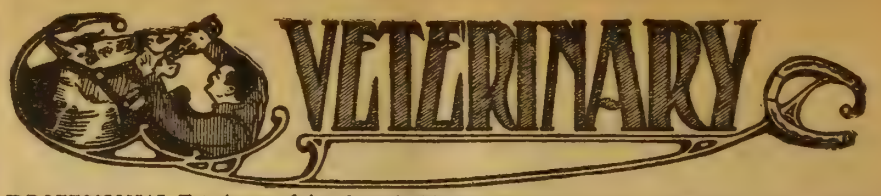
If none of the above combinations suit you, you can make up your own club of papers in the following way: First select The Wisconsin Farmer and figure it at $1.00 per year. Then select any of the papers or magazines listed above and figure them at half their regular subscription price as indicated above, choosing whatever papers or magazines that appeal to you. As an example, suppose you should want The Wisconsin Farmer, Kansas City Weekly Star, Woman's World and People's Home Journal. You would figure The Wisconsin Farmer in the combination at $1.00; then you would add up the regular subscription price of the other three papers, which amounts to $1.10. Half of that amount equals 55 cents. Add this to the regular price of The Wisconsin Farmer, which is $1.00, and you would have a total of $1.55, which would be the rate for The Wisconsin Farmer, Kansas City Weekly Star, Woman's World and People's Home Journal.

If you wish to subscribe for any papers or magazines not listed in any of the above offers, write to us for special rates. Send all orders to Club Dept., The Wisconsin Farmer, Madison, Wis.



PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

AILING ANIMALS.

Yearling Colts Sucking Mares.

Is it injurious to mares to have yearling colts sucking them? Is it harmful to the colts?

It is probably no more injurious to mares for yearlings to suckle them than for young colts to suckle them, but it does not seem to us to be a very good practice. The first milk would probably not be very good for yearlings, but the milk later on should not hurt them.

Failure of Cow to Get in Calf.

I have a cow that has been milking for nineteen months and she is still milking eight to ten quarts a day and she is not with calf. I have brought her to the bull several times, but it did no good. What is the trouble?

This is a rather difficult question to answer without an examination of the animal in question. This trouble is brought about by any one of a number of causes. You had best have your local veterinarian examine this animal and he may be able to locate the cause of the trouble and can then prescribe according to his findings.

Injured Hock.

We have a bay gelding twelve years old which we turned into pasture with other horses. The next morning he was sore in the right hind leg. The pain increased so that he kept raising the leg from the ground. The hock joint started to swell till the joint was round. The pain seems most severe on the inside of the hock joint right on the projecting bone. This horse seems feverish. This happened on April 24th. Please state treatment.

Your animal is probably the victim of an injury in the hock region. You should have had this attended to immediately. If the injury seems purely of a local nature you may get results by applying a blistering agent to the affected parts after the painful stage has subsided some. Prompt treatment is in order, as your animal may develop a spavin.

Painful Condition of the Foot.

I have a two-year-old colt which has an aching foot. When walking and that foot is back something seems to move back just as she is bending the joint right above the hoof, and then it gives a tapping sound. I had her feet trimmed by a blacksmith. Could this have anything to do with it? What is the cause and what remedy do you think should be used? It does not hurt her very much. Is this dangerous as to her soundness?

It would seem from your description that your animal has injured herself over or near one of the lower joints and that she sets it down in an unnatural position, causing the peculiar movement you speak of. We would advise you to either take this animal to a veterinarian or have one come and see it and have him make a careful examination. The trimming of the hoof has probably not been the cause of the trouble.

Bloody Milk.

I have a Holstein cow that calved in January. I have milked her for two years and her milk has always seemed good until a few days ago. Now I find it bloody. The buttermilk looks like bloody water. She is about five years old. We have been feeding her warm chop feed twice a day all winter and alfalfa hay. Now she runs in a pasture where there is plenty of green grass and greasewood. Can you tell me what is the matter with her and what can be done for her?

Blood may escape with the milk when the udder has been injured by blows, also when it is congested or inflamed when the circulation through it has been suddenly increased by richer and more abundant food or when the cow is under the excitement of heat. The eating of acrid or irritant plants may be the cause. In milk which becomes red after it is drawn it may be due to the presence in it of the micrococcus prodigiosus. From the above statements you will see that it is all-important to know the cause of the trouble before treatment is begun. The treatment will vary with the cause. If congested glands, give one pound of epsom salts and daily thereafter one-half ounce of saltpeter with a dram of chlorate of potash. Bathe the bag with hot or cold water and rub with camphorated lard. If the food is too rich or abundant it must be reduced. If from acrid plants these must be kept from the animal.

Injury to Leg.

I have a seven-year-old mare that has had a discharge from her left hind leg since last October. She had not been working for some time so one day after a rain I rode her after the cows. She slipped and fell, but apparently she was all right. I put her in the barn and afterward turned her out. Next day I noticed her leg had begun to swell, but she was not lame. It broke the third day. I have syringed it out once daily. The opening begins at the lower portion of the muscle on the inside of the leg and runs eight inches in toward the stifle joint. I have used cresol and salt water as a disinfectant. Any information will be greatly appreciated.

Your mare has probably met with an injury which caused abscess formation. The cavity you speak of is probably just the space between the two layers of muscle. Keep the drainage established and syringe out once daily with mild antiseptic solution, such as lysol 1 per cent solution or mercuric chloride 1 to 1,000. It might be advisable for a veterinarian to examine this animal.

Dr. Hess Dip and Disinfectant

Kills Disease Germs Destroys Foul Odors

Nothing better for disinfecting stables, barns, sinks, troughs, garbage cans, outhouses, etc. Good alike for home and stable.

For scab, mange, hog lice, ticks on sheep, fleas on dogs, and all parasitic skin diseases of horses, cattle, sheep, dogs, hogs and poultry.

Pint bottles, quart, half-gallon and gallon cans and barrels. One gallon can, $1.00 (except in Canada and far West). Smaller packages as low as 25c.

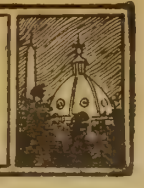
CURRENT EVENTS



DAVID LLOYD GEORGE has been selected as the man best able to bring about a peaceful settlement of the troubled Irish question. Premier Asquith made a notable speech in parliament last week. Instead of giving details of his recent visit to Ireland and of any plan he might have formed to bring about peace there, by agreement among the contending parties, he announced that David Lloyd George had undertaken the delicate task of bringing the hostile factions together. The premier concluded with an appeal that for a time all debate on the question, both in the house of commons and outside be suspended, in view of the adverse effect such argument might have in the difficult undertaking facing the government. The premier's speech was heard with intense interest by the members and he had scarcely resumed his seat when John Redmond, the nationalist leader, arose and acquiesced in the premier's request, adding in a voice filled with emotion, his ardent desire for a solution of the difficulties of his country. Mr. Redmond was quickly followed by his political arch-enemy, Sir Edward Carson, who tentered his support to the proposition. Lloyd George is undoubtedly the strongest man in England today, for it was he who arranged the British financial affairs when war first broke out and who has speeded up the munition workers the past few months and made it possible for the allies to secure a sufficient supply of ammunition to hold the Germans and Austrians in check. The Irish question is the biggest he has tackled and how he will succeed remains to be seen.

CONGRESS completed its part in the enactment of the first of the administration preparedness measures last week and passed a compromise army bill which has already gone to President Wilson for his signature. The bill as finally agreed upon provides for a regular army with a peace strength of more than 200,000 men, backed by a federalized national guard of more than 400,000, and carries many reorganization features worked out by war department officials. To complete the main elements of the program of preparedness on which the administration plans to spend more than a billion dollars within the next five years, congress still has to perfect and pass the naval bill, embodying the navy increases, and the fortification bill, which includes provision for most of the equipment for the increased army. The bill provides for the establishment of a system of military training camps for civilians paid out of the federal treasury and for vocational education in the army. It is by all odds the longest step this country has ever taken in the matter of efficient military defense.

JUSTICE CHAS. E. HUGHES was nominated for the presidency by the republicans of Oregon, by a decisive plurality over Senator Cummins, of Iowa, and Senator Burton, of Ohio. As a result, his presidential stock went soaring. Justice Hughes had requested that his name be withdrawn from the Oregon ballots, but the courts refused this, so Oregon was the first state in which the question of his candidacy was put up to the republican voters, fairly and squarely, they having to content themselves in other states with writing his name on the ballot. Since the Oregon primaries there has been more talk of Hughes than of any other candidate, although large numbers of men are working night and day in the interests of Roosevelt. Justice Hughes has maintained absolute silence on political matters since being appointed a member of the United States supreme court, but his record while governor of New York still appeals to the rank and file of his party and he is unquestionably a strong man for the place. Another month will find the matter settled in both parties, the republican convention to be held in Chicago commencing June 7th and the democratic convention to be held in St. Louis commencing June 14th. President Wilson is certain to be renominated.

THE struggle around Verdun, the great French fortress, continues with unabated fury. The fighting last week was even more vigorous and deadly than any heretofore waged. At an immense cost in human lives the Germans succeeded in recapturing Fort Douamont, which the French had taken from them but a few days before. The Teutons were likewise successful in taking the outlying village of Cumieres, so that the week was rather favorable to them, although the victories were won at such great cost in human life as to seriously impair the Teutonic forces for the future. There is a growing conviction that Verdun may be the turning point of the war and so both sides are fighting with unparallelel fury. While this is going on the Austrians have been successful against the Italians, pushing them back, step by step, in the mountainous region between the two countries. The week closed with the central powers (Germany and Austria) having a little the better of the struggle.

THEODORE ROOSEVELT invaded the enemy's country and delivered a ringing speech on preparedness at Detroit, home of Henry Ford, pacificist. Colonel Roosevelt declared early in his speech that he had for Ford "not merely friendliness but in many respects a very genuine admiration," but he went on to classify him wtih the tories of the revolutionary war and the copperheads of the civil war. Emerging from the question of personalities he launched into a harangue for preparedness, saying: "There is not a nation in the world which believes that our course of conduct has been dictated by anything save timidity, unworthy shrinking from effort and responsibility, and cold and selfish love of money-making and of soft ease. The only right principle is to prepare thoroughly or not at all. The only right principle is to avoid hitting if it is possible to do so, but never under any circumstances to hit soft. To go to war a little, but not much, is the one absolutely certain way to insure disaster. To prepare a little, but not much, stands on a par with a city developing a fire department which, after a fire occurs, can put it out a little, but not much." In urging "universal military service based on universal training," Colonel Roosevelt said he believed in it because "it would be not only of incalculable benefit to the nation in the event of war, but of incalculable benefit to the individual undergoing it, and, therefore, to the nation, as regards the work of peace."

THAT Russia is able and willing to take a still greater part in the European war is evidenced by the fact that fully 30,000 Russian soldiers have been landed in France to assist in holding Verdun and other threatened points, while a large detachment has succeeded in joining hands with the British against the Turks in Asiatic Turkey. The Russians seem to be recovering from the defeat which Von Hindenburg and the Germans administered to them some months ago and to have the men and the munitions to figure prominently in future engagements. When the war broke out Russia was so honeycombed with graft and inefficiency it could not play the big part it was expected to play, but since then it has been steadily bringing order out of chaos and now stands second to none of the nations engaged in efficiency and willingness to bear the brunt of the burden.

Cost of Machinery.

Machinery makes money for its owner when in use, but costs him money when it is idle. The value of an implement is measured by the acreage covered per year and its life measured by days in which it has been in service. A machine makes the greatest possible profit for its owner when it is used continuously in profitable work till it is worn out. Then it is really worn out, it does not rot or rust out.

The United States Department of Agriculture says that the average farm implement is only about half worn out by use alone. The rest of the wear is due to rust and decay. Acres count in the life of a machine, not years. They have conducted studies of farm machinery with the purpose of determining the life of different machines and it was found that the cost per acre covered is the real measure of the value of the service given by an implement and that, on the average, the more acres covered per year the more profitable it proves to its owner. For example, it was found in one instance that the mower that covers but fourteen acres per year cost its owner 36 cents per acre, while the mower that covers fifty-three acres annually costs but 10 cents per acre cut.

Of the implements studied the walking plow shows the longest life in days of service, 224 days out of a total life of twelve years, while the two-row corn planter shows the shortest life in days of service, nine days out of eleven years. The cost of the walking plow was less than 10 cents per acre, mostly for repairs, while the cost of the corn planter was 80 cents per acre, mostly a "replacement cost," or the amount charged against the implement each year toward getting a new one when it is scrapped. These figures are based on data collected from a portion of the United States where the land is rolling and the soil rather heavy. Local conditions will have some effect on the life of machinery and this should be taken into consideration.

It was found that the grain binder costing $125 when new was used about three and one-half days each year, had a life of fifty-three days of work, over a period of nearly sixteen years, this was for covering about thirty-five acres per year. The total cost per acre was 40 cents. A corn binder costing $125 new was used about three and three-fourths days each year and had a life of forty days of work, covering twenty-one acres per year for a period of about eleven years. The total cost per acre covered was 84 cents. The spike-tooth harrow had a life of fourteen years doing forty-three days actual work and cost 3 cents per acre, as it cost only $10.50 when new. A grain drill costing $72 was found to have a life of sixteen and one-half years covering forty-six acres per year at a total cost of 17 cents per acre. The land roller cost about 4 cents per acre and had a life of sixteen years doing seventy-five days' actual work in this period.

LAW QUESTIONS.

Removing Mail Box—Damages.

A Subscriber, Klevenville, Wis.—A rented a farm from B for three years. There was a mail box on the place and B agreed to leave it there for A's use. After A used the box one year B took it away without A's consent. What can A do about the matter?

Answer.—A can sue B for damages for removing the box, and recover judgment against him, but it is such a trivial matter that it would not pay A to have a lawsuit about it.

License for Selling Feed.

A Subscriber, Kingston, Wis.—Where several farmers join together and buy a carload of feed, can they sell it at a profit without obtaining a license in the state of Wisconsin?

Answer.—The law of Wisconsin does not require a license for such an enterprise, but if the farmers are selling out the feed in a town or city there may be an ordinance of such town or city providing for a license, so they had better inquire of the town or city officers about it.

Ask your neighbor to subscribe for The Wisconsin Farmer.

Three Hundred Million Bushel Crop in 1915

Farmers pay for their land with one year's crop and prosperity was never so great.

Regarding Western Canada as a grain producer, a prominent business man says: "Canada's position today is sounder than ever. There is more wheat, more oats, more grain for feed, 20% more cattle than last year and more hogs. The war market in Europe needs our surplus. As for the wheat crop, it is marvelous and a monument of strength for business confidence to build upon, exceeding the most optimistic predictions."

Wheat averaged in 1915 over 25 bushels per acre
Oats averaged in 1915 over 45 bushels per acre
Barley averaged in 1915 over 40 bushels per acre

Prices are high, markets convenient, excellent land low in price either improved or otherwise, ranging from $12 to $30 per acre. Free homestead lands are plentiful and not far from railway lines and convenient to good schools and churches. The climate is healthful.

There is no war tax on land, nor is there any conscription. For complete information as to best locations for isettlement, reduced railroad rates and descriptive illustrated pamphlet, address

Canning Vegetables on the Farm.

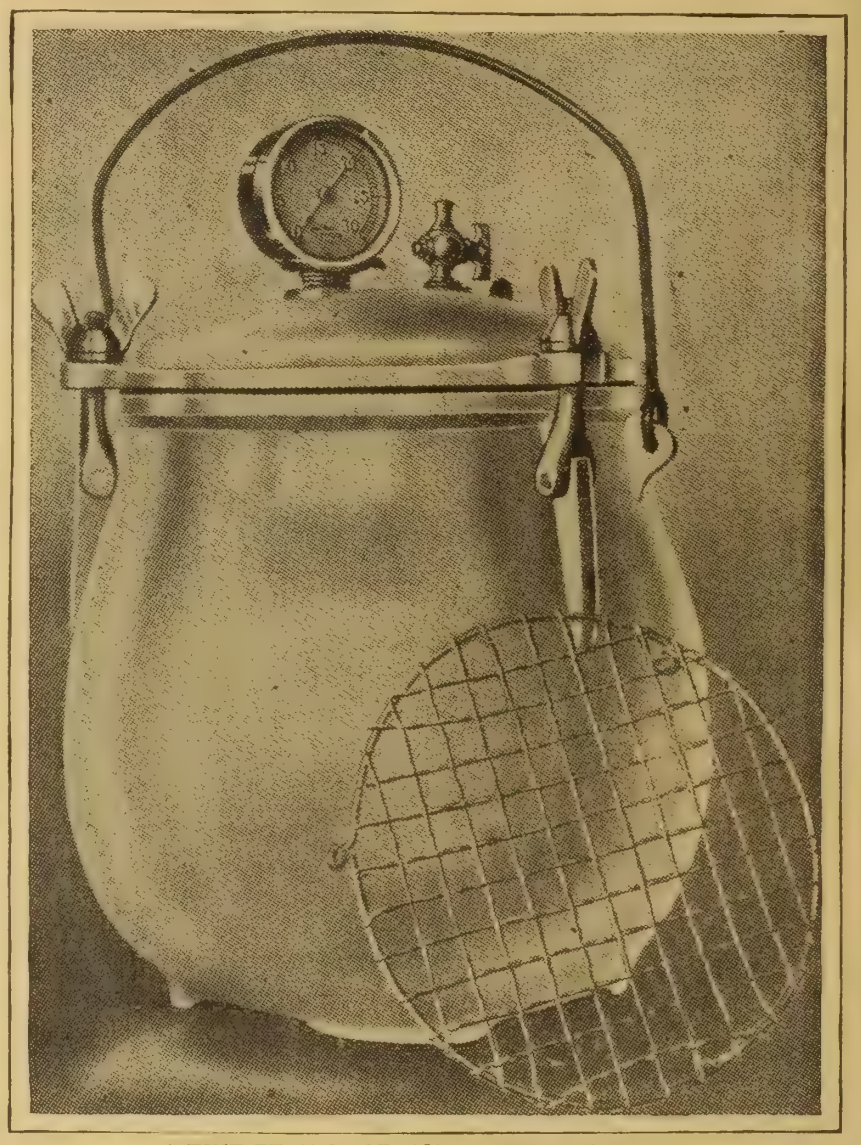
The canning season will soon be upon us. Evidently our readers are beginning to think of this, for within the past week we have had numerous requests for the best methods of canning tomatoes, peas, corn and beans. The writers of these letters state that they are planning to put up various kinds of vegetables, but that heretofore they have had trouble with such products keeping and are anxious this year to find a method of canning that will insure safe keeping for winter use.

Home canning is comparatively easy, but success in this line depends to a great extent on a knowledge of what causes canned fruits and vegetables to spoil. Micro-organisms, bacteria, yeast and mold are tiny little plants which cannot be seen with the naked eye, but are found practically everywhere, and it is a well-known fact that it is these little organisms that cause fruits and vegetables to decay and spoil. Therefore, every one of these living organisms must be killed before our canned products will keep. Moreover, the jars must be sealed air tight; this for the reason that the bacteria, yeast and mold are in the air and one tiny bubble of air may contain hundreds of these organisms.

Sterilization, or a killing of all living organisms by means of boiling water, is, therefore, the principle of all canning. In the case of actively growing organisms this end can be accomplished in five minutes, but the spores, the resting state of the bacteria, require a longer time. This is the secret of success in canning vegetables. Most everyone is successful in canning fruits and making jelly, preserves and pickles, but when it comes to vegetables many housewives make the mistake of not cooking them long enough to kill these spores. The thing to remember is that boiling water will kill the spores if the process is continued long enough.

It has formerly been the practice of some housewives to can their vegetables by what is known as the fractional method of sterilization. This means boiling the vegetables one hour a day for three consecutive days. The first hour's boiling kills all the growing organisms, but not the spores. Overnight the spores grow and the second day's boiling kills them. The third day's boiling kills all those which might not have been sufficiently developed to have been previously killed. This method requires time and is a great deal of trouble and for that reason most successful canners have discontinued it and are canning their vegetables in steam pressure outfits or by continuous boiling. The steam pressure method is perhaps the easiest and the quickest. By putting water under pressure the temperature at which it boils is raised. In this way a higher temperature is obtained and the spores are destroyed in a much shorter time. The continuous boiling method, however, is very satisfactory and no expensive outfit is necessary.

Those who are fortunate enough to possess one of the fine steam pressure outfits will have no trouble if they follow directions carefully. These are nice to have, but you are not necessarily seriously handicapped in the canning process if you do not possess one. A simple water bath outfit can be made in any home. All that is needed is a wash boiler, bucket, pan or any utensil with a tight-fitting top. Into the utensil should be fitted a rack made of wire, tin or narrow strips of boards. The rack should fit the container perfectly and should raise the jars at least three-fourths of an inch from the bottom of the container. Handles should also be attached to the racks so that the jars may be lifted in and out of the hot water in the rack.



A FINE TYPE OF STEAM PRESSURE OUTFIT.

In canning tomatoes select those of a uniform size, ripeness and color. Scald in water hot enough to loosen the skins and then plunge quickly in cold water. Remove core and skin. Pack in the jars whole and fill with hot tomato juice. Add one level teaspoonful of salt to each quart. Place rubber and cap in position; partially seal, but not tight. Sterilize twenty-two minutes in hot water bath outfit. Remove and tighten covers.

Sweet corn should be canned the same day as picked, as, indeed, should all vegetables and fruits. Remove husks and silks. Blanch on the cob in boiling water from five to fifteen minutes, then plunge quickly into cold water. Cut the corn from the cob with a thin, sharp knife. Pack the corn in jars tightly until full. Add one level teaspoonful of salt to each quart and hot water enough to fill. Place rubber and cap on jars and partially seal. Sterilize 180 minutes. Remove jars and tighten covers.

In canning Lima beans, string beans, peas, etc., cull, string and grade for uniform size and color. Blanch in boiling hot water from two to five minutes. Plunge quickly in cold water. Pack in jars, adding boiling hot water until full. Add one level teaspoonful of salt to each quart. Place rubbers and tops in position and partially seal. Sterilize for 120 minutes. Remove jars and tighten covers.

Carrots, parsnips, beats, turnips, sweet potatoes, etc., are canned in the same way, first carefully removing the skin (after being thoroughly washed) by scalding in hot water and then plunging into cold. One teaspoonful of salt should be added to each quart. These vegetables require a ninety-minute sterilizing period.

The directions here given are for canning in quart jars. If half-gallon jars are used 10 per cent of the time should be added. For instance, if your vegetable requires a ninety-minute period in quart jars half-gallon jars would require ninety-nine minutes. Begin to count time immediately after the water is boiling hard. This does not mean when bubbles begin to form on the bottom of the container nor even when bubbles begin to rise to the top, but when it is rolling and jumping vigorously. The jars, of course, are placed in the water bath before it is hot and care must be exercised also in removing the jars, as they would break if lifted immediately from the boiling water into the cool air.

Be sure your jars are clean and that the caps fit perfectly. Always use new rubbers, and it is best to buy the rubbers separately, as these are always of a better quality than those which come with the jars. With proper attention to all these details there is no reason why every farm woman cannot can all the surplus product from her garden and have it in perfect condition for winter use.

Package or Bulk Food For Your Family.

In this day, when the cost of living is soaring, there is much discusion about the value of package goods.

While the public may pay a few cents more for foods done up in packages, it is getting quality and cleanliness by this most sanitary method of distributing foods, which are not certain when distributed in bulk. The saving of a few cents at cost of health is not economy, and whenever buying in packages is of sanitary advantage the buyer should not buy in bulk.

The stanchest advocate of package goods is the American housewife herself. She has decreed that the old cracker barrel in the cross-roads grocery store shall go. Stored in this open barrel the crackers absorbed all the impurities of a breath-laden atmosphere of a crowded shop, as well as served as a repository for dust, flies, etc.

She will not tolerate the picking of dirt or refuse out of loose cereal. When she once observes a clerk brush up tea and with it dust from the

Carol John Pigott. Robert Henry Agne. Holger Larsen. Algie Marie Brunner. Helen Myrtle Twitchell. Emma Ray.

counter and put it back into the tea chest she says, "give me package tea."

The housewife has been growing in pure food wisdom, in confidence in her rights, in enthusiasm in protecting the health of her family, and today she is demanding the cleanest, purest and best in food producing and food selling. Back of her is the pure food official of her town, state and United States; the manufacturer of reliable food products, and her local dealer. Of these, the food manufacturer first came to the aid of the housewife in answer to her appeal for goods in as perfect shape as they left his factory. The label on all reputable package goods is a guarantee of quality and of well-prepared, weighed and carefully wrapped food products. The price is fixed at first to stand comparison with other goods and remains fixed. To raise the price by a fraction of a cent would be fatal just as a fraction of a cent too much in the beginning would be fatal by putting him at a disadvantage with competitors.

The prices of bulk goods fluctuate as the prices of meat, fruit and vegetables, etc., all of which are sold at the price the grocer thinks he can get. If his running expenses are high he feels justified in charging higher prices than the humble grocer on an unfashionable street.

Then, too, is there not a great deal more waste in a kitchen by deterioration when the housewife buys in the "paper bag?" Soda crackers, tea, coffee, raisins, currants, spices, etc., are good examples of foods that will deteriorate when purchased in bulk unless stored in covered containers. With the modern machinery for handling and wrapping package goods the increase in cost to the housewife is very small compared to the gain in quality and cleanliness of production.

Lewis B. Allyn, food chemist, says "that impurities, unreliable weights or measures, deterioration, waste, inconvenience, lack of guarantee and redress are the risks we take when purchasing in bulk, and that the package can guarantee us full weight or measure, perfect quality and condition and redress in case of dissatisfaction, because the manufacturer's name, the weight or quantity of contents—fixed by law, a true description or list of contents, the date of packing, and in cases, the number of packer, are printed upon the package.

The clean, light, ventilated, well-arranged model food store, with its attractive displays of package goods, instills into the mind of the purchaser a feeling of confidence which was never fostered by the open cracker barrel." —[Laura B. Breese.

Pure Water the Best Tonic.

Water taken as a tonic assures a happy disposition, a clear complexion, a good appetite and a liberal amount of "pep," in the opinion of Dr. R. T. Nichols, physician in the Kansas State Agricultural College.

The average person does not drink enough water. Doctor Nichols says water may be taken at any time by the average person without injury to the system. Old physicians have advised against drinking water at meal times. Their theory was incorrect, as no harm can result provided one does not wash down the food.

Water stimulates the kidneys, the bowels and the pores of the skin. A good digestive system is almost an assurance of perfect health. Pure water is a tonic for this system, and, moreover, is the best tonic a person can take.

Ice water should not be drunk by the healthy person no matter how hot the day, for its temperature is too far below that of the body. An athlete should not drink water just before or after a contest. Water taken on an empty stomach cleans out the digestive tract and prepares these organs better to digest the food.

Dr. Nichols believes there is such a thing as taking too much of nature's tonic. An excess of water overworks the excretory organs just as does an overdose of prepared tonic.

The source of tonic water should be tested several times a year. Although water is the best of tonics, it may carry the worst of germs. Always be sure drinking water is pure.

Cake From Bread Sponge.

To the Editor:—I have read the Home page with interest for more than five years, but have never before written to the editor. Last night I read of Mrs. A. G. J.'s request for cake made from bread sponge and as I have one my mother used to make—a favorite with us all—I thought I would send it in and perhaps help someone a little, for I have been helped a great deal by the contributions of others.

This is the recipe: Three cupfuls bread sponge, two cupfuls sugar, one cupful shortening, two eggs, two teaspoonfuls cinnamon, one teaspoonful cloves, one-half teaspoonful nutmeg, one cupful raisins, one teaspoonful soda, flour to make stiff as fruit cake. Let rise till light and bake about like fruit cake. This makes a large cake and I usually take just half the recipe.

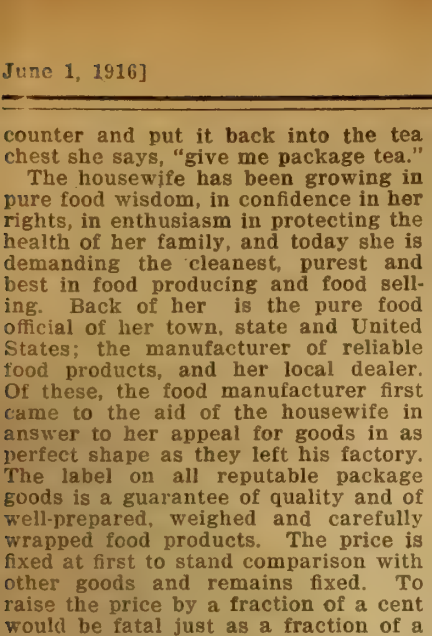
Another recipe I use is as follows: Take two cupfuls bread sponge, one egg, from one-fourth to one-half cupful sugar (depends on how sweet you like it), a pinch of salt, one-half cupful raisins (whole or chopped), flour enough to knead on board. Knead a few minutes and press in a pan about one inch in depth, spread with butter and sprinkle with sugar and cinnamon. Let rise till light and bake about half an hour.

Sometimes I have forgotten to save out the sponge, so I would take as much of the bread dough as I wanted and work in the eggs and raisins and it was all right.

How many have tried cinnamon rolls this way. Roll out bread dough about one-half inch thick, spread with butter, sprinkle with cinnamon and sugar and roll. Place in circle in pan and cut almost through about one inch apart and turn half over. It thus forms a flower. Place an extra one in center of ring. When light and just before placing in the oven pour over them a mixture made of one-half cupful sour cream and one-half cupful sugar. Bake. This dressing is sufficient for fifteen or more rolls.

For Mrs. C. R., who wanted a remedy for mildew, if stain is not too bad dipping in buttermilk and laying on the grass in the sun sometimes removes it. It is necessary to repeat two or three times in some cases. I have also used chloride of lime, a couple of tablespoonfuls in three or four quarts of water. Let goods lie half an hour or so. Rinse thoroughly, for the lime will eat if you do not.

Mrs. R. J. Gardiner.



Take a KODAK with you.

Double the fun and prolong the pleasures of every outing with Kodak pictures.

Catalogue of Kodaks and Brownies, free at your dealer's, or by mail.

EASTMAN KODAK CO., 469 State St., ROCHESTER, N. Y.

Recipes.

Coffee Cake.—Take about a quart of bread sponge and add one cup of sugar, one egg, one cup of raisins, four tablespoonfuls of melted lard, and a little nutmeg. Make stiff as for bread and set aside to rise. Then knead down again. Let rise a second time and put into round cake tins. Let rise and bake. When cool make an icing of powdered sugar and a little cream and flavoring. —Mrs. H. G.

Raisin Delight.—One-half pound each raisins, figs and shelled nuts, one-fourth cup pulverized sugar. Put fruit and nuts through food chopper and if not of smooth consistency put through a second time. Mix with the pulverized sugar and shape into a roll two inches in diameter. Wrap in wax paper until ready for use. This is excellent for school lunches and picnics.

Strawberry Blanc Mange.—One quart of milk, one-fourth cup of sugar, one cup of strawberry juice, four tablespoonfuls of cornstarch. Heat milk to boiling point. Add sugar, strawberry juice and cornstarch which has been rubbed smooth in a little cold milk. Cook until thick and pour into wet molds. When firm, turn out and garnish with whole strawberries and serve with sweetened whipped cream.

English Muffins.—Put two tablespoonfuls of lard and one teaspoonful of salt in a bowl and pour over it one cupful of scalded milk. When the mixture is lukewarm add one-fourth cake of yeast, broken in bits, and when yeast is dissolved add one and one-fourth cupfuls of flour. Cover and let rise until light. Cut down and cook on a hot buttered griddle, turning once, or cook in a hot oven in buttered muffin rings.

Chicken Imperiale.—Shred chicken with a silver fork. Make a rich cream sauce in the chafing dish, and add the chicken, together with a half cupful of good stock or one bouillon cube, a chopped Spanish pepper, a tablespoonful of chopped parsley and one-half can of button mushrooms. Season with salt and plenty of paprika and cook five minutes.

THE YOUNG FOLKS

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

The Endless Tale.

One of the Young Folks who signs her name "Elsie" has asked us to tell the story of The Endless Tale, so here it is.

There was once in the far East a great king who had nothing to do but sit all day long and listen to stories. He was very fond of stories and was always disappointed when the end came. He would listen through the longest story, and always when it was finished he would say, "There is only one fault to find with your story; it is too short." Story tellers from everywhere came to his palace and told him stories, some of them very, very long, but still the king was not satisfied.

At last he sent word into all the land offering a prize to anyone who should tell him an endless tale. And the prize for this endless tale was to be his fairest daughter as bride to the winner, and he also said he would make him his heir and therefore he should be king after him.

But the king was cruel, too, and he added to this offer that if any man should try to tell such a story and fail he should have his head cut off. This part of the king's message wasn't very attractive but the princess was very beautiful and there were many young men who would risk anything to win her, so some of them tried for the prize. One told a story that lasted for three months, but after that he could think of nothing more to tell and he had to give it up and pay the penalty. This was a warning to the others, so for a long, long time no one else tried it.

One day a stranger came to the palace and asked the king if it was true that he had offered his fairest daughter to the man who would tell him an endless tale. "Yes," said the king, "but if he fails he shall lose his head."

Then the stranger announced that he had a fine story about locusts that he would like to tell if the king would listen, to which the king agreed, and the story teller began.

"Once upon a time a certain king took all the corn in his country and stored it in a great, strong granary. A swarm of locusts came over the country and saw where the grain was stored. The granary was well-made and tight but the locusts sought day after day until they finally found on one side a crevice that was just big enough for one locust to pass through at a time. One locust went through this tiny hole and carried away a grain of corn; then another locust went in and carried away a grain of corn; then another locust went in and carried away a grain of corn."

For days and weeks and months the strange story teller kept saying over and over again, "Then another locust went in and carried away a grain of corn."

At the end of two years the king said, "How much longer will the locusts be going in and carrying away corn?"

"Why," said the story teller, "they have as yet cleared only one cubit and there are many, many thousands of cubits in the granary."

And the king cried out, "Man, you will drive me mad! I do not want to hear another word. Take my daughter; be my heir; rule my kingdom, but never let me hear another word about those locusts."

So the story teller married the king's daughter and they were very happy, indeed. And the king had been cured of his liking for long stories.

What Kind of Bird Is This?

Dear Young Folks:—I enjoy the letters which so many boys and girls have written. There are many boys and girls in our consolidated school. We are going to have a new schoolhouse built. I am in the fifth grade and like to go to school very much.

One day we went to the woods, where we picked flowers. After a while we had ice cream and marshmallows. We toasted the marshmallows over a fire.

I have read the story, "Rebecca of Sunnybrook Farm." It is a good story.

Has anyone ever seen a bird about the size of a catbird, or smaller than a blackbird? The tips of its wings and tail are black and the part around its eyes are also black. The breast is white. The back and top of its head are gray. The beak is curved like that of the parrot. I am interested in birds, so if someone knows the name of this bird will they please write to the Young Folks and tell us?

—Dorothy.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and inclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery.

CATALOG OF SPRING AND SUMMER FASHIONS.

Send 10 cents in silver or stamps for our up-to-date 1916 large spring and summer catalog, containing over 400 designs of ladies', misses' and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, MADISON, WISCONSIN.

1753—A smart costume appropriate for sport or outing. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6¾ yards of 36-inch material for a 36-inch size.

1471—A simple, serviceable model. The pattern is cut in 3 sizes: Small, medium and large. It requires 5½ yards of 36-inch material for the medium size.

1732-1725—A smart summer gown. This combines ladies' waist pattern 1732 and ladies' skirt pattern 1725. The waist pattern 1732 is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 36 will require 2¼ yards of 36-inch material. The skirt pattern 1725 is cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It will require 3⅞ yards of 44-inch material for a medium size. Two separate patterns. Ten cents for each pattern.

1667—A pretty model for house or porch wear. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6⅛ yards of 44-inch material for a 36-inch size.

1741—A charming dress in empire style, with sleeve in either of two lengths. The pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It requires 3½ yards of 36-inch material for an 8-year size.

1371—A pleasing frock for the little miss, in empire style, with or without bodice. The pattern is cut in 4 sizes: 2, 4, 6 and 8 years. It requires 2¾ yards of 36-inch material for a 6-year size.

1731—Girls' "Middy" dress, with sleeve in either of two lengths. The pattern is cut in 5 sizes; 6, 8, 10, 12 and 14 years. It requires 4⅞ yards of 44-inch material for a 14-year size.

1612—A charming gown for the matron. It is especially attractive for the lovely combinations of material now in vogue. The pattern is cut in 6 sizes: 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 5⅞ yards of 44-inch material for a 36-inch size.

9355—Cool and comfortable sun bonnets for ladies and girls. The pattern including both styles is cut in one size, medium for ladies and for girls. It requires for No. 1, 1½ yards and for No. 2 1¾ yards of 32-inch material.

1644—Children's rompers, a practical, serviceable garment. The pattern is cut in 5 sizes; 1, 2, 3, 4 and 5 years. It requires 3 yards of 27-inch material for 4-year size.

1631—Girls' jumper dress with guimpe. The pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It requires 2 yards of 27-inch material for the guimpe and 2⅛ yards for the dress for a 6-year size.

1728—Ladies' yoke petticoat. The pattern is cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It requires 3⅝ yards of 36-inch material for a 24-inch size.

International Sunday School Lesson.

Lesson for June 4, 1916.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

THE CALL OF THE WEST.

LESSON TEXT—Acts 15:36; 16:15.

GOLDEN TEXT—Come over into Macedonia and help us.—Acts 16:9.

Following the commission's report at Antioch of the decision of the Jerusalem church, Paul and Barnabas and others continued their evangelism in that city (Ch. 15:35). These leaders soon felt the need of revisiting the scenes of their former labors (v. 36), but when it came to the organization of their party, Paul refused to accede to the decision of Barnabas that John Mark should accompany them (vs. 37, 38, see Acts 14:13). So sharp a contention arose that two parties were organized. That Paul later forgave Mark is evidenced by his tender references to him.

I. A Closed Door. Ch. 16:1:8. Paul's companions for this second missionary tour were Silas (15:40), Luke (See use of word "we," v. 13), and Timothy (v. 1-3). The latter came of good ancestry, had good training and was of good report, still to avoid contention he submitted to the rite of circumcision. Paul's work was to promulgate the Jerusalem decree, to establish or to confirm the churches and to add to these churches new converts. But that did not entirely fulfill Paul's commission (9:15). The word "Asia" (v. 6) means the Roman province of Asia and, wisely obeying the Spirit's direction, Paul passed on until he came to the seaport town of Troas. At a later time Paul spoke the "word of the Lord Jesus" in Asia with wonderful effect (19: 1, 8, 19, 26, 27). It must have burned within the bones of Paul thus to be restrained, but it did not serve as an excuse for him to take a vacation, but rather to seek new fields wherein to preach. Thus he came to Troas.

II. The Macedonian Call. v. 9-13. Paul had several epoch-making visions; on the Damascus road (9:3, 4 and 26:19); in Jerusalem (23:11); at the time of his shipwreck (27:23), and the one we are now considering. A vision is a knowledge of the need and of the resources at one's command. Grecian beauty, philosophy, art and culture needed Christ. Christ as a resource was adequate and available to supply that need. This vision Paul saw: through it God called him to Macedonia. "We" (the first use of that pronoun in the book of Acts), Paul and Luke, immediately essayed to obey.

III. The Open Door, v. 14. 15. On what seeming trifles does history turn! An outcast wandering Jew coming to help a proud, cultured, influential foreign city, but he bears the Gospel which alone can be of help to them. Paul did not wait to "investigate the field" nor to establish a working organization. He knew a better point of contact, and that was to find those in that city who knew God even though ignorant of Christ. He began by preaching Jesus, not comparative religions, nor did he seek to found "community centers" with soup kitchens and social uplift. Paul knew that to elevate the individual by establishing him in the faith of Christ would soon result in community uplift. On the other hand, a faith which evaporates in words and does not give tangible, concrete evidence in works may well be challenged as to its being genuine. There was no supernatural direction as to what part of Macedonia Paul was to visit, and exercising his common sense, Paul went at once to the principal city. He did not begin at once to preach the gospel (v. 12 R. V.), but waited and watched for an opportunity, doubtless praying much for a favorable opening (Ch. 13:14; 17:2; 18:4).

The "man of Macedonia" seems to have been a woman unless we consider the Philippian jailer. This open-air

meeting was one of the most notable in history. The Lord opened the heart of pious Lydia and it was the turning point of the evangelization of Europe and America and the world. God must open the hearts of men and women (John 6:44, 45; Eph. 1:17, 18; Luke 24:45), and this he is willing and glad to do. The steps of this woman's conversion are clearly marked and present a good type. (1) She went out to pray (v. 13). (2) She heard the word (v. 13, 14; see also John 5:24). (3) She had her heart opened by the Lord (v. 14). (4) She "gave heed to the things which were spoken" (v. 13 and Mark 16:16). (5) She made public confession of her newly-found faith by baptism.

(6) She carried with her the whole household, perhaps children, workers in her business and servants (v. 31-33; I Cor. 1:16).

The use of the word "constrained" in verse 15 indicates a heart hunger to be helpful by being allowed to serve.

The Philippian church often helped Paul subsequently and doubtless Lydia was a leading spirit in such service.

The history of the Christian church relates many illustrations of the leadership and prominence of women of wealth and culture.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Starting a Boy in the Poultry Business.

A professional man who lives in the suburbs of his home city, whose estate consists of four or five acres of land, partly equipped for raising poultry, writes in regard to starting his boy in the business as follows:

I wish to ask your professional and personal opinion of the following: My son is thirteen years old, ready to understand and wishes to have a part in the poultry business. He is capable of doing a large share of the work and growing more capable each year. But he needs guidance and oversight more than many another, for he is quite forgetful. I could help him a good deal, especially in the matter of equipment, what to feed, why, how to feed, etc., but, of course, could not be there to see that the chicks were under cover. This boy would comprehend a ration and the reason for it, but he is careless. Would you advise waiting a year or two longer?

Do you see any plan, any corner of the business that the boy and I could take up a partnership, that would be likely to work out? Would expect losses, would expect to fail at this and that, and this is all right, to a measurable degree, if it will finally lead to measurable success. What limits could we set on this project, and still have it all right educationally for the boy? I mean if it were a half failure this first time. Please give me vour insight on this question.

Do not wait one year, neither one week or day; begin now. Try if you can, to find if the boy has a preference for some color that would play an important part. There is more in this than few people realize. Select an all-purpose breed, with the commercial part as the basis, and gradually grow into furnishing stock and eggs for customers, to head their yards.

Any time is a good time to go into the poultry business, but at this time the best plan is to buy a sitting of pure-bred eggs. These should not be the "best' as the trade mark goes, but from a dependable breeder and can be obtained at from $1 to $3 a sitting.

Caring for the possible chicks he will get from the eggs will be a starter in the matter of getting over being negligent. Something that is better than just an everyday chicken will help him in this matter. Who is it that does not wish to excel?

If he is fortunate as to raise some cockerels, and no one cares for them for breeders, have him to dress them and sell them to private customers about Thanksgiving. If there are only two, why, two it is, and an experience in one line of the business is to the good. Next spring purchase enough pullets of the same strain as you started with, at about $1 each, to make ten pullets, and a head of the mating should be purchased at from $3 to $5. This would give a good foundation, with unlimited future resources.

This may seem to be on a very small scale, but it is the only way with little or no experience. As the boy will have unlimited time, it will be possible for him to trapnest his hens. This is almost the first time I have ever recommended a trapnest; for the most part, our inquiries are from busy farm women. Please do not jump at the conclusion that the writer is averse to trapnesting. It is all right, but it has limitations.

Keep a record of the eggs, the feed and all expenses. Study feed values, as you never studied anything before, if you expect to break even on the expenses. It can be done, and $1.50 net value received for every business hen on the place. As you have some yards, there will be no expense on this score.

If September eggs are cheap, put them in waterglass until they are high. It rarely pays to do this though, where the prices are seldom below 25 cents per dozen. Anyhow, the boy would get his lesson, and as it is understood, this is the prime idea.

Whatever breed he selects, with your guidance, get a Standard of Perfection which may be procured at this office, and get the boy to compare his fowls with it. It will guide him in the selection of his own stock. With grit and determination, it is impossible to say what immense things the boy may do later.

And, above all, if the boy should fail to raise any chicks do not let him quit. The world has no use for a quitter. The next stage of the game would be to buy a pen of fowls as soon as the breeding season is over. It will cost something to feed them, but then the cost will be much less than later.

The start, whether with the eggs or stock, and what numbers, depends on the time of the year.

Cooked Oats For Chickens.

To the Editor:—I would like to say to the inquirer about feeding cooked oats to chickens that I have fed it for over a quarter of a century and did not lose any chickens from so doing. I cooked it dry, or if it was not dry I mixed it with bran or mixed ground grain so it would not be too moist. I like to feed cooked oats in the winter at noon by scattering it in clean straw. It does not take nearly as much oats cooked as if fed whole raw grains. I think it is a great aid to start the young pullets laying. Poultry Raiser.

Failure to Get Catch of Clover.

(Continued from page 8.)

ing on the surface is liable to be killed by the frost; and that early fall seeding can be successfully practiced in many places.

Clover is commonly seeded with small grain which is called the nurse crop. This nurse crop serves two functions, it keeps the weeds down and it produces a money crop while the clover is making its first year's growth. Whether it is wise to use a nurse crop depends on so many things that it cannot be discussed within the limits of a brief article; it has been abundantly shown, however, that if weeds are kept down by clipping, the clover will make a better growth when sown alone than when with a nurse crop. In dry seasons the nurse crop is pretty certain to cause the death of the clover by taking all the moisture and then leaving the young plants exposed to the heat of a July or August sun when in a weakened condition by reason of the lack of moisture. If a nurse crop is used, care should be taken not to seed it too thickly, since the thicker the grain the more certain it is to smother the clover or to take all the moisture and leave the soil dry at harvest time. Of the small grains rye shades the ground the least and oats the most and these crops represent both extremes of desirableness so far as red clover is concerned.

The consideration of the nurse crop brings us from getting a catch to maintaining a stand. The most frequeht causes of the death of young clover are the drouth and heat to which the plants are subjected upon the removal of the grain crop. The amount of injury caused will, of course, depend on the season. The summer of 1915 was very favorable to young clover, as there was plenty of rain throughout most of the clover belt, but such seasons are exceptional. Injury will also be worse on soils deficient in humus since these run together and dry out more than soils having plenty of organic matter. Top dressing the fields with manure during late winter is as good a preventive of this danger as can be suggested. The manure will not only prevent loss of moisture, but will furnish plant food for the young clover making stronger plants, better able to withstand drouth. It is also advisable to leave the grain stubble as long as possible so as to afford shelter to the young plants.

If there is a good stand of clover on a field in September and October there is every reason to expect a good stand in spring, barring, of course, most unusual weather conditions. If, however, the soil is deficient in lime the plant, though appearing fair in the fall, may lack the vigor to go through even a reasonably mild winter. Two mistakes are often made, and these should be guarded against. The young clover should not be pastured closely in the fall, nor should it be allowed to seed. Last fall, owing to the favorable summer young clover was found blossoming and seeding in many fields. This is bad because it weakens the plants and increases the number of clover seed insects, the late broods finding these flower heads a fine place in which to lay eggs which hatch into larvae, many of which may live over the next winter. Provided there is lime and phosporus enough in the land, second-year clover should give little trouble unless attacked by root borers or other insects. There are leaf-eating insects that do damage locally and some fungi have been known to kill whole fields or to reduce yields, but the insects working on the roots probably give more trouble than other insects or than diseases. When a field becomes infested with root-eating insects there is nothing to do but plow it up. The fact that insects and diseases of all kinds increase in a clover field is one of the best reasons why such a field should not be kept longer than two years.

The principles of successful clover growing may be summarized as follows:

Give the clover a chance to make a healthy plant by adding lime, phosphorus and potash to soils that need them. In some way add vegetable matter to the soil and keep up the supply by turning under clover often enough.

Give the seed a fair chance by placing it in mellow soil and covering it from one-half to one inch deep.

If sown with a nurse crop, give the young plants a chance by not seeding the grain crop too thickly, by top dressing with manure if practicable, and by cutting the stubble as high as possible.

PARTRIDGE and BARRED Plymouth Rocks. Eggs from choice pens of Partridge and Barred, $2 per setting. Dr. O. R. Rice, Delavan, Wis.

EGGS for hatching from Barred Rocks, E. B. Thompson's Ringlets, $1.25 per 15, prepaid. D. S. Thoreson, Shell Lake, Wisconsin.

HEPSEY BURKE—A Sister to David Harum

By F. N. Wescott, the Brother of the Author of "David Harum."

(Copyright 1915.)

CHAPTER XXIII.

Hepsey Calls a Meeting.

FOR the next few days Hepsey's mind worked in unfamiliar channels, for her nature was that of a benevolent autocrat, and she had found herself led by circumstances into a situation demanding the prowess and elasticity of the diplomat. To begin with, she must risk a gamble at the meeting. If the spiritual yeast did not rise in old Bascom, as she hoped it would, and crown her strategy with success she would have to fall back on belligerent tactics and see if it were not possible to get his duty out of him by threatened force of public opinion; and she knew that, with his obstinacy, it would be touch and go on which side of the fence he would fall in a situation of that kind—dependent, in fact, upon the half turn of a screw, more or less, for the result. Furthermore, she concluded that beyond the vaguest hint of her call on Bascom and the object of the meeting she could not show her hand to Maxwell; for he would feel it his duty to step in and prevent the possibility of any such open breach as failure on Hepsey's part would probably make in the parish solidarity. For once she must keep her own counsel—except for Jonathan, whose present infatuated condition made him an even safer and more satisfactory source of "advice" than he normally was. But the evening before the meeting, as he sat on Hepsey's porch, he began to experience qualms, perhaps in his capacity as Junior Warden. But Hepsey turned upon him relentlessly:

"Now see here! You know I don't start somethin' unless I can see it through and if it means a scrap, so much the better. Next to a good revival, a good hard scrap in a stupid parish has a real spiritual value. It stimulates the circulation, increases the appetite, gives people somethin' to think about and does a lot of good where peaceful ways would fail. The trouble with us is that we've always been a sight too peaceful. If I've got to do it I'm goin' to make a row, a real jolly row that'll make some people wish they'd never been born. No-no-no! Don't you try to interfere. We've come to a crisis and I'm goin' to meet it. Don't you worry until I begin to holler for first aid to the injured. A woman can't vote for a vestryman, though women form the bulk of the congregation and do most all of the parish work; and the whole church'd go to smithereens if it weren't for the women. But there's one thing a woman can always do: She can talk. They say that talk is cheap, but sometimes it's a mighty expensive article, if it's the right kind; and maybe the men will have to settle the bills. I'm going to talk; perhaps you think that's nothing new. But you don't know how I can talk when once I get my dander up. Somebody's goin' to sit up and pay attention this time. Bascom'll conclude to preside at the meetin'; whichever way he means to act; and I've fixed it so Maxwell will be engaged on other duties. No; go 'way. I don't want to see you around here again until the whole thing's over."

"All right, Hepsey, all right. I guess if it goes through the way you want you'll be that set up you'll be wantin' to marry old Bascom 'stead of me," chuckled Jonathan, as the lady of his choice turned to enter the house.

She faced round upon him as she reached the door, her features set with grim determination:

"If I get the whole caboodle, bag and baggage, from the meetin' and from Bascom there's no knowin' but what I'll send for the parson and be married right there and then. There isn't a thing I could think of in the line of a real expensive sacrifice that'd measure up as compensation for winnin' out—not even marryin' you, Jonathan Jackson."

So Hepsey laid down lines for control of the meeting, ready with a different variety of experiments from point to point in its progress, as Sylvester Bascom's attitude at the time might necessitate. For she felt very little anxiety as to her ability to carry the main body of the audience along with her.

The night of the meeting the Sunday School room, adjacent to the church, was filled full to a seat at least a quarter of an hour before the time announced for the meeting. Hepsey had provided herself with a chair in the center of the front row, directly facing the low platform to be occupied by the chairman. Her leather bag hung formidably on one arm and a long narrow blank book was laid on her lap. She took little notice of her surroundings and her anxiety was imperceptible as she thrummed with a pencil upon the book, glancing now and then at the side door, watching for Bascom's entrance. The meeting buzzed light conversation as a preliminary. Had she miscalculated on the very first move? Was he going to treat the whole affair with lofty disdain? As the hour struck dead silence reigned in the room, expectant, and Jonathan, who sat next her, fidgeted nervously.

"Five minutes' grace and that's all. If he's not here by then it'll be up to you to call the meetin' to order," whispered Hepsey.

"Sakes!" hissed the terrified Junior Warden, "you didn't say nothin' about that Hepsey," he protested.

She leveled a withering glance at him and was about to reduce him to utter impotence by some scathing remark when both were startled by a voice in front of them, issuing from "the chair." Silently the Senior Warden had entered and had proceeded to open the meeting. His face was set and stern and his voice hard and toneless. No help from that quarter, Hepsey mentally recorded.

"As the rector of this parish is not able to be present I have been asked to preside at this meeting. I believe that it was instigated—that is, suggested, by some of the ladies who believe that there are some matters of importance which need immediate attention and must be presented to the congregation without delay. I must beg to remind these ladies that the Wardens and Vestrymen are the business officers of the church; and it seems to my poor judgment that if any business is to be transacted the proper way would be for the Vestry to take care of it. However, I have complied with the request and have undertaken to preside, in the absence of the rector. The meeting is now open for business."

Bascom sat down and gazed at the audience, but with a stare so expressionless as gave no further index to his mood. For some time there was a rather painful silence, but at last Hepsey Burke arose and faced about to command the audience.

"Brethren and sisters," she began, "a few of us women have made up our minds that it's high time that somethin' was done towards payin' our rector what we owe him and that we furnish him with a proper house to live in."

At this point a faint murmur of applause interrupted the speaker, who replied: "There. There. Don't be too quick. You won't feel a bit like applaudin' when I get through. It's a burnin' shame and disgrace that we owe Mr. Maxwell about two hundred dollars, which means a mighty lot to him, because if he was paid in full every month he would get just about enough to keep his wife and himself from starvin' to death. I wasn't asked to call this meetin'; I asked the rector to and I asked the Senior Warden to preside. And I told the rector that some of us—both men and women—had business to talk about that wasn't for his ears. For all he knows, we're here to pass a vote of censure on him. The fact is that we have reached the point where somethin' has got to be done right off quick; and if none of the Vestrymen do it, then a poor shrinkin' little woman like myself has got to rise and mount the band wagon. I'm no woman's rights woman, but I have a conscience that'll keep me awake nights until I have freed my mind."

Here Hepsey paused, and twirling her pencil between her lips, gazed around at her auditors who were listening with breathless attention. Then she suddenly exclaimed with suppressed wrath and in her penetrating tones:

"What is the matter with you men, anyway? You'd have to pay your butcher or your baker or your grocer, whether you wanted to or not. Then why in the name of conscience don't you pay your parson? Certainly religion that don't cost nothin' is worse than nothin'. I'll tell you the reason why you don't support your parson. It's just because your rector's a gentleman and can't very well kick over the traces or balk or sue you even if you do starve him. So you prosperous, big-headed men think that you can sneak out of it. Oh, you needn't shuffle and look mad; you're goin' to get the truth for once, and I had Johnny Mullins lock the front door before I began."

The whole audience responded to this sally with a laugh, but the speaker relented not one iota. "Then when you've smit your rector on one cheek you quote the Bible to make him think he ought to turn his overcoat also." Another roar. "There, you don't need to think I'm havin' a game. I'm not through yet. Now let's get right down to business. We owe our rector a lot of money and he is livin' in a tent because we neglected to pay the interest on the rectory mortgage held by the Senior Warden of our church. Talkin' plain business, and nothin' else, turned him out of house and home and we broke our business contract with him. Yes we did! And now you know it.

"Some of us have been sayin'—and I was one of 'em till Mr. Maxwell corrected me—that it was mean of Mr. Bascom to turn the rector and his wife out of their house. But business is business and until we've paid the last cent of our contributions we haven't any right to throw stones at anyone. Wait till we've done our part for that! We've been the laughing stock of the whole town because of our pesky meanness. That tent of ours has stuck out on the landscape like a horse fly on a pillow sham.

"It's not my business to tell how the rector and his wife have had to economize and suffer to get along at all, or how nice and uncomplainin' they've been through it all. They wouldn't want me to say anythin' of that! sportsmen they are, both of 'em. The price of food's gone up and the rector's salary gone down like a teeter on a log.

"Now, as I remarked before, let's get right down to business. The only way to raise that money is to raise it! There's no use larkin' all 'round Robin Hood's barn, or scampering round the mulberry bush any longer. I don't care for fairs myself, where you have to go and buy somethin' you don't want for five times what it is worth and call it givin' to the Lord. And I don't care to give a chicken and then have to pay for eatin' the same old bird afterwards. I won't eat soda biscuit unless I know who made 'em. Church fairs are an invention of the devil to make people think they're religious when they are only mighty restless and selfish.

"The only thing to do is to put your hands in your trousers' pockets and pay, cash down, just as you would in any business transaction. And by cash I don't mean five cents in the plate Sunday and a dollar for a show on Tuesday. We've none of us any business to pretend to give to the Lord what doesn't cost a red cent, as the Bible says, somewheres. Now don't get nervous. I'm going to start a subscription paper right here and now. It'll save lots of trouble and you ought to jump at the chance. You'll be votin' me a plated ice water pitcher before we get through for being' so good to you—just as a little souvenir of the evenin'."

A disjointed murmur of disapproval rose from sundry parts of the room at this summary way of meeting the emergency. Nelson, who had tried in vain to catch the eye of the chair, rose at a venture and remarked truculently:

"This is a most unusual proceeding. Mrs. Burke."

The chair remained immobile—but Hepsey turned upon the foe like a flash of lightning.

"Precisely, Mr. Nelson. And we are a most unusual parish. I don't claim to have any information gained by world-wide travel, but livin' my life as I've found it here, in this town, I've got to say, that this is the first time I ever heard of a church turnin' its rector out of house and home and refusin' to give him salary enough to buy food for his family. Maybe in the course of your professional travels this thing has got to be an everyday occurrence to you—but there's some of us here that ain't got much interest in such goings-on outside of Durford."

"You have no authority to raise money for the church; I believe the Warden will concur in that opinion?" and he bowed towards Bascom.

"That is a point for the meeting to decide," he replied judicially, as Hepsey Burke turned towards him.

"Seems to me," continued Mrs. Burke, facing the audience, "that authority won't fill the rector's purse so well as cash. It's awful curious how a church with six Vestrymen and two Wardens, all of them good business men—men that can squeeze money out of a monkeywrench, and always get the best of the other fellow in a horse trade, and smoke cigars enough to pay the rector's whole salary—get limp and faint and find it necessary to fall back on talkin' about 'authority' when any money is to be raised. What we want in the parish is not authority, but just everyday plain business hustle, the sort of hustle that wears trousers, and as we don't seem to get that, the next best kind is the sort that wears skirts. I'd always rather that men shall do the public work than women, but if men won't women must. What we need right here in Durford is a few full-grown men who aren't shirks or quitters, who can put up prayers with one hand while they put down the cash with the other; and I don't believe the Lord ever laid it up against any man who paid first and prayed afterwards.

"Now brethren, don't all speak at once. I'm goin' to start takin' subscriptions. Who's goin' to head the list?"

(Continued next week.)

Beginning with the Boiler

And ending with the last brushful of paint, there is not a questionable item to be found in any engine that the Nichols & Shepard Company build. Everything is of the best.

A GOOD TRACTION ENGINE

Is the unfailing result of this method. When we say that it IS good we are backed by the openly expressed opinion of thousands of users who know in every detail what a good traction engine should be.

THE USER IS SATISFIED

That every convenience, that every economy of operation, that every safety device that is necessary or practical will be found right where it belongs on a—

RED RIVER SPECIAL ENGINE

Five sizes and sixteen variations are built, ranging from 13-40 to 30-98 H. P. Wood, coal or straw may be used for fuel, the engine may be had in single or double cylinder, the mounting may be center or rear. No matter what your needs may be for agricultural traction power we make an engine that will fill the bill.

Send for a copy of the Home Edition of the Red River Special paper. You will find that someone in your immediate vicinity has tried with success a Nichols & Shepard Co. traction engine on every kind of work that a tractor can do. They have been pleased with the results and have written us to tell just how well it performed. There is a lot of experience condensed in these letters that may be useful to you. Ask for a Big Catalog at the same time. It illustrates and describes the power that will haul the mortgage off the farm.

Collected by Representatives of The Wisconsin Farmer

Brown Swiss Cattle of Quality.

WISCONSIN'S Brown Swiss cattle have been and are now attracting considerable attention both by the large milk records which they have been making and by their winnings in the show ring. Although there are not the large numbers of these worthy cattle that there are of some of the other breeds, they are competing very creditably with these breeds and these owners are highly enthusiastic in regard to their future success. Wisconsin now has the largest herd of Brown Swiss cattle in the United States owned by Mr. Voegli, of Green county. The herd of Mr. Allyn in Walworth county has been making some wonderful milk records during the past year. In addition to this, they have won a large number of very creditable prizes at the big dairy shows and state fairs during the past three years. The herd of Charles F. Lau, of Thiensville, Wis., is one which shows promise of demanding the attention of all breeders. His foundation herd consisted of seven cows and a sire purchased from J. P. Allyn, whose show records and production records have placed his herd among the leaders of the breed. At the present time Mr. Lau is offering some very fine yearling bulls for sale ready for immediate service. These were sired by Casper L., a son of Casper C., and come of prize-winning breeding on both sides. For further information in regard to these animals write to the above address. See page 27.—Adv.

Kohlwey's Holsteins.

PROBABLY the largest herd of registered cattle in Ozaukee county, is that of Fred Kohlwey, Grafton, Wis. The herd consists of some fifty head all choicely bred. The sire at the head of the herd is Cedarlawn Champion 3d, whose dam, Cedarlawn Bessie, has a record of 22.20 pounds of butter in seven days with first calf. The sire of Cedarlawn Champion 3d is Cedarlawn Champion, the great bull that heads the Cedarlawn herd of C. A. Schroeder, of West Bend, Wis. His dam was the former word's record two year old, making close to twenty-six pounds of butter in seven days. At the present time Mr. Kohlwey is offering bull calves sired by Cedarlawn Champion 3d and out of granddaughters of Sir Johanna De Kol, sire of the forty-pound cow, Johanna De Kol Van Beers, and many others with exceptionally high records. For further information in regard to the animals write to the above address. Kindly mention The Wisconsin Farmer when writing. See page 28.—Adv.

The Grand Champion Charter Oak Sold.

WHEN Oscar Knutson, Michigan City, N. D., purchased the Clydesdale stallion, Charter Oak, of Jas. Van Etta, Lima Center, Wis., he bought one of the best horses ever owned in the state. This horse has been a winner in whatever show he was entered. He was a winner at Chicago as a two year old and also as a three year old. As a four year old he was grand champion at the Wisconsin State Fair. As a five year old he was grand champion at Minnesota and at the World's Fair. Mr. Van Etta deserves a great deal of credit for bringing this horse out the way he has. We feel safe in saying that this is the highest-priced Clydesdale stallion that ever left Wisconsin. Mr. Van Etta has a grand stud of Clydes and at any time you want something of this breed we know of no better breeder to refer you to.—Adv.

Jos. Engelhof Chester Whites.

WE recently called on Jos. Egelhof, breeder of Chester White hogs near Edmund, Wis. He is offering bred sows and pigs for sale at very reasonable figures. The spring pigs are sired by Prince Triumph he by old Prince Triumph that sold for a long figure a couple of years ago in an Iowa sale. Owing to shortage of feed and pasture Mr. Egelhof wishes to cut his herd down in numbers and for that reason he will sell a dozen of his sows. In age they range from fall gilts to two years old. They are bred for fall litters. He also has some fall boars for sale and spring pigs, both sexes. These hogs are certainly being priced right and if you are interested it will pay you to write him or better yet see the hogs. See page 27.—Adv.

Peul's Holsteins.

HENRY PEUL, Cedarburg, Wis., is advertising two fine calves for sale on page 28. One was sired by Billy Elgin De Kol 134469. The other was sired by Korndyke De Kol Spoffard 6th. The dams of these two bulls are good, straight animals and good producers. The young bulls are well marked, of good, straight, square type and well grown. They are being offered very reasonably for quick sale.—Adv.

Do You Want Durocs?

IF you can use five or six Duroc sows that are bred for fall farrow you will be pleased with those being offered by J. W. Higgins, Gotham, Wis. They are sired by or bred to Model John, a son of the grand champion, Lee's Defender. Mr. Higgins is one of the Duroc boosters of the state and his herd is nominated in the futurity and if you want to show a futurity litter this fall buy one of these nominated litters. His spring pigs are looking fine and for a short time he will sell gilts and boars unrelated. We are glad to recommend this herd. See page 27.—Adv.

Short-horns for Sale.

IF you are in the market for Short-horns, either straight Scotch or Scotch-topped you can find them in the herd of Wm. Hickin, Lancaster, Wis. This breeder has a large herd and will sell cows, heifers or bulls. He will also sell three tried sires. Champion Banff, Aug. 17, 1906, sired by Nonpareil Banff 2d, out of Persis 5th by the Duthie bull, Highland Champion, second dam imported Persis 4th by Christmas Gift. Mr. Hickin can show you some good cattle, the get of this bull. Red Crest, a seven-year-old red is sired by Golden Crest out of imported Duchess 28th by Lester, second dam Duchess 15th by the great Cruickshank bull, Sittyton Fame. Prince Henry was calved June 20, 1912, and is sired by Starry Crest out of Marietta B. by King Alexander. He traces to imported Marietta 2d in the third cross by Prince Horace, bred by W. S. Marr. One can see from this breeding that the bulls are well bred and anyone wanting a bull for immediate service can find them in this herd. As mentioned above, heifers and cows are being offered for sale, some of them are by or bred to one of the above bulls. Notice the advertisement in this issue and write Mr. Hickin if interested in Short-horns. See page 27.—Adv.

The Art of Auctioneering.

NO profession offers more attractive possibilities for financial reward than does that of an auctioneer. There is constant and steady demand for the services of men equipped for satisfactory service in the profession. Special study and training is an essential to success in this work, and that can be secured at Jones National School of Auctioneering, 40 North Sacramento boulevard, Chicago, Ill. This is the oldest and most complete school of the kind in the country and offers to the student advantages that cannot be secured elsewhere. The graduate of the Jones school is thoroughly equipped to make a success of his chosen profession and in every section of the country will be found leading auctioneers who laid the foundation for their successful careers at the Jones institution. A complete and handsome catalog will be sent to any person interested. Address Jones' National School of Auctioneering, 40 North Sacramento avenue, Chicago, Ill. The advertisement appears on page 27.—Adv.

Good Lightning-Rod Proposition.

ON account of the number of storms last season we believe that farmers will be more interested than usual this year in lightning rods. The Cedar Rapids Lightning Rod Company, Cedar Rapids, Iowa, has a special proposition to make to dealers and agents who wish to handle their line. They are well supplied with good stock, being fortunate in having exceptionally good quality 98 per cent pure Lake Superior copper. Cedar Rapids has excellent shipping facilities and goods may be forwarded in a short time to any point within a radius of several hundred miles. We request that those who write to this company concerning their offer mention this paper in their letter.—Adv.

Harvey Little Offers Short-horns.

WE have just had a letter from Harvey H. Little who owns one of the very best herds of milking Short-horns in the state of Wisconsin, located near Evansville, advising that he has several young bulls that are old enough to ship. We recently saw these young bulls and gladly recommend them. They are from high-producing cows, as Mr. Little's records show and no herd in the state contains more quality milking Short-horns than this herd. Among this lot of bulls there are some suitable to head any herd if given proper care. It will pay you to get prices. In writing will you please mention The Wisconsin Farmer? See page 27.—Adv.

Well-Bred Jersey Bulls for Sale.

SEVERAL Jersey bulls of good breeding are advertised for sale on page 27 by Jos. G. Greene, Bangor, Wis. The two-year-old bulls are priced at from $75 to $85. There are some younger bulls in the lot; two bulls are from official record cows. Here is your opportunity to get a good Jersey bull. Write Mr. Greene at once regarding this offering and please say you saw his advertisement in The Wisconsin Farmer.—Adv.

Dineen's Holsteins.

THE Holstein herd of C. F. Dineen, Cedarburg, Wis., is one which we advise our readers to keep in mind. The herd has been carefully built up with good individual cows of high production ability. One of the foundation cows, that is still in the herd is Mechthilde Daisy Longfield, that made 22.45 pounds of butter in seven days. This cow not only is a heavy producing animal herself, but she transmits this ability to her daughters in a very marked degree. She has four A. R. O. daughters, one of which is a three year old and made 22.39 pounds of butter in seven days and another daughter made over twenty pounds. She was sired by Longfield Piebe De Kol, that has several A. R. O. daughters with creditable records. A son of this fine cow now stands at the head of the herd. He was sired by King Pontiac Mahomet, a son of the great bull, King of the Pontiacs, that has 174 A. R. O. daughters, fourteen with records above thirty pounds. He has thirty-one daughters that have an average of 113 pounds of butter in thirty days. At the present time Mr. Dineen is offering a yearling bull, ready for service, sired by a twenty-four-pound bull and out of a daughter of a sixteen-pound cow. For pedigree and further information write to the above address. See page 28.—Adv.

Don't Forget the Duroc Futurity Payments.

LEST you forget, we want to impress on you the importance of keeping your Duroc futurity nominations good. You have no doubt received letters from the association with blanks for the litter nominations that should have been in June 1st. If you have nominated your herd it will pay you to nominate your litter or litters. This only costs $1 per litter and while perhaps at the present time you can't tell very much about the outcome of the different litters, no doubt some of them will come along fine and you will want to show them, but if you fail to nominate the litter at this time, you lose your chance of showing this fall. Inasmuch as you have paid the $5 to nominate your herd, don't fail to keep the nomination good, but send in the litter nominations at once. If you haven't received the blank all you have to do is to send in the farrowing date of the litter and the record number of the sire and dam, together with the dollar for each litter you wish to nominate. If you Duroc men do your part we will have the greatest show of Durocs at the Wisconsin State Fair that they have ever had. Keep boosting all the time. Send your nomination direct to J. R. Pfander, Secretary, Peoria, Ill.—Adv.

Rid Your Live Stock of Worms.

AT this time of year, live stock are very apt to be troubled with stomach and intestinal worms which cause indigestion, decreased vitality and lowered resistance to disease. It is impossible to keep stock in good condition when they are bothered with worms. Therefore, it will be worth while for stockmen to read the advertisement on page 18 of Sal-Vet, the widely-known worm destroyer and live stock conditioner. A price list is included in the advertisement and also a sixty days' trial proposition, which allows for a trial of Sal-Vet in order that its value may be learned. If interested in this proposition, write to Sidney R. Feil, Pres., The Feil Mfg. Co., Cleveland, Ohio, and kindly mention this paper in your letter.—Adv.

Refined Hog Cholera Serum.

A STERILE, filtered hog cholera serum has at last been produced and the announcement of this fact appears in the advertisement of H. K. Mulford Co., Philadelphia, Pa., which appears on page 2 of this issue. Reduced to its simplest terms, it may be said that there is no form of germ life whatever in this product, so that when it is introduced into the tissue of animals it can by no manner of means result in introducing a dangerous infection. The production of this serum is the result of a scientific process that eliminates everything that should be eliminated and yet retains the full protective value of the product as an agent for preventing cholera. The use of this serum by a skilled veterinarian simply means the utter elimination of chance and the complete safeguarding of every treated animal. The process of sterilizing and filtering the serum so that it becomes an absolutely refined product has not been the result of chance work, but rather, the outcome of painstaking effort carried on at a fabulous cost for a period of five years. The use of this product in the future by swine breeders of the United States means that millions of dollars will be saved. As a protecting agency against hog cholera the Mulford refined serum might well be called a product of perfection. It may be used in the "single" treatment or in accordance with the so-called "simultaneous" plan. It is so pure in its composition that it is immediately absorbed by the system of the hog when it is injected and complications cannot arise from the use of this product because, as said before, it is absolutely free from germs. It only costs about 40 cents to inoculate a fifty-pound pig with this sterile and filtered serum. Provision has been made so that it will be placed in the hands of skilled veterinarians only. It would be well if every swine breeder who reads this paper would fix in his mind the name "H. K. Mulford Co." and in connection therewith remember that this is the company that makes the germless hog cholera serum. A postal card application to the company, addressed to Philadelphia, Pa., requesting Booklet No. 9, which contains much information about this serum, will meet with a prompt response and your request will be complied with immediately.—Adv.

Poland China Swine.

Sept. 28, E. W. Hendricks, Hazel Green, Wis.
Oct. 10, Grant County Poland China Breeders' Assn., Lancaster, Wis. Burlie Dobson, secretary.

"Those familiar with conditions pronounce that the cattle business for the next three years is going to be a profitable investment," F. W. Harding, of Chicago, secretary of the American Short-horn Breeders' Association, said. Mr. Harding has been making a tour of the middle West and the Southwest in the interest of the association, and says that prospects throughout the country are better than usual. "However, farmers throughout the United States are beginning to realize that 'scrub' cattle cannot compete on the market with thoroughbred cattle," he said. "When you hear of a farmer who has failed in the cattle business, you can generally mark him down as a dealer in 'scrubs' and not one who has awakened to the fact that thoroughbred stock is a sound investment."

Andrew Frank - Fox Lake, Wisconsin

Registered Holsteins

BULLS from A. R. O. dams, of the right type to improve your herd. Prices reasonable.
W. W. Bird - - - Cambria, Wisconsin

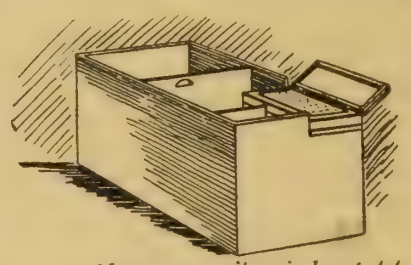
Safety First Box For Blasting Caps.

Dynamite is not exploded by merely inserting a fuse in the cartridge and lighting it. If this were done the cartridge would probably only burn. Some agent is needed so that the spark from the fuse will explode it, thereby detonate the dynamite. Blasting caps containing mercury fulminate serve this purpose.

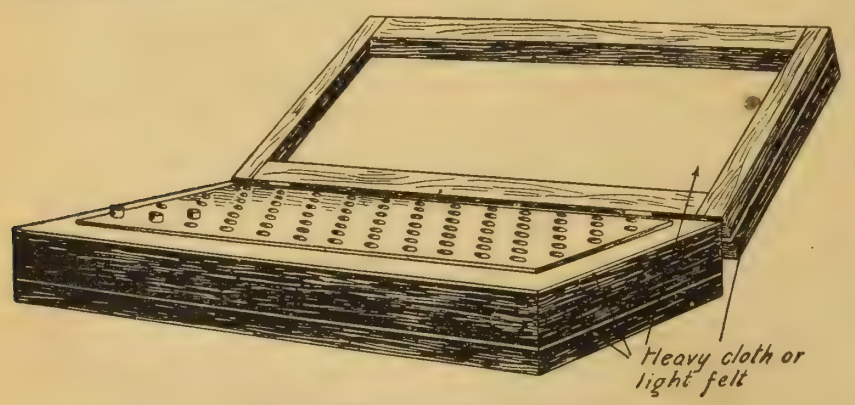
These blasting caps or detonators, as they are sometimes called, are quite sensitive to shocks, friction or heat and should always be treated with the greatest respect. When blasting in the field it is somewhat of a problem to have the caps convenient and at the same time in a safe place.

A cap box has been designed by the engineering department, Wisconsin College of Agriculture, which is both handy and almost fool proof.

The accompanying sketch shows the cap box in one corner of a handy dynamite kit in which may be carried the necessary tools, fuse, dynamite, matches, soap or grease used in blasting operations.



Showing position in handy kit



SAFETY FIRST BOX FOR CARRYING

The "Safety First" cap box itself is made, in part, of a pine block seven and one-half by one and one-eighth by four and three-fourths inches in which eighty-four quarter-inch holes are bored entirely through the block. A one-half inch space is left around the upper side of the block which is covered with felt and on which the edge of the cover rests. Felt, or a heavy, soft cloth, is tacked on the bottom of the pine block and this acts as a buffer between the cap and one-half-inch bottom board. A hinged cover with raised sides and padded top protects the caps from above.

Enough caps can be placed in the box to last all day. Since it is a snug fit there is no danger from jar or friction. As long as the cover is down sparks do not reach them and nothing bangs against them. They are handy to the fuse, dynamite and crimper.

It is a foolish practice to keep blasting caps loose in the pocket, because sooner or later it is certain that at least one or two of these will be left and forgotten until struck with a wrench, jack knife or spark from a tobacco pipe. It is equally bad to have them loose in the kit with the dynamite where tools are continually being jarred about. The "safety first" cap box does away with such practices and offers a safe and convenient means of carrying blasting caps.

Advice to Flock Owners.

After years of experience in the raising of sheep and after having seen dozens of farmers in Upper Wisconsin engage in the sheep business under all sorts of conditions, E. J. Delwiche, who superintends the northern branch stations, has these suggestions to offer to the prospective sheepman:

Avoid grazing sheep on wet, low lying lands, where stagnant water remains during most of the season.

Keep only enough sheep on a given acreage to keep the brush down. Thirty acres of cut-over land in the red clay districts will, on the average, provide pasture for approximately 100 head, fifty ewes and fifty lambs. On densely wooded mixed hardwood lands where grass has not gotten much of a foothold, half that number of sheep will be sufficient. On jack pine and scrub oak lands even a larger acreage is required.

The number of sheep for a given area can be increased from 30 to 50 per cent the second year.

Sheep pastures should be divided in no less than three divisions, and the flock allowed to graze on these only ten days to two weeks at a time. In this way the pasture will renew itself, parasites will be more or less eradicated, and sprouts will be kept down more uniformly than if sheep are given the run of the entire pasture at once.

Brush, if over five feet in height, should be cut close to the ground, taking care that no sharp stumps are left. A few trees should be left for shade.

Pile up all brush and windfalls, which are not flat on the ground. Remove all old, scratchy stumps or tree tops in which sheep are likely to get tangled. Many sheep are lost by getting caught in close thickets and tangled windfalls or tree tops.

It is well to have some shelter in a sheep pasture into which the animals can be driven at night and during wet and cold weather in early spring and late fall.

The best results in the use of sheep are secured only when the brush has been cut, but it is a help to brushing if the sheep are allowed to run over the unbrushed ground for a week or ten days before brushing is begun.

Sheep will often kill brush in one season's pasturing, but it is thought best to run them two seasons before clearing the land.

Clover and grass seed should be scattered in the sheep pasture so as to produce tame grasses, if they are not already found there.

The sheep pasture should be visited every day to make sure that none of the sheep have met with misfortune in the thick brush.

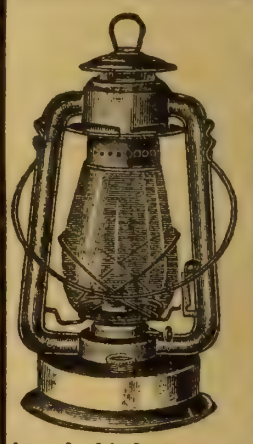
Roses and Bugs.

To the Editor.—Now is the time to look after the garden pests—aphis on the roses, on the plums, cherries and apples. Florists control this pest by cold water spraying, applied with force and at least three times a week. Kerosene emulsion is effectual. No poison does any good. Any of the tobacco extracts are good. These are found at most drug stores. If not you can get them at seed stores. Use them according to directions. Tobacco stems can be cut up and steeped, making a liquid strong enough to give satisfactory results. There is no danger of getting this remedy too strong. If there are only a few bushes or trees I have found that dipping the shoots in shallow pans is more effectual than spraying, especially if the leaves are curled up. I have found that a wing to wash up on the under side of the leaves is a good way to apply any of these remedies. Hand sprayers can be bought at seed stores that will be useful to apply any of these sprays. The orchard should have been sprayed before the leaf buds open and should be thoroughly sprayed again just as soon as the blossoms fall, for the codling moth, with the proper poisons. Any reliable nursery catalog will give the poison sprays, but the application must be thorough and at the right time. Spray thoroughly again ten days or two weeks after the blossoms fall. For the second brood spray the first of August. It is impossible to raise choice fruit without these sprayings.

Most of the injurious insects of the garden can be held in check by weak solutions of Paris green. One of the best and simplest remedies is soapsuds. One pound of whale oil soap sliced up and dissolved in four gallons of water is good for any of the rose insects and nearly all the garden pests.

Geo. J. Kellogg.

SAFETY STORM BLAST LANTERN FREE



This Safety Lantern cannot catch fire or explode. It is absolutely safe at all times and on all occasions. If you drop it in the hay loft, no oil can escape; if the cow kicks it over, it goes out at once.

It cannot blow out in a cyclone because of the storm blast feature. It is just the kind of a lantern every farmer needs about the house and barn.

Patent opening device raises and swings the globe free for lighting, filling and trimming. This lantern is fully guaranteed and is endorsed by the highest authorities on fire insurance, fire fighting and explosives. If dropped or turned over it immediately goes out. Oil cannot run. Impossible to catch fire. A lantern you will always feel safe with in the house or barn.

OUR OFFER

Send $2.00 for a three year new or renewal subscription to The Wisconsin Farmer and we will send you one of these Safety Storm Blast Lanterns as a premium free and postpaid.

Making Good Guernsey Sales.

WE have just had a letter from Alfred I. Stubbs, breeder of Guernsey cattle, West Salem, Wis., advising that he recently sold eight cows and heifers to Glenayre Farm, Glenayre, Ill. It will be remembered that this firm bought the two top heifers in the recent Guernsey sale at West Salem, paying $725 each, they were sired by imported Holden 4th the great breeding bull at the head of the Stubbs herd. The eight head just sold are bred to or sired by him. This lot brought $4,000 which shows the value of Holden 4th breeding. —Adv.

SEVERAL YOUNG AYRSHIRE BULLS FOR SALE

LIKE picture here shown. One born August 3, 2915. Sire, imported Craigbrae Lord Rosebery 15001. Dam, Bonny Miss Casanet of So. Farm out of 480 pound three year old. He is more white than red and is guaranteed in every way. If you see him you'll buy him if you know Ayrshires. Your inspection and correspondence are invited. Write Jas. Van Etta, Lima Center, Rock county, Wisconsin.

REGISTERED HOLSTEIN HEIFERS

AND bull calves from one to 15 months old. Some sired by Jewel Aaggie Alcartra 143023, whose four nearest dams average over 25 pounds of butter in seven days. A few choice registered cows also for sale. Address
JOHN NORTH. — **Kilbourn, Wisconsin.**

638-lb. Guernsey Bull

SIRED by a grandson of Glenwood Boy of Haddon (that has 30 A. R. O. daughters) and King Coral (that has 25 A. R. O. daughters). His dam made 638 lbs. fat and his 3 nearest dams average over 632 lbs. fat. A richly bred bull and an outstanding individual; dark fawn with a little white.
Grenwode Farm, E. R. Whitcomb, Prop. Whitefish Bay, Wisconsin.

REGISTERED GUERNSEY HEIFERS

3 MONTHS to 2 years of age, and yearling bulls ready for service from Advanced Registry dams with records up to 500 pounds of fat. Send for a sale list. Address
W. A. Lawson — **Rosendale, Wisconsin**

Sons of the 37-lb. Holstein Bull

SIR Canary Belle De Kol, out of heavy producing dams. Will price a few females. Write me your wants in Registered Holsteins
John Hasse — **Monroe, Wisconsin**

GALLOWAY CATTLE.

30 GALLOWAY BULLS FOR SALE

FROM 14 to 18 months of age, sired by Standard Favorite and Stanley's Othello. Also cows and heifers and Oxford rams. C S. Hechtner, Chariton, Iowa.

HILLSIDE STOCK FARM

BULLS of serviceable age sold, but we have a few young bulls, mostly white, from a grandson of King of the Pontiacs, that has 13 30-lb. daughters. From A.R.O. cows up to 600 lbs. milk; 24.06 butter. Also 2 heifers, 5 cows. Farm 1½ mi. S. Reedsburg. Kirkpatrick Bros., Sauk Co., Reedsburg, Wis.

ATTENTION

PURE-BRED Guernsey bulls, two of serviceable age, and eight calves at special prices for thirty days. A rare chance to get some of the best blood lines of the breed. Address
S. A. Merriman — **Fort Atkinson, Wisconsin**

A COOLING PLUNGE

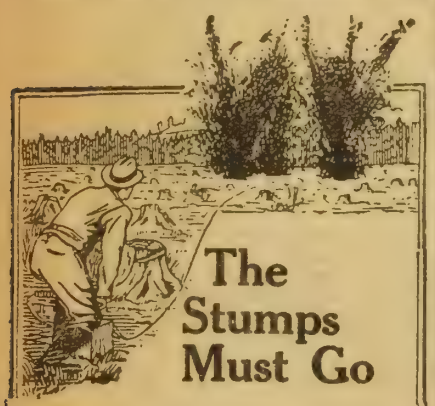
CURRENT EVENTS

CHARLES E. HUGHES, justice of the United States supreme court, against the field seemed to be the situation at the opening of the republican national convention in Chicago last week. The Hughes boom has been gaining strength steadily, and, notwithstanding the fact that Justice Hughes has absolutely refused to be quoted on any public issue, the pre-convention guesses were that he stood a better show of being nominated to make the race against President Wilson than any other republican, not excepting Theodore Roosevelt. At the same time, this week's convention promises to be a strenuous one, as there is a large field of favorite sons and it is anybody's race. The convention was scheduled to be called to order in the Chicago coliseum Wednesday of this week, with Senator Warren G. Harding, of Ohio, presiding as temporary chairman and delivering the keynote address.

JAMES J. HILL, the great railroad builder, died last week at his home in St. Paul, at the age of 78. He was one of the great men of the country and had built himself up to his commanding position from comparative poverty. He was born on a farm near Guelph, Ontario, Canada, but migrated to this country when a boy, on the advice of a stranger who happened to visit the farm and noted his eager, ambitious spirit. He soon got into the railroad business, and against great obstacles succeeded in building the Great Northern Railroad and in developing the "bread basket" of the Northwest: The great wheat states. Mr. Hill's wealth is estimated at between $200,000,000 and $500,000,000. An estimate of it was furnished when at the opening of the European war he called his bankers together and displayed a mass of his securities. More than $100,000,000 was said to have been in the boxes he laid before his bankers. "There should be no trouble," said Mr. Hill, "but if there is this amount is at your disposal." Mr. Hill had the absolute control of the First National Bank and the Northwestern Trust Company, which have a combined capital and surplus of $6,500,000. Mr. Hill was a large owner of stock in the Chase National Bank, of New York; First National Bank, of Chicago, and the Northwestern National Bank in Minneapolis. He was a large owner of the Great Northern Pacific Steamship Company. The greatest portion of Mr. Hill's wealth, however, was in the stocks and bonds of the Great Northern, Northern Pacific and Chicago, Burlington & Quincy railroads.

IN AN address before the League to Enforce Peace, President Wilson declared that the United States is ready to join in any feasible association of nations to preserve the peace of the world against "political ambition and selfish hostility" and in the service of "a common order, a common justice and a common peace." He expressed hope that peace terms which would end the present war would include such an arrangement. Outlining peace suggestions, which the president said he hoped the United States would make if it had the opportunity, he included provision for absolute freedom of the seas, a contention which has been the keystone of all the diplomatic discussion with Germany and Great Britain, and virtual guarantees of territorial integrity and political independence. The fundamentals of a lasting peace, President Wilson said he believes were: "First, that every people has a right to choose the sovereignty under which they shall live. Like other nations," the president said, "we have ourselves no doubt offended against that principle when for a little while controlled by selfish passion, as our franker historians have been honorable enough to admit, but it has become more and more our rule of life and action. Second, that the small states of the world have a right to enjoy the same respect for their sovereignty and for their territorial integrity that great and powerful nations expect and insist upon. And third, that the world has a right to be free from every disturbance of its peace that has its origin in aggression and disregard of the rights of people and nations." The speech is believed to be a preliminary feeler for peace in Europe, which seems a little nearer at present than at any time since the war began, but with nothing definite or tangible as yet upon which to build more than a faint hope.

HALF a billion dollars will be the government's internal revenue tax toll for the fiscal year ending June 30th, according to an announcement made by Secretary McAdoo, of the treasury department. This sum, which exceeds by many millions all previous estimates, will be made up as follows: Taxes on whisky, beer, cigars, cigarets and tobacco, $303,000,000; taxes on the incomes of individuals and corporations, $115,000,000; emergency tax collections, $83,000,000. The volume of money pouring into the treasury has steadily increased month by month since last fall until it is now greater than at any time since the effects of the war began to be felt. Mr. McAdoo accounts for the situation as follows: "The great boom in business is largely responsible for the increase in receipts from ordinary internal revenue. The prosperity of the country with the attendant wider scope of employment and increase in wages has in itself resulted in a large consumption of taxable articles, greatly augmenting the government's revenue." Consumption of whisky, cigars, cigarets and tobacco has increased, according to revenues received, while consumption of beer has decreased during the fiscal year.



The Stumps Must Go

Increasing population, growing demand and better prices for food stuffs are raising farm values. Stumps take up space, hinder work and cost you money. Get them out.

DU PONT

Red Cross Farm Powder

will remove them. In most cases Red Cross Farm Powder alone will do the work most quickly, easily and cheaply. Used in connection with other mechanical appliances it makes their work more efficient because it loosens the roots, shakes them free of dirt and leaves most of the soil in the hole. Long use by thousands of farmers has proved its merits for stumping, subsoiling, ditching, tree planting, etc.

Big Book Free

Tells just what you want to know about the use of dynamite on the farm. You ought to have it. Write today for **Handbook of Explosives No. 35.**

POSITION WANTED Reliable man past fifty wants position on farm where he can get home for his family. Experienced in creamery work. Write G. E. H., care of this paper, for information.

Land Lost by Fencing.

The amount of land that is lost to cultivation along fence rows is a matter of importance, especially where the land is high priced. Hence it is well, in selecting a type of farm fencing, to give consideration to the space that the fence will occupy. The following table, derived from data obtained from a survey recently conducted by the department in twelve north-central states, reported in department bulletin 321, shows the width of the strip of land, from the center of the fence out on one side, which is made untillable by different types of fences:

Kind of fence	Amount of land made untillable Feet	Fence required to lose an acre of ground Rods
Woven wire	3.29	802
Barbed wire	3.42	772
Board	3.23	817
Picket	3.29	802
Hedge (well trimmed)	7.6	347
Straight rail	3.57	739
Worm rail	6.05	436

Should the fence run between two pasture fields, practically no land would be lost, but when it divides two cultivated fields the width of the strip of land made untillable, as shown by the table, should be doubled, and the number of rods of fence required to occupy an acre of ground would be one-half that stated in the table.

When a forage or small grain crop is grown, less land is lost along the fence row than when corn, potatoes or some other cultivated crop is grown, for much land is taken for turning along the fence row with the latter. Local practices also influence the amount of land along the fence row which is not cultivated. Thus, in certain parts of Iowa and adjacent states, it is not uncommon for a farmer to leave a headland ten to twelve feet in width along his fences; these are used for driveways. In many localities of the East it is the practice to use one horse to plow along the fence row in order to get as close to it as possible.

It will be noted from the table that wire, board and picket fences take up but a little over three feet on a side, while worm-rail fences occupy double this amount of land. The amount of land that the hedge fence renders useless for cultivation will depend upon the size of the hedge. If it is left untrimmed it will sap the fertility of the soil for more than a rod on each side of it; if it is kept well trimmed it occupies nearly double the amount of land taken by a wire fence. If the season is dry a hedge does much more damage than when there is plenty of rainfall, as its root system extends out to a considerable distance and takes up moisture that is needed by the crops in the adjacent fields.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

THE LATE "JIM" HILL.

FEW men have lived a more interesting or inspiring life than the late James J. Hill, or "Jim" Hill, as he was known far and wide. His career shows the opportunities open to the farm boy of determination and spirit. I want to take a few minutes of your time to point out the lesson of Hill's life as it applies to the farm boy.

"Jim" Hill was born on a farm. He might have remained there all his life and the chances are he would have been a good farmer, for he did everything thoroughly. But he was needed elsewhere and today 400,000 prosperous farms, in six of the big states of the northwest, testify indirectly to the excellence of his work. The story of how the boy came to leave the Canadian farm, on which he was born, is extremely interesting.

A stranger had stopped at the Hill farm for dinner, after the fashion of folks in the country, knowing full well the hospitable temper of the people. He had left his horse at the gate. Young Hill saw that the animal was tired and carried it a pail of water. The stranger was pleased with the lad's thoughtfulness and love of dumb brutes, and as he drove off he tossed the boy a newspaper from the United States and called out gravely: "Go there, young man. That country needs youngsters of your spirit." "Jim" Hill read the paper carefully; it was a rare treat to the farm boy of that day: A recent paper "from the states," all his very own. The paper contained glowing accounts of opportunities in the United States. The boy resolved to investigate for himself. The next morning he chopped his last tree. Today there stands a tree stump on that old Hill farm, in Ontario, bearing this label: "The last tree chopped by James J. Hill." The boy broke all his home ties and set out across the boundary line to see if the opportunities did, indeed, exist as they had been pictured in the paper.

When "Jim" Hill died last week he left a fortune variously estimated at between $200,000,000 and $500,000,000 and the entire Northwest mourned his passing. He discovered the "breadbasket of the world" and led in its development from a wilderness into what now comprises six wealthy states dotted with 400,000 farms. He blazed a trail for transportation which eventually reached from Buffalo to Asia, with a total mileage of rail and steamship facilities that would nearly girdle the earth. All this the farm boy accomplished because he set forth to see if opportunities did really abound in the big world and because he had the spirit and the determination that hesitated at nothing. His indomitable will overcame every obstacle and he became one of America's greatest men, perhaps as great a self-made American as has ever lived.

Nor was James J. Hill one of those men whom success spoils. He was "Jim" Hill to thousands upon thousands of men to whom his enterprises gave profitable employment. He never lost his interest in agriculture and was one of the most forceful writers on farming topics that I have ever read. He would have made an ideal secretary of agriculture and was prominently mentioned for that position when President Wilson was making up his cabinet. In whatever line of activity his work led him "Jim" Hill could be relied upon to do things thoroughly and well.

And so the humble farm boy climbed to the very pinnacle of the pyramid, and when he passed a whole nation mourned, the wheels of commerce were stopped as a tribute to his memory and millions grieved. Is there not inspiration here to all of us, spurring us onward and upward in search of the opportunity which exists every bit as much today, in some field, as it did when the Canadian boy set out to see if the stories he had read in the chance-had newspaper were really true? What one farm boy has done another farm boy can do. And so the lesson of "Jim" Hill's life will last for many, many years, to thrill and inspire others to do the big, really-worth-while things of life.

GROWING OLD GRACEFULLY.

SOME months ago we had a most profitable discussion in these columns on the subject of whether or not the farmer should retire, in his old age, and move to the town or city. The general opinion seemed to be that while there are urban conveniences which attract many a farmer who has earned the right to rest, there is far more happiness to be found in spending the twilight of our lives on the old home place.

I do not believe there ever was any discussion in this paper which interested me more than this, for almost every writer had a heart-interest story to tell. I want to supplement those contributions from subscribers with something I found in one of the medical journals last evening. The article is written by a noted physician and tells how an old man passed the autumn of his life on the old farm with the utmost pleasure to himself and all about him, because he succeeded in finding enough little, odd jobs to occupy his mind, and so had no time to bemoan the oncoming of that grim visitor who is not to be denied by any of us. After reading this story I think we will all agree with the doctor who wrote it when he said, "There is a place for the old man on the farm." Here is the story:

Sitting on the porch one day the old man noticed that the yard was littered with trash. He gathered this, burned it, and then turned his attention to the dead leaves which had gathered in hollows. The leaves were raked up and hauled to the garden for fertilizing. Refuse wood was gathered and chopped into light cooking wood and kindling. He picked up many gunnysacks that had been carelessly dropped about, but which were needed when time came to dig potatoes.

The orchard was pruned, and the old man cut from the refuse many bean poles, firewood and burned the brush, using the ashes for the garden and grape vines. Ditches were cleared of weeds, and cresses were sown along the low spots. The heavier garden work was done by the hired men, but the old man kept it in fair condition with little trouble. He gathered the produce for the table and cut and pulled vegetables for the market.

And so his realm of usefulness grew, once he had looked about. He took charge of the chickens and increased their output. The skimmed milk was being thrown away. He went to town and found a market for quite a lot of cottage cheese. He evaporated the whey to a creamy consistence and fed it to the hens, saving grain and increasing the yield of eggs. His big fly traps caught many of the pests and cleared the house of them. He guarded the chicken yard from hawks and made war on ground squirrels when they appeared in the cornfield.

There were many other tasks, not too big for him to undertake, which the old man saw and did. He was happy. He felt a return of his self-respect. For he knew he still was able to earn his "keep" and bring in a profit to his sons by doing the little things that otherwise would have had to be left undone.

Age is a beautiful thing to contemplate when it finds us still engrossed in our life work, with a mind open and receptive to ideas, still interested in the affairs, both large and small, of the world round about us. It need never be the bugaboo and dread which many of the young folks make of it, so long as we maintain a healthy mind, even though it sometimes does find our bodies frail and weak. I can remember when fifty and even when forty-five seemed like a ripe old age, but now that I have only a few more years to live until the allotted three-score-years-and-ten of the prophets are mine, I look back to forty-five and even to fifty as being in the very prime of life. The secret of growing old gracefully, I believe, lies in keeping interested in one's own work and in the things that lie round about us. If we cannot all find chores to do about the old farm, as did the man of whom the physician writes in the medical journal, surely we can all take an interest in the affairs of the workaday world, either in our own locality or in the nation and world as a whole. When the eye grows dim and the faithful "specs" of an earlier day no longer suffice, if we have some loved one to read to us from the newspaper or farm journal and some loved one to talk over the world's events with, surely we can all look upon age as having its blessings and its comforts. The mistake too many old men make is in believing there is no longer any need of them, their services or their counsel. After all, age is a mental rather than a physical condition.

THE FARM HAND'S AUTO.

I WANT to add an interesting little postscript to the story of the relationship existing today between farmer and farm hand. A contract was signed a few days ago between an Illinois farmer and the man who works for him by which the farmer gives his helper $30 a month and, in addition, guarantees to pay for the upkeep of the latter's automobile. He is to provide gasoline and oil for the car throughout the entire season.

Surely, we have reached a high stage of prosperity when the farm hand who works for $30 a month can afford to keep an automobile. And, equally surely, we have reached a very amicable stage in our capital and labor partnership when the farmer finds it a profitable investment to pay the upkeep of his laborer's car.

FLAG DAY.

WEDNESDAY of next week is Flag Day. It is an occasion which most of us are all too prone to forget. Coming so soon after Decoration Day, we are wont to believe we have shown our patriotism enough, there is the hard work of the season before us and so Flag Day slips by unnoticed. Should this be so?

No man on earth owes more to the flag than the American farmer. Why are conditions so chaotic in Mexico today? Because of the land situation there; a few men, obtaining possession of great tracts through government grant and otherwise, have kept the rank and file of the people in economic slavery. If Mexico had a flag like the stars and stripes, standing for equality and liberty to all, farming and industrial conditions would not be at the low ebb they are in Mexico today and the southern republic would forge ahead until it might, in time, become a formidable rival to its northern neighbor. Why are a dozen or more nations at one another's throats in Europe today? Because their flags do not stand for the liberty and the unquestioned right to go about one's daily work that the stars and stripes stand for. I have already set forth in this page the story of how the Russian peasants have been inflamed against the Germans because the latter are held responsible for the introduction of labor-saving machinery into the Russian wheatfields. If the Russian flag insured to every man, woman and child beneath its folds an education such as every member of the American farm family is entitled to and receives; if it gave to the peasant farmers a chance to till the soil with some hopes of some day attaining industrial independence, as the stars and stripes give to the tenant farmers of America; there would be no war fought out, at a cost of millions of human lives, over no more principle than the prejudice of an uneducated people against labor-saving farm machinery. Believe me, friends, we attribute our success to our soil, to our modern farming methods, to the industry with which we set about our work and carry it through to the harvest, but there would be no agricultural prosperity in America today were it not for the flag. When we consider what makes us the greatest farming people in the world, do not forget that the flag is one of the greatest factors, for it stands for a stable government which permits us to work in peace, safe in the knowledge that we will reap where we have sown, that the reward of our work will belong to us and will not be taken away by any despot or trampled under the feet of a great army living off the labor of others.

That is why it seems to me we should remember that next Wednesday is flag day and not let the occasion pass unnoticed. Those of you who have flags, hang them out next Wednesday, as you did on Decoration Day. Those of you who do not have flags, just remember the day and think of what the flag means to you and yours, how it protects you from injustice, from the oppressor and the invader; how it makes it possible for your fields to yield abundantly and for you to prosper from the fruits of your labor; and when the day draws to a close, if you have time for nothing else, read with me the lines of the poet:

Hats off!
Along the street there comes
A blare of bugles, a ruffle of drums,
A flash of color beneath the sky:
Hats off!
The flag is passing by!

Blue and crimson and white it shines,
Over the steel-tipped, ordered lines.
Hats off!
The colors before us fly;
But more than the flag is passing by.

Sea-fights and land-fights, grim and great,
Fought to make and to save the State;
Weary marches and sinking ships;
Cheers of victory on dying lips.

Days of plenty and years of peace;
March of a strong land's swift increase;
Equal justice, right and law,
Stately honor and reverend awe;

Sign of a nation, great and strong
To ward her people from foreign wrong;
Pride and glory and honor—all
Live in the colors to stand or fall.

Hats off!
Along the street there comes
A blare of bugles, a ruffle of drums;
And loyal hearts are beating high:
Hats off!
The flag is passing by!

For Better Rural Mail Service in Wisconsin.

AT THE Eau Claire meeting of the Wisconsin Rural Carriers' Association, held May 30th-31st, one of the prominent members was kind enough to say that The Wisconsin Farmer has been the friend of the rural carrier. For the special compliment paid to Mr. James M. Pierce, publisher of The Wisconsin Farmer, by one of the speakers in open meeting, we desire to express our thankful appreciation.

The Wisconsin Farmer is devoted to the interests of the rural carrier because it recognizes in the free delivery system the greatest boon which has ever come to the farmer. When it was arranged to have mail delivered daily to the farm homes of the nation, a great forward step in better citizenship on the farm was made. This step was of greatest importance as affecting the educational interests of the farmer and all members of his household. This step was important from the business standpoint. It brought the backwoodsman up into town. It has resulted in bringing the farmers of the nation closer together. It has made it possible for them to organize for their own interest and advancement. There was a time when the joke about the farmer who had not heard about the assassination of Lincoln was a familiar one. Of course, this was a cruel and unkind joke at any time, for the farmer has never been so far behind the times as he has been pictured. But since the rural mail service has brought the daily mail to the farmer's door not even the wildest imagination can picture him as he once was. There are thousands upon thousands of people in the cities of Wisconsin who do not read so much or keep so well informed as the people on Wisconsin farms. Not long ago the state superintendent of instruction issued a statement which shows that rural children complete their school and high school courses in considerably less time than city children. Reference was made to this report in The Wisconsin Farmer several weeks ago. Only recently one of our editors visited with Superintendent Meating, of Outagamie county, a man who has been at the head of public schools of the county for fourteen years. We were not surprised to hear from him that in some years as high as 90 per cent of the valedictorians on the graduating programs of the high schools of that county are children who came from the farm homes. Of course, these facts are not all to be credited to the rural free delivery, but rural delivery is one of the most important agencies which has helped the farmer to keep abreast of the times.

It is our firm opinion that there are no more faithful men in any branch of the government service than those who travel the mail routes of the country. Sometimes it seems to us the big fellows in Washington do not appreciate the nature of the job which the carrier has. If we could send each congressman out for two or three days with a rural carrier, to travel the routes, and if we could pick a few real bad days when the work was the hardest, we believe that we could create a sympathy for the rural carrier which would redound to his lasting benefit as well as to the benefit of the service. Our congressmen, as a rule, are reasonably faithful to their duties, when they understand them. But a man who takes an occasional auto ride, when the roads are good and when it doesn't look like rain, has small conception of the everyday grind of the rural carrier who must be out in all kinds of weather and on all kinds of roads.

The Wisconsin Farmer may be relied upon always to be the friend of the carrier and in favor of extension of the rural mail service. There are a great many farms in this state which should have free delivery service and which do not have it. The Wisconsin Farmer believes that this state has pressing need of many new routes, and we urge that as many as can possibly and reasonably be cared for be added. The government officials should not make mail routes so long that no carrier can give good, prompt service. The rural mail service is past the experimental stage. Every move made now should be in the interest of greater efficiency. We are convinced that the carriers will do their part at any time to improve the service, if the rest of us, especially our members of congress, will do our part.

Wisconsin Guernsey Breeders Active.

REPORTS of the Western Guernsey Breeders' Association meeting at Livingston, Grant county, Wisconsin, and of the Waukesha County Breeders' meeting at Eagle, appear in this issue, also some views taken on these farms where Guernsey herds of prominence have been developed. One of the editors of The Wisconsin Farmer was present at each meeting and enjoyed the hospitality of the breeders.

Guernsey men are alive to the interests of this dairy breed and the prospects for better business both on the farm through the medium of the milk pail, and in the sale ring, were never better for Guernsey breeders than now.

It is the policy of The Wisconsin Farmer to give special attention to these breeders' meetings, and the editors have enjoyed a great deal of pleasure and derived a great deal of benefit from attending the sessions. Wisconsin ought to be the best organized state in the Union in so far as its relation to the several dairy breeds is concerned. Probably it is better organized in this respect now than any other state, but there is room for improvement. There are a great many good breeders in the state who are now actively supporting these associations. The Wisconsin Farmer would like to see them all get in. None of us know it all and it is not possible to attend such meetings as were held at Livingston and Eagle, and not pick up some good information which we had not previously given any special thought. It is a great thing to have an individual breeder thinking along the best lines of development of his herd. It is bigger to have all the breeders of a community enthused with the same spirit. When all the breeders of a county become interested and when breeders will meet and exchange experiences and learn the fine points which have resulted in the best herds of the county, then this community work begins to bear fruit.

Of course, organization will not take the place of individual effort, but it will go a long ways toward stimulating and sustaining such effort. The Wisconsin Farmer is glad to note that the Guernsey breeders of the state, and of the several counties, are awake to their interests as individuals and as a whole, and we may expect even greater improvement and advance in Guernsey interests in the future than in the past.

Our New Serial.

WE BEGIN the publication next week of our new serial story, "Told in The Hills," by Marah Ellis Ryan, author of "That Girl Montana," "The Bond Woman," and "My Quaker Maid." This is a story of the real West in the picturesque and romantic days when red-blooded people took part in real events. Miss Ryan is familiar with her material through long residence in the West, and has written a story which for genuine thrills and heart interest has not been surpassed by any novel published in recent years. We confidently assert that "Told in The Hills" is the biggest and best serial story ever offered its readers by any farm paper.

We have already given our readers a number of good serials, including "The Story of Waitstill Baxter," by Kate Douglas Wiggin; "Dawn O'Hara," by Edna Ferber; "Winning the Wilderness," by Margaret Hill McCarter, and "Hepsey Burke," by F. N. Westcott. "Told in The Hills" is a worthy successor to these and will be followed by other novels of high grade. It is our purpose to print from three to four good $1.50 novels each year, making a feature not surpassed by any other farm paper. The stories are chosen with care, and may safely and pleasanty be read by every member of the farm family.

The Question of Large Litters.

ONE of our subscribers, Mr. Carey R. Jones, of Barron county, Wisconsin, has had splendid success in his hog raising operations, this being shown particularly in the number of pigs per sow that he has been able to save during the last two years. In the following communication Mr. Jones gives the record he has made:

I have been reading the letter of one of your subscribers who raised 125 pigs from twelve sows. He sure did well. I suppose they were young sows, though he did not say. That is a good number for that many young sows.

Nine years ago I started raising the Duroc Jerseys. I got a good bunch—seven in all—of large type, also got the best registered hog. When it was time to wean the pigs there were fifty of them. That did not satisfy me, so the next year I watched and kept sows out of the largest litters. From that time on I would not keep a sow that was not raised in a litter of ten. I kept up the strain of hogs and always bought the very best full-blood Duroc Jersey hog I could get. This I think anyone should do to have good luck.

In 1914 I kept eight young sows that raised eighty-two pigs. That is, I sold that many in the fall and not a runt in the bunch—all nice, large-framed hogs. When those pigs were six weeks old I weaned them and turned the hog in with the sows. The same fall, in September, they raised eighty, that is, till after they were weaned, and no runts. The next spring I kept the same old sows. One lost all of her pigs and the others had sixty-three at weaning time, and all good ones. In the fall of 1915 the seven sows had seventy-three pigs at weaning time, and all good ones. Then I had a public sale and sold all the old sows and moved to Wisconsin. I saved only a few young sows, so have no pigs yet.

I was living at Iowa Falls, Iowa, at the time of which I write. I think that most of the farmers make a serious mistake in keeping young sows, and lots of them are not particular enough in choosing sows. They should never let $25 or $50 extra on the price of a good male hog keep them from getting him. I always reason that as long as an old sow will raise twenty or more good pigs in one year she is worth her keep, and once I get a good hog and a bunch of sows I keep them right along.

I never give my hogs any special care and always make them weigh about 240 or 250 at seven months old. I really do better with the fall pigs than with the spring pigs, as I have more milk in the winter for them, and the sows raise more and better pigs when they raise two litters a year.

I am sure that it is a mistake to cross-breed, using a black hog one year, a white one the next, and in a few years a red one. We should stick to one strain and change it only to improve.

The Wisconsin Farmer has very grave doubts if this splendid record can be matched by another breeder located anywhere in the great central West. A swine breeder who is able to raise and market an average of ten pigs per sow deserves special mention among the list of individuals who are making agricultural history. Most breeders think they are doing exceedingly well if they raise an average of seven pigs per sow. Mr. Jones' communication is doubly interesting because of the fact that he raises two litters from his sows every year. Ordinarily when a large litter is raised a sow is pulled down so much in flesh that she will not raise a good litter in the fall, but it seems that in this instance this regulation did not hold good. If any reader of The Wisconsin Farmer has anything like the equal of this record to report we shall be pleased indeed to hear from him.

Waupaca and Portage Association.

IT GIVES The Wisconsin Farmer editors a great deal of pleasure to review the progress of our live stock breeders' association. Whenever a determined effort is made to keep up interest in these associations a great deal of good is accomplished. A very excellent report comes to us from Mr. Arthur W. Ritchie, of Royalton, Wisconsin, secretary of the Waupaca and Portage County Holstein Breeders' Association. We quote from Mr. Ritchie's recent letter to The Wisconsin Farmer:

The Waupaca and Portage County Holstein Breeders' Association was organized January 18, 1913, with thirty-seven members. The membership has now increased to one hundred, representing about 600 pure-bred cattle. The first and great purpose of this association is to promote the Holstein breed in these two counties. Another aim is to increase the production of each individual herd. In addition to this the association hopes to increase the enthusiasm for better bred stock. With these points in view, we believe greater profits will be realized. Selling surplus stock can be done in no better way than through an association of this character. We now have in herds belonging to members of our association some of the very best blood that flows in Holstein veins. The call for Holstein cattle has become so great that it is impossible for individuals to supply the demand. It is on this account that we believe in organizations capable of furnishing more stock than any one individual could spare at any one time. One of the features of this association is a monthly report sent to the secretary by each member. This report includes a list of all the stock the member has for sale, with description of the stock and statement of breeding. In this manner it is easily possible at any time to make up a carload lot or more for shipment. It also makes it possible to find either pure breds or grades at the least possible expense, by simply corresponding with the secretary.

Official testing is going on very extensively and both seven-day and yearly reports are being made. This association holds two meetings each year. A business meeting is held in January, and a summer meeting which combines a picnic and business session. At the summer meetings a number of good speakers are procured. At the business meetings in the winter officers are elected and ways and means of advertising rediscussed. Our summer meeting is more of a social affair, where breeders and their families and others interested meet and exchange ideas and become better acquainted with each other. Lastly, but not least, we endeavor to establish hearty co-operation with our state and national organizations.

Although this is rather a brief statement of the excellent work done in Waupaca and Portage counties it is at the same time inspirational. This association has trebled its membership in three years. It is significant to note that the membership now owns 600 pure-bred Holstein cattle. If every Holstein breeders' association in Wisconsin could make a report like this one the worries concerning the state association would soon be over. Of course, a county association which succeeds as the Waupaca and Portage County Breeders' Association has, supports the state association. We have no doubt the success of the Waupaca and Portage County Association is due, to a considerable degree, to the officers. These men are to be congratuated upon the good work which they are doing.

A Tip to Wisconsin Farmers on Feed Buying.

MR. L. L. OLDHAM, county agent for Walworth county, is advising farmers to buy winter feed early. He says that reports from North Dakota, South Dakota, parts of Minnesota and Montana, also Nebraska and Kansas, indicate that we are facing a low acreage of wheat and a subsequent shorter crop the coming fall.

This means a shortage of bran and naturally a higher price for this product next fall. Those who possibly can should plan to purchase their bran within sixty days. Millers, jobbers and dealers are

not favorable to the idea of storage for this by-product, as the losses from various agencies are too great and the demand too slow during the summer months when cows are generally on grass. Mr. Oldham says:

The months of June and July see the price the lowest during the year. In the fall, however, when the new crop starts coming in and the demand picks up the price naturally follows the trend of events and rises. With a shortage in sight the situation is more serious. The increase in the price per ton when it comes will naturally catch and be to the disadvantage of our farmers who make a practice of feeding bran and middlings. These feeds are good feeds and are indispensable to the farm feeding. Buy now and store in a good tight bin, return the sacks for credit and the winter feed problem is settled. This is my advice to you.

Mr. Oldham recommends to Walworth county farmers that they consider such crops as peas and beans as a supplement to short pastures and a safeguard against a poor corn crop. Discussing the matter from the farmer's standpoint, and what he would do if he owned a Walworth county farm, he says:

I certainly should plant some peas and soy beans to increase the protein content of my cow feeds. These crops make excellent hay of about the same feeding value as alfalfa. Stored in the silo with corn in the proportion of corn three parts, beans or peas one part they make an excellent silage. A greater proportion of beans and peas and less corn may mean odorous milk and soft butter, so I would be careful how I mixed them for silage. Both of these crops are good growers, do well on all lands, are easily harvested, can be harvested, housed and later run in the cutter with the corn for silage. Put up for hay they are handled like any hay crop and are liked by all farm animals. They carry unusually high percentages of protein as figured in farm feeds and consequently add much to the value of a ration containing them. It's protein we folks buy in feeds when we buy. This is the best way of getting it—the cheapest and surest. Furthermore, none have assured me as yet that we are going to have a corn crop. It's everyday preparedness that counts in business today.

Dried brewers' grains, one of the most popular feeds for the dairy cow in this section of the state is selling right now at its lowest mark this year. Like most other feeds this feed price is lowered in the summer months when the brewer does not care to store, when the cows are on grass and the demand very slow. Our farmers can make money no easier and quicker than by purchasing their supply of this feed and bran during the next sixty days. Buy it, haul it, empty it in tight bins, return the sacks for credit and you are fixed for the coming winter's feed problem and at a saving of $3 to $5 to $8 per ton. The total winter's supply handled in this manner represents no mean saving to the thinking business manager.

These suggestions from Mr. Oldham, who is conversant with the situation, are well worth considering. It is a little too early to figure on shortage of crops, although the decreased acreage in some of the wheat sections would indicate that we might expect a shortage of bran.

The Madison Rotary Club.

IT IS apparent that the tractor demonstration be held in Madison September 4th-8th is to be a big success. Last week The Wisconsin Farmer published some facts relating to the splendid grounds which had been secured for this demonstration. Our attention has been called to an article by Mr. B. B. Clarke in a recent issue of the Madison Democrat. We quote the first two paragraphs:

That little old Rotary Club of Madison doesn't pay anybody big salaries to show it how to spend money, but when it comes to "doing things" it's there "hittin' " on all cylinders all the time.

The manner in which the Rotarians took hold and secured the greatest boom that Madison ever had, or will have, in the big "plowing demonstration" to be held here in September, proves that the Rotary Club knows how to do the J. Rufus Wallingford stunt in reality.

The time is coming when farmers will hear a great deal more about rotary clubs. The Rotary Club of Superior, Douglas county, has recently had a great deal to do with developing the farming areas in that section. Rotary clubs are usually successful because of the splendid spirit which prevails among the members. As indicated by Mr. Clarke, there are no high-salaried fellows in the rotary clubs. The clubs are made up of business and professional men. There is one member representing each line of business. This plan makes the club representative of the various interests in a city. The plan also has resulted in eliminating rivalry which might occur in a club where there were many prominent men representing the same line of business. The one aim and object of the rotary club is to do something worth while, and these organizations seem to be peculiarly fortunate in the small number of knockers enrolled. Rotary clubs stay out of party politics and have no axes to grind. They are in a position to help things which are worth helping and to do it with all their might.

That these things are true has been illustrated by the work of the Madison Rotary Club in connection with the round-up tractor demonstration to be held in Madison September 4th-8th. Mr. Clarke is right in saying that the rotarians are bringing to Madison one of the most important events which has ever been arranged for this city. He predicts that not less than 10,000 automobiles will be parked in Madison and along the lakes during the tractor demonstration. It is generally believed that Madison will have 100,000 visitors during this week. We are glad to note that the rotarians are on the job; that they have started off the demonstration plans in fine shape by getting beautiful grounds on the shore of Lake Monona; and we have not the slightest idea but that they will stay by the work until the demonstration shall be announced a complete success.

Concrete Water Tanks.

THE question of supplying an abundance of pure water for live stock is important as every farmer knows, and there is nothing nicer in the way of a tank than one made of concrete. The bottom of the tank should be connected with a drain so that the tank can be easily cleaned. It should also have an overflow pipe which may be connected with the same drain and thus avoid the disagreeable feature of having the water overflow into places where it is not wanted.

A concrete tank is not only cheap and very serviceable but it is also substantial and neat in appearance and makes a good impression on anyone who sees it. It is permanent and in line with modern ways of building. For those who may not know how to go about mixing the concrete and provide re-enforcement in the best manner possible we give the following directions from the Nebraska College of Agriculture:

A good mixture for a concrete tank may be made of one part Portland cement, two parts clean, coarse sand, and four parts screened gravel or crushed rock. Where neither gravel nor crushed rock is available use one part of cement to three of sand. If less cement is used than the amount given, the mixture will not wear. The foundation should be about six inches thick, enough so that there will be no danger of heaving from frost. It should be re-enforced with woven wire.

The sides of the tank may be re-enforced the same as the foundation, care being taken that the re-enforcement is placed near the outside wall. Only wire or iron of good quality should be used, as rusted material only fills space and does not re-enforce. There should be continuous re-enforcement around corners. Where the wire or other material laps, the laps should be several inches.

The form for the tank should be so made as not to crack the cement when taken apart. After the forms are removed, the inside of the tank may be waterproofed by applying a coat of concrete paste made of pure cement and water mixed to the consistency of cream.

These directions are right to the point and any man who will follow them carefully can build as good a tank as can be constructed. If you need a water tank don't forget to give concrete careful consideration before buying one of wood or steel.

The Right Way to Pasture Alfalfa.

ACCORDING to the opinion of those in charge of the Crop Improvement Association of Winnebago county, Ill., alfalfa is not a safe pasture for cattle and sheep because of the tendency of these animals to bloat. For putting growth and weight on young horses alfalfa excels. But its peculiar value and adaptation is as a pasture for hogs. For this purpose it has no equal. Every farmer who raises hogs should have an alfalfa hog pasture, according to the officials of this association. In fact, hogs cannot be raised with so great profit any other way. Much data could be given to prove the value of alfalfa pasture.

Some object to pasturing alfalfa because "pasturing kills it." And this is true if the alfalfa is pastured too closely. The reason is found when we observe the manner in which the alfalfa plant grows. Namely, it grows at the top of the stem. When the stem is grazed off the plant must start branches or new shoots from the crown, but if the grazing is too close and too long continued the alfalfa makes little growth and finally dies from exhaustion. With grass pastures the growth takes place at the base of the leaf blades, and close cropping, while it may reduce the yield, does not usually kill the grass.

The right way to pasture alfalfa is to have much more growth or area than the animals can graze off and then cut the alfalfa regularly for hay when it reaches the blooming stage. Or, a better way, in grazing hogs, is to have two pastures, or a divided pasture. Cut one early and allow the hogs to graze on the other until the new growth in the first pasture is six or eight inches high, then turn the hogs in and cut the hay on the second field. Turn the hogs into the second field again in two or three weeks, and cut the first field, thus maintaining always a fresh pasture for the hogs and yet not allowing them to graze off the young shoots or graze the older growth too closely.

Hogs on alfalfa pasture should not be allowed to root out the plants and eat the crowns and roots, which they are inclined to do unless prevented by ringing.

The alfalfa pasture should be cultivated each spring to break up and mellow the hard crust which forms from much tramping. Cultivation and regular clipping as described above is all the care which alfalfa pastures require. If not grazed too closely it should last several years, when other fields should be seeded and the old pasture plowed and planted to corn or other crops for two or three years before reseeding.

The Value of a Registered Sire.

IT is difficult to say just what a registered sire may add to the value of a herd, but if he is a good individual, it is safe to say that he will prove very profitable even in a small herd. There are many instances on record, especially in dairy herds, where sires have paid for themselves several times over in two or three years' time, by increasing the milk production of his heifer calves over and above that of their dams.

Such an instance has recently been brought to our attention by the Georgia Experiment Station, where an ordinary grade Jersey cow was purchased in 1908 for $35. She was bred to a registeerd Holstein bull and produced a heifer calf. This calf was raised and bred to calve at two years of age.

For two years accurate records were kept of the milk production of this heifer as well as of her dam with the following results: During the first two lactation periods the heifer produced an average of 8,976 pounds of milk per period, while the old cow produced an average of only 5,352 pounds. Thus the heifer produced an average of 3,624 pounds of milk per year more than her dam which, one may reasonably conclude, was due to the superior dairy blood she had inherited from her sire. This extra quantity of milk contained 145 pounds of butter fat worth, at 30 cents a pound, $43.50. In a herd of ten cows such results would mean an extra profit of $435 a year.

Such an increase in production, due to the introduction of improved blood through the sire, is by no means exceptional and may be expected as an average in a herd of twenty grade cows. When we take into consideration that the second cross with improved blood will bring another increase in production, though perhaps not quite so pronounced as the first, and that a third cross will bring still further improvement it is not difficult to realize that it pays to use registered sires in all milk-producing herds. and that one can afford to pay a good price for a bull of the right kind.

A Series of War Articles.

WE BEGIN the publication in The Wisconsin Farmer next week of a series of articles by Mr. Harry C. Evans, one of the most prominent members of the party which Henry Ford, the Detroit millionaire-manufacturer, took to Europe a few weeks ago in an effort to bring the war to an end and to hasten the day of international peace. Mr. Evans had exceptional opportunities to investigate conditions personally in Germany, Denmark, Sweden, Norway and the other countries of northern Europe which are either engaged in the present war or upon which devolves the duty of furnishing food supplies and asylum to the fighting nations. Mr. Evans was one of the most prominent members of the Ford party and refused an appointment to remain in Europe as one of the permanent representatives of Mr. Ford in his splendid efforts to bring about peace.

The first article written by Mr. Evans, especially for The Wisconsin Farmer, will appear in these columns next week. It will deal with present agricultural conditions in Germany, the manner in which the German empire is conserving its food supplies and increasing production so that no one need go hungry. Mr. Evans tells of things he actually saw while traveling back and forth through Germany. He also tells of the manner in which the German farmer dominates the affairs of the empire politically and of the attention which the kaiser and all in power pay to the farmer and his interests.

We are firmly of the opinion that no articles published by any farm paper since the war began give such a good impression of existing conditions in Germany and elsewhere in Enrope as those which Mr. Evans has written for The Wisconsin Farmer. While the first deals wholly with Germany, subsequent articles will take up other warring countries, the series ending with Mr. Evans' conclusions as to what will be the situation when the war comes to an end.

American Judges For Argentine.

THERE are many indications of a growing interest among Argentine breeders of live stock in the pure-bred stock raised in this country. Recently a number of important consignments of beef-breeding cattle were sent to the Argentine from this country at excellent prices. Argentine cattlemen are buyers of the very best breeding animals and have been for many years, but up till now British breeders have monopolized the business. In recent years a number of American breed associations have been active in calling the attention of Argentine ranchmen to the high quality of stock that is obtainable in this country, and now that the European war has interfered with normal commercial relations between Argentina and Europe it begins to look as though the time were ripe for trade in pure-bred live stock between American and Argentine breeders to begin in earnest.

To help cultivate friendly relations between the live stock interests of the two countries the International Live Stock Exposition has invited Senor Carlos M. Duggan, one of the leading ranch owners in Argentina, to serve as judge of grade and cross-bred bullocks at this year's show, and the invitation has been accepted. Ricardo F. Pearson, another distinguished Argentine breeder, will judge the pure-bred Short-horns at the International this fall.

What is perhaps still more important is the fact that the management of the Argentine National Live Stock Show have asked for four American judges to place the ribbons on the winners of the leading breeds at their great show in August. The judges selected to do this work are: Short-horns, Prof. C. F. Curtiss; Herefords and Angus, Frank Van Natta; Lincoln Sheep, Robert Miller; draft horses, Robert B. Ogilvie.

SUCCESSFUL FARM MANAGERS.

Wisconsin College of Agriculture Announces Winners in the State Farm Management Contest Covering the Entire Year of 1915—Meeting at Ft. Atkinson, June 5th.

BASED upon their records for 1915, twenty-six farmsteads in twelve counties of Wisconsin on June 5th were awarded the leading places in the state farm management contest. The announcement was made at a meeting held at Fort Atkinson. W. L. and J. W. Baird and wives, Waukesha county, secured first place; S. A. Baird & Son and wives, Waukesha county, won second place and J. H. Williams and wife, Waukesha county, were accorded third place. Farm management contests were held this year under the direction of the Wisconsin College of Agriculture in twenty-one counties. D. H. Otis and R. V. Gunn were in charge of the state work. Practically all those who had part in the contest competed without any thought of winning cash prizes. The first year of the contests was 1912 and the number of farmers entered at that time was 150. There were 365 entered in 1915 and about 800 have promised to enter this work and keep their own records in a farm account book in 1916.

The plan for this work has been explained at a farmers' meeting in each county where the work was undertaken. An opportunity has been given for any farmer who desired to hand in his name and address and take part in the contest. Each farm is given a number and survey date taken, showing the capital and its distribution, receipts and their sources, expenses and their sources, from which was figured the net results of the farm. In addition to this, consideration was given to the maintenance of fertility, the health of the herd, general appearance and the development of the home and home life. When the records are secured a meeting is held in each county, where the results for the year are explained and each contestant given statement as to the outcome of his farm operations for the year. He is shown just how his business stands and it is compared with the average in his county, and also is compared with farms where greater profits were made.

D. H. Otis, in charge of the farm management work, says this county work has been conducted as a demonstration and many farmers have been in it who never thought of entering because there might be a prize connected with the work. The prize feature is very insignificant, even almost negligible, so far as the county work is concerned.

The three farms that stand the highest in the county are selected to represent that county at the state contest, which is held after the local meetings, at which time the summary of the work in the state is presented, the factors making for success in farming emphasized and prizes awarded. Following the state meeting an inspection trip is taken to a few of the counties that have been making the best showing with a view of visiting some of the farms in each county and show on the farm what has been accomplished and how it has been accomplished. This inspection trip has been of special interest and value to those in the work.

The interest in this work is shown by the fact that there were 150 farmers in the movement the first year and 440 farmers the second year. At this point the plan of the work was changed to make it necessary for each farmer coming into the movement to promise to actually keep his records. On this basis there were over 500 who entered the third year, of which 365 kept full records of their inventory and financial accounts for the year. For the ensuing year over 800 farmers have promised in writing that they will keep their accounts in a farm account book and hand them in at the end of the year long enough for the college of agriculture to get the data needed for the farm management demonstration and contest work.

ENTRANCE TO THE S. A. BAIRD & SON FARM, WAUKESHA COUNTY, WIS.

The James Mfg. Co., Ft. Atkinson, Wisconsin, has materially assisted this work by furnishing account books for farmers. This company has donated a total sum of $500 for this purpose.

Prof. D. H. Otis advises Wisconsin farmers that material assistance in these contests is given from bankers throughout the state. Farmers engaged in the contests have been urged to transact their business by checks; in fact, handle the banking business the same as any other business institution would handle it. This system has been a great help in keeping the records of each individual contestant correct.

The state winners in the Wisconsin farm management contest this year are as follows:

1. W. L. Baird and J. W. Baird and wife, Waukesha county.
2. S. A. Baird & Son and wives, Waukesha county.
3. J. H. Williams and wife, Waukesha county.
4. H. P. West and wife, Fond du Lac county.
5. Dallas E. Davis and wife, Walworth county.
6. William Romberg and wife, Winnebago county.
7. N. A. Rasmussen and wife, Winnebago county.
8. S. W. Baird and wife, Fond du Lac county.
9. A. Callentine and wife, Green county.
10. G. F. Clark and wife, Polk county.
11. R. J. Plenty and wife, Barron county.
12. H. Anthus and wife, Jefferson county.
13. Will Preston and wife, Green county.
14. E. A. Jones and wife, La Crosse county.
15. P. L. Lehman and wife, Barron county.
16. W. A. Lawson and wife, Fond du Lac county.
17. C. A. Peterson and wife, Fond du Lac county.
18. G. Hoeth and wife, La Crosse county.
19. H. J. Bassuener and wife, Wood county.
20. S. E. Severson and wife, Barron county.
21. C. Lundberg and wife, Polk county.
22. P. G. Warmington and wife, Racine county.
23. R. Martiny & Son and wife, Sauk county.
24. Frank Squires and wife, Racine county.
25. S. A. B. Ausman and wife, Dunn county.
26. Mrs. G. H. Tenpas, Wood county.

The winners in the county contests are as follows:

Barron county, R. J. Plenty and wife.
Douglas county, Otto Schmidt and wife.
Dunn county, S. A. B. Ausman and wife.
Eau Claire county, H. Chrysler and wife.
Fond du Lac county, H. P. West and wife.
Green county, A. Callentine and wife.
Jefferson county, Ben E. Wolf and wife.
La Crosse county, E. A. Jones and wife.
Langlade county, A. Guenther and wife.
Lincoln county, E. R. Nelson and wife.
Oneida county, Arthur Blumenstein and wife.
Polk county, Chas. Lundberg and wife.
Price county, E. A. Young and wife.
Racine county, P. G. Warmington and wife.
Rock county, R. E. Voltz and wife.
Sauk county, R. Martiny & Son and wife.
Taylor county, Frank Halopka and wife.
Waukesha county, W. L. Baird and J. W. Baird and wife.
Winnebago county, N. A. Rasmussen and wife.
Wood county, H. J. Bassuener and wife.

A fine program was arranged for the state meeting at Ft. Atkinson, June 5th. At the time this article was written and published the program had not yet been given and more will be said concerning it in next week's issue. The arrangements provided for a visit to the Hoard Dairy Farm, James Mfg. Barn Equipment plant and the Creamery Package Mfg. plant. Among the speakers announced were J. A. Craig, Janesville; Ex-Governor W. D. Hoard, Cyril G. Hopkins, of the Illinois College of Agriculture; Dean H. L. Russell, Wisconsin College of Agriculture; Senator C. H. Everett, Miss Elizabeth Kelley, of the home economics department of the University of Wisconsin; D. H. Otis and R. V. Gunn.

The scope of the farm management work is very practical and every effort is made to bring the instruction and advice down to a point where it can easily be understood. It is not so much to encourage "fancy farming" as it is to encourage profitable methods that this contest is conducted each year. In summing up the results of the work equipment is taken into consideration. But the chief aim is to get the farmers of the state to make the most of what they have at hand and to encourage such additional equipment, additional stock and new ideas as will be within reason and will be sure to result in increased profits.

An important feature of the meeting held at Fort Atkinson was the attention paid to the wives who have done so much to make farm management plans succeed the past year. As Miss Elizabeth Kelley expressed it, "The truest sign that we are on the right road to the solution of the problem how to make the farm yield to the utmost, and of making a contented and prosperous farming community, is the number of ladies included in the list of prize winners this year." Miss Kelley urged better homes and better living conditions for the farms of Wisconsin. She said that the farm woman's part in management and profits is sufficiently large to warrant greater attention to the conveniences of the home. In other words, the women are entitled to better homes and better home conveniences because they actually earn them.

A FEW OF THE WINNERS IN THE WISCONSIN FARM MANAGEMENT CONTEST.

1, Riley Martiny, Sauk Co.; 2, Pierce Martiny, Sauk Co.; 3, H. J. Bassuener, Wood Co.; 4, R. E. Voltz, Rock Co.; 5, N. A. Rasmussen, Winnebago Co.; 6, Otto M. Schmidt, Douglas Co.; 7, Charles Lundberg, Polk Co.; 8, P. G. Warmington, Racine Co.

VIEW ON THE JOHN H. WILLIAMS FARM, WAUKESHA COUNTY, WIS.

Clover Seed Profitable Cash Crop

E. J. Delwiche, in Wisconsin Bankers' Bulletin, Says That It Sells For More Per Pound Than Any Other Cash Crop.

OF ALL the cash crops grown in Wisconsin, few, if any, sell for as much per pound as clover seed. The cost of marketing in proportion to value is much less than such crops as potatoes, hay, barley, oats, or wheat. A fifty-bushel load of barley worth 60 cents per bushel, if hauled twelve miles to market, costs about $4 for hauling, or one-ninth of its value. A one and one-half ton load of timothy hay worth $18 ($12 per ton), hauled for the same distance, costs two-ninths of its value for marketing. Out of every $9, $2 go to pay for hauling. A fifty-bushel load of wheat worth $50 ($1 per bushel) requires $1 out of every $12.50 of its value to market. A fifty-bushel load of potatoes worth $20, takes $1 out of every $5 to defray cost of marketing. In contrast to the above, a fifty-bushel load of clover seed worth $500, costs only $1 out of every $125 to get it to market.

Table I. Value of one and one-half tons of barley, clover seed, timothy hay and potatoes, compared with cost of hauling to market.

	Timothy Hay	Potatoes	Barley	Clover seed
Price	$12 per T.	40c per bu.	60c per bu.	
Value of 1½ ton load	$18	$20	$37.50	$500
Cost to haul 12 miles	4	4	4.00	4
Amount left after hauling	14	16	33.50	496
Per cent of value of load required to haul	22 2-10	20	10 6-10	8-10 of 1 per cent

Table II. Value of crops and value of fertility removed compared.

	Timothy Hay	Potatoes	Barley	Clover Seed
Value of 1½ tons	$18.00	$20	$37.50	$500
Fertility value in 1½ tons	7.50	5	9.00	9
Ratio of fertility to value of crops	7½ to 18	5 to 20	9 to 37½	9 to 500

Table II above shows the value of fertility in one and one-half tons of each of timothy hay, clover seed, barley and potatoes, on the basis of the fertilizer constituents. By far the smallest proportion goes with clover seed in comparison to value. In fact, if the amount of nitrogen fixed by the clover crop is considered, the growing of clover seed for market will leave the soil richer instead of poorer in fertility.

Clover grown for seed pays well under Wisconsin conditions when rightly handled. In 1915 at the Superior station, on heavy red clay soil, alsike clover yielded over five bushels per acre.

At Marshfield medium red clover gave a yield of 1¼ tons of cured hay in first crop and 3½ bushels of seed in the second crop. At $10 per bushel, the alsike seed crop was worth $50 per acre. The crop of medium red was worth, at $10 per ton, about $12 for the hay, and at $11 per bushel, $38.50 for the seed, or about $50.50 per acre. Compared with barley, which yielded forty-five bushels per acre and sold for 70 cents per bushel, giving a return of $31.50, the returns for the clover were very much in favor of clover seed as a cash crop. In comparison with timothy yielding two tons per acre and selling for $12 per ton, the returns from the clover crop were fully 100 per cent greater. Few crops pay better net returns than clover when the seed crops yield over two and one-half bushels of seed per acre.

To secure good yields of high-class clover seed only high-testing seed, free from weed seeds, should be sown. Unless clover seed has been carefully recleaned there is always danger of foul weed seeds being found in it. The safe way is to sow seed that has been tested for purity and germination.

In order to get pure stands of clover, plenty of seed should be sown—more than when the crop is intended for hay only. The stand of clover should be thick in order to crowd out annual weeds as much as possible. On heavy soils and loams, about ten pounds of alsike and about twelve pounds of red clover should be sown. On light soils, medium red and mammoth clover should be sown at the rate of about fifteen pounds per acre.

Good success usually follows the sowing of clover with winter grain. The seed is broadcasted either on the last snow, or early in the morning when the wet ground is frozen. As the ground thaws the seed sinks in the soil and is covered. On clay soils it is not usually necessary or desirable to harrow after seeding in rye or winter wheat unless the ground is very dry. In the case of light soil the land should be well harrowed so as to cover the seed properly. If done when the ground is fairly dry the grain will suffer no injury from the harrowing.

When sown with spring grain clover seed should be covered as a rule. In sowing with the grain drill with grass seed attachment we prefer broadcasting in front of the drill or seeder rather than to run the clover in the grain spouts. On heavy soils and loams we seldom harrow after seeding with the grain drill. On the lighter soil types we usually run the smoothing harrow after seeding. This helps to cover the clover seed more uniformly. On the lightest soils we prefer sowing the clover without a nurse crop, in which case seeding is done as soon as the ground is fit to work.

Clover, particularly alsike and mammoth, should be grown for seed only on clean land free from noxious weeds. Because the first crop of medium red clover is cut for hay this variety does not demand as clean land as the other clovers named. The best seed is grown on land in a good rotation, and when sown with small grain following a cultivated crop, such as corn, potatoes or roots.

State Fair Office at West Allis.

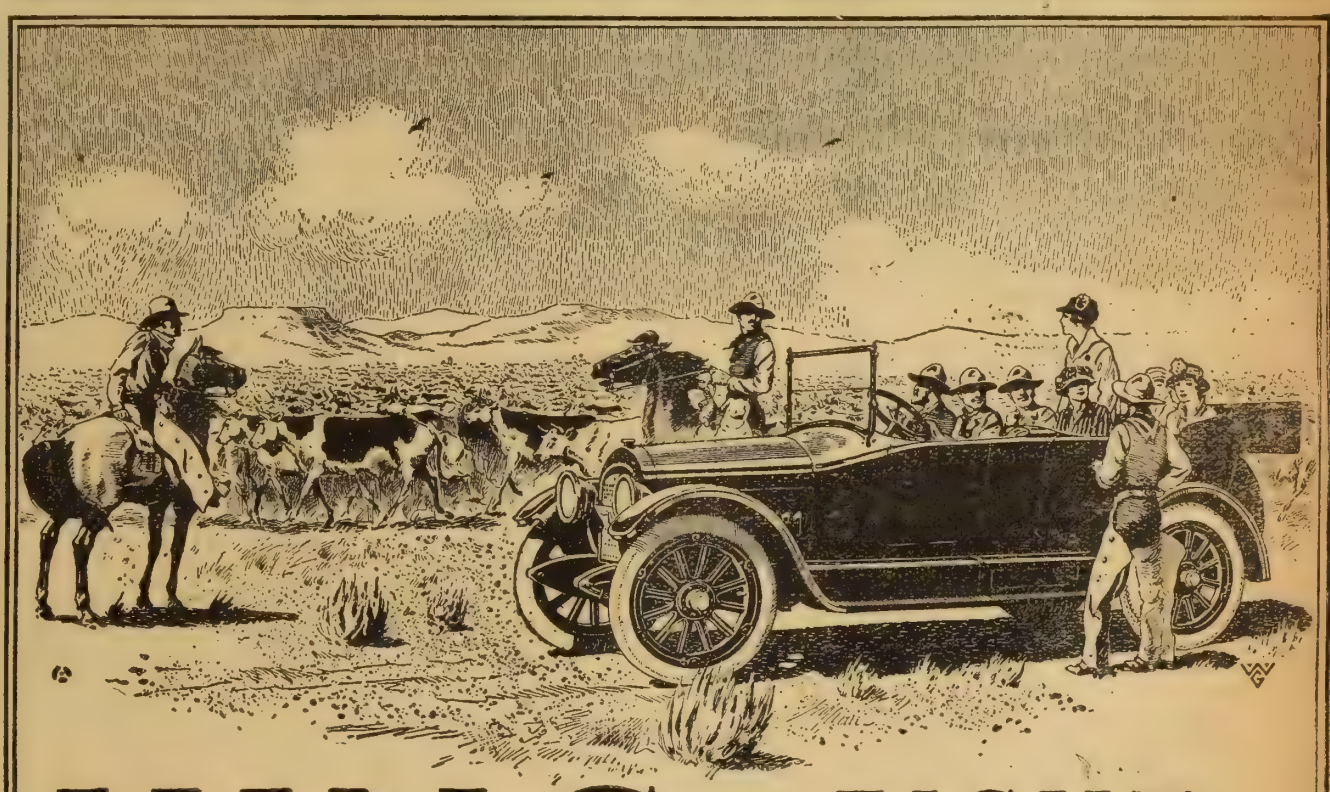
Beginning June 1st, the office of Oliver E. Remey, secretary of the State Fair, will be maintained on the State Fair grounds at West Allis until after this year's big exposition, the dates of which are September 2d to 16th.

The premium book for this year's fair is ready for prospective exhibitors and will be sent out during the present week. Plans for this year's fair were finally mapped out some time ago. From now until the opening date of the fair there will be much building activity on the grounds, and a large force of men is at work getting the grounds in shape for the fair. Within a week a force of painters will begin on exteriors and interiors of buildings.

One of the big departments of this year's fair will be that of the boys and girls' agricultural clubs contests, which was inaugurated last year. It is expected that over 1,000 boys and girls will compete. The cash premiums amount to over $1,500 and the special premiums exceed $6,000. Among those offering special prizes are George W. Browne, Fred Pabst, Fred Underwood, president of the Erie railroad, the Merchants' and Manufacturers' Association of Milwaukee, and the Wisconsin Bankers' Association.

An innovation this year will be a general sale of pure-bred horses and cattle on Friday, September 16th, under direction of Fred Pabst.

It is possible that President Wilson and the republican nominee for president may be special guests at this year's fair. Special invitations will be sent to both. It is understood that both are planning western trips for September.



KING EIGHT CYLINDER

for the WIDEST RANGE *of* SERVICE

Only an EIGHT *can compete with an* EIGHT—
and there are but two Pioneer cars of this class

WHY the eight cylinder motor gives the quickest acceleration, practically eliminates gear-shifting, takes all but the steepest hills on "high", banishes vibration, develops great power and speed at small fuel expense, and adds years to the car's life, is explained in the words—CONSTANT POWER.

The Eight has *four* power impulses per revolution; the Six, *three;* and the Four, *two.* An Eight's power strokes *overlap at the point of their highest efficiency.* No gaps between strokes to be bridged by the momentum of a heavy, power-wasting fly-wheel; no high and low power periods to cause vibration and wear, but a constant, swift flowing stream of energy, composed of strokes received at right angles, instead of vertically, and giving a smoothness of power that relieves mechanism and tires of the "killing" effects of violent power strokes. In accessibility the King's motor surpasses all other engine types.

The King is the *original* popular-priced Eight and has been in operation the world over for more than a year. A demonstration in the new Model E is a most necessary part of your "before buying" experience.

Work of Eau Claire County Breeders.

To the Editor:—We are planning a rousing meeting of the Eau Claire County Holstein Breeders' Association at the George H. Comings farm June 16th. Comings is one of our members who resides four miles southwest of the city of Eau Claire. There will be a scoring contest in the forenoon, a basket dinner at noon, and we expect [illegible]r Humphrey to be with us [illegible] us a talk in the afternoon. [illegible] ill be a business meeting for [illegible]ion of officers and the transother business. Mr. Comings [illegible] everything possible to make the meeting a success. In case of inclement weather the meeting will be held in his commodious barn.

While our association is not large in membership, they are all boosting for the Holstein breed and we have a few breeders whom we believe are as good as any in the state. In an advertising way we issue a quarterly list. Each member who has surplus stock for sale sends in the number, kind and prices to the secretary, who compiles all into a sales list. This list is sent to all members of the association and to others who may be interested in breeding Holstein cattle. We have also advertised in our local and county papers as much as our funds would permit. We have had a number of calls from buyers outside of the state and could sell ten times the cattle we do if we had them to sell. We sold a carload early in the spring to buyers in Minnesota. Recently a buyer from Tennessee was here looking for pure-bred Holsteins. We have also had an inquiry from Iowa wanting to get a line on several carloads of Holstein cattle. The letter says that Wisconsin is the best place they know to get this stock. Eau Claire is forging to the front with Holsteins and we expect to soon become known as a Holstein center.

B. F. Von Berg,
Secretary Eau Claire County Holstein Breeders' Association.

Milking Machine and Testing.

To the Editor:—In April 20th issue of The Wisconsin Farmer I noticed an article by B. H. Diny regarding milking machines. We are milking all our valuable registered Holsteins with double unit machine—and we are more than pleased with the results. I cannot see where a single unit machine would be of enough more advantage to warrant paying the extra cost. When it is desirable to keep the milk of a cow separate she can be milked alone with the double unit machine as quickly as she could be milked with a single unit machine. Testing associations usually use two milkings a month to determine the monthly production, and while it would take nearly double the time to milk them singly for these two milkings per month, don't think the time saved would justify extra cost of single units. In case we wanted to keep an exact record of every cow I should, of course, prefer the single unit machine, but I believe the monthly figures give near enough to a correct performance of a cow for us to know whether she is profitable or not. The machine is easy to clean and the milk is much cleaner than when hand milked. We haven't a cow in the herd but seems to do as well or better with the machine than with hand milking. We have taken a great deal of pleasure the last few years with our automobile, but if we had to dispose of either the car or the milker the auto would have to go. J. Roy Gordan.

Land Clearing With Tractor.

To the Editor:—I have had many years' experience with steam tractors, and am using one for clearing land, sawing lumber and threshing. But there is considerable new road building going on in this new country, so I made a purchase of a new gas tractor for that work. The size of the tractor is twenty-six-forty-four horse power as rated by the company. It is a three-wheel tractor, two drivers and steering wheel. It handles grader to perfection. The weight of tractor is 8,500 pounds and I find it a great advantage in this work compared with horse power. This is not a cheap gas tractor that I have, but I think a man gets his power too light in order to save on the first cost, then later he finds that he has not power enough to do the different kinds of work. My experience is to get a little more power at the first purchase than is actually needed. The gas tractor is a great advantage over steam in road work, and I also think it must be in field work. Where water is good and fuel plentiful and the work is stationary or such as clearing land of stumps, it is cheaper to use a steam tractor. I do not want to advertise by mentioning any name of tractor. There are many good tractors, but there are also some very poor tractors. An inexperienced man intending to purchase a tractor would do well to ask some experienced friend or buy through his home dealer from a reliable manufacturing company. There is a case here where two of my neighbors belong to a farm developing company that made a purchase of a new tractor cheap for cash, but it turned out to be high-priced experience at any cost. I think that the tractor is the future power of farming. J. J. Martin.
Aitkin Co., Minn.

Notes on Tree Growth in Blasted Ground.

To the Editor:—An examination of a good many orchards where the trees are growing in land prepared for them by blasting shows first of all that the trees are anchored more securely. There is far less of that leaning away from the wind that characterizes too many orchards. It not only is unsightly—it often means the breaking down of the trees under their usual loads of fruit. I do not know whether this can be attributed to a deeper root system or to more extensive root systems. Probably it is a combination of both.

I have not observed that in young trees the blasting of the ground results in much thicker growth of trunk, though only a few trees have been measured within my observation to check up this point. But in older trees that are growing in the ground containing hardpan, there is a decided increase in the thickness of the trunks of the trees where the ground has been blasted. Probably the young trees do not yet have vital need of the underlying strata of soil. Probably the trees begin to suffer from the lack of food and lack of water that stunts them and keeps them back only after they have thoroughly worked over the topsoil within reach of the roots. In one instance apple trees over hardpan were lifted by the forces of growth till the roots were exposed above the ground, simply because the hard ground beneath offered no opportunity for root penetration.

There probably are a good many soils that will not be benefited much by blasting, particularly if the blasting is not immediately followed in the right way with heavy-rooted cover crops. But these soils do not often occur in the fruit-growing sections, for there are problems in moisture storage and in the making available of insoluble plant foods which the blasting helps to solve, and these problems are present in clay and loam, and highland and lowland alike.

As for length and thickness and number of the twig growth of trees, I personally can bear witness to the fact that in blasted ground there is every reason to expect superiority. In only a half dozen instances out of a hundred that I have seen have the trees failed to make huskier, bigger tops in blasted ground. It is the rule rather than the exception to see whole blocks of 1,000 to 10,000 trees so planted, show an average growth of eighteen or twenty or twenty-four inches in a season, and alongside of this I reflect that on similar soils I have seen many orchards planted with inferior tillage, that would average only seven or eight or ten inches in twig growth in a season. It is only fair to say that I have seen a few orchards in light sandy soil, and in very heavy soil, where blasting apparently did no good, or even did harm. The sandy soil seemed to lose in moisture-holding capacity by the blasting. The clay seemed to hold water around the trees too long.

There may be some question about the value of blasting an open, fertile soil, but there can be no question at all when there is the least indication of plow sole, or hardpan, or a layer of clay. Blasting is intensive tillage. If you believe in tillage you automatically believe in the use of explosives to secure it, because there is no other method so effective, and none that you can use to get the same results, or to get results of a similar nature for so little money. J. R. Mattern.

Tractor Power For Thresher.

To the Editor.—I own a 20-40 gasoline tractor, but I have not done any farm work up to the present time. Last fall, however, I ran a thresher thirty-two-inch cylinder fifty-four separator with blower and bagger and a forty-inch cylinder clover huller. The tractor handled this machinery fairly well. It used but two gallons of oil a day and twenty-five to thirty gallons of gasoline while threshing. It used fifteen to seventeen gallons of gasoline while hulling clover. The average price paid for oil was 35 cents per gallon and gasoline 12½ cents per gallon. My repair bill was $1. Perhaps by next fall I can give you a better report on what this tractor actually does. I figure on pulling a road grader and on the farm I hope to use the tractor to move or pull out big stones. I have not thought very much about what I would do in the way of plowing, as our farm is small and quite hilly and I have been afraid the engine would mire down going up grade, so I would not go to the expense of buying a gang plow.

Ernst Kowalske.
Shawano Co., Wisconsin.

Prefers Heavy Tractor.

To the Editor:—I just got my tractor this winter and have done some plowing with it this spring and am not through yet. I like it fine so far. Next winter I will be able to tell you more about it and just exactly how I like it and what can be done with it. My tractor pulls four plows anywhere—uphill or down—in the toughest kind of soil, nine inches deep. It weighs 8,000 pounds, but does not pack the soil, as it has such large wheels. I prefer the heavy tractor. In my judgment better have a four-horse team and do just as much as one of the two-plow tractors.

Grant Co., Wis. Fred Kettler.

Business Principles Applied to Farming.

To the Editor:—Before I decided to make farming my life work I spent seven years in the grocery business and there learned that to be a successful business man I must sell a first-class article, display and advertise before the public and attend strictly to business. I have tried to apply these principles to the business of farming. I started to raise pure-bred chickens when I was a small boy at home in the city, and from that on decided that from the standpoint of profit pure-bred stock in all lines was the thing on the farm. My stock is all pure bred except the horses and they are high grades. I try to keep my stock in first-class condition so that they will be attractive to a buyer and a good advertisement to the farm. I am continually doing A. R. O. work and advertise by this means and also through the press and show ring. To secure the largest profit all feeds should be raised on the farm. To this end I have experimented with my soil and find it well adapted to alfalfa; also find it the best hay crop to raise. I also plant the best pure-bred seeds to be procured and follow a four-year crop rotation. I feed all my grain on the farm unless there is an advantage in selling and buying back a feed we can use to better advantage.

I find there is a great deal of pleasure in farming and have never regretted leaving the city for the country and am hoping to raise my boys and girls so that farm life will appeal to them also. S. H. Bird.

S. H. BIRD LIVE STOCK FARM, FOND DU LAC COUNTY.

The Sugar Beet Situation.

To the Editor:—Sugar beet planting has been somewhat retarded by recent rains. The soil undoubtedly now possessed considerable moisture and, all other things remaining equal, a good growth of beets may be expected. However, it did not take long this spring for the soil to get into right condition after the heavy rains. Planting was resumed early.

It is clear that at no other time of the year during the period of growth of beets will deep plowing be as effective as it is in times of excessive moisture. Deep plowing furnishes a storehouse for the water to run into, and thence into the subsoil. A good depth of cultivated soil will keep the winter moisture and take up the spring moisture and in this way equalize the dry and wet periods.

When the soil in the seed bed is deep the temperature is much more uniform and the air and moisture are admitted more freely. The food of the plant becomes more easily available, soil remains loose, weeds are kept down better and, on the whole, the sugar beets will grow better and the crop will be improved both in quality and quantity. Moisture after all is very important in the growth of beets. No matter how much fertility there may be stored in the soil, if it is not in a soluble form the plant will be unable to use it and the plant will not grow as expected. No matter how poor the soil may be in fertility, if it contains a reasonable amount of moisture a fair crop may be expected at least.

It appears that the subject of fertilizing the soil is given more attention now than ever before by our farmers. Proper amount of fertility, coupled with proper cultivation and judicious handling, will to a large degree warrant success in the growth of any farm crop. Every farmer should understand his soil as he would a book. The better knowledge he has of the needs of his soil and the better he can administer to these needs, just so much more will he succeed in raising a better crop, be it a crop of sugar beets or any other crop he may choose to grow. The application of fertility at the right time will add enormously to the permanent value of the field and the farm. J. F. Wotja.
College of Agriculture.

A Mississippi man is experimenting in the hope of developing a neckless species of cattle, a process on which British, French and American governments are said to be keeping close tab.

Western Guernsey Breeders Meet

Southwestern Wisconsin Association Is Host at Annual Summer Meeting at Rundell Bros.' Farm Near Livingston, Grant County.

EVERYTHING seemed just right for the combined meeting and summer picnic of the Western Guernsey Breeders' Association and the Southwestern Guernsey Breeders' Association at Livingston, Grant county, on June 1st. Guernsey breeders are awake to the possibilities. Secretary Olsen, of the southwestern association, informed the writer that there are at least three times as many Guernsey herds in this territory as four years ago, which indicates that this section, so

NORWOOD S. ALICE 31428—A. R. 2096.
A splendid Guernsey type. One of the Rundell herd, Ore Hill Farm.

The weather man presented the breeders with an ideal day, and more than 250 of them, with their wives and families, turned out to make this the most successful gathering of its kind in that section of the state.

This was the first time that the Western Guernsey Breeders' Association has ever met with the breeders in southwestern Wisconsin, and in long noted as Wisconsin's beef and swine section, is moving with the rest of the state into dairying, and that the Guernsey is keeping pace with the other breeds. The southwestern association now has about forty active members, who are using pure-bred sires or own pure-bred females and the officers expect to increase the

MARTILLA OF HADDON 32136—A. R. 2412.

MARTILLA OF LINWOOD 43781.
At two years she produced 11,525.9 pounds milk and 514.31 pounds fat.

choosing the farm of Mr. Dale Rundell a few miles from Livingston a wise selection was made. The meeting was held on the lawn at the Rundell farm and overlooked as picturesque and fertile farm lands as are to be found anywhere in this section. Mr. Rundell also has a splendid herd of about eighty pure-bred Guernseys which were on show for the benefit of the visitors and the success of this membership to a hundred during the coming year, which will be an easy matter if all the Guernsey breeders in the four counties take the interest that should be taken in such an organization. Only a short business session to discuss some pending matters was held by the local association and the program was turned over to the western association, which presented Dr. M. B. Wood, the well-

COW BARN ON ORE HILL FARM NEAR LIVINGSTON, WISCONSIN.

meeting should serve to greatly stimulate interest in the breed in Grant, Iowa, Lafayette and Crawford, the counties in which the members of the Southwestern Guernsey Breeders' Association reside. This section of Wisconsin with its rolling farm lands, dotted by beautiful trees and groves and noted for its wonderful blue grass pastures which have finished many a steer for market, is worth a visit from any person, and the breeders who missed this opportunity to see this country and attend this joint meeting missed a treat, to say the least.

Interest in dairying in this section is rapidly increasing and the known authority of Mankato, Minn., as the principal speaker. Dr. Wood is acquainted personally with most of the best cows of the breed in this country and his talk on the advancement and the fine qualities of the breed was as interesting as it was instructive.

Mr. H. W. Griswold, of West Salem, president, presided at the meeting which followed dinner served by the Ladies' Aid Society. Music found a strong place in the day's festivities and was furnished by the Platteville city band. The attendance of western breeders was not so large as had been anticipated but what was lacking in numbers was made up in enthusiasm with the result that a most enjoyable time was reported by all.

Dr. Wood in his address reviewed at length the advancement of the breed in America, and pointed out that twenty-eight states are now represented by the cows under test for entrance to the advanced registry. To his mind the greatest thing ever done for the breed was when the 1[illegible] Guernsey cow under official supervision established her record of 8[illegible]7 pounds of fat some twelve years ago as that led to renewed interest with the result that through better care and proper feeding many high records have been made since. On January 1,

(Concluded on page 12.)

Guernsey Meeting at Burton Farm

Waukesha County Breeders Hold Annual Session This Year in Southwest Part of the County---Meeting a Big Success.

THE annual summer meeting and picnic of the Waukesha County Guernsey Breeders' Association was held Friday, June 2d, at the Roy Burton farm, a few miles from Eagle. The picnic was in every way up to the standard of this organization, and more than 400 breeders with their families enjoyed the day's festivities. This was the first meeting of the association in the Mr. Burton as a meeting place the association exercised good judgment, for it is in this part of the county that the Guernsey industry is the weakest, if it can be truthfully said that it is at all weak in Waukesha county. The splendid pure-bred herd of Mr. Burton was on show for the occasion as well as the herd of Mr. H. N. Longley, who lives near by. Mr. Longley joined with Mr. Burton as

IMP. DAIRYMAID OF ST. CROIX 46679.
A. R. 391.44 pounds of fat at two years old. One of the Roy Burton Guernsey herd of Waukesha county, Wisconsin.

southwestern corner of the county, and the success which attended the gathering speaks well for the growing interest in Guernseys in that section of what the Waukesha county breeders have elected to term the "Guernsey capital of America."

Lowering skies threatened rain at most any moment during the day, but this did not keep the breeders away. By actual count there were seventy-two automobiles parked in the road that passes Eldwood farm in addition to nineteen buggies and one hay rack

VIENETTE 38249.
Now on test and has made 345.30 pounds fat in 293 days as a three year old.

which brought a big party. However, the weather man was kind and held off the rain although on the night before the tents erected for dining and speaking purposes were blown down, discommoding the women who prepared the bountiful dinner served to almost 400 persons at noon. This

IMP. VIOLET OF ST. CROIX 47088.
A. R. 465.81 pounds fat at two years old.

did not discourage the ladies, and everything was carried out per schedule on the open lawn instead of under canvass as had been planned.

In the selection of Eldwood farm of host on this occasion, and too much credit cannot be given Mrs. Burton and Mrs. Longley for their part in making the gathering a success.

The forenoon was devoted to a judging contest among the boys of the county. This developed unusual interest and forty-six boys were on hand when Prof. G. C. Humphrey lined up the cows and started the contest. Last year the Waukesha breeders held an essay contest; this year it was a judging contest and next year it will be something else. They never seem

IMP. LIZETTE OF ST. CROIX 46680.
Now on test and has made 334.39 pounds fat in 274 days as a senior two year old.

to run out of ideas for keeping interest at white heat, and especially in interesting the coming generation in the Guernsey cow. Professor Humphrey gave the boys a talk on the characteristics of the breed. He explained the methods of judging and the particular points to bear in mind and passed out score cards to each boy. Twenty minutes was given to pick the best cow in each of three classes. Considerable credit for the success of the contest is due Superintendent of Schools Rice, who had co-operated with the association in enlisting the boys in the contest, and Professor Humphrey praised very highly the good judgment shown by the boys.

First prize of $10 offered by the Farmers' Savings Bank and the Farmers' Mill at Palmyra, was awarded to Delbert Kingston who succeeded in placing ten out of twelve cows correctly. Earl Higgins was given second honors; H. J. Potter, third; L. Agathan fourth and Ralph Uglow fifth. Each boy received a prize of 50 cents whether he was a winner or not.

Mr. Gavin McKerrow, president, pre-

(Concluded on page 22.)

Warmer Weather Boosts Crops.

Present Conditions May Overcome Bad Effects of Late Spring ---Corn Planting Nearly Finished---Pastures Are Very Good.

WISCONSIN.

Adams County.—Meadows winterkilled badly. Wild pastures are good. Oats and winter rye were damaged by high winds. Corn planting is nearly completed. The season is about two weeks later than usual. Live stock look good. Only a small amount of fruit is raised here, but it looks fine.—W. B. Barnes.

Burnette County.—Until the last week rain and cold weather have in general, retarded the growth of everything except grass and pastures. Corn, which was planted in water-soaked, cold ground, stands a poor show of germinating properly. Sprouts of small corn are peeping through the ground and if the weather warms up bumper crops may be predicted. Winter wheat and rye are backward, but otherwise are healthy and look good. Pastures are in first-class condition. Some gardens are planted, but look bad. Fruit buds have not opened. Live stock are looking good, considering the serious winter. Many colts are dying when four or five days old from intestinal trouble. —E. H. Johnson.

Chippewa County.—Grain crops look good. Rain is plentiful. Meadows and pastures are growing fine. Hay is heavy. It is a little too wet for corn and some of it has not been planted. Fruit trees look healthly, but the weather has been cold for them. Live stock are doing well.—Gustave E. Rheingans.

Clark County.—Oats have a good color, but are small on account of cold, wet weather. Winter wheat, rye and clover badly winterkilled. Some corn has been planted, but it is not up yet. Much planting will be done as soon as the ground is dry enough. Pastures are getting good, and cows are giving a good flow of milk, except in cases where not wintered well.—Fred Ackerman.

Door County.—Spring is exceptionally late. Some who sold hay are now buying it. A few warm days will change this. Frequent rains have delayed seeding. Some small grain is just up; prospects for it are very good; it stools better in cool weather.—John Aznoe.

Fond du Lac County.—Weather is very favorable for crops. Grass is growing splendidly. Corn planting is progressing nicely; most of it has been planted. Small grain is doing well. Fruit prospects are good.—A. L. Williams.

Grant County.—Oats look fine; winter wheat winterkilled badly. Little barley, rye or spring wheat was sown. Meadows and pastures are fine. Alfalfa winterkilled some, but only a small per cent of the hay ground was sown to alfalfa. The last week has been warm and corn which has been planted is growing fine. Nearly 20 per cent of the corn is to be planted yet.—P. R. Stoffel.

Iowa County.—Hay crops, especially clover, are fine. Fall wheat and rye are fair, other small grains are good. Corn is nearly all planted and is coming up well. Some farmers who trusted seed picked last fall will have to replant. Gardens are fine and fruit prospects are fair.—Will Dowling.

Jackson County.—Weather has turned warm and everything is looking fine. Most of the corn is planted, but farmers complain that the early planting is not coming up as it should. More corn will be put in than usual because of the clover killing out. Young pigs are scarce and below average. Cows and fat cattle are scarce.—C. R. Ristow.

Kewaunee County.—Seeding is late; about 90 per cent has been done. The acreage of cereals is about the same as last year. Crops are backward and have suffered from heavy rains. Many farmers have sown from two to three acre patches of alfalfa. Pastures are good, and cows have been turned onto them. Timothy looks good, but clover badly winterkilled, especially in the western part of the county. One-half of the potatoes have been planted. Live stock looks fine, but there are a few cases of black leg and farmers are vaccinating their stock against it. Apples and cherries promise full crops. More hogs are on feed this year than last.—W. C. Katel.

La Crosse County.—Season is backward, but pastures are improving and oats and barley look good. More corn than usual is being planted because of the winterkilling of wheat and clover. Corn is not doing well on account of late frosts and late rains; some replanting is necessary. Live stock are doing well.—R. R. French.

Lafayette County.—Weather has been warmer, with a fine rain on May 29th. Corn planting is nearly finished, but some replanting is necessary on account of poor seed and cutworms. It is reported that a small white worm is eating the corn germ in some fields. Small grains and meadows have made a big growth during the last week and now look good. Pastures are good, and cows are producing well. The pig crop in this locality is about an average. Young colts are up to normal. Late potato planting is in progress this week. Fruit will be light crop from present indications. Several silos are being built.—Lloyd Scott.

Marinette County.—Frost was slow in coming out of the ground, which, together with excessive rainfall, has delayed spring seeding very much. The early seedings of oats and spring wheat are looking fine, so is the grass seeding. Pastures and meadows are in excellent condition and warm weather during the past week has done much to improve them. About 60 per cent of the corn is planted. Orchards promise bumper crops of apples, plums and cherries. Farmers are purchasing grade dairy cattle through the county advancement association. Young pigs are scarce, as many sows failed to breed.—W. B. Sanderson.

Monroe County.—Oats are looking good. Hay crop will be short as most of the clover winterkilled. The early planting of corn is being replanted; that planted after the ground was warm enough is coming up. Low pastures are furnishing fine feed.—D. F. Jones.

Oconto County.—Condition of grain at present is poor on account of wet weather; about half the seeding is done. Little corn or potato planting has been done. A large acreage of certified potatoes will be planted in Oconto county this year. In general, meadows and pastures are very good. Live stock are generally healthy; there is one case of blackleg and a few cases of tuberculosis in this region. The fruit crop promises to be good if frost does not come. The following prices for farm produce are current: Hay, $16; oats, 50 cents; certified seed potatoes, $1 a bushel; cows, $40 to $75; horses, $100 to $200.—Wm. J. Hinker.

Oneida County.—Warm rains have greatly helped the hay and small grain crops. Clover and alfalfa are about seven inches high. Practically all small grains are well out of the ground. Most of the corn and potatoes are planted, and if warm weather continues crops will be normal. About 80 per cent of the young pigs are saved.—A. Blumenstein.

Outagamie County.—Because of the late spring and frequent rains, oats seeding has just been finished recently. The early sowing is up and making rapid growth. Plowing for corn is under way, but very little planting has been done. Potato planting will follow corn planting; potatoes are scarce, bringing $1 and $1.25 a bushel. Pastures are just getting a good start. Old meadows are bare in spots, but the new seeding came through the winter in fine shape. Old hay is all gone. Pigs are scarce and high-priced, because brood sows were sold off on account of scarcity of corn. Few sheep are left on the farms. Work horses are in good demand. Many new silos are being built.—Peter Tubbs.

Ozaukee County.—Warm weather has set in and pastures, small grain and the new seeding of clover are making a good showing. A great deal of alfalfa was killed by a sheet of ice and sleet in March and the land has been plowed and will be put in corn and potatoes. Red clover did not kill as badly as alfalfa. Corn and potato planting is nearly finished. Plum and cherry trees did not blossom freely; apple prospects are good. Many farmers spray their fruit trees. The Ozaukee County Cooperative Cow-Testing Association was started on April 12th and its members are well pleased with the results. Many farmers are purchasing pure-bred sires to head their herds.—C. F. Dineen.

Pierce County.—Spring is very late. Oats and barley look good; rye winterkilled badly, some fields have been sown to barley. Not all corn is planted because of wet weather. Some fields are too wet to plow. Clover, pastures and meadows are doing fine. Large acreages of potatoes and cabbages are being planted. Prospects are good for a bumper crop of apples. Stock came through the winter in rather poor shape.—T. B. Eaton.

Taylor County.—Weather is getting warmer and crop prospects are better. Heavy rains have made crops late. Oats are coming on fine. Meadows look good, but hay will be late. Pastures are in fine shape. Most of the potatoes are planted. Strawberry crop is excellent. Lamb crop is fairly good; wool sells for from 30 to 35 cents. Roads are in poor shape at present, and farmers will be busy fixing them up.—E. H. Dehne.

Trempealeau County.—Nearly all wheat winterkilled. Some fields of rye are fair, but it winterkilled badly also. Oats, barley and timothy hay are growing well. Pastures are a little backward on account of cold weather. Early planted corn has suffered, due primarily to poor seed and cold weather. The later planting of corn is growing better where the seed is good. Clover winterkilled. Fruit, such as apples, may make a fair crop; strawberries were killed out. Farmers here are most interested in dairying, but scarcity of labor makes beef raising more convenient in some cases. Sheep and swine are well represented this year.—C. G. K.

Vernon County.—Corn planting is much later than normal; about one-half of the crop is in. Small grain is doing fine. Last year's planting of clover is growing well, but old clover killed out. Tobacco is doing well in the beds. Alfalfa suffered during the winter. Until last week pastures were a little slow. Small berry crops look well. Apple trees are in full bloom and no frosts have hurt them so far.—Chas. E. Butters.

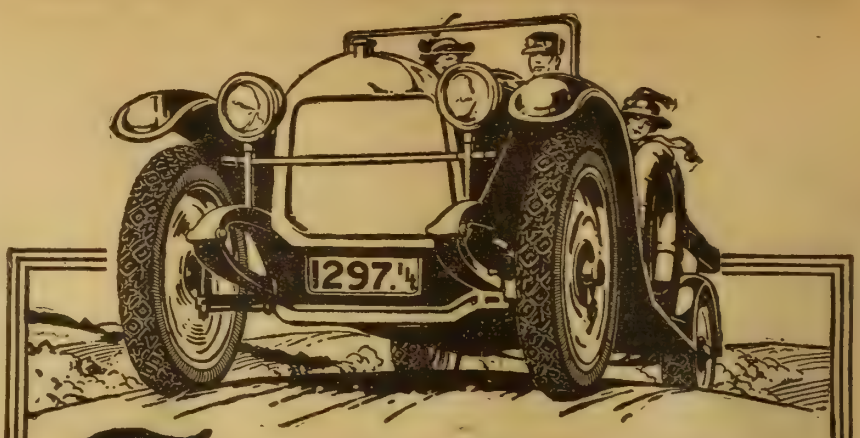
Walworth County.—Small grain, pastures and meadows are looking fine. The last week was very favorable for growth. Corn planting is more than two-thirds done and some shoots are coming up; the stand is good. Milk production is above the average this season. Pig crop is an average; hogs will not be marketed very early, as feed will have to be bought for them during the summer. Old corn is gone and feed will probably be high. There is a slight tendency for sheep raising to increase here, although dairying is the principal industry.—Arthur Emig.

Washburn County.—Pastures, meadows and small grains are good. The new seeding of clover is growing well. Nearly all the corn is planted. Oats acreage is slightly increased and corn acreage slightly decreased. Potatoes are being planted. Lamb crop is good. Weather is warmer, with a little too much rain.—John W. McCulloch.

MINNESOTA.

Dodge County.—Small grains are looking fine, except in low places where there was too much rain. Considerable corn planting is yet to be done; the first planting is coming up. The corn acreage is less than last year. Some potatoes have been planted. Meadows and pastures are looking good. Live stock are doing well.—Frank Houston.

Mower County.—Small grain is looking good. There has been too much rain for corn. Pastures and meadows are good. Fruit prospects are promising. Stock cattle are scarce. Hogs are also scarce because farmers sold most of them off on account of the scarcity of corn.—Walter H. Martin.



Firestone

Non-Skid Tires

—Built for the man who must make town for market, bank or train.

—Built for the man who must have tires that will give him service, regardless of weather or road.

—Built by the men who are specialists in making and selling tires—men who do nothing else in America's Largest Exclusive Tire Plant.

The sturdy Firestone qualities of sure grip, long life, great resiliency, and freedom from mishaps have gained the patronage of motorists everywhere.

Red Side Wall—Black Tread

—the trade-mark of Firestone Tires and the sign of exclusive values—not only in looks but in toughness of the tread.

Firestone Accessories are easy to apply and certain to work. Your dealer has them.

Free Offer Send the name of your dealer and make of your tires and get one of our Cementless Tube Patches. Also copy of our book, "Mileage Talks," No. 17

Rural Carriers Meet at Eau Claire

Thirteenth Annual Session One of Great Profit to Our Friends Who Carry the Mail Over Wisconsin's Country Roads.

THE thirteenth annual meeting of the rural letter carriers of Wisconsin, faithful servitors of the public, which was held on May 30th and 31st at Eau Claire, turned out to be one of the most interesting meetings ever held by the association, and those carriers who were so unfortunate as not to attend missed a rare treat. Although the convention, in numbers, was not up to that of last year in Madison when the association celebrated the twelfth anniversary by meeting in the city which gave it birth, it was even more enthusiastic and a great year was predicted for the organization. The weather was ideal and about 200 carriers and visitors registered, of which about seventy-five were accredited delegates from county organizations.

Too much cannot be said in favor of the state organization which is doing a splendid work to advance the interest of the rural carriers, particularly in Wisconsin, and also in a national way through its support of national measures that are beneficial. The association now has 711 paid-up members, and it is hoped in another year to include every carrier in the membership rolls. During the past year several members have dropped out for one reason or another but plans were laid to get all of these to renew and add additional new members.

The organization of the rural delivery service has done as much for civilization as any other one thing, as farm life has been made all the more pleasant with the delivery of mail every day, rain or shine, hot or cold, by the faithful carriers who often do not get from the public the great credit they deserve. The carrier is the link between the city and the country folk, and it is such organizations as the Wisconsin Rural Letter Carriers' Association that are doing a splendid work in improving the service in all respects, for it usually turns out that what is good for the carrier is good for the public. On every hand expressions of enjoyment were heard during the convention, and in addition to the business sessions there was plenty of jollity and amusement for all. The convention is held on Memorial Day each year, enabling the carriers to leave their cares at home and get together for the benefit of the service, and for the benefit of themselves.

The convention opened on Tuesday morning with an invocation by Rev. F. L. Andrews and an address by Mayor J. E. Barron, of Eau Claire, who extended to the carriers the keys to the city and told them to enjoy themselves to the utmost. Mayor Barron said that he had never welcomed a gathering with more pleasure than the carriers' convention, and these sentiments were further voiced by Postmaster Charles F. West, of Eau Claire, in his greeting to the visitors. R. F. Kaiser, of the Civic and Commerce Association, extended a welcome on behalf of the business men of Eau Claire, which was followed by the introduction of W. G. Arle, of Sturgeon Bay, president, by B. Herrick. Mr. Arle has just finished his fourth year as president, and presided at all the sessions in his usual efficient manner while at his left E. S. Demarest, of Waupaca, attended faithfully to his duties as secretary. For eleven years Mr. Demarest has been secretary, and has seen the organization grow from one of thirty members to one of more than 700, and a carriers' convention without his presence would not seem like a real convention. C. L. Lind, of the U. N. A. P. O. C., spoke on matters concerning the service which address with the president's response to his introduction and several musical selections closed the forenoon program. On the first afternoon, as has been the custom for years, the carriers marched with the veterans in the annual Memorial Day parade and accompanied the Grand Army boys to the hall in which the services were held. This was followed by a banquet in the evening at the Rod and Gun Club. This banquet was served by the wives of the Eau Claire county carriers. Formality was thrown to the winds and everyone enjoyed immensely the splendid dinner provided and the short informal talks that followed, interspersed with music. One of the commendable features of the carriers' conventions is the musical programs which tend to provide the right kind of enthusiasm and put everyone at ease. Too much cannot be said in praise of the Eau Claire county carriers who were hosts on this occasion, as no stone was left unturned to make the convention successful from every standpoint.

The second day was devoted entirely to the business sessions which were well attended. President Arle presided, and after an address by the writer praising the work of the association and wishing for it a greater success the coming year Mr. Arle took occasion to announce the friendship of the carriers to The Wisconsin Farmer and their appreciation of the splendid editorials by Mr. James M. Pierce, publisher, on matters of the most vital importance to them. The Wisconsin Farmer has always regarded the rural carriers as one of the important factors in farm life, and Mr. Arle said that the carriers appreciated to the fullest Mr. Pierce's support, in his editorial columns and in other ways, in advancing those measures of interest to the carriers. "In Mr. Pierce the carriers have a strong friend and admirer," he said.

Mr. Arle, in his annual report, said that after four years as president he could no longer serve, and asked to be relieved of the guiding reins during the coming year. He also invited the association to meet in 1917 at Sturgeon Bay in addition to discussing matters of interest to the association, such as plans for getting new members; increasing finances, etc. A. L. Larson, of Sheridan, vice president,

(Concluded on page 22.)

The Use Of Hercules Dynamite On Farm, Orchard and Ranch

See the State Land Clearing Demonstration

YOU have undoubtedly heard of the demonstration in land clearing which the State Special Excursion is giving. These demonstrations will be of great value to every Wisconsin farmer who attends them.

You owe it to yourself, your family, and your farm, to be present at the demonstration given near you. Find out when and where it will take place.

You will receive visual proof of the remarkable results which may be achieved by the use of dynamite in felling trees, stump removing, rock blasting and drainage work. You will realize why dynamite saves time, labor and money in work of this kind.

In addition to seeing the demonstration write us for a copy of "Progressive Cultivation". It will be sent free on request. It tells in detail how to use Hercules Dynamite to the best advantage on your land. Write for your copy today. Please use the coupon below.

HERCULES POWDER CO.
3 West 10th St.
Wilmington, Del.

Please send me a free copy of your book, "Progressive Cultivation." I am interested in Dynamite for

_____

_____

_____

Tree Planting

The two illustrations above show fully the value of using dynamite in planting trees. These drawings are exact copies of photographs of two trees planted at the same time and in the same orchard. The one on the left was planted in a spaded hole, the other in a dynamited hole. The growth and development of the latter is almost twice that of the former. This difference always shows when Hercules Dynamite is used.

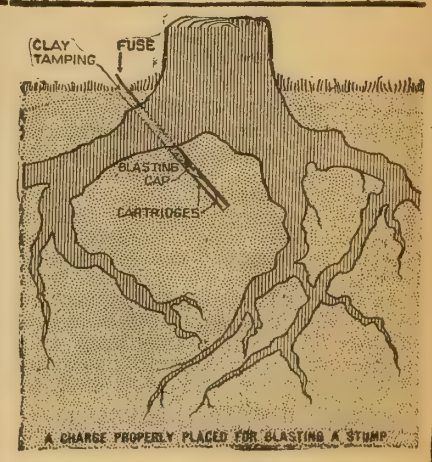
The ground is thoroughly broken up. The roots have a chance to spread in a natural manner. Also the work of planting is done more quickly and at less expense. In "Progressive Cultivation" are given interesting details with regard to the use of Hercules Dynamite for tree planting. Are you familiar with the method and its results?

Stump Blasting

Every man who has had experience in pulling stumps *without* the aid of dynamite knows only too well the amount of labor and time involved.

When you have land to clear, use Hercules Dynamite. You not only save labor and time—and, as a result, money—but you also thoroughly break up the subsoil and very effectively prepare the land for cultivation.

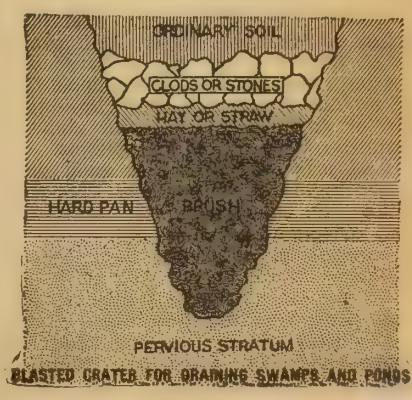
The diagram given shows the best way of removing one kind of stump, that with matted, spreading roots. When dynamiting a stump with a tap root the charge should be placed differently to get the best results. "Progressive Cultivation" tells just how stumps of various kinds can be most readily removed.



Drainage Work

The draining of swamps and ponds can be done better with Hercules Dynamite than by any other means. There are several ways in which dynamite may be used. We have room to illustrate only one of them — the crater method. By this method the hard soil forming the bed of the swamp is broken up and the water drains off through the loose stratum below.

In "Progressive Cultivation" full details with regard to drainage work with dynamite are given.



In And Around Wisconsin.

Walworth county, by vote of the county board recently, will go under the state and county road system in 1918.

The cranberry crop of Wisconsin is developing in good shape, according to C. G. Malde, of the Grand Rapids station. Injury from frosts and insects has been slight. Wisconsin will raise about 45,000 barrels of cranberries this year, according to Mr. Malde's estimate.

The Washington County Holstein-Friesian Breeders' Association is expecting to hold a county picnic Tuesday, June 20th, at Cedar Lawn Farms near the town of West Bend. This is a great Holstein center and the committee is endeavoring to make this meeting the best ever held in the county. The Cedar Lawn Farms will provide lunch.

Dean H. L. Russell, of the college of agriculture, will speak on "The Money Side of the Tuberculosis Question" at joint meetings of the Western Wisconsin Holstein Breeders' Association, Monroe County Guernsey Breeders' Association and Monroe County Jersey Breeders' Association, to be held at the Indian School at Tomah, June 17th.

The Portage-Prairie Holstein-Friesian Association will hold its annual picnic this year June 23d. The speakers will be John B. Irwin, of Minnesota, and E. L. Alderhold, of Neenah. H. S. Hoard, of The Wisconsin Farmer, will give a talk on publicity. Mr. J. W. Hutchinson, of Randolph, advises The Wisconsin Farmer by letter that a splendid summer meeting is anticipated.

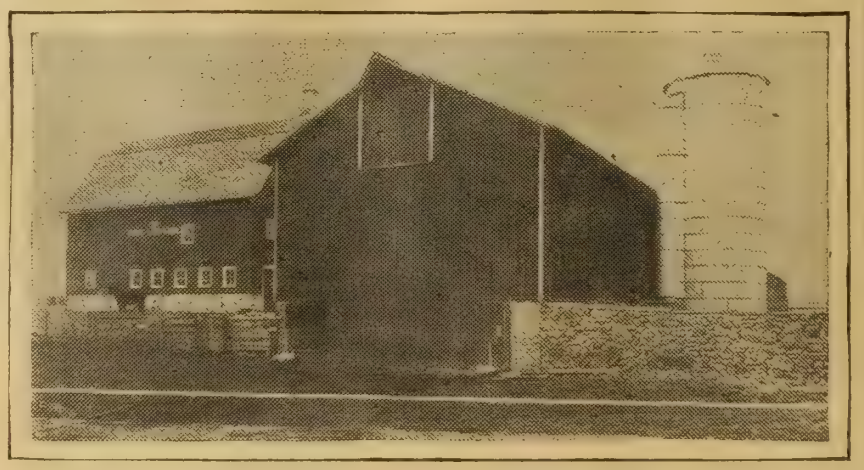
Facts brought out by the farm management contest in Eau Claire county, Wisconsin, are of interest. The following table was made up from reports from forty-nine farms:

Receipts per cow	Labor Income	No. of farms	Per cent of minus incomes
Less than $35	$ 80	10	70
$35 to $44	180	21	30
$45 and over	232	18	20

From this table it will be observed that farms on which the receipts per cow are $45 or more have an average labor income of $232, while those which have receipts per cow below $35 have an average labor income of $80 and those whose receipts per cow fall between $35 and $45 have an average labor income of $180. From these reports it is plainly evident that there is a difference of $312 in the net earnings of farmers who keep cows which return less than $35, and that class of farmers who keep cows returning $45 and over.

The boys' road dragging contest is on in Walworth county. Any township may enter, providing the chairman of the supervisors is willing to co-operate and employ the boys for dragging. Any boy may enter in any of the participating townships. Each contestant makes regular reports to the chairman of supervisors in his township. The chairman makes agreement as to payment for the work, either per mile or per hour, and assigns the stretch of road to the contestant. It is the rule that no stretch of road shall exceed two miles in length. The county Y. M. C. A. office at Delavan is assisting in keeping the records. It is provided that roads shall be dragged after each rain. The first prize in each township, provided that three or more contestants enter, will be a free trip and expenses to Madison next February to attend the university exercises known as Farmers' Week. All prizes are to be given on the basis of the best improved stretch of roads at the end of the contest season. The chairman of supervisors and the contest committee are to be the judges. A general prize is offered to each contestant finishing the contest. This will include an automobile trip and banquet, arrangements for which are to be announced later in the season. We know of no better way of interesting the boys in proper care of the roads than the road dragging contest. In the first place, the boy receives compensation for his work. This is as it should be. There is the added stimulus of the prospect of winning some of the prizes. Furthermore, there is a friendly rivalry established which will certainly result in better roads in Walworth county. The Y. M. C. A. at Delavan, the business men of that city and the newspapers are doing a great deal to further this work and are entitled to considerable credit.

Mr. A. L. Stone, state seed inspector, has resumed the work of cooperative weed control experiments on a number of Wisconsin farms in an effort to eradicate quack grass, Canada thistle, buckhorn, wild mustard and other weeds. The experimental farms are located at Eden, Fond du Lac county; Milwaukee; Deerfield, Dane county; Fountain City, Buffalo county; Three Lakes, Heaford Junction and Minocqua, Oneida county; Stiles, Oconto county; Appleton, Outagamie county, and Grantsburg, Burnett county.



A substantial and dependable silo, made of metal, on the H. S. Wentworth farm, near Edgerton, Wis. This silo is twelve feet four inches by thirty-three feet high.

Last week we made brief mention of the alfalfa tour of Rock county. We are advised by Mr. L. F. Graber, who has furnished The Wisconsin Farmer with the accompanying photographs, that about eighty farmers compose the party. Mr. L. A. Markham, of the Rock county Y. M. C. A., and Mr. Peter V. Kuhn, of the Janesville Commercial Club, directed the arrangements for the trip Some farmers supplied their own automobiles, but a large portion of them were supplied by the business men of Janesville. Mr. Graber is secretary of the Wisconsin Alfalfa Order, and he gave a number of short talks and demonstrations on various farms visited. Stops were made at the Wm. Hanke farm and at the J. R. Haddon farm. At the first-named place the soil is rich in limestone. At the Haddon farm alfalfa has been successfully grown in clay. The party also visited the Forrest Kemmerer farm, the E. L. Benedict farm and the W. J. Dougan farm. Mr. Benedict and Mr. Dougan have both been successful in growing alfalfa on level stretches. Many farmers were unable to make the entire trip, but visited the demonstrations and heard the lecture on the farm nearest them. The accompanying illustrations will give some idea of the interest which was taken in the affair.

ROCK COUNTY FARMERS IN ALFALFA FIELD.

L. F. GRABER, OF ALFALA ORDER, TALKS TO ROCK COUNTY FARMERS.

The following program has been arranged for the annual Guernsey breeders' picnic, to be held at the high school grounds, West Salem, Wisconsin, Saturday, June 10th:

Music, West Salem Band.
"The Future of Our Association," Pres. Sherman L. Dudley.
"Better Dairying," Prof. G. C. Humphrey.
Impromptu talks from breeder visitors.
Music, Band.
Address. "Citizenship," John F. Doherty.
Music, Band.
Judging contest for boys and men.
You are cordially invited to attend. Come!

The Wisconsin Experiment Station does not advise Wisconsin farmers to go very heavily into the broom corn crop. While the price may look promising, the statement which has just been sent out says that a large amount of labor is required to handle the straw and put it into proper condition for the buyer. This takes a great portion out of the selling price and reduces the profit very considerably. Furthermore, experiments at the Wisconsin station lead to the statement that most of the work on the broom corn crop comes at a very inopportune time for the average Wisconsin farmer. This crop requires particular attention at the time when corn needs to be harvested. The experiment station has never advocated broom corn for Wisconsin. Reports have called attention to the fact that the plant does best in a warm, sunny climate where there is a considerable amount of moisture during the early part of the growing season. Dry weather, however, must prevail at harvest time, in order that the brush may be dried rapidly and retain its fresh green color. Inasmuch as rains are not infrequent in Wisconsin during late summer and early fall, it is often impossible to produce a crop of good quality.

Western Guernsey Breeders Meet.

(Continued from page 9.)

1905, he said there were only 236 cows in the advanced registry, while on April 15, 1916, there were 4,719. The first champion, he said, was developed in Wisconsin, and the last champion was produced in Wisconsin, so that this state, he feels, has contributed its share to the success of the breed.

The owner of pure breds, Dr. Wood considers, has three objects. First, it is to produce; second to reproduce and third to sell. Without reproduction sale is impossible. For that reason he pleads for careful breeding for conformation as well as production. Investigation of the A. R. records he says bears out his contention that many families in the breed only await development and he advocates very strongly the development of families. The records show few bulls, he says, with more than a couple of A. R. cows to their credit which to him is proof that the families represented by these bulls should be further developed.

Dr. Wood is a strong believer in the Guernsey and during his address took occasion to read the report of the Winnebago County Cow-Testing Association which he had clipped from a recent issue of The Wisconsin Farmer. This report showed several grade Guernseys which had tested over 6 per cent and one in particular that tested more than 8 per cent and gave more than 1,100 pounds of milk during the month. Such work as this he said shows the qualities in the Guernsey and that the possibilities of the breed are unlimited.

Mr. C. H. Hurlbut, representing the breed paper, the Guernsey Breeders' Journal, announced the new policy agreed upon at the last meeting of the cattle club which is to the effect that after July 1st the Journal will be published twice a month instead of once a month, and will contain the A. R. records, etc. Mr. Chris Schroeder explained the plan adopted by the recent state convention of the Holstein breeders to issue a directory. The Guernsey breeders are planning to do likewise.

A judging contest concludes the day's festivities and proved quite interesting. No elections were held at this time as officers are chosen at the winter meetings. The officers of the Southwestern Association, which was host on the occasion are: G. C. Cramer, of Livingston, president; Fred Stanville, of Lancaster, vice president; A. O. Olsen, of Livingston, secretary-treasurer; Franklin Rundell, of Livingston, and John McLeod, of Platteville, members of the executive committee.

Farmers' Picnic at Tomah.

The Wisconsin Farmer has received a poster giving complete announcement of the farmers' picnic at Tomah, June 17th. This is a joint meeting of the Western Wisconsin Holstein-Friesian Breeders' Association, Monroe County Guernsey Breeders' Association and Monroe County Jersey Breeders' Association. Governor Philipp, Dean H. L. Russell, and Secretary C. P. Norgord, of the Wisconsin Department of Agriculture, will be speakers. It is expected this will be the biggest farm meeting ever held in the section of the state where it has been located. The picnic will be held on the Government Indian School campus. The Tomah military band has been engaged for the day.

Ask your neighbor to subscribe for The Wisconsin Farmer.

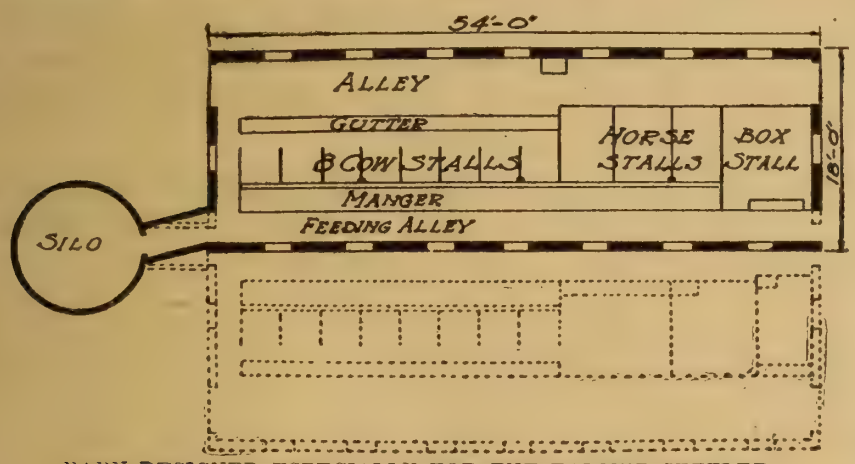
UPPER WISCONSIN

Have Good Potato Seed.

Mr. R. L. Cuff, county agricultural representative of Barron county, reports that a number of farmers in the northern part of his county have good potato seed. While not a very large per cent of this is certified stock, it has been examined by Mr. Cuff and found to be quite generally good. A good many farmers of this section will use certified seed this year. In order to stimulate interest in better potatoes Father Legulian, of Barron county, is offering special prizes for boys and girls. He is furnishing seed potatoes enough to plant one acre for the boys, and supplying the girls with seed corn and strawberry plants. According to all reports in the Barron county papers, this is keeping Father Legulian busy. He is reported, however, to be enjoying the work immensely and is no doubt doing a great deal of good.

Barn Designed For Wisconsin Settlers.

Upper Wisconsin settlers who are starting out with a few head of cows and just enough horses to do the work on their slashing will be interested in the pioneer barn especially designed for such conditions by the agricultural engineering department of the Wisconsin College of Agriculture. It is called a pioneer barn and is planned to meet the needs especially of the settler who expects to eventually



BARN DESIGNED ESPECIALLY FOR THE FARMER-SETTLER.

increase the size of his herd and in turn enlarge his barn to care for the additional stock.

The barn plan shown in the accompanying illustration is eighteen feet wide and fifty-four feet long and has been so planned that the barn can be added to easily and eventually be thirty-six feet wide and hold just double the present capacity of eight cows, three single horse stalls, one double stall and one box stall. The silo is so located that it will be accessible to the completed barn when the addition eventually contemplated is added. It will then be at the end of the main feeding alley which in such case will run through the center, the cows facing in. Particular attention has been paid to window space which affords plenty of light and fresh air.

In Sawyer County.

County Agent C. P. West, of Sawyer county, has introduced several carloads of registered and high-grade Holstein and Guernsey stock, including four registered sires. He has effected an organization of rural school children who are arranging to secure a plot of ground on the home farm for the purpose of producing pure seed potatoes and pedigreed seed corn. The county board has given Mr. West an acre for an experimental farm. This acre is near the court house in Hayward. In this acre he will raise No. 12 Wisconsin corn, alfalfa, soy beans and potatoes. Farmers will meet regularly throughout the summer to watch the progress of these crops. Sawyer county will have a display at the potato show to be held at Eau Claire next fall, and the exhibit will be in charge of Mr. West, assisted by Mr. Jens Uhrenholdt.

Root Crops For Dairy Farmer.

Mr. G. M. Householder, agricultural representative in Rusk county, is endeavoring to interest dairymen in root crops as feed for cows. He has addressed a letter to farmers of this county on the subject. In this letter he says that where winter dairying is practiced root crops become almost indispensable, especially on farms where there is no silo. He says that pound for pound root crops are as valuable as silage for dairy cows and that if care is used they will not taint the milk. Another special advantage is that grain crops do well after root crops, for the clean cultivation and long roots keep the soil open and in good tilth. We quote from Mr. Householder's letter as follows:

Clay and sand loam is the best for root crops. However, clays will produce good roots if twelve to twenty loads of well-rotted manure is applied per acre and the land well drained.

Roots require very thorough cultivation of the ground before seeding. The soil should be worked to a depth of six or eight inches. All large clods must be broken and the field gone over with a planker or spike-tooth harrow.

Yields of thirty tons per acre have been secured in Upper Wisconsin and twenty-ton yields are not uncommon. The kind of roots to grow depends upon your soil, kind of stock you expect to feed and the time of feeding.

Mangels furnish the largest yield per acre. They are comparatively easy to harvest and keep better than either sugar beets or turnips. Mangels are relished by all classes of stock. They are rather exacting as to soil and cultivation, more so than turnips or rutabagas. They are not so apt to taint the milk when fed to cows, as is the case with turnips or even rutabagas.

Carrots are high in feeding value; and are relished by all kinds of stock, including horses. They are probably adapted to lighter soils than mangels, and are about equal to the latter in cost of production per acre. They yield less per acre, however, and need more care in storage than mangels.

Rutabagas are high in feeding value and yield well on very heavy soils, fully as well as mangels. They cost less to produce than mangels or carrots and may be fed to all classes of stock. They may be planted later than either mangels or carrots, but do not keep as well as mangels, and when not fed judiciously they are apt to taint the milk.

Turnips can be grown on wet land better than either carrot or mangels so they can be sown nearly a month later. They are not so exacting as to soil requirements, and make rapid growth, so need less attention for weeding and are easily harvested. Turnips may be grown as a catch crop on new land, which is also true of rutabagas. On the other hand, they are not as good keepers as the other r ts mentioned, are comparatively low in feeding value, and taint the milk when given to a milk cow, unless fed with care. They are a fine feed for sheep, and in England they are extensively used for that purpose.

Barron County Breeders.

The Barron County Holstein Breeders' Association will hold its annual picnic at Krahenbuhl's Grove, June 15th. Arrangements were made at a special meeting of the executive committee May 21st. Mr. R. L. Cuff, the county agricultural representative, is in charge of the entertainment for the day. It is expected this will be the largest Holstein picnic ever held in Barron county.

LAW QUESTIONS.

Marriage Under Age.

A Subscriber, Barron, Wis.—A couple in Wisconsin were married and now have children. One of the parties was under age when married. (1) Can the marriage be set aside, because one of the parties was not of age? (2) In case such marriage should be set aside, who would have the custody of the children? (3) Could either of the parents take the children out of the state before the marriage was set aside?

Answer.—(1) It cannot. The couple now having children, it would be against public policy to have the marriage set aside for such cause. (2) In such a case the court would determine the matter. (2) The father could do so.

Election Ballot.

Mr. Louis Stenson, Bruce, Wis.—An election ballot on the question of a liquor license, was as follows, viz.:

LIQUOR LICENSE.
For License
Against License.

Nothing else appeared on the ballot. The ballot clerks did not sign their names on the back of the ballots. (1) Was said ballots legal? (2) Give the section of the Wisconsin statutes relating to such ballots?

Answer.—(1) Said ballot was legal. (2) Section 40-a, chapter 664, session laws of 1907.

That education pays on the farm is shown by the figures worked out by W. O. Lockhart, a Missourian, who has spent the past year in Wisconsin making a special study of this and allied subjects. He found that farmers visited who had stopped after finishing the common school were receiving an average income, after deducting all expenses, of $632 a year; those who had taken a short course in agriculture, $739; those who had graduated from high school, $893, and those who had a college education, $1,056.

Plantings of varieties of apples, crab apples and plums adapted to Wisconsin have been made on farms in Price county largely through the effort of the county representative. Mr. Richards has succeeded in getting out four young orchards and twenty-four trees each at points near Ogema, Cannon, Park Falls and Prentice.

OUR NEW SERIAL COMMENCES NEXT WEEK
Watch For It
"TOLD IN THE HILLS"
By Marah Ellis Ryan
The biggest, best story of the West ever written, full of romance and action, description and adventure. By the author of "The Bondwoman" and "That Girl Montana."
"Told in the Hills" is exciting from start to finish; it holds the reader enthralled with interest. Be sure to read the first instalment in this paper next week.
"TOLD IN THE HILLS"
The biggest serial treat ever offered by any farm paper.
COMMENCES NEXT WEEK

CUT RATES—LUMBER, SHINGLES
OUR own Douglas Fir and Red Cedar direct from our sawmill and factory to you. Hurry! Prices advancing. "Tacoma" dimension lumber guaranteed full two inches thick, 20% stronger. "Dakota Clear" shingles, guaranteed half-inch butts; everlasting. To insure lowest prices send list for estimate. We quote delivered; pay after inspection. References, any Tacoma bank.
LOCAL LUMBER COMPANY, Tacoma, Wash.

HURRY! OUR AITKIN COUNTY LANDS
WILL not last long. Located in choice dairying district, near railway and big competing markets. Our prices are low and terms easy for you. Come or send for folders. Arnold, Land Agent, Rock Island Ry., 151 Wolvin Bldg., Duluth, Minn.

WANTED FARMS—Have 3,357 buyers; describe your unsold property, give price, acreage, location. 769 Farmers' Exchange, Denver, Colo.

IMPROVED and unimproved farms for sale. Call on or address Fred L. Arduser, Route 1, Grantsburg, Wisconsin.

CHANCE TO BECOME INDEPENDENT
4,000 Acres Uncleared Fine Farming Lands, Black Loam on Clay Sub-Soil. Near Mackinaw City, Michigan.
FOR SALE at
$8 to $12 An Acre
in 40 acre tracts.
For stock or sheep raising, for crops of all kinds, the land cannot be excelled in the state of Michigan.
For furthur particulars address
PAUL LEAKE
The Michigan Trust Company
Grand Rapids, Michigan

PROSPERITY IN CANADA—$900,000,000 in new wealth added in 1915. Enormuos crops and low taxation make farmers rich. Wheat average, 36.16 bushels per acre in Alberta, 28.75 bushels per acre in Saskatchewan, 28.50 bushels per acre in Manitoba. Taxes average $24 and will not exceed $35 per quarter section, includes all taxes; no taxes on improvements. Free schools and full religious liberty, good climate. Get your farm home from the Canadian Pacific Railway. 20 years to pay. Good land from $11 to $30 per acre; irrigated lands from $35, and the government guarantees your land and water titles. Balance, after first payment, extended over nineteen years, with interest at 6%; privileges of paying in full any time. Before final payment becomes due your farm should have paid for itself. We will lend you up to $2,000 in improvements in certain districts, with no security other than the land itself. Particulars on request. Ready-made farms for sale. Special easy terms. Loans for livestock. In defined districts, after one year's occupation, under certain conditions, we advance cattle, sheep and hogs to farmers up to a value of $1,000. We want you; we can afford to help you. We own the land; we want the land cultivated. Our interests are mutual. Buy direct and get your farm home from the CANADIAN PACIFIC RAILWAY. Send for free book. J. S. Dennis, Assistant to the President, Canadian Pacific Railway, 82 Ninth Ave., Calgary, Alberta, Canada.

Wisconsin Farms
In the Clover Dairyland of the famous Chippewa Valley in Southern Sawyer County, Wisconsin.
Prices $15.00 to $28.00 per acre.
Liberal terms if desired.
Write for descriptive booklet and map to

It has lands, city property and stocks of goods advertised in its columns from nearly every state, so that you can find just what you're looking for in its columns. Established 19 years and reaches 76,200 readers. Send 25c for one year's subscription or $1.00 for five years. Department F, Farm and Real Estate Journal, Traer, Iowa.

ST. LOUIS county, near Duluth's steel industry. Enormous demand farm, garden, dairy products. Easy terms. Folders free. Arnold, Land Com'r., 513 Wolvin Bldg., Duluth, Minn.

FOR Minnesota improved farms and land bargains, write or call on H. A. Hanson, 242 Temple Court, Minneapolis, Minnesota.

Overland

$615

Roadster $595
Model 75 - f. o. b. Toledo

1,000 Car

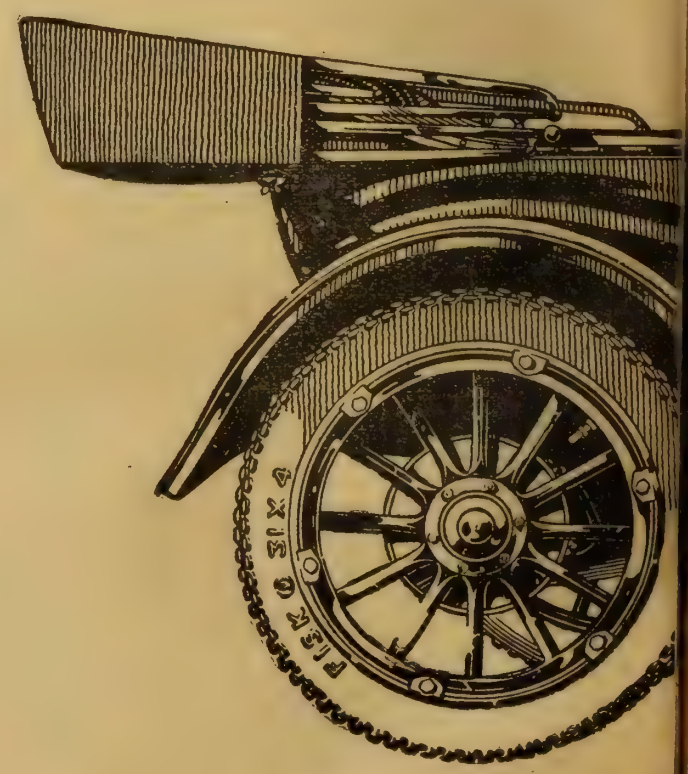
To completely realize that ideal which the public has yearned for—which producers have long striven to attain—

That was the definite purpose behind the $615 Overland.

A small car with comfortable, roomy seats that would ride as easily as a big one—

A small car with "big looks" that a man could buy and yet keep on speaking terms with both his pride and his pocketbook—

A small, light car that would reach a new low level of operating and upkeep expense—



The Will

a Day Not Enough

That has been the ideal.

That was the definite need which $615 Overland supplies with defi- finality.

But a luxurious small car—like most ils—was difficult of attainment.

And to attain it and still keep the e lower than any other complete omobile had ever been sold for, ant quantity production on a scale er before attempted in cars of this s.

We increased our capacity to 1,000 s a day—more than double any vious output of cars of this class.

And the result is this comfortable small car, beautiful and complete, for $615.

Never before has any complete automobile been sold at anywhere near so low a price.

And never before has any small, light, economical car been anywhere near so comfortable or so beautiful.

But so completely have we realized a popular ideal that 1,000 cars a day is not going to supply the demand.

If you order yours today it will not be a day too soon to avoid delay.

See the Overland dealer at once.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

QUESTIONS AND ANSWERS.

Power Transmitted.

Would you please tell me what power you will have from a one and three-fourths horse power engine, running a belt from a four-inch pulley on the engine to a twenty-inch pulley on the line shaft?

Answer.—Difference in size of pulleys does not change the horse power. The horse power that can be obtained from the line shaft is the same as that of the engine, less frictional losses. With the pulleys the line shaft will run only one-fourth as fast as the engine, but it will give four times as much belt pull from a A-inch pulley mounted on it, less frictional losses.

Defective Wiring.

I have a 1913 Model T. Ford car that will not run. It is equipped with a K-W vibrator. All the coils will buzz when out of the box, but when I try to start the motor with the coils in the box, only numbers one and two will buzz. Where can my trouble be?

Answer.—The coils and vibrator points are all right, since they work when out of the box. Trace the wiring carefully from the coil terminals to the binding posts on the timer, or "commutator," as the Ford people call it. You will probably find a broken wire or a place where all the insulation is worn off, permitting a ground. It may be that the commutator is worn or gummed so that it does not make contact at three and four.

The Fuel Question.

Will kerosene work in a high-speed motor? In a Model T Ford car, would it be practical to place a three-way cock in the fuel pipe and connect it to the kerosene and gasoline tanks in such a way that either tank may be switched on or off? Would two carburetors have to be used? If water must be used with kerosene would it do to have it enter the manifold from a tank placed over the cylinders, or must the water also be drawn in through the carburetor?

Answer.—Kerosene does not work well in a high-speed motor. Whether or not an engine will run on it can best be determined by trial. The three-way-cock plan, as given above, would make it easy to try. Water is not a necessity for burning kerosene. Where used it should be taken in through a spraying nozzle in the carburetor, so that it will enter the cylinder as a vapor.

Making a Motor.

I enclose a drawing of an electric motor I am going to make. Please tell me whether it will run, and if my wiring is correct. Which wire should be connected to the battery zinc? Please tell me the correct way to wind coils.

Answer.—We have not space to publish your diagram. A motor made on that principle would not work. An induction motor is somewhat similar to your design, but will work on alternating current only. For running a battery motor, it does not matter which terminal is connected to the zinc. Field coils are usually wound on wooden spools, using very fine single or double cotton-covered copper wire. The cotton should be shellaced as wound, and allowed to dry for several days in a warm place before using.

Engine Uses Too Much Oil.

What makes my Model 79 Overland consume so much lubricating oil? I cannot make over twenty miles to the quart; while my neighbor, with the same model car, makes as high as 100 miles per quart. The crank case has been drained and the carbon scraped out. There are no leaks anywhere in oil pump or crank case. The machine has run 9,000 miles. When the engine is speeded up, blue smoke pours out of the exhaust pipe. Could this be due to the piston rings? If I took the engine apart and scraped the carbon out from under the rings would this help?

Answer.—Evidently too much oil is working up past the rings. Do not carry too high an oil level in the crank case. It is probable that your rings are worn and should be replaced by new ones. Your pistons may be a little too small. A scored cylinder could cause the trouble. Scraping the carbon out from under the rings would do no good unless the rings were stuck, which is not probable. The blue smoke is due to too much oil. A new set of rings will probably overcome the difficulty after they wear in.

Electric Horn for Ford Car.

Can I connect an electric horn to the magneto of my 1915 Ford car? If so, please publish a wiring diagram.

Answer.—You can use a horn of the electric vibrator type, but not the kind operated by a revolving armature. The wiring is very simple. Run a wire from the magneto terminal on the coil box to the horn. From the other horn terminal run a wire to the switch. From the other switch terminal run a wire to the frame of the car and ground it.

Speed of Propeller.

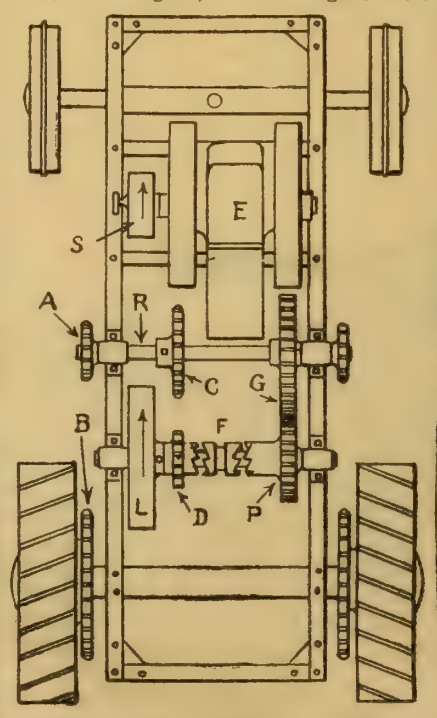
I have a five-horse-power Marine engine running at 800 R. P. M. I am thinking of mounting this on buggy wheels and driving the outfit by a seven-foot propeller. How fast should the propeller revolve to push the vehicle fifteen miles per hour? Could I make such an outfit work?

Answer.—Such an outfit is not practical for road work. It may be used as a novelty on a race track or smooth, level road. In designing a propeller, armature, flywheel or any other rapidly-rotating part, adjust the speed and outside diameter so that the part farthest out does not travel faster than one mile per minute. The angle of the blades of a propeller affect the push of the propeller. Make yours about 45 degrees at the ends.

Another Tractor.

I would like to have a few tractor questions answered. I have an engine rated at seven horse power at 375 R. P. M. It has an eight-inch belt pulley and friction clutch. I have this engine mounted on a very strong iron wagon truck. The rear wheels are thirty-six inches in diameter and four inches wide. How can I make a tractor out of it, and will it be strong enough to pull a four-teen-inch bottom? I enclose a sketch. What size sprocket would you suggest for A? How many teeth? How many at B? Would you suggest a belt or a chain drive between pulleys S and L? What should be the diameter of L? Please tell me how to make a reverse gear on it.

Answer.—We are publishing your sketch, with a reverse gear attached. E is the engine, S the engine belt



pulley; L the countershaft drive pulley, driven by a belt from S; D is a small sprocket and P is a small gear, both running free on the countershaft, but having a clutch hub so that either may be driven by the toothed clutch F, which slides on a key in the countershaft. R is the drive shaft. C is a large sprocket wheel, driven from D. G is a large gear, driven from P. Two small sprockets, A, drive the drive wheel sprockets, B. When F engages D, the tractor moves ahead; when F engages P, the tractor is reversed.

The drive wheels should make twenty-four revolutions per minute. All sprockets should be about one and one-half inch pitch. A should have fifteen teeth; B, forty-five teeth; C, thirty teeth; D, fifteen teeth. G should have at least twice as many teeth as P. L should be twenty inches diameter. The outfit would pull a four-teen-inch plow under favorable conditions.

Heating Gasoline by Exhaust.

As gasoline gives the best combustion at 290 degrees of heat, I have thought of a plan for warming the bowl of the carburetor. I would drill a hole in the exhaust pipe below the two middle cylinders and run a pipe about one-fourth inch inside diameter from the hole in the exhaust pipe straight down about twenty inches and turn the pipe up so that it will blow against the bottom of the carburetor bowl. By inserting a pet cock the force of the exhaust could be regulated. Would there be any danger? I also have a hot air pipe attachment. What would be the easiest way to start on gasoline and then use kerosene?

Answer—To use two kinds of fuel, place a three-way cock between the feed pipe to the carburetor and the two fuel tanks. Gasoline heated to 290 degrees in the carburetor bowl would vaporize and interfere with the spraying action of the needle valve. It would be dangerous to have a stream of exhaust on the bowl of carburetor, as any gasoline leak might cause a fire.

Motor Rating.

Will a three and three-fourths inch diameter automobile engine cylinder with a six-inch stroke give more power than one of the same diameter having a five-inch stroke? I see in the "Motor World" rating they do not give a five-inch stroke engine any more power than a four-inch stroke engine having the same cylinder diameter. If there is no more power in a long stroke cylinder, what is the use of having more than a two-inch stroke? Is a connecting rod ten inches long between centers better than one six inches long between centers?

Answer.—At the same speed, the long-stroke motor has more power than the short-stroke motor. The theory is, however, that the long-stroke motor cannot run as fast as the short-stroke motor, and that what power a motor gains by lengthening the stroke is lost by a reduction in speed; hence, the length of stroke is not considered in the usual auto-engine rating. The long-stroke motor pulls more evenly and is a better hill climber than the short-stroke motor, due to the greater leverage of the cranks. It is also more economical. It is slower and heavier than a short-stroke motor. Gasoline motors are not made with a stroke shorter than the diameter, as they would be wasteful of gasoline, a large part of the explosion pressure being lost, due to the early exhaust. The long connecting rod is the better. The longer the rod the less the pressure against the cylinder walls by the piston. Too long a rod would cause too much weight which would cut down the speed of the motor.

Champion
TOLEDO MADE FOR THE WHOLE WORLD'S TRADE
Dependable Spark Plugs

The Quality Plug for High Powered Cars

Champion Heavy Stone 7/8-18 Price, $1.25

Lift the hood of almost any de luxe car and see what plug supplies its spark of life.

The engineers who specify and recommend the vital equipment which best serves these master pieces among motor cars—

Have nothing to gain in specifying Champions except to supply unfailing dependability in the spark plug link of their ignition systems.

For most high powered cars the Champion Heavy Stone Plug has demonstrated its greater efficiency in the most gruelling tests.

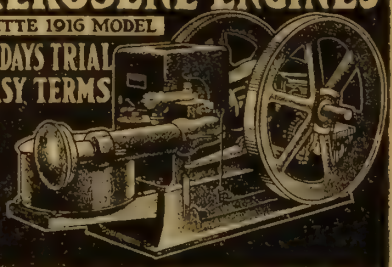
Your dealer knows the size your particular motor requires. If for any reason you are not already supplied with Champion Heavy Stone Plugs, install them at once and note the increased "pep" and "go" in your motor.

The Champion Guarantee

Complete satisfaction to the user—free repair, replacement or money back.

Champion Spark Plug Company, 509 Avondale Ave., Toledo, Ohio

KEROSENE ENGINES
WITTE 1916 MODEL
90 DAYS TRIAL EASY TERMS



FREE BOOK Greatest Engine value I ever offered.--Ed. H. Witte.

Pulls 30 to 50 per cent over factory rating. Sturdy; dependable; Lowest priced; Lowest cost of operation; Better built. My 30 years' engine experience and a $500,000 factory behind every engine I sell.

Inside Facts about the engine business are told in my Free 4-color book. Don't buy any engine at any price till you read it. Full of interesting information.

THE **FREEMAN ENSILAGE CUTTER**
—The Cutter That Saves You Money

Costs less to buy—less to operate—less for upkeep. The Freeman combines the limit of quality and economy.

Standard For 30 Years

Runs easiest—on least power. Cuts clean and fast. Traveling force feed table—handles big bundles easily. Has extra strong frame, large feed rolls, adjustable knives, safety fly wheel, safety stop lever.

Steel Enclosed Carrier reduces running expense, prevents feed blowing away.

GET OUR FREE BOOK showing full line Ensilage and Feed Cutters, Carriers and Blower-Elevators.

THE S. FREEMAN & SONS MFG. CO.
219 Michigan St. Racine, Wis.

We can furnish Blower or Enclosed Steel Carrier as desired.

Shoo-Fly THE ANIMALS' FRIEND

For keeping flies and many other insects off of animals—in barn or pasture—longer than any imitation. Used and endorsed since 1885 by leading dairymen.

$1 WORTH SAVES $20.00 in milk and flesh on each cow in a single season. Excellent for galls. Allays itching. Aids in keeping animals from irritating sores by rubbing or stamping. Excellent for lice and mites in poultry houses.

$1.25 ($1.50 west of Mississippi River) will bring you enough Shoo-Fly to protect 10 cows 2 weeks, also our 3-tube gravity sprayer. EXPRESS PREPAID. Money back if not satisfactory. Name Express Office. Booklet FREE. Special terms to agents.

Shoo-Fly Mfg. Co., Dept. 21, 1310 N. 10th St., Phila.
Editor knows from experience Shoo-Fly is O. K.

OUR DAIRY DEPARTMENT

ALL communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

Waupaca and Butternut Ridge.

Attached will be found a report of the Waupaca and Butternut Ridge Co-operative Cow-Testing Association for the month ending May 20th. The highest producer is a registered Guernsey owned by C. A. Peterson and G. R. Miller. She is eight years old and freshened January 15th. She yielded 1,138 pounds of 5.6 per cent milk, making 63.1 pounds of butter fat. Fifty-one cows make up the list for this month, ten of them producing over fifty pounds of butter fat.

The annual picnic of the association will be held at H. C. Frihart's farm on the 4th of June. C. E. Lee, H. C. Searles and Noel Negley are the speakers. A band has been engaged for the day.

The monthly report, furnished by George L. Moss, official tester, is as follows:

Well Satisfied With Milking Machine.

To the Editor:—My experience with the milking machine has proven to me that it is a practical machine for a practical dairyman, who has ten or more cows to milk. I find the cows take very kindly to it, and most all of them do as well when milked by the machine as when milked by hand, but there is an occasional one that will not milk with the machine, will not give down her milk for it as well as by hand. However, out of twenty-six cows we milked we only had one such cow, and I think you are apt to find about the same thing in any herd of as many cows.

There is no doubt about it being a saver of time, as one man can easily milk from twenty to thirty-five cows in an hour, and it also gives the dairyman an independence he cannot possibly have when depending on hand milkers. The problem of keeping help to do the milking was our greatest draw-back to the dairy business, and the machine relieved the situation greatly, as we were enabled to go ahead ourselves if we were suddenly and unexpectedly thrown out of help, and with no great inconvenience to ourselves.

The success of the machine depends a great deal on the operator, but anyone who will use care and judgment can easily operate a machine, and secure good results, but I find you can no more trust every man you may hire to use the machine, than you can trust all of them to handle milk, as it is an easy thing to slight the work, and good results in the dairy come only by carefulness in all its lines.

I can freely give my endorsement in favor of the machine, and recommend it to anyone who knows himself to be a careful man, but if the man in question knows himself to be of the careless sort I would advise him to let the machine alone, and also quit the dairy business. Dr. R. B. Johnston.

Wisconsin Sheep Institutes.

Through the active co-operation of the Wisconsin Live Stock Breeders' Association and the department of farmers' institutes a series of special sheep institutes will be held next month in some of the sections of the state which are especially well adapted to sheep raising. Frank Kleinheinz, shepherd at the experiment station for more than a quarter of a century, will assist at a number of these meetings, which will be held at farms near Augusta and in Wilson township, Eau Claire county; Bayfield, Bayfield county; Wausau, Marathon county; Gays Mills, Soldier's Grove, Crawford county; Viola, Richland county, and LaFarge, Vernon county. Demonstrations with leading breeds of sheep will be given.

BLIZZARD filled it after rival failed

Was it a case of "counting chickens before the eggs were hatched?" At any rate, the letter at the left, written December 21, 1915, corrects certain statements that have appeared in farm paper advertising and catalogs about the filling of Mr. Collom's 75 foot silo, at Somerville, Ohio. The

BLIZZARD
Ensilage Cutter

has unlimited elevating ability because it is designed scientifically right. The catalog explains it all. Other Blizzard *certainties* are—simple to understand and run—large cutting capacity—even cut silage—steady work—unusual safety—small repair cost—long life.

Write today giving size of silos to be filled and size of engine you plan using, for valuable suggestions and free booklets—"Making Silage Pay Better," "What Users Say" and "1916 Blizzard Catalog." Ask for any or all. They're free.

The Jos. Dick Mfg. Co.
Box 64 Canton, Ohio

ROSS Ensilage Cutters and Silo Fillers with Blower

STEEL Cutting Apparatus and Blower (instead of cast iron).

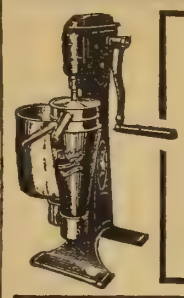
Especially designed for steam power and extraordinarily heavy work. Steel is known to be stronger than cast iron. The Ross is not an ordinary fodder cutter but a **special made machine for filling silos.** We have manufactured the Ross for **65 years,** and to-day it will by its own actions prove its superiority. Write for catalog.

We also manufacture the **Ross Wood** and **IN-DE-STR-UCT-O Metal Silo.**

Guaranteed free from defects for life of machine.

THE E. W. ROSS CO., Box 154 Springfield, O.

ROSS



SHARPLES SUCTION-FEED SEPARATOR

makes three cows earn more for you than four cows without it. And it will save from 7 to 13 pounds of butter per cow yearly that every other separator loses through imperfect separation. Still it is simpler, easier washed and easier kept clean than any other separator—*no discs,* no oil holes, no high lifting. It's truly a woman's separator. Ask for catalog, *"Velvet" for Dairymen,* and see your dealer as well.

HEPSEY BURKE—A Sister to David Harum

By F. N. Wescott, the Brother of the Author of "David Harum."

(Copyright 1915.)

CHAPTER XXIII—Continued.

A little withered old woman laboriously struggled to her feet and in a high-pitched, quavering voice began.

"I'd like to give suth'n' towards the end in view. Our rector were powerful good to my Thomas when he had the brown kitties in his throat. He came to see him mos' every day and read to him and said prayers with him and brought him papers and jelly. He certainly were powerful good to my Thomas; and once when Thomas had a fever our rector said that he thought that a bath would do my Thomas a heap of good and he guessed he'd give him one. So I got some water in a bowl and some soap and our rector he just took off his coat and his vest and his collar and his cuffs and our rector he washed Thomas and he washed him and he wa——"

"Well," Hepsey interrupted, to stay the flow of eloquence, "so you'd like to pay for his laundry now would you Mrs. Sumner? Shall I put you down for two dollars? Good! Mrs. Sumner sets the ball rollin' with two dollars. Who'll be next?"

As there was no response Mrs. Burke glanced critically over the assembly until she had picked her man and then announced:

"Hiram Mason, I'm sure you must be on the anxious bench?"

Hiram colored painfully as he replied:

"I don't know as I am prepared to say what I can give just at present Mrs. Burke."

"Well, now, let's think about it a little. Last night's Daily Bugle had your name in a list of those that gave $10 apiece at St. Bridget's fair. I suppose the Irish trade's valuable to a grocer like yourself; but you surely can't do less for your own church? I'll put you down for ten, though, of course, you can double it if you like."

"No," said Hiram, meditatively; "I guess ten'll do."

"Hiram Mason gives ten dollars. The Lord loveth a cheerful giver. Thanks, Hiram."

Again there was a pause, and, as no one volunteered, Hepsey continued:

"Sylvester Perkins, how much will you give?"

"I suppose I'll give five dollars," Sylvester responded before Mrs. Burke could have a chance to put him down for a larger sum. "But I don't like this way of doin' things a little bit. It's not a woman's place to hold up a man and rob him in public meetin'."

"No, a woman usually goes through her husband's pockets when he's asleep, I suppose. But you see I'm not your wife. Thanks, Mr. Perkins: Mr. Perkins, five dollars," she repeated as she entered his subscription in the book. "Next?" she called briskly.

"Mrs. Burke, I'll give twenty dollars, if you think that's enough," called a voice from the back timidly.

Everyone turned to the speaker in some surprise. He was a delicate, slender fellow, evidently in bad health. He trembled nervously and Mrs. Burke hesitated for an instant, between fear of hurting his feelings and letting him give more than she knew he could possibly afford.

"I am afraid you ought not to give so much, Amos. Let me put you down for five," she said kindly. "We mustn't rob Peter to pay Paul."

"No, ma'am, put me down for twenty," he persisted; and then burst forth—"and I wish it was twenty thousand. I'd do anything for Mr. Maxwell; I owe it to him, I tell you."

The speaker hesitated a moment and wiped his forehead with his handkerchief and then continued slowly, and with obvious effort:

"Maybe you'll think I am a fool to give myself away before a crowd like this and I a member of the church, but the simple fact is that Mr. Maxwell saved my life once when I was pretty near all in."

Again the speaker stopped, breathing heavily, and there was absolute silence in the room. Regaining his courage, he continued: "Yes, he saved me, body and soul, and I guess I'll tell the whole story. Most of you would have kicked me into the street or lodged me in jail, but he wasn't that kind, thank God!

"I was clerking in the postoffice a while back and I left town one night, suddenly. I'd been drinking some and when I left my accounts were two hundred dollars short. The thing was kept quiet. Only two men knew about it. Mr. Maxwell was one. He got the other man to keep his mouth shut, handed over the amount and chased after me and made me come back with him and stay at his house for a while. Then he gave me some work and helped me to make a new start. He didn't say a word of reproach, nor he didn't talk religion to me. He just acted as if he cared a whole lot for me and wanted to put me on my feet again.

'I didn't know for a long time where Mr. Maxwell got the money for me, but after a while I discovered that he'd given a chattel mortgage on his books and personal belongings. Do you suppose that there's anybody else in the world would have done that for me? It wasn't only his giving me the money; it was finding that somebody trusted me and cared for me who had no business to trust me and couldn't afford to trust me. That's what saved me and kept me straight.

"I haven't touched a drop since and I never will. I've been paying my debt to him as quick as I can and as far as money can pay it; but all the gold in the world wouldn't even me up with him. I don't know just why I've told all about it, but I guess it's because I felt you ought to know the kind of a man the rector is; and I'm glad he isn't here or he'd never have let me give him away like this."

Amos sat down, while the astonished gathering stared at him, the defaulter, who in a moment of gratitude had betrayed himself. The woman next to him edged a little farther away from him and watched him furtively, but he did not seem to care.

Under the stimulus of this confession the feelings of the people quickly responded to the occasion and a line soon formed without further need of wit or eloquence on Hepsey's part, to have their subscriptions recorded. In half an hour Mrs. Burke, whose face was glowing with pleasure—albeit she glanced anxiously from time to time towards old Mr. Bascom, in an endeavor to size up his mood and force his intentions—had written down the name of the last volunteer. She turned towards her audience:

"As I don't want to keep you waitin' here all night while I add up the subscriptions I'll ask the chairman to do it for me and let you know the result. He's quicker at figurin' than I am, I guess," with which compliment she smilingly handed the book to the Senior Warden. While the old man bent to his task the room buzzed with low, excited conversation. Enough was already known of Bascom's hostility to the rector to make the meeting decidedly curious as to his attitude towards Hepsey's remarks anent the mortgage; and they knew him well enough to be aware that he would not allow that item in her speech to go unanswered in some way or other.

All eyes rested upon the gaunt figure of the chairman, as he arose to his feet to announce the total of the subscription list. He cleared his throat and looked down at Hepsey Burke; and Jonathan, as he squinted anxiously at Hepsey by his side, noticed that she sat with her eyes tight-closed, oblivious of the chairman's glance. Jonathan looked hastily up at Bascom and noticed him shift his position a little nervously as he cleared his throat again.

"The amount subscribed on this list is two hundred and thirty-seven dollars and thirty-five cents," he said. The loud applause was instantaneous and Jonathan turned quickly to Hepsey, as he stamped his feet and clapped his hands.

"Thirty-seven thirty-five more than we owe him; Hepsey, you've done fine," he chortled.

But Hepsey's look was now rivited on the chairman and except for a half-absent smile of pleasure, the keenest anxiety showed in her expression.

Bascom cleared his voice again and then proceeded:

"Mrs. Burke informed you that the rector's salary was in arrears to the extent of about two hundred dollars. It is now for this meeting to pass a formal resolution for the application of the amount subscribed to the object in view."

Hepsey's lips narrowed; not a cent was down on the list to the name of the Senior Warden; the debt was being paid without assistance from him.

"I presume I may put it to the meeting that the amount, when collected, be paid over to the rector by a committee formed for that purpose?" proceeded the chairman.

This resolution being duly seconded and carried, Bascom continued:

"Before we adjourn I request the opportunity to make a few remarks in reply to Mrs. Burke's observations concerning the ejection of the rector from the house which he occupied. She was good enough to spare my feelings by pointing out that from a business or legal point of view it was not I who was responsible for that act, but the parishioners, who, having purchased the rectory subject to a mortgage, had failed to meet the interest upon it. That is what Mrs. Burke said. What she did not say and what none of you have said in public, though I reckon you've said it among yourselves, I will take upon myself to say for her and you."

He paused—and every eye was fixed upon him and every mouth agape in paralyzed astonishment, and the said features of Hepsey Burke were no exception to the rule.

"When," continued Bascom evenly and urbanely, "the word went round that the interest on the mortgage had got behind and the money must be collected for it those concerned no doubt remarked easily: "Oh, I guess that'll be all right. Bascom won't worry about that; he don't need it; anyway he can pay it to himself, for the parish, if he does."

There was an uncomfortable stirring of the audience at this shrewd thrust, but Hepsey could not contain herself and laughed right out, clapping loudly.

"And yet I don't mind saying that if I had thought of suggesting to any one of you such a method of collecting interest due to you you might have kicked some," he commented dryly.

"At the next step, when I ultimately concluded to act upon my right to eject Mr. Maxwell from the rectory, I've no doubt that on all sides it was: 'Well, did you ever know the likes of that? Turning the rector out of house and home! Well he's a skinflint for fair!'"

He paused and watched the effect. This time his hearers sat absolutely motionless.

"And I agree with you," he added presently, in a quiet voice: "I was a skinflint for fair!"

Almost Hepsey forgot herself so far as to clap thunderously; she caught her hands together just in time—recollecting that her demonstration would be taken too literally.

"But I would not have you misunderstand me. Though it was for me to call myself a skinflint for that act, it was not for you to do so. You did so on wrong grounds. Those who in making money have been less successful than others find it convenient to leave all such obligations upon the shoulders of the richer man and to say 'it's up to him; he can afford it.' Is it any wonder that it makes the rich man sour on subscriptions and philantrophies? He has as much, or more, of inducement to apply his earnings and savings to his own ends and pleasures; why, then, is it not up to all in their own proportions to meet social needs? A good many years of such meanness among his neighbors makes even a rich man sour and mean, I guess. And that's what it made me—and though that isn't a justification of my act, it gave me as much right to call you skinflints as for you to call me, all except one of you, Hepsey Burke."

The meeting quivered with tense ex-

citement. What did it all mean? If a chicken had sneezed the whole gathering would have been dissolved in hysterics, it was so keyed up with a sense of the impending disclosure of a deep mystery. As for Hepsey, she sat motionless, though Jonathan believed that he caught sight of a tear glistening in its descent.

"Hepsey Burke had a right to call me a skinflint, because she knew what none of you knew; but because it was private knowledge she wouldn't make use of it against me—not unless she couldn't have done what was right any other way. And now I'm going to tell you what she knew:

"The rectory was my wife's property and she intended it as a gift to the parish for the rectory of the church. I was preparing the deeds of transfer when she died—suddenly, as some of you remember," his voice made heroic efforts to keep clear and steady, "owing to her death before the transfer that house passed to our daughter; and what I intended to do was to buy it of her and present it to the parish. I delayed, at first for good reasons. And I suppose as I got more and more lonesome and mixed less and less with people I got sourer—and then I delayed from meanness. It would have been easy enough for me to buy it of my daughter and she'd have been willing enough; but as I saw more and more put upon me and less and less human recognition—I was 'a rich man,' and needed no personal sympathy or encouragement, it seemed—I held back. And I got so mean I couldn't make friends with the rector even."

He paused, and from the half smile on his face and the hint of brightness that passed over his expression the audience caught relief.

"I guess a good shaking up is good for a man's liver. It cures a sour stomach—and as there are those that say the way to a man's heart is through his stomach, perhaps it cures a sour heart. I got my shaking up all right, as you know; and perhaps that's been working a cure on me. Or perhaps it was the quiet ministrations of that little Mrs. Betty of yours"—applause—"or the infusion of some of the rector's blood in my veins (he let himself be bled to keep me alive, after I'd lost what little blood I had, as you probably have never heard)"—shouts of applause—"or possibly what cured me was a little knitting visit that Hepsey Burke paid me the other day and during which she dropped some home-truths: I can't say.

"Before I decided what I would do about the rectory I wanted to see what you would do, under Mrs. Burke's guidance, this evening. You've shouldered your share as far as the rector's salary is concerned. Well—I'll add what I consider my fair share to that, fifty dollars. The arrears due on the mortgage interest is one hundred and twenty dollars. I shall hold you to your side of that bargain, to date. If you pay the rector the two hundred dollars due him on his salary you will need to subscribe about another forty to make up the interest; that done, and paid to me, I will do my part and present the rectory to the parish in memory of my dear wife, as she desired."

He sat down.

Hepsey rose and called out in a clear voice:

"He's right; Mr. Bascom's dead right; it's up to us to do business first and clear ourselves of the debt on a business bargain; then we can accept the gift without too much worryin'." And she sent a very friendly smile over to Bascom.

Again there was some cheering, in the midst of which Jonathan Jackson jumped to his feet beside Hepsey; and facing the room, with his arm through hers, he shouted:

"Hepsey Burke and me will make up the difference!"

Another cheer went up, and Hepsey's face flamed scarlet amid the craning of necks and chaffing laughter—half puzzled, half understanding.

Sylvester Bascom rose to his feet and there was silence. With assumed seriousness he addressed Hepsey, still standing:

"Mrs. Burke, so that it may be quite in order, do you endorse Mr. Jackson's authority to speak for you in this matter?"

Every eye was turned upon them; but Hepsey could find not a word, so flabbergasted was she by this sudden move of Jonathan's. Jonathan himself colored furiously, but stuck to his guns, and Hepsey's arm:

"Well, to tell the truth," he replied in a jaunty voice, "Hepsey Burke and me's goin' to be married right now, so I guess we'll combine our resources, like."

This announcement gave the coup de grace to any further attempt at orderliness and the room became a seething chorus of congratulatory greetings aimed at Hepsey and Jonathan, in the midst of which Sylvester Bascom slipped out unnoticed.

CHAPTER XXIV.

Omnium Gatherum.

WHEN at last the room emptied and she was free to do so Hepsey, accompanied by the possessive Jonathan, found her way over to the Maxwells. Before she started to tell them the results of the meeting she cast a glance of whimsical affection at her palpitating fiance.

"I'd best let him get it off his chest—then we'll get down to business," she laughed.

So Jonathan, amid much handshaking and congratulation, told his victorious story—until, when he seemed to become too triumphant, she broke in with: "Now that's enough for you, Mr. Proudmouth. Let me just say a word or two, will you? The meetin' wasn't called for you and me and I want to tell about more important happenin's."

When they had heard of all that had been accomplished Mrs. Betty got up and put her arms round Hepsey's neck and gave her such a hug and a kiss on each cheek that brought the tears to Mrs. Burke's eyes. And Donald, moist-eyed in spite of himself, took her hand in both of his and expressed his feelings and relieved the tension at the same time by saying:

"Hepsey Burke, for all your molasses and the little bit of vinegar you say you keep by you, 'there are no flies on you,' as Nickey would put it."

At which sally Jonathan slapped his knee and ejaculated.

"No! there ain't, by gum! There ain't no flies on Hepsey, if I do say it myself."

At which proprietory speech Hepsey wagged her head warningly, saying, as they left—"There's no downin' him these days; I'm sure I don't know what's come over the man."

On their way home Jonathan was urgent for fixing the day.

"You said you'd marry me right there and then if the meetin' came your way, now you know you did, Hepsey," he argued. "So if we say tomorrow——"

But, though Hepsey would never go back on a promise, she protested against too summary an interpretation of it and insisted on due time to prepare herself for her wedding. So a day was set some two months hence.

Meanwhile, Sylvester Bascom's truer and pristine nature blossomed forth in the sunnier atmosphere around him and after he had delivered himself of his feelings to the Maxwells, in a visit which he paid them next day at their nomadic quarters he begged leave to put the rectory in full repair before he handed it over to the parish and the Maxwells returned to it.

And he was better than his word, for, with Hepsey and Virginia accompanying her, he insisted on Mrs. Betty taking a trip to the city a few days later for the purpose of selecting furnishings of various kinds dear to the hearts of housekeepers—Hepsey absorbing a share of the time in selecting her "trousseau."

Meanwhile, in due course the rectory was made a new place, inside and out, and a few weeks after their return the transformed house, repainted inside and out, papered and curtained and charmingly fitted with new furniture, was again occupied by the Maxwells.

That the interest of the parish should for a while be concentrated on the doings at the rectory and diverted from her own important preparations was a blessing to Hepsey—for she continually declared to Mrs. Betty that, little as she knew Jonathan in his new manner, she knew herself less!

It was decided that the wedding should be in the church and a reception held after the ceremony, for the bride and bridegroom, at the rectory—and that, in this way the whole parish would celebrate in honor of the auspicious occasion and of other happy results of Hepsey's parish meeting.

The day before the wedding, while Mrs. Betty and Virginia were busily occupied at Thunder Cliff and the rectory, dividing their attentions between the last touches to Hepsey's wardrobe and preparing confections for the wedding guests, Donald Maxwell was closeted with Mr. Bascom at Willow Bluff for a considerable time. It was known that the Senior Warden was to support his colleague, Jonathan, at the morrow's event, and it was presumed that the rector was prompting him in his duties for the occasion.

The ceremony next day at the church was a center of fervent and cordial good will and thanksgiving, as Jonathan, supported by Sylvester Bascom, took to wife Hepsey, given away by Mrs. Betty, with Virginia as a kind of maid of honor, hovering near. It was well for Donald Maxwell that his memory served him faithfully in conducting the service, for his eyes were in misty conflict with his bright smile. Nickey from the front pew, watched his mother with awestruck eyes, and with sonlike amazement at her self-possessed carriage under the blaze of so much public attention.

There followed a procession from the church and soon the rectory, house and garden were alive with chattering groups of all sorts and conditions, for the invitations had been general and public, irrespective of class or sect, at Hepsey's special request. There was a constant line of friends, known and unknown, filing past bride and bridegroom, with congratulatory greetings and cordial good wishes. There were speeches from delegations of various local bodies and from local notables of various degrees; and there were wedding presents out-vying each other, as it seemed, in kindly personal significance rather than in costliness. Among them all, and arranged by Mrs. Betty at the very center, the Vestry's gift to the bride stood easily first, a plated ice water pitcher!

It was left to Maxwell to make the farewell speech, as the company crowded round the automobile, lent by the Bascoms, in which Hepsey and Jonathan sat in smiling happiness, ready to drive to the station, on their way for a week's honeymoon.

"Friends!" he said, in a voice that reached to the skirts of the assembled throng, "before we give a valedictory 'three times three' to the happy couple I have to tell you of a plan that has been made to commemorate this day permanently—and so that Mrs. Jackson may not forget the place she holds in our hearts and always will hold, as Hepsey Burke.

"It is Mr. Bascom's idea and I know it will give lasting pleasure to Mrs. Burke—I mean Mrs. Jackson," he corrected himself, laughing, "as well as to all Durford, young and old. The beautiful piece of woodland, half a mile beyond Willow Bluff, is today presented by Mr. Bascom to the town and we shall shortly repair there to watch the boys erect the tent now on the church plot and which Mr. Jackson has kindly presented to the Boy Scouts."

"Gee," yelled Nickey, in astounded delight, and leading a cheer that interrupted the speaker for some moments.

Maxwell continued: "Mr. Bascom's generous gift to the town will be kept in order by the Boy Scouts, as their permanent camping ground—and I daresay Nickey Burke will not be averse to occupying the tent with his corps, during the week or so that Mrs. Jackson is to be away. The place is to be called in her honor—'Hepsey Burke Park.' And now—Three cheers for the bride and groom."

The cheers were given with wholehearted fervor, as the man at the wheel tooted and the auto started on its way with the smiling pair, followed by the people's delighted shouts of approbation at the happy plan for perpetuating among them the cheerful name of Hepsey Burke.

The End.

YOU CAN'T PLOW
WITH AN AUTOMOBILE

Power and weight are necessary factors in heavy traction work like plowing. Many attempts have been made and are being made now to do this class of work with light-weight explosive engines.

They do not and cannot get the same economical results that properly designed and constructed Oil-Gas Tractors can accomplish.

NICHOLS & SHEPARD CO.'S
OIL-GAS TRACTOR

Is properly made to do the work that it is expected to do. It is not an experiment, but a tried and tested machine, good enough and reliable enough to be sold under the Red River Special name and guaranty.

It will plow, haul and work at the belt with the steadiness and sureness of steam.

Operating economies are highly developed. It has the power, it has the strength, it has the weight to do the things that you want it to do—and that we guarantee it to do—without stalling or breaking down. That's business.

DON'T TRY TO WORK A
PLEASURE MACHINE

There's a lot to this gas engine question. It is well worth careful investigation before you buy any kind of a tractor that makes power with oil or gasoline. Write us for particulars and consider the facts that we put before you before your decision is made. Ask for the Home Edition of the Red River Special paper and the Big Catalog that tells about our line.

THE HOME

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

Hygiene of the Eyes.

Many of the causes of blindness originate in infancy, and therefore the baby's eyes should be given careful attention. At birth the eyes should be looked after immediately, washed, the secretions removed and three drops of a 2 per cent silver nitrate solution dropped into each by the doctor or a trained nurse. Remember, by the doctor or a trained nurse, for while the solution is used to kill germs that are injurious to the sight it will destroy the sight itself if not properly used.

It is said that 80 per cent of blindness in children is caused by negligence in the cases of sore eyes in babies. If the baby's eyes become inflamed or mattery the doctor should be called and his directions implicitly followed. It does not pay at such times to apply a remedy someone wants you "to try." Get the advice of someone who knows. The doctor has made a study of that very thing for the sole purpose of saving baby eyes, and he will tell you what to do. Watery eyes may not be due to a cold, and prompt attention may save the little one serious trouble later on.

The disease known as pink eye is contagious, and precautions should be taken to prevent its spread by providing a separate towel and wash basin for the individual who has contracted the disease. Bathe the eyes frequently with warm boracic acid solution. Hot packs on the eyelids are good also.

Properly-fitted glasses should be provided for the cross-eyed baby. If taken in time most cases of crossed eyes can be cured in this way. Even at six months the baby will wear them, and by the time you think he is old enough to wear glasses he may not need them. Neglect of the cross-eyed baby may mean an operation in a few years.

Too much attention cannot be given this matter of the baby's eyes. It is a little thing to wash out his eyes each morning with boracic acid solution it is a little thing to protect his eyes from strong light and dust and wind; it is a little thing to call in the family doctor if the eyes do not look right; but it will be a big thing if he grows up with injured eyesight and lays it at the door of your carelessness or neglect.

Never Rub Woolens.

Grandmother knew how to launder woolens so they wouldn't harden and shrink. The same methods still apply, says the home economics department at Iowa State College, which suggests a few things to remember in washing woolens.

First. Wash the article by lifting it up and down in the water by hand or with suction hand washer, or wash in a machine that does not rub. Cut up soap in cold water, heat until dissolved and use instead of bar soap. Squeeze water out by hand or in loosely set wringer. Remove wrinkles by pressing one portion after another and not rubbing iron from place to place.

Second. Wash and rinse in lukewarm water and dry when sunlight is not too hot—never on a cold day. Press with warm, not hot, iron.

Third. Use soft water and a pure soap. Rinse in four waters to remove all soap.

Tatted Lace.

Directions.—Begin with the c l each r of 5 d s, 8 p with 2 d s between, 5 d s, fasten on spool thread, ch 6 d s., p, 2 d s, p, 2 d s, p, 4 d s, turn, r of 2 d s, p, 2 d s, join to 2nd p of c l, 2 d s, p, 2 d s. Ch of 4 d s, 3 p with 2 d s between, 4 d s. Alternate the r and ch until 12 rings and 11 chains are made, joining rings to each other and to picots of the c l as seen in illustration, ch like the 1st joining to 1st p of 1st ch by last p. Fasten threads in center of c l. Repeat these figures, joining by middle p of 2 chains.

Across the top make a double row of rings with ch between, r of 4 d s, 3 p with 4 d s between, 4 d s, and

A TATTED LACE SUITABLE FOR PETTICOAT TRIMMING.

ch of 4 d s. Join rings of each row to each other, and lower row to figures as seen in illustration.

Abbreviations—d s, double stitch or double knot; p, picot; ch, chain; l p, long picot; r, ring; c l, clover leaf.

Real German Coffee Cake.

To the Editor:—Seeing Mrs. A. G. J.'s request for a recipe for coffee cake I will send mine for German coffee cake.

One cupful scalded milk, one-third cupful butter, one-fourth cupful sugar, one-half teaspoonful salt, one egg, one-third yeast cake dissolved in one-fourth cupful water (or one-half cupful yeast sponge), one-half cupful seeded raisins, flour to make a stiff batter. Let rise. Spread in deep pan one-half inch thick. Let rise again. Before baking brush over with a beaten egg, then melt three tablespoonfuls butter and mix with it one-third cupful sugar, one teaspoonful cinnamon and three tablespoonfuls flour and spread over the top.

I will tell you of a cook book I made. I got a composition book and when I see a good recipe in some paper or magazine I copy it in my book. I put the different recipes, such as cakes, pies, salads, etc., on separate pages so I can find them easily. Miss B. W. M.

To Take Out Mildew.

To the Editor:—Will try to help Mrs. C. R. out on the mildew question. Take soft soap and salt and rub on the goods, then lay out on the grass overnight. If the mildew is bad it may take repeated doses, or just let the garment lie out for two or three days at a time. Buttermlik also may be used with equal success. Soak the clothes in sour buttermilk overnight or longer, then lay on the grass the same as when using soap and salt.

The lady who wanted to know how to clean a wool jacket will have good success with flour. Warm the flour and rub the garment in it just as though washing with water. Be sure to rub every part of the garment, and if not badly soiled she will be pleased with the result. Be sure to dust the flour out well. I have heard that corn meal is good too, but have not tried that. Flour is good for white bear skin also.

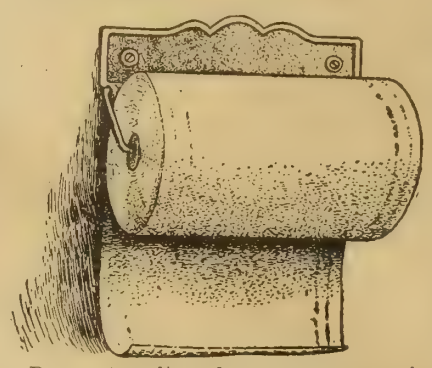
I hope this may help someone, as I find a good many helps in the paper. —Albertha.

Save Time and Steps in Kitchen.

Laura B. Breese Describes Some Inexpensive Devices Which Will Save Many Steps and Much Labor.

THE kitchen is literally the workshop in the home. The efficient homemaker will have this room most sanitary and convenient. The popular slogan today is "efficiency," and why should the home not standardize its processes of work as far as possible, just as all other business places are doing? When the routine of housework is reduced to the methods requiring the least amount of time and effort in its accomplishment, then we will recognize efficiency in the management and the housewife will find more time for recreational work.

Since the kitchen is used so much, let us study its possibilities first. The standard equipment, such as the sink, table, stove, cupboard for dishes, cabinet or supply cupboards, bear particular relation to each other. A

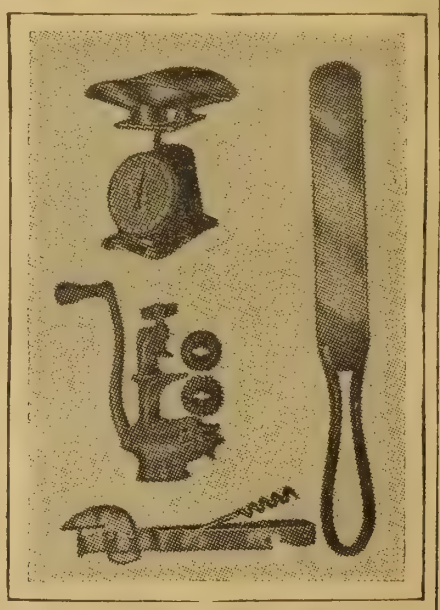


Paper toweling has many uses in the kitchen of the efficient and ingenious housewife of today.

housewife's work in her kitchen might be divided into two processes: those of preparing a meal and of clearing it away. Certain pieces of equipment are needed for each process, hence it would be a convenience to group these pieces together and in the order they are to be used. For example, in preparing the meal, she would need her cabinet, stove and small table. Mixing her dish at the cabinet, her stove should be close at hand for use next, and then the little table for holding serving dishes, etc. Her dining room would be her goal and it would save steps if she worked toward the goal.

In clearing away the meal the sink and cupboard should be close together and the process carried on toward the cupboard, which is the goal of this process.

The smaller utensils should be



SOME HANDY KITCHEN UTENSILS.

grouped about the larger pieces to save steps when they are needed, e. g., around the sink have the soaps, brushes, cleaning powders, etc., needed there. The utensils, mixing spoons, measuring cups, supplies for cooking will be convenient in the kitchen cabinet, or shelves, or in cupboards over the kitchen table. Holders, covers for cooking utensils, seasonings, etc., save steps if kept near the stove.

The kitchen should have good ventilation and light. Let the sunlight flood into all corners, as it is nature's best disinfectant. If the floor is pine, covering it with a good grade of linoleum will make it easier to keep clean, as well as save the feet.

Aluminum cooking utensils are much lighter to handle than the iron pots and kettles, and for nearly all cooking are most satisfactory.

Following is a list of labor-saving devices for the home which serve as strength, energy and time savers:

Bread mixer, meat grinder, potato ricer, double boiler, measuring cups, measuring spoons, stationary egg, cream and mayonnaise mixers, scales, vacuum cleaner, dustless duster, washing machine, fireless cooker, spatula, self-heating flatiron, self-wringing mop, collapsible step-ladder, and soup strainers.

"Skilled, intelligent work is more essential in the kitchen than in any department in the home. Hence, it requires intelligence linked with equipment to make the best ordered kitchen serve its intended purpose."

Many housekeepers make work harder for themselves by not having the equpiment of proper height. The table, ironing-board, and sink should all be high enough for the one who works over them to make it unnecessary for her to stoop at her work. This adjustment will save many a backache. Blocks of wood may be used under the table legs or the square top door stops screwed into them to raise the table to this required height.

The "Korner Kleaner"—a cork with a knob-handle will be found a great convenience for scouring cutlery. It sells for 10 cents.

The "Mistic Mit" is excellent for scouring utensils, particularly aluminum ware. It is made of fine copper strands and cotton twine and woven so the inside which covers the hand is soft, while the outside has the abrasive qualities of the metallic copper. It costs 10 cents.

The "Turbine Cream Whipper" is a joy for whipping a small amount of cream in shallow bowls. It does not spatter and costs only 10 cents.

Chloride of Lime For Mildew.

To the Editor:—If Mrs. C. R. will try my method of removing mildew from white goods (washable goods, of course) I am sure she will be pleased with the result.

Take a teaspoonful of chloride of lime and dissolve in boiling water. Strain through a piece of muslin to be sure all tiny lumps are out, as they rot the goods. Add enough hot water to cover the garment, which should be wet in cold water before placing in the bleach. Stir slowly for several minutes (leaving it on the stove) so the bleach will be all through. Then rinse well in several waters. Wash as usual and all mildew will be gone.

Will someone please tell me how to rid my pantry of the little red ants that have begun to bother already? I should be very thankful for the help.

If those who have lamps to fill, the bowls of which cannot be seen through, will set the lamp on the household scale and find how much a lampful of oil weighs and then remember it they will not need to be bothered with the oil running over. Anything that will save the busy housewife at this time of year, or any other time for that matter, is well worth trying. Mrs. S. H. N.

Notes For the Housewife.

Let potatoes lie in cold water for a little while before paring if you wish them to be white.

Chicken fat is excellent for shortening.

If they are oiled before putting

hem in the oven, stuffed peppers vill retain their green color.

To clean the inside of an enameled eapot, first fill the teapot with water nd a handful of soda. Put it into a varm oven in the evening and let it emain there. In the morning empty t and rub around with a flannel and he inside will be as white as when he teapot was new.

Do not turn down the wick of your erosene lamp and think that you are aving oil, for practically none is saved nd the air becomes vitiated and filled vith a disagreeable odor. Before dis-arding the old lamp burner try boil-ng it for half an hour in a strong olution of water and soda; dry thor-oughly before putting back on the amp and you will not need a new urner.

A new garbage can makes the best ontainer for sterilizing cans of fruits and vegetables when canning. It should be of the galvanized type and have a well-fitting lid. Use a piece of heavy wire netting or a frame made of slats as a false bot-tom to keep the fruit jars from com-ing into direct contact with the bot-tom of the can.

A neat, durable way to sew on hooks and eyes, snaps and patent fasteners is to buttonhole them into place, letting the purl of the button-hole stitch come to the outside of the ring. Fasteners put on in this way are on to stay.

Recipes.

Potato Cups.—Select large potatoes, peel and soak in ice-cold water. Use a cooky cutter to shape them in cylin-drical form, and a smaller cutter to shape the center. Then scoop out the potato, slice a piece off the end so it will rest flat on the plate, fry in deep fat until brown, and serve with the centers filled with creamed peas. Celery cooked until tender and served in pota-to cups is nice also.

Stuffed Onions With Ham.—Boil three large Spanish onions whole in salted water until tender, but unbroken. Cool and carefully remove the centers. Chop the centers with three-fourths of a cup of ham, a teaspoonful of chopped pars-ley and an egg well beaten, and suffi-cient cream to moisten. Mix and fill the onions. Place in a casserole, dredge with flour and dot with bits of butter. Pour a little milk in the bottom of the dish and bake twenty minutes, covered. Sprinkle with buttered crumbs, un-covered.

Corn Chowder—Fry a half pound of diced salt pork in a big saucepan until brown. Add one sliced onion and cook until light brown. Then add four sliced potatoes that have been parboiled ten minutes, a can of corn and a pint of boiling water. Cook until the vege-tables are tender, then add a quart of rich milk, pepper, salt and a half dozen crackers which have been soaked in a little milk. Serve with a cracker on each dish of soup.

Cereal Muffins.—To one-half cupful of breakfast cereal add one-half cupful of white flour, one rounding teaspoonful of baking powder, one-half level tea-spoonful of salt, one tablespoonful of sugar, one well-beaten egg, one-half cupful of sweet milk, and one table-spoonful of melted butter. Mix well and bake in greased gem pans in a hot oven.

Crullers.—Two tablespoonfuls of but-ter, two tablespoonfuls of sugar, one egg, two cupfuls of flour, one-eighth teaspoonful grated nutmeg and cinna-mon each, one-fourth teaspoonful of baking powder, one-half cupful of milk. Cream the butter and add the sugar gradually. Sift and mix together the flour, baking powder and spices. To the sugar and butter add the egg, the milk and the flour mixture alternately, beat-ing continually. Roll out, cut into strips and gash strips in four places. Take up by running finger through gashes. Drop into deep fat and fry.

Cabbage Salad.—Cut two slices of fat salt pork in cubes and fry a golden brown. Pour this hot fat and bits of pork over a small head of cabbage and one onion finely chopped. Season well with salt and pepper. Pour a little vine-gar into the fr ing pan when it is boil-ing hot, then pour over the cabbage and serve at once.

Chocolate Spice Cake.—One-half cu-ful of butter, one cupful of sugar, one-half cupful of milk, one-fourth tea-spoonful each allspice, cloves and nut-meg, one and one-half cupfuls of flour, two eggs (beaten separately) one and one-half teaspoonfuls of melted choco-late.—Miss B. W. M.

THE YOUNG FOLKS

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Belongs to Canning Club.

Dear Young Folks:—I have been reading all of your letters and I enjoy them very much, so I thought it was time for me to write to you.

I live on a 140-acre farm. I live near a small marsh close to a river which is called Mink river. We have seventeen head of cattle. We milk six cows and I help milk. We also have three horses.

I go to school every day. I am twelve years old and am in the sev-enth grade. I have only missed two days of school. I like my teacher very much. We live two miles from school.

We have formed a club in our school for the boys and one for the girls. The girls' club is a canning club. In the summer we are going to raise dif-ferent kinds of fruits and vegetables for canning.

Elsie says we should give riddles, so I will ask you one: He has no eyes; he has no legs, but he has a mouth and he goes on forever. Can you guess it? The answer to Elsie's rid-dle, what has an eye but cannot see, I think is a needle. —Florence.

Another Answer For Elsie.

Dear Young Folks:—I read Elsie's letter about riddles. I think the an-swer to hers is a potato, as it has eyes but cannot see.

I am eleven years old and am in the sixth grade. We live on a farm nine miles from town. We have elev-en horses and two colts. We have several cows, too, but I don't know just how many.

I make cakes and also cook some. I sew quite a lot, too. Here is one of my cake recipes. It is for angel cake.

Beat the whites of eight eggs until frothy, add one teaspoonful cream of tartar, and continue beating till the eggs are stiff. Then add gradually, while beating constantly, one cupful fine granulated sugar. Fold in three-fourths cupful flour mixed with one-fourth teaspoonful salt and sifted four times. Add three-fourths teaspoonful of extract. Pour into an unbuttered angel cake pan and bake fifty minutes in a moderate oven. When done, re-move from pan. You may use any kind of white icing. —Stella.

The Sparrow's Nest.

Dear Young Folks:—I am a farm girl. I live on a 160-acre farm. I am ten years old and am in the fifth grade at school. My sister goes to high school in town.

I am going to tell you about the sparrow's nest that is in our buggy shed. It is in a can and it is made of hay and feathers. My brother found it and it had six eggs in it. Today I looked in and there were three little birds in it. I will write and tell the Young Folks when the birds go away.

I am raising flowers and chickens this summer. I can crochet and play on the organ. I am going to learn how to tat, too. My sister is going to teach me. —Golde.

Wishes She Lived in the Country.

Dear Young Folks:—I have been reading almost all of the nice letters that you have written and I think I would like to write to you.

I used to live in the country and I wish I still lived there. We had one of the loveliest orchards. I am in the seventh high grade and am twelve years old. We have a dog and a cat. The dog's name is Jack and the cat's name is Bright Eyes.

We used to go to the woods and get the largest and darkest blue violets.

I cook every week at school and can bake and cook quite a few things.

—Evelyn.

No More Flame-Blackened Cooking Utensils to Scour

Isn't that good news? Just think of the hours of work you won't have to do. Write today for booklet that tells about the different styles and prices of

NEW PERFECTION OIL COOK STOVES

The flame never reaches the utensil. It never creeps up or diminishes. It gives the maximum of efficiency.

This stove is easy to fill and is always ready. Makes summer cooking easy.

No smoke—no odor—no waste. Your cur-tains will stay clean longer.

Costs much less to burn than the coal or wood burning range. Does away with neces-sity of enduring excessive heat of the latter.

Get the oil cook-stove with the *Long Blue Chimney*. You can't afford to be without one this summer.

International Sunday School Lesson.

Lesson for June 11, 1916.
(By E. O. SELLERS, Acting Director of Sunday School Course.)

SOWING AND REAPING (TEMPERANCE LESSON.)

LESSON TEXT—Galatians 6.

GOLDEN TEXT—God is not mocked; for whatsoever a man soweth, that shall he also reap.—Gal. 6:7.

We turn aside today to consider the second temperance lesson for the year. Paul's letter to the churches of Galatia strongly contrasts law and grace. Its key verse is ch. 2:16, and its most prominent word is "law." Many claim verse one of Chapter 5 as its golden verse. This final chapter is a most practical one and rich in suggestion regarding our social rela-tions. Let each member come pre-pared to give a temperance applica-tion or to ask a temperance question.

I. "Bear Ye One Another's Burdens" (vv. 1-5). If a man trespass, be sur-prised in a sin, be caught in the very act, or surprised into committing a sin, "ye which are spiritual" (literal-ly guided and governed by the spirit; ch. 5:16-25) are to restore such a one. This is to be done not by cutting off or casting aside the erring one but as a dislocated limb is restored to its place, so we are to "restore" that one to his place as a believer; each be-liever being a member of the body of Christ (I Cor. 12:12, 14, 27); one who falls into sin is a dislocated limb or member, and the stronger ones are to restore him to his proper place. This must be done, however, not with any sense of our own infallibility but in meekness, gentleness and with great tenderness. (See II Tim. 2:24-26. Paul's reason for this, "lest thou also be tempted" should lay low the pride any of us who have not fallen might feel (v. 1; Math. 7:2-5; Jas, 2:13). In-stead of exclaiming, "I could never have done any such act," we ought rather to say, "But for the grace of God I might have done even worse than that." (I Cor. 10:13). The bur-dens (v. 2) or weights which we are to bear are not the unnecessary de-tails of the Mosaic law (Math. 23:4; Acts 15:10) but rather they are the temptations, weaknesses and failures of others. The master "came not to be ministered unto but to minister" and was "tempted in all points," "touched with a feeling of our infirmi-ties" and in our thus sharing with each other we but follow in his steps (Ch. 5:4; John 13:34, 15:12; Romans 15:3. This is the "law of Christ," not onerous, not a grievous burden, not necessarily an obligation, but a "law" because he, our "file leader," fully and perfectly exemplifies it (Phil. 2:5-8). It is chiefly self-conceit and spiritual pride (v. 3) which stands in the way of gentle forbearance in dealing with our erring brothers. Such pride does not usually deceive others (Jas. 1:22-24) and he who is so controlled, "de-ceiveth himself."

II. Whatsoever a Man Soweth" vv. 6-8. While each must so bear his burden, yet those who are taught are to help those who teach to bear their burdens by contributing "in all good things" (Rom. 15:27; I Cor. 9:11-14). Paul sounds a solemn warning to

those who refuse thus to help forward the work of righteousness, those who fail to support others and think that their selfishness will accrue to their advantage (v. 7). The natural world has many illustrations of this immutable law. Men may mock (sneer at) this law, but find eventually that there is no escape from its operations. This law has many applications. The one in the context is, first, a physical one (v. 8), a most familiar one to us all. The same is true spiritually, and has been repeatedly illustrated throughout the history of the Christian church. (II Cor. 9:56; Prov. 11:24). In all of our actions, physical, mental, moral, social, spiritual, we reap what we [illegible]e in kind, sown sparingly we [illegible] in abundance.

We shall Reap, If We Faint [illegible]" vv. 9-18. Paul now proceeds to [illegible] the practical application. If we [illegible] under the leadership of the Spirit (See ch. 5:16-25 we avoid carnal mindedness and the Spirit (who is life John 6:63; II Cor. 3:6), we shall reap "life eternal," i. e., life which is endless in duration and divine in its essence. There must be, however, persistence. We would not withhold the good seed nor refrain from sowing it if we are to reap the reward suggested in verses nine and ten. If we do so withhold, or should we sow ought but the "good seed," we will surely reap the awful harvest suggested in verses 7 and 8. Temporal weariness or discouragement will not excuse us for any negligence. Nor are we to be impatient, for "in due season," in God's time (I Tim. 6:14, 15) we shall reap; not perhaps immediately, but the issue is certain.

Some fail to reap because of laxity; others continue cultivation too long; still others, by overlooking their "opportunity" to do good (v. 10) and hence having not sown, they cannot reap.

Paul suggests (v. 12) that the sowing of which he speaks is not for any outward show, nor for conformity to the edicts and regulations of men in order to avoid persecution, (v. 12 R. V.).

Guernsey Meeting at Burton Farm.

(Continued from page 9.)

sided with Mr. F. E. Fox, secretary-treasurer. Only a short business session was held at which Earl Roberts, Clyde Fruit and C. J. Connell were named on the resolutions committee. It was decided to do away with the nominating committee and elect officers from the meeting next winter. Resolutions were passed thanking Mr. and Mrs. Burton and Mr. and Mrs. Longley and expressing sorrow over the recent death of Mr. A. E. Swan.

The directors asked for an expression from the members on the advisability of holding a grade and a bull sale this fall in addition to the regular sales. The sentiment was fairly strong for both, many favoring the grade sale on the ground that this would enable many breeders to secure good stock which, by using a pure-bred sire, would gradually get them into the pure-bred business when they cannot now afford to start with pure breds. Others suggested a combination grade female and pure-bred bull sale; some a bull sale by itself and some a grade female sale by itself. As one member expressed it, it would be a wise move to hold a grade sale even if some of the females had to go at a sacrifice, as they would not have to feed them over winter, and during that time the buyer could be using them. Final action on these matters was left to the directors.

Mr. F. W. Merrill, of Minneapolis, spoke in a most interesting manner on the dairy industry of the Northwest. He dwelt particularly on the trade possibilities for Wisconsin and pleaded for the greatest integrity in breeding and selling of pure-bred animals. Waukesha county is succeeding as a Guernsey center, he said, because the breeders have their hearts in the work and that in his opinion no man can develop a fine type of Guernsey without developing himself.

The dairyman, he said, is today overcoming the greatest obstacles that confront any class of farmers. First, he is operating on expensive land; second, his machine is costly and she is subject to disease. What the Northwest wants is cows like those in Wisconsin who can produce fat at a cost of from 12 to 15 cents a pound instead of those at 25 cents like now prevail in much of that country and he declared that they are coming to Wisconsin to get them.

Mr. Merrill flayed the cattle dealers in plain language and said that much of the bad reputation Wisconsin has in Montana, North Dakota and Idaho is the result of these dealers. "I tell them that the finest cattle and the healthiest cattle in the world are to be found in Wisconsin," he said, "if they will go where integrity backs every animal and will do business with the breeders." The accredited tubercular free list now being prepared in Wisconsin he believes will do much to help conditions and keep out the dealer who will take an automobile, drive through a county and furnish any old kind of cattle for $5 a head.

"The northwest has money and they want your cattle," he declared. "They are ready to buy and willing to pay the price, but they demand good stuff and they won't take diseased stock."

Mr. Merrill spoke pointedly on the necessity of honesty in breeding and selling and said that much of Waukesha's success has been due to these two things. But the state, he said, must co-operate as a whole as the breeders of Waukesha county have co-operated and then the word will go out that what comes from Wisconsin is good and is clean.

Too long has the impression prevailed, he said, that a pure bred is good because she is pure bred; that a Guernsey is good because she is a Guernsey. Mr. Merrill believes that the great problem facing the breeder today is to weed out the pure-bred scrubs from the pure-bred herds and to get away from the impression that a cow is a good cow just because she is pure bred. Nothing hurts, in his opinion, like selling a cow that will not pay for the investment and for this reason he says "get away from the undesirable pure bred. See to it that every animal sold at a private or public sale is worth the price that it brings."

Mr. Merrill is a great advocate of community breeding and does not believe that Waukesha county could have ever reached the place it occupies today in Guernsey history without the co-operative effort that has prevailed since 1904. No breed can be developed in his mind to a great degree by a breeder alone in his territory.

Mr. C. P. Norgord, commissioner of agriculture, discussed the functions of the new department and explained what it is trying to do for the farmers and breeders. He told of plans for the coming state fair and predicted it would be the greatest as well as the best in the history of Wisconsin.

Mr. Norgord also discussed the tuberculosis situation and appealed to the breeders to take particular precautions to keep their herds free of it, not only as a safeguard for their own families but as a duty to the state and nation as well as to their own financial benefit. Mr. Norgord explained how tuberculosis has been spread by the sale of whey and other by-products from cheese factories and creameries and advocated the enactment of a law in Wisconsin which would require the pasteurization of all such by-products before they could be fed to the calves or used in any way.

The fact that the farmer has to suffer in the cleaning up process he regretted, but under existing laws that is the only method. Some day he hopes to see a plan evolved where some of this burden will be lifted from the farmer and placed upon the state and nation which is also benefited.

Mr. C. J. Kaiser, vice president of the Farmers' Savings Bank, of Palmyra, explained a plan inaugurated by the bank to loan money to boys who wish to get into the breeding game on their own hook and invited them to take advantage of it.

Rural Carriers Meet at Eau Claire.

(Continued from page 11.)

said that Mr. Arle has performed his duties so faithfully that he has had nothing to do, and Secretary Demarest reported 711 paid-up members, and that Marathon county deserves special mention for increase in members in county organizations for the year. Several counties, he said, had failed to report, and an effort will be made to revive them. The dues are $1 a year, of which half goes to the national organization and every carrier not a member should immediately enlist and attend the conventions which are great stimulators of interest in the service.

Henry Gallenbeck, of Beaver Dam, state organizer, reported that he had gone slowly during the year in order not to run up expenses, but that what he has accomplished was done at a total expense of $34.40. Mr. Gallenbeck spoke at some length on the value of the organization, and pointed out that if the carriers are to get their just deserts they must organize and fight for them. Nothing has ever been won through individual effort, and he declared that every concession secured by the carriers from congress has been the result of concerted, organized effort. He said that never in history had a postmaster-general voluntarily recommended betterments which is an indication of the necessity of keeping the state association in good shape to back up the national association. "What we get from congress must come from organization," he said. Mr. Gallenbeck also discussed the question of pay and said that he did not believe any man could fix a scale for Wisconsin that would be fair to every carrier as conditions vary so largely in Wisconsin. In some parts he said some carriers really should get more for going twenty-six miles than others get for going thirty miles, as roads vary. In this he was applauded, which indicates a desire of Wisconsin carriers to adjust the wages on an equitable basis. G. C. Granger, of Sheboygan Falls, reported a balance of $612.08 in the treasury.

HOMESTEAD COMPANY
Engraving Dept. Des Moines, Iowa

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and inclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery.

CATALOG OF SPRING AND SUMMER FASHIONS.

Send 10 cents in silver or stamps for our up-to-date 1916 large spring and summer catalog, containing over 400 designs of ladies', misses' and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, MADISON, WISCONSIN.

1666—A pretty negligee. The pattern is cut in 3 sizes: Small, medium and large. It requires 2 yards of 42-inch material for a medium size.

1713—A set of new tunics. These attractive styles may be used for any material. The pattern which includes all styles illustrated, is cut in 3 sizes: Small, medium and large. No. 1 will require 1⅝ yards of 44-inch material, No.

2 will require 3 yards and No. 3 will require 2⅝ yards for a medium size.

1381—A jaunty shirt waist. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 36 will require 2½ yards of 44-inch material.

1724—A smart and simple model. This portrays an ideal play or school dress. The pattern is cut in 4 sizes: 2, 4, 6 and 8 years. It requires 2¾ yards of 36-inch material for the dress, and 1¼ yards for the bloomers for a 4-year size.

1736—A comfortable apron, easy to adjust. The pattern is cut in 3 sizes: Small, medium and large. It requires 6⅛ yards of 36-inch material for a medium size.

1647-1646—A good sport suit. This portrays a combination of middy blouse 1647 and skirt 1646. The blouse and skirt are cut in 4 sizes: 14, 16, 18 and 20 years. It requires 2½ yards for the blouse and 3½ yards for the skirt of material 44 inches wide for a 16-year size. Two separate patterns, 10 cents for each pattern.

9910—A dainty little apron model. The pattern is cut in 5 sizes: 2, 4, 6, 8, and 10 years. It requires 1⅞ yards of 36-inch material for a 6-year size.

1627—A pretty style ladies' dress, with body lining or yoke portions with long or short sleeves, and with or without ruffles. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6½ yards of 44-inch material for the dress, without ruffles. With ruffles it requires 7⅞ yards for a 36-inch size.

1727—A smart suit for the little boy. The pattern is cut in 4 sizes: 2, 3, 4 and 5 years. It requires 2⅝ yards of 44-inch material for a 4-year size.

1743—Junior dress with two styles of sleeve and with under waist. The pattern is cut in 3 sizes; 12, 14 and 16 years. It requires 1¼ yards of 27-inch material for the underwaist and 5½ yards for the dress for a 14-year size.

9925—A splendid style for the growing girl. The pattern is cut in 4 sizes: 6, 8, 10 and 12 years. It requires 4 yards of 36-inch material for a 6-year size.

1726—A splendid model for house or porch wear. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 7 yards of 36-inch material for a 36-inch size.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Shade For Hens In Hot Weather.

To the Editor:—The poultry should have plenty of shade in the hot weather. About noon the hens will get out of the hot sun and remain in the shade until three or four o'clock when they will again return to the field or range and stay until time to go to roost.

The shade may be furnished in a few months if plum and cherry trees are planted about the chicken runs. The orchard is also a nice place for the hens, because out there they find many bugs and worms while scratching beneath the shade of the apple trees. I have seen the hens out in the wooded lot enjoying themselves in the heat of the day as they scratched in the leaves or grass. If the flock must remain in the poultry house to find refuge from the hot sun, the hens will simply sit around very inactive until the day gets cooler.

When the poultry must be confined to a small lot, I find it a good plan if no shade is available, to make an artificial shade. One summer I drove three foot posts into the ground, one at each corner of a parallelogram six feet wide and twelve feet long. I nailed two-by-fours to the top of these posts and covered with boards. A curtain of burlap was hung to the south side so that the sun would not shine beneath it in the mid day. Here the hens would come and scratch and dust themselves during the heated portion of the day. So I have made it a point to see that the hens have a good shade in the warm weather. It pays.

Subscriber.

Tankage For Poultry.

To the Editor:—I have about 100 hens. I do not have a warm place for them. Have been feeding corn and oats, more oats than corn, and bran by them all the time. They have all the sweet milk they can consume until noon, also warm water, table scraps and vegetables, mostly potato parings. They have about two quarts of tankage every other day. They will leave their grain for the tankage if fed at the same time. What I want to know is this, is the tankage of any value to them? I have got quite a few eggs all winter and about sixty eggs a day now. What do you poultry people say? E. J.

Feeding Oats to Fowls.

To the Editor:—Don't worry about what "they say." Oats is not only one of the best of feeds but a stimulant as well. The only runaway the writer was ever guilty of was from a horse "feeling his oats." The best calf we have on the place today has been given all the oats she could consume since first she began to nibble at them. A grade colt that is "all horse" to use the words of horsemen, had access to oats since he was born. The best poultry yards, from which we are gathering nine big brown eggs daily from eleven hens, are given little grain with the exception of oats. It is always thus oats are never found wanting at this place.

In our yards the oats are fed dry, in deep litter, and there is little danger of fowls overeating of them. This could not be said of any other kind of grain. If you are getting the right results from boiled oats, why boiled oats it is, and do not worry about trouble until trouble troubles you.

A woman who is very successful in caring for young chicks uses cooked oatmeal, instead of feeding it raw. This is contrary to the belief of many, but what's the use? It never pays to take things on at one gulp, any more than it does to be so narrow that we can see only one way and that way our own. About ever so often there is a revolution of opinion anyhow.

It may be that this would be a very good time to express our opinion about raw oatmeal; there are feeds preferable for very young chicks. Later it is O. K.

The only possible danger in feeding oats dry is if the fowl has been on short rations, has no grit, and then gorges the crop with this grain. The points may pierce the lining of the crop, causing death. If boiled and fed soft this slight danger would be eliminated. Subscriber.

AILING ANIMALS.

Scratches.

I would like to know how to treat scratches on colts. What would you recommend for this?

For scratches in colts, if it is of a simple nature, the use of a dry brush to take all dirt off and then the application once daily of tincture of iodine is very beneficial.

Breeding Young Mare.

I have a six-year-old mare that refuses to breed. She is a fine animal and I would like for her to raise colts. Can anything be done in a case of this kind?

The cause of the trouble with your young mare must be ascertained before any encouragement can be given about her breeding. Have your veterinarian examine her.

Prevention of Blackleg.

I have lost several head of calves with blackleg in the past two or three years. Have vaccinated them with blacklegoids since, but it is hard work. I have heard that there is some kind of wire used and wish to know if you can tell me the kind of wire used and where it is put, through the tail or through the brisket.

You speak of a wire being used as a prevention. Now the only thing we know of in this line is the thread method of vaccine which is put in the tail region. If one has a good place to confine animals the use of the blacklegoids is the simplest method known.

Troublesome Wire Cut.

I have a three-year-old sorrel mare that I bought about a month ago. She got cut in the wire last winter and it seemed all healed over when I bought her, but after a few days' work it broke open again. The cut was just above the hoof on the right fore foot and the foot is somewhat larger than the other. It has gone down some since I had her, but it still runs some. There is a small opening at each end of the cut. I have been syringing it out with a carbolic solution. Do you think there ought to be a larger opening, and which way ought it to be cut?

It is possible your animal has had an injury to the tendons or the bone when cut on the wire. We would advise you to have this examined by a veterinarian before doing any cutting and he may be able to locate the cause of the trouble.

Peculiar Death of Bull.

About a week ago I lost a valuable bull. Now this bull seemed all healthy and O. K. at night and in the morning I noticed he did not eat his feed up in the yard so I put him in the barn and fed him hay and oats. He ate them up and at noon I fed him more hay. He ate the hay, but would not drink and at five o'clock in the afternoon he was dead. He seemed to have a fit before he died and frothed at the mouth. He did not bloat after he died. I had a veterinarian see him and he could not tell what was the matter with him. He opened him up and found his heart full of blood and his kidneys were spotted and his bladder was full of blood.

It is rather hard for one who has not made an autopsy of this animal to make a diagnosis when one who did make an autopsy failed of diagnosis. However, we may say that the trouble seemed to be of an acute nature, probably internal hemorrhage, which might have been occasioned from any one of a number of acute diseases or conditions.

Scours in Calf.

I have a seven-weeks-old calf that has had scours for about four weeks. Do you know of a remedy? This calf has always sucked the cow; never been fed by hand. I never had a calf scour before sucking the cow. What causes it? The calf is turned to cow twice a day. Am satisfied the calf doesn't get too much milk. It craves salt, which is given to it nearly every morning. Has a good dry place to sleep and is turned out every nice day. Have been trying to get it to eat some ground corn, but have had no luck. Cow didn't clean when she calved for two or three weeks after, but seems to be all right now, eats well and bawls for calf now, something she didn't do until lately. She is just a heifer. This is her first calf.

First let us say to you, never be guilty of letting a cow go over twenty-four hours if she hasn't cleaned properly. She should be attended to by a veterinarian or one competent to do this work. The calf which is scouring should have been treated long ago. The following line of treatment may prove beneficial. Give one-fourth pound of magnesium sulphate in a pint of warm water. As soon as the physic has done its work give the following: Tincture of gambir, two drams, and chalk mixture, one ounce. Give a teaspoonful every four hours. You will have to get your druggist to put this medicine up for you. Do not water this calf very heavily for a few days and the above treatment may prove beneficial.

FREE ILLUSTRATED Catalog. **Big bargains on account of room.** Leading breeds, blooded poultry, pigs, sheep, all breeds calves. 30 blooded Barred Plymouth Rock eggs, $1.00; 100 eggs $3.50. S. C. PATENTS Watson E. Coleman, Patent Lawyer, Washington, D.C. Advice and books free. Rates reasonable. Highest references. Best services.

HEAVES cured or money back. Baird's Heave Remedy is guaranteed. Write Baird Mfg. Co., Box 618, Purcell, Okla., for particulars.

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

Found—Another Good Duroc Boar.

SOME time ago we called attention to the good two-year-old Duroc Jersey boar owned by McClurg Bros., of Viroqua, Wis., and at that time we asked that we be notified if there were more "good boars in the woods." Since then we have received several letter from [illegible]s telling us of the good herd boars they had and we have gone to see [illegible] them. A couple of them were [illegible]ough "in the woods," and should stay there, and a breeder that has no more ambition than to use a boar, such as some we have seen, will also remain "in the woods" as far as constructive breeding goes. We realize that every breeder can't have a world beater, but every breeder can have the desire and ambition to raise better hogs, and when we call on a man that tells us he has "as good hogs as anyone" just because they have red hair and a pedigree, we can rest assured there is something wrong. We have seen another good Duroc boar, and one any breeder should feel proud of. He is owned by Emmett Cook & Son, the senior living near Richland Center and the son's postoffice is Boaz though his shipping point is Richland Center. We all hear and read about 1,000-pound boars, but those that follow the game kno that they are not as common as reported. The Cook boar is the best, 1,000-pound prospect we have seen in the state. Cook's Defender is by Defiance and he by Defender, his dam by Jewel Chief. He has just turned three years old, has one of the best backs we have seen for some time, great depth, bone and feet suitable to carry 1,000 pounds and the head and ear is almost ideal. He will be shown at some of the best county fairs, but the owners did not feel that they had the time necessary to get him in condition for the state fairs. Owing to the short corn crop most of his get were sold last fall, but we saw some fine spring pigs by him. There are also some good sows in this herd among them being a daughter of Defender, purchased last winter from McKee Bros., and she is raising a litter by Cherry King Defender. There is an excellent litter of eleven out of a daughter of Illustrator and they are sired by Cherry Chief Wonder the good boar heading the Van Meter herd in Illinois. Remember Cook's Defender, he will be crossed with good sows and we predict that his get will be heard from. His advertisement appears in this issue and if you should write about this boar or his get please mention this paper. See page 27.—Adv.

Dobson & Eastman Poland Herd.

THE name Dobson & Eastman, Lancaster, Wis., needs no introduction to Poland China breeders or readers of Wisconsin Farmer. Burlie Dobson is one of the popular boys at the fairs, making himself conspicuous by his winnings. They are raising a fine lot of spring pigs, not as many perhaps as in former years, owing to the fact that fewer sows were carried over, but what they have look like the money at this time. Perhaps some of you Poland exhibitors wonder what is going to be out this year from this farm. The big show right now is their junior yearling and when the fall shows start he will be an "eye-opener." On May 1st he weighed 505 pounds being thirteen months and twenty days old. Burlie says he is gaining about a pound a day and if he keeps that up he will be "some boar" by September. Any of you breeders that have junior yearlings want to keep busy from now on. They will also have an entry in the senior yearling class and two senior pigs. They are undecided whether they will take out the 1915 champion, Jumbo Hadley, or not. He is looking good, but they feel that he is worth more as a breeder than a show boar. They will show his get. All sow classes will be filled and they are going to be strong in senior sow pigs. They have three, any one of which will make a creditable showing. They have entered three futurity litters. Dobson & Eastman are lined up right for the fairs. During the winter the Grant county Poland China breeders formed an association and Mr. Dobson is the live wire of this association and it was due mainly to his efforts that this association was formed. To boost the breed in their county, October 10th has been claimed for an association boar sale. The motive of this sale will be to advertise more than to make a profit and they realize that good boars must be offered if they want to make a reputation for themselves and their association and with this thought in mind, the members have agreed to consign the very tops from their respective herds. There are some good herds in the state and if they will do this we can guarantee there will be some good boars in the sale. We will have more to say about the Dobson & Eastman herd at a later date.—Adv.

Drake's Short-horns.

SHORT-HORN cattle have been bred for many years by H. B. Drake & Sons, Beaver Dam, Wis. They have followed the dual-purpose line, breeding for both milk and beef along Scotch and Scotch-top strains. They have become well and favorably known, both as breeders and as honorable and square salesmen. The writer has yet to hear of a dissatisfied buyer, but on the other hand has heard nothing but favorable comments in regard to these men. The cows in the herd are big, roomy matrons, showing constitution and good, straight conformation. The herd is headed by Broadhooks Prince, one of the best grandsons of Whitehall Sultan. At the present time this firm is offering some good young bulls that are fit to head any herd. For breeding and further description write to the above address. See page 27.—Adv.

Watson & Will's Holsteins.

WATSON & WILL, Menomonee Falls, Wis., have a fine herd of Duchess Ormsby and Johanna bred cows. The cows are closely related to the new world's record cow, Duchess Skylark Ormsby, and the former world's record cow, Pietertje Maid Ormsby. The sire at the head of the herd is Maple Crest De Kol Friend 104236. He is a half brother to Banostine Belle De Kol, that gave 27,404 pounds of milk and made 1,322 pounds of butter in a year. Maple Crest De Kol Friend, is a son of Friend Hengerveld De Kol Butter Boy, that has four daughters with records over 1,000 pounds of butter and from 20,000 to 27,000 pounds of milk in a year. His dam is Maple Crest Pontiac Duchess, that made twenty-one pounds of butter and gave 507 pounds of milk in seven days. She is a daughter of Pontiac Aaggie Korndyke, that has four daughters that have made over 1,000 pounds of butter within a year. Maple Crest De Kol Friend is, therefore, one of the most richly-bred bulls in Wisconsin, being very strongly bred along heavy producing and long distance producing lines. At the present time Watson & Will are offering a number of yearling bulls ready for immediate service. These are from advanced registry cows of Duchess Ormsby and Johanna strains and sired by the above bull.—Adv.

McGill's Holsteins.

A HOLSTEIN bull ready for immediate service is advertised for sale on page 28 by W. D. McGill, Menomonee Falls, Wis. This youung bull is of Johanna, Korndyke, Ormsby lines of breeding. He was sired by Sir Johanna Aaltje Korndyke, whose dam is from a sister to Johanna De Kol Van Beers, the first forty-pound cow of the breed, and Netherland Johanna De Kol, that made 28.56 pounds of butter in seven days as a four year old. His sire, Dr. Johanna Korndyke, is a son of Korndyke Netherland Wayne De Kol, that has three daughters with records from twenty to twenty-seven pounds of butter in seven days. The dam of the young bull offered for sale has an advanced registry record. For further information in regard to this animal write to the above address.—Adv.

Tochterman's Holsteins.

ONE of the best herds of Holstein cattle in Green county which is noted for its good Holstein cattle is that of C. Tochtermann, Monroe, Wis. He has been breeding Holsteins for a great many years and has been very particular in his selection of both males and females. His herd is built upon the Johanna strain, he having purchased several bulls closely related to Colantha 4th's Johanna. Mr. Tochtermann has done considerable advance registry testing and has made a large number of very creditable records. At the present time he is advertising a fine young bull for sale on page 28, out of Spring Valley Lindora 241565. This cow, as a junior two year old, gave 428 pounds of milk and made seventeen pounds of butter. The bull offered for sale was sired by Johanna Bonheur Pieter 113138, whose fourteen nearest dams average over twenty-eight pounds of butter in seven days. For an extended pedigree and further information in regard to this animal write to the above address.—Adv.

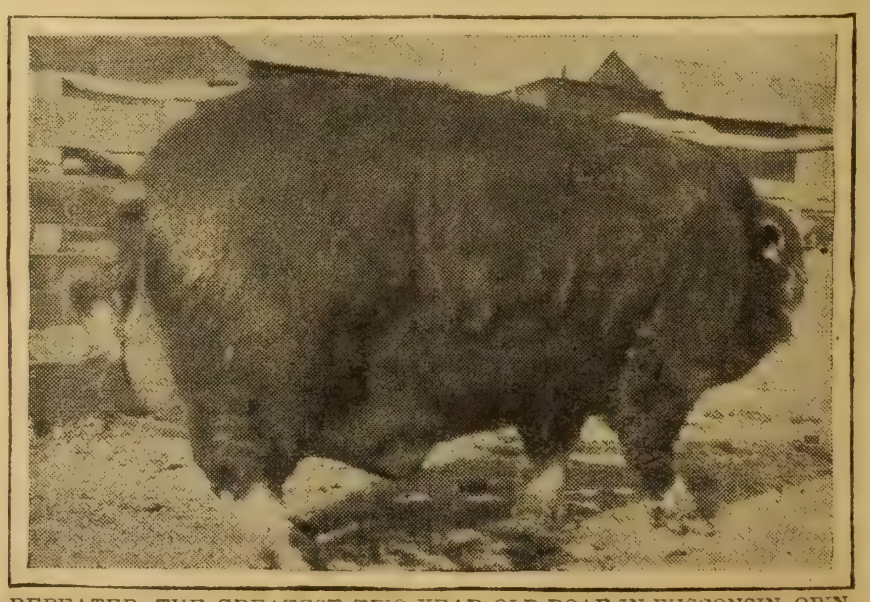
Smith's Short-horns.

THAT milking Shor horns are in great demand is shown by the fact of the heavy sales which George Smith & Sons, Burnett, Wis., have enjoyed during the past year. They have sold all of their yearling bulls and a number of younger ones and report that they could have sold many more had they had bulls ready for service. Their herd is one of high producing ability, in fact, they are using a milking machine, a thing unheard of on a great many Short-horn breeding farms. At the present time they are offering bulls from one to four months old, sired by Milkman. His dam gave over sixty pounds of milk per day, testing 4.4 per cent fat. Our readers will find it to their advantage to correspond with his firm when in the market for a herd header.—Adv.

ACME HARVESTING MACHINES IN ACTION. SEE FIELD NOTE ON PAGE 25.

Chester White News.

L. J. McBAIN is a breeder of Chester Whites and his postoffice is Bloom City, Wis., although he is only a few miles from Viola, his shipping point. A fellow breeder had told us that we would find some good hogs at this farm and we were not disappointed when we arrived. He is in the same predicament many others are this spring—didn't keep over enough sows and consequently he hasn't as many pigs as he should have. The five good sows that he retained have raised forty-five pigs and we are glad to report that there are some outstanding pigs among this number. The "big noise" on this farm is Iowa Boy, a son of the noted Iowa sire and show boar, Iowa First. This boar is a three year old and the fact that he had size and quality made him appeal to us. Three of the best sows are sired by him. The other boar in service is a two year old sired by the widely-known Combination 2d out of Sophia by Inspector O. K. This breeding needs no comment and individually he has a world of quality. This boar is one of the litter of eight boars that sold in the Evan's boar sale a year ago last fall at an average of $71. Besides the spring pigs that are sired by the above boars Mr. McBain has some fall boars and three or four of these are choice individuals. They are by the Combination boar, Ideal Combination. It would be well to keep this herd in mind, for, while Mr. McBain has never done much advertising, he now has his herd or will have in a very short time, to the point where he need not be ashamed to make a noise about it. We will have more to say about this herd later.—Adv.



REPEATER, THE GREATEST TWO-YEAR-OLD BOAR IN WISCONSIN. OWNED BY J. C. HENDRICKS, HAZEL GREEN, WIS. SEE PAGE 27.

A Poland Herd With Few Equals.

WE do not believe that the Poland China breeders, in general, appreciate the fact that Wisconsin has one of the best herds of this breed to be found anywhere. For the past five years the writer has been associated with the breeders of Iowa, Nebraska and South Dakota and he has seen the good herds of those states and inasmuch as Wisconsin is young in the swine industry, we thought, of course, there would be great room for improvement in this state, but J. C. Hendricks, Hazel Green, Wis., has a Poland China herd that deserves a berth with the best in the United States. It was our good fortune to attend the Hendricks sale the first week we were in the state and such an offering of Poland China gilts, we have seldom seen. If some of the highly advertised breeders of Iowa had had this offering they would have held a record-breaking sale. This was Mr. Hendricks first auction sale and the fact that he made an average of $72.75 on forty head and all but five of these were spring gilts, goes to show that he had the goods. In the first place J. C. is a natural hog man. He enjoys taking care of his hogs and he gets results. When we visited this herd the middle of March he had a great line up of spring pigs and it is useless to say that they were doing fine. Repeater, one of the herd boars is an outstanding individual. In the first place he is big, but his size was not gained at the expense of quality. He comes from big breeding by Orange Big Bone he by Big Bone, breeding that has made good wherever used. Mr. Hendricks demonstrated his ability as a breeder when he produced Smooth Price, in our estimation the best Poland boar of his age that we have seen in the state. We haven't seen all the herds in the state as yet and we make this assertion with all due respects to other Poland breeders. This boar was a year old last September. Is sired by Smooth Wonder by Wonderful by A Wonder 143421. His dam, Lady Wonder is by Chief Price 2d. A better pedigree could not be written. The owner may take this boar to the state fair this fall and if he does some one will know that there is a hog show. Keep this boar in mind, also Repeater, for they are two boars that will be heard from in the future. Notice the advertisement of this herd in this issue and if you need something in big-type Polands write Mr. Hendricks. When writing will you kindly mention The Wisconsin Farmer? See page 27.—Adv.

Lincoln Model an Excellent Duroc Boar.

MANY of the Duroc Jersey breeders of the Northwest have seen the good boar, Lincoln Model, and while there is no doubt difference of opinion about this hog, it must be conceded that he is one of the best. In our estimation, Lincoln Model is one of the four outstanding Duroc boars that we have seen in the state of Wisconsin. There are several good things about this boar that cannot be overlooked. He has a wonderful set of ears, eyes that are prominent and that will never "fat shut." Some might say that he has a "sow head"—that is not masculine enough, but we all know that there are more boars that can be faulted for having too coarse a head and ear with small eyes, than those with the "fine" head. He has a wonderful back and a spring of rib and "middle" that constitutes an easy feeder. He is now four years old and the writer has never seen a boar of his age that is smoother. He is entirely free from wrinkles, is not shielded and is as wide at the ham as he is at the shoulder. He is as good on his feet as a pig. Few boars of this age retain all these good points. Not only is Lincoln Model a good individual, but he is a good sire, and, as we visit the different herds we find some of the best pigs are by this boar, from sows that were purchased in the Stubbs & Hyzer sale last winter. Recently Mr. Albert L. Hyzer purchased Mr. Stubbs' interest in the Durocs and from now on Mr. Hyzer will be sole owner and you can rest assured that some good hogs of this breed will be produced at West Salem. Mr. Hyzer now has about seventy-five spring pigs most of which are by Lincoln Model. He expects to buy several high-class sows to cross with this boar and give Lincoln Model a chance to show what he can do when crossed on the best of sows. He will be shown this fall together with his get and we feel certain that he will make a creditable showing. Don't forget Lincoln Model, he is going to be heard from. Also remember that Albert L. Hyzer is the present owner. His advertisement appears in this issue. See page 27.—Adv.

Schultz's Chester Whites.

CHESTER WHITE pigs of March farrow are offered for sale on page 27 by L. A. Schultz, Poynette, Wis. These are the long, stretchy, heavy boned type of hogs that develop into big mature animals. Mr. Schultz is also offering five matured sows bred for

August farrow. For further information in regard to these animals write to the above address.—Adv.

Successful Harvester Line.

If great fields are to be cultivated and great crops to be grown, proper harvesting machinery is highly essential. This thought was the father of the old-time "Illinois Harvester" from which was developed the old-time Acme Hodges Header of today. The business established by Jonathan Haines flourished and continued under his direction until 1860 when it was purchased and enlarged by the founders of the Acme Harvesting Machine Company, which is today sending its highly developed harvesting machines and hay tools from its magnificent plant in Peoria, Ill., to every part of the world. The original ideal to which Jonathan Haines strove during his life has been continued and enlarged upon—the ideal of maximum efficiency combined with minimum cost and labor—and this ideal has been woven into every machine and tool produced today by this well-founded company. The Acme Harvesting Machine Company is today the largest independent manufacturer of machinery and hay tools in the world. The plant covers twenty-five acres of land with ideal shipping facilities at hand. The working condition throughout the entire factory are a source of pride to the owners and extreme comfort and delight to the many men and women employed in the shop and office. The first and last impression gained from a ground floor study of the "Acme" line of harvesting machines and hay tools is the thoroughness which characterizes every individual machine. A large force of field men is maintained for the purpose of studying the farmer's problems. These men make it their business to visit the various sections of the country and make a careful, scientific and extremely practical study of every phase and department of harvesting and haying. In addition to this force in the field the company maintains its own experimenting farms. Every conceivable condition of farming is purposely produced on these farms, in order that the machines may be rigorously tested out and demonstrated under the most diverse and adverse conditions. Every machine of the "Acme" line has been put through just such tests, and the machines, as they stand today, are the results of over fifty years of this same careful study and experiment. Possibly the best known of the "Acme" machines is the grain binder. This may be due to the fact that more machines of this type are in use than any other one kind. Wherever the binder is used it is giving the utmost satisfaction. Almost as well known and as widely used is the Acme Hodges Header. This machine dates away back to before the Civil war times, and through that long period and down to today it has held a leading place among machines that have given universal satisfaction wherever used. Rounding out their complete line of Harvesting machines, they also make the Acme corn binder; the four types of mowers, the Acme mower, Acme Giant mower, Acme Pony mower and Acme Giant vertical lift mower; the acme Lark self-dump sulky rake, the Acme combined side delivery rake and tedder, the Acme truss frame (two wheel) sweep rake; the acme (two-wheel) sweep rake; the Acme Giant (three-wheel) sweep rake; the New Acme (four-wheel) power-lift sweep rake; the Acme Monarch (folding) sweep rake; the Acme No. 2 stocker; the Acme stocker (with transport truck); the Acme reaper, the Acme Buncher; the Acme stock cover chains, and the Acme flax dump attachment. This is truly a strong array of machinery for handling all kinds and conditions of harvesting and haying, and the standing that the Acme Harvesting Machine Company enjoys among the farmers and dealers of the country, as well as the high esteem in which they are held by other concerns in similar lines of business is the strongest evidence of their value. See page 19.—Adv.

The Currie Hampshire Herd.

R. L. CURRIE, Viola, Wis., is one of the oldest breeders of Hampshires in the state. He called a sale last winter and cataloged over 100 head of sows, but this was too many to sell in one sale, so he kept some of the good ones and they have all raised good litters for him. If you are interested in this breed you can find anything you want in this herd. He has some good fall gilts, some sows bred for fall farrow and spring pigs of both sexes. His Gen. McArthur boar is a great belter and if you order from Mr. Currie you will get a hog well belted, if not you can send it back. Every Hampshire on the place is for sale and Currie has some good ones. It will pay you to get the first pick, so write at once and please mention The Wisconsin Farmer. See page 27.—Adv.

Grenwode Farm Guernseys.

A 638-pound Guernsey bull is advertised for sale on page 28 by E. R. Whitcomb, proprietor of Grenwode Farm, Whitefish Bay, Wis. This bull is sired by Glenwood King Coral, a grandson of Glenwood Boy of Haddon and King Coral, that have a total of fifty-one advanced registry daughters. His dam, Duke's Pretty Duchess 2d, gave 11,000 pounds of milk and made 630 pounds of fat in a year. The three nearest dams of the young bulls offered for sale average 632 pounds of fat in a year. This is a richly bred bull and an outstanding individual. For charted pedigree and further information write to the above address.—Adv.

Derivan's Poland Chinas.

BIG-TYPE Poland Chinas are advertised for sale on page 27 by Jas. Derivan, Fox Lake, Wis. He is now offering September pigs of both sexes, sired by the great boars, Black Expansion and King. Send for description and breeding of the animals to the above address.—Adv.

McNutt's Holsteins.

REGISTERED Holstien heifers and young cows are advertised for sale on page 28 by H. F. McNutt, Oxford, Wis. These animals are bred to their forty-pound bull, Johanna King Segis, one of the most richly-bred bulls in the United States. His sire was King Segis, declared by many prominent judges to be the greatest bull of the breed. Although he lived to be but six years old, he has six daughters with records over thirty pounds of butter in seven days. The dam of Johanna King Segis is Johanna De Kol Van Beers, the first forty-pound cow of he breed, that with three sons have sold for a total of $62,000. Johanna King Segis not only inherits high production ability, but he also transmits it to his offspring. One of his daughters, Belle Beauty Johanna Segis, is the largest record heifer of her age in the world. At twenty-three months of age she made an extraordinary record of 22.21 pounds of butter and 439.7 pounds of milk in seven days. Heifers and young cows bred to a bull that will produce such daughters are very valuable animals to own. Mr. McNutt can also furnish a carload or more of high-grade springers or young cows or yearling bulls ready for service from advanced registry and untested dams. For further information in regard to the animals now offered for sale write to the above address.—Adv.

Keep Your Animals Free From Parasites.

LICE may truly be reckoned among the "little things" which, as is so generally the case, are often a big source of annoyance and loss. Horses, cattle, sheep and hogs are all subject to some parasitic disease which affect, to a varying degree, their health, productiveness or appearance, as the case may be. For such conditions a good dip and disinfectant is essential, and, as it is often necessary to apply it locally, uniform strength is a highly desired attribute. What the farmer needs is a preparation that he can depend on for absolute uniformity, no matter where or when he buys it. A good example of this is Dr. Hess dip and disinfectant, judging from its wide usage and favorable repute. At all events, it is known that Dr. Hess, the compounder, is a skilled and experienced veterinarian, regarded by many as an authority on stock and poultry ailments, and what might be called the materia medica of the farmer's calling. All his preparations are covered by a broad guarantee whereby dealers are instructed to refund the customer's money if they do not fulfill all that is claimed for them. —Adv.

Edgewater Stock Farm.

EDGEWATER STOCK FARM, Ft. Atkinson, Wis., maintain one of the largest herds of dairy animals in the middle West. They have a herd of from 400 to 500 animals and are able to supply at all times from a single individual to several carloads of either Holsteins or Guernseys. The proprietors are careful and discriminating judges of good cattle and offer first-class stock only. They have several very choice bulls which they are offering at very reasonable prices and at the present time can supply a carload of high-grade Holstein or Guernsey springers or young cows due to freshen in the fall. No matter what your wants may be it will be to your advantage to get in correspondence with these people before buying elsewhere. See page 28.—Adv.

Kirkpatrick Brothers' Holsteins.

KIRKPATRICK BROS., Reedsburg, Wis., are offering some exceptionally good, young bulls for sale on page 28. These were sired by a grandson of King of Pontiacs, who now has 175 A. R. O. daughters, fourteen of which have records above thirty pounds. The dams of the young bulls offered for sale have creditable A. R. O. records, some as high as 600 pounds of milk and twenty-four pounds of butter in seven days. This firm is also offering five registered cows and two heifers for sale. For extended pedigrees and further information write to the above address.—Adv.

Larson's Poland Chinas.

ATTENTION is called to the change of advertisement J. Le Roy Larson, Iola, Wis. He is now offering a yearling boar, sired by Wisconsin Jumbo and a gilt bred for fall farrow to Fairview Jumbo by Wisconsin Jumbo. He is also booking orders for July, August and September pigs. In a letter received from Mr. Larson May 25th, he says, "I am all sold out of spring boars and have but a few gilts left. The Wisconsin Farmer is doing the work for me." When writing to our advertisers kindly mention that you saw their advertisement in The Wisconsin Farmer. See page 27.—Adv.

MONEY-SAVING CLUBS.

HERE is an opportunity for subscribers to The Wisconsin Farmer to buy all of their papers and magazines at one time at a big reduction in price. By ordering all your papers and magazines through The Wisconsin Farmer you are assured of prompt service and low prices. Pick out your club and send your order today. (We do not guarantee these prices longer that ten days beyond the date of issue in which these offers appear.)

If none of the above combinations suit you, you can make your own club of papers in the following way: First select The Wisconsin Farmer and figure it at $1.00 per year. Then select any of the papers or magazines listed above and figure them at half their regular subscription price as indicated above, choosing whatever papers or magazines that appeal to you. As an example, suppose you should want The Wisconsin Farmer, Kansas City Weekly Star, Woman's World and People's Home Journal. You would figure The Wisconsin Farmer in the combination at $1.00; then you would add up the regular subscription price of the other three papers, which amounts to $1.10. Half of that amount equals 55 cents. Add this to the regular price of The Wisconsin Farmer, which is $1.00, and you would have a total of $1.55, which would be the rate for The Wisconsin Farmer, Kansas City Weekly Star, Woman's World, and People's Home Journal.

If you wish to subscribe for any papers or magazines not listed in any of the above offers, write to us for special rates. Send all orders to Club Dept., The Wisconsin Farmer, Madison, Wisconsin.

Another Firm Joins the Duroc Ranks.

BEGINNING with this issue of The Wisconsin Farmer the name Geo. D. Sprain & Sons, West Salem, Wis., will appear regularly in the Duroc Jersey column. These gentlemen have been breeding pure-bred Durocs for the past three years. They got off on the right foot and now have a bunch of "red hogs" that they need not be ashamed of. Three of the best sows are by the champion, Lee's Defender, and are out of Marion Wonder dams. Without a doubt the best sows we have seen in the state are of this cross and these are no exception to the rule. Two of them have fine, large litters by the good boar, Lincoln Model, and one has a litter by Regular 2d. They have one sow by the dean of the big-type sires, King the Col. and the litter is by a grandson of the three-times champion, Missouri Model Top. The attraction on this Duroc farm at the present time is Grand Model 21st. This boar is of September 2, 1915, farrow and, while he is very thin at the present writing, he has the most stretch of any boar of his age we have seen this spring. He is sired by the great show and breeding boar, Grand Model, and his dam, Fancy May, is by Crimson Dusty Critic, he by Dusty Critic by old Glendale Critic, out of a daughter of old Crimson Wonder. This is the only boar by the noted Grand Model that we have seen in the state and if they can get him in condition he will be shown at the fairs this fall. Another good boar in this herd is a junior yearling called Corrector 2d he by Corrector by Sensation Wonder. His dam is by Pal's Dude. This is a very likely boar, good enough to deserve a berth in most any herd. The Duroc fraternity should be glad to have this firm join their ranks, for they are progressive breeders and have laid the foundation for a number one herd of Durocs. They expect to make a sow sale this winter and they will be in position to offer an attractive lot. They have about sixty-five spring pigs that are doing nicely. These are sired by Lincoln Model, Regulator 2d and Salem Model. A few of the boar pigs will be offered at this time. They are right in every way and you must be satisfied when they arrive at your station or you need not pay, send them back. Keep this herd in mind, for it is a comer. His advertisement appears in this issue and if you write please mention The Wisconsin Farmer. See page 27.—Adv.

Fewacres Farm Jerseys.

THE Fewacres Farm herd of Jerseys is attracting a great deal of attention by the register of merit records which they have been and are now making. Although the herd has been established but a few years, great care and discrimination was used in their selection, which has resulted in a herd of high producing animals. During the past year they have made a great many very creditable records. At the present time they are offering a number of very choice young bulls from one to ten months of age. There are variety of blood lines to choose from, including Nobles of Oakland, Oxford Majesty, Jacoba Irene, Loretta D., and Financial Countess, all of which will be recognized by Jersey breeders as among the leading strains of the breed. Pictures and pedigrees of these young bulls will be gladly sent on request. We recommend this herd of cattle to the readers of The Wisconsin Farmer and assure a square deal to purchasers of animals. See page 27.—Adv.

Merriman's Guernseys.

TWO registered Guernsey bulls of serviceable age are advertised for sale on page 28 by S. A. Merriman, Fort Atkinson, Wis. These are well marked, well grown and of good, straight conformation. They are being priced very low at the present time and we advise our readers who are looking for a herd header to write for their breeding and prices. Mr. Merriman is also offering several calves that will pay our readers to investigate. Kindly mention The Wisconsin Farmer.—Adv.

Notseter's Milking Short-horns.

JOHN NOTSETER, Deerfield, Wis., writes that he has sold the yearling heifers which he was advertising in The Wisconsin Farmer and is now offering several fine yearling bulls of the milking strain. These were sired by King Crest 39857, a choicely-bred bull of McLay breeding. The dams of the young bulls offered for sale are of Arabella and of Imported Bertha breeding, two lines which have proven to be heavy-milking strains. See page 27.—Adv.

Vandervort's Jerseys.

ROLLIE VANDERVORT, Tomah, Wis., is advertising some choice, young Jersey bulls for sale on page 27. These were sired by Golden Fern's Don and are from well-bred high-producing dams of good type. Several of these young bulls are ready for immediate service and are being priced right for quick sale. For pedigrees and further information write to the above address. —Adv.

Wiegand's Jerseys.

A YEARLING Jersey bull is advertised for sale on page 27 by L. P. Wiegand & Sons, Cleveland, Wis. His dam made 82.9 pounds of butter fat in thirty days in official test. She is a daughter of King Sappho King, that

has several other high-record register of merit daughters. The young bull offered for sale is a fine individual, well grown and of good, straight type.—Adv.

Schmidt's Guernseys.

THE Guernsey herd of Carl Schmidt, Wrightstown, Wis., is both choicely bred and of high production ability. The majority of the females in the herd are imported animals and are daughters of such bulls as Governor of the Chene, Galaxy Sequel and other bulls of equally choice breeding. The herd is headed by Goodwill Hero, whose dam is a 526-pound imported daughter of Governor of the Chene. His sire was Imported Golden Hero of L'Etinnerie, the sire of several A. R. daughters and also the sire of Imp. Holden 4th. At the present time Mr. Schmidt is offering a yearling bull ready for immediate service, sired by Goodwill Hero and out of [illegible]ndari XXXI, a daughter of Gal-[illegible]uel. This bull is an extra good [illegible] and will please the man who [illegible]. For further information [illegible] the above address. See page 28.

A Rare Combination of Economy and Luxury.

TO build a small car with all the appearances, comforts and easy riding qualities of a big, powerful car was the ideal that led the Willys-Overland Company, Toledo, Ohio, to build the $615 Overland car. This luxurious small car is one that any person should be proud to own, yet it has an unusually low level of operating and upkeep expense. Large production is one of the means of reducing the price of the Overland to $615; the capacity of the Overland plant is 1,000 cars a day, but even this rate will hardly supply the demand; those who want an Overland this year should order without delay. A beautiful, free catalog will be sent to anyone writing for it to the company named above. See their advertisement on page 14 and 15.—Adv.

Champion Plugs Have Unfailing Dependability.

CHAMPION spark plugs are recommended for high power cars because of their unfailing dependability. Many competent engineers specify Champions on account of the added "pep" they give to the motor. In all kinds of severe tests, the Champion heavy stone plug has demonstrated its value for constant, efficient service. Try them on your car, if you do not have them already, and note the new life they give to the car. The Champion Spark Plug Company, Toledo, Ohio, guarantees complete satisfaction to every Champion user—free repair, replacement or money back, if unsatisfactory. Your dealer knows the size of plug your motor requires. See advertisement on page 16.—Adv.

Hanchett's Guernseys.

A RICHLY-BRED Guernsey bull is advertised for sale on page 28 by W. H. & B. L. Hanchett, Sparta, Wis. He is a grandson of Glenwood's Reputation, sweepstakes bull at the Wisconsin State Fair. The dam of the young bull offered for sale is a heavy producing animal, having recently made forty-six pounds of fat in twenty-five days, which is equivalent to over two pounds of butter per day. For further information in regard to this young bull write to the above address.—Adv.

North's Holsteins.

JOHN NORTH, Kilbourn, Wis., is offering registered Holstein heifers and bull calves from one to fifteen months of age. Some of these were sired by Jewel Aaggie Alcartra, whose four nearest dams average over twenty-five pounds of butter in seven days. Mr. North is also offering a few choice registered cows for sale at the present time. For extended pedigrees and further information in regard to these animals write to the above address. See page 28.—Adv.

Simon's Chester Whites.

JOHN SIMON, Campbellsport, Wis., is one of Wisconsin's leading breeders of Chester White pigs. He is now offering for sale several early fall pigs and 1916 spring pigs of either sex to be shipped at weaning time. We advise our readers to buy early, as there is already a great demand for breeding stock, and by fall it will be very hard to secure. See page 27.—Adv.

A Thirty-seven-Pound Holstein Bull.

SIR CANARY BELLE DE KOL, the thirty-seven-pound Holstein bull, is the sire of the young bulls advertised for sale on page 28 by John Hasse, Monroe, Wis. These young bulls are out of heavy producing cows of good, straight type and typical dairy conformation. Mr. Hasse writes that he will also price a few females of various ages.—Adv.

NEWS OF THE SALE RING

Waukesha County Holstein Breeders' Sale.

It is a pleasure to report a cattle sale in Waukesha county for the writer can always feel sure that he is reporting an actual sale and not a lot of fake sales and fictitious prices. At the third annual sale of the Waukesha County Holstein-Friesian Association, the buyers had everything their own way. There was no "boosting" of prices by the auctioneers, no side bidding by the consignors and no cattle bid in. Although prices did not average high they represent the money actually paid by the buyers. The Barion Farm, Byron, Ill., owned by Medill McCormick took eighteen head for $4,030. Henry Ringling, Baraboo, Wis., purchased four fine cows. Gustav Pabst, Milwaukee, Wis., purchased a large number to stock his 4,000-acre farm at Dousman. G. P. Mayer, Milwaukee, purchased several head. The top price female was No. 47, which brought $475. She is a very choicely bred cow and a fine individual. The top price bull was No. 35, a thirty-pound son of Paul Ormsby. Several of the females sold at over $400. Yearling and two-year-old heifers were in strong demand and the good individuals of good breeding brought from $200 to $275. A detailed list of the sale is given below.

FEMALES.

Roberts Pondyke Beauty, Nov. 5, 1911; E. E. Swan, Wauwotosa, Wis.	$320
Roberta Pontiac Colantha, Jan. 22, 1914; Robt. G. Swan, Wauwatosa, Wis.	240

Will Address Wisconsin Meetings.

The Wisconsin Farmer has a letter from Mr. R. Baker, assistant secretary Wisconsin Live Stock Breeders' Association, announcing several speeches in Wisconsin by J. B. Irwin, of Minneapolis Holstein Breeders' Association, who developed the famous Duchess Skylark Ormsby. Mr. Irwin will speak at the following meetings in Wisconsin in June:

Walworth County Holstein Breeders' Association, Elkhorn, June 20th.

Waukesha County Holstein Breeders' Association, Waukesha, June 21st.

Kenosha-Racine Holstein Breeders' Association, Kenosha, June 22d.

Blake's Prairie Holstein Breeders' Association, Randolph, June 23d.

Ozaukee County Holstein Breeders' Association, Cedarburg, June 24th.

These meetings are arranged on the co-operative plan, which provides that the Wisconsin Live Stock Breeders' Association pay one-half the expenses of the speakers; the Wisconsin Holstein Breeders' Association pay one-fourth and the Local Breeders' Association the remaining quarter. Mr. Irwin will, no doubt, be able to give Wisconsin breeders some valuable information.

The first Wisconsin tractor demonstration will be held in the city of Madison, September 4th to 8th. This will be the round-up of all the state tractor shows on the national circuit. It is expected 100,000 visitors will visit Madison for the demonstrations.

ALFALFA! SOW IT NOW ORDER DIRECT

Grow Alfalfa and your crop worries are over. It's a sure crop regardless of climatic conditions when once started. Produces 3 to 4 crops, often more, per year. Will actually earn from $60 to $100 an acre per year on land in the corn belt. Our double cleaned, non-irrigated Northern grown, high quality, pure tested Alfalfa seed at following prices: 20 lbs., $4.90; 60 lbs., $13.10; 100 lbs., $23.50. Also headquarters for Sweet Clover, Soy Beans, Cowpeas, Grass Seeds, Rape, Sudan Grass, Feterita, etc.

GALLOWAY BROS. & CO., 39 Galloway Sta. Waterloo, Iowa

A GOOD YEARLING ANGUS BULL for sale. J. W. Wilkinson, Mitchellville, Iowa.

SAFETY STORM BLAST LANTERN FREE

This Safety Lantern cannot catch fire or explode. It is absolutely safe at all times and on all occasions. If you drop it in the hay loft, no oil can escape; if the cow kicks it over, it goes out at once.

It cannot blow out in a cyclone because of the storm blast feature. It is just the kind of a lantern every farmer needs about the house and barn.

Patent opening device raises and swings the globe free for lighting, filling and trimming. This lantern is fully guaranteed and is endorsed by the highest authorities on fire insurance, fire fighting and explosives. If dropped or turned over it immediately goes out. Oil cannot run. Impossible to catch fire. A lantern you will always feel safe with in the house or barn.

OUR OFFER

Send $2.00 for a three year new or renewal subscription to The Wisconsin Farmer and we will send you one of these Safety Storm Blast Lanterns as a premium free and postpaid.

SHORT-HORN CATTLE.

A GREAT RECORD

AT the world's three largest beef cattle shows in 1915, all breeds, grades and cross-breds competing, Short-horns were grand champions. The champion carlot at Denver, Colorado, 1916, were two-year-old Short-horns. Twenty-eight Shrot-horn cows were added to the honor roll of the British Dairy Short-horn Society with milk records from 10,006 lbs. to 13,000 lbs. 104,954 Short-horns were recorded from March 1, 1915, to March 1, 1916, in the American Short-horn Herd Book. If you are in the market for Short-horns, our free service bureau is yours. Address

Purebred Registered
HOLSTEIN CATTLE
Holstein owners partners in prosperity. During the fiscal year ending April 30, 1915, 134,456 certificates of registration of pedigrees were issued by the Holstein-Friesian Association, producing a gross revenue of $150,814. To the thoughtful student of facts this great volume of business, of but one department of this Association, is sufficient evidence that the administration of its affairs has been able and sound. The owner of purebred Holstein cattle is a partner in all the benefits accruing from this progressive management of the affairs of the most profitable of dairy breeds. Investigate the big "Black-and Whites."

Are You One of the Losers?

Low Corn King
Low Cloverleaf

SOMETIMES Americans wonder why they get only about half the crop yields from an acre that are produced in other countries. Well, here's one reason—a large majority of the farmers in this country own no manure spreader. One corn belt state lost $20,000,000 last year by the wasting and poor handling of manure. Are you one of the farmers who shared in this loss? If you are, you need an I H C manure spreader.

International Harvester spreaders, **Low Corn King** and **Low Cloverleaf**—besides being low, strong, durable, simple in beater and apron mechanism, with good traction, light draft, and plenty of clearance—have a really successful wide-spreading device.

Low Corn King and **Low Cloverleaf** spreaders are low for easy loading and narrow for easy handling in yard, stable or field. From a box 45 inches wide either of these spreaders covers an even strip of ground 8 feet wide, or better. It saves time and labor, and keeps wheels and horses well away from the slippery manure already spread.

See the I H C dealer about a **Low Corn King** or **Low Cloverleaf** made to stand by you for years. Write us for catalogue.

CURRENT EVENTS

CHARLES E. HUGHES, of New York, and Charles W. Fairbanks, of Indiana, were nominated by the republican national convention last Saturday for the presidency and vice presidency, while at the same time Theodore Roosevelt, of New York, and John M. Parker, of Louisiana, were nominated by the progressives for the same high offices. Justice Hughes, who had not been an avowed candidate, immediately accepted the nomination, while Colonel Roosevelt immediately declined to accept, for the present at least, or until Justice Hughes can make his position plain on preparedness and the other big issues of the day in which Roosevelt is particularly interested. The race promises to be a three-party one, for the progressive national committee will meet again in Chicago on June 25th, at which time if Colonel Roosevelt persists in refusing to make the race a new progressive standard bearer (probably Victor Murdock, of Kansas, or Governor Hiram Johnson, of California) will be chosen in his stead. Justice Hughes was nominated on the third ballot, after it became apparent that the republicans and the progressives could neither unite on Roosevelt nor anyone he might name and that the favorite sons (prominent in the list being Sherman, of Illinois; LaFollette, of Wisconsin; Fairbanks, of Indiana; Cummins, of Iowa, and Burton, of Ohio) could not poll strength sufficient to beat Hughes. The convention nominated Hughes without knowing exactly where he stood on the big issues, but within an hour he had resigned from the supreme court and issued a statement coming out strongly for a protective tariff and ample national preparedness. He will enter into the campaign at once and is undoubtedly a strong candidate. Prior to being appointed to the supreme court, by President Taft, he was governor of New York for three years.

AS THE details of the recent sea battle between the English and the German fleets, in the North Sea, come in it becomes more apparent that the defeat was not the crushing one to the Britsh navy that it was first made to appear. According to late dispatches Vice-Admiral Beatty, of the British navy, with only a few ships at his disposal, fought the entire German high-seas fleet with his comparatively small squadron, exchanging shots at close range, and only the coming of night and a heavy mist just as the British battle fleet arrived saved the Germans. British naval experts gave this opinion of the battle and praised the daring and wonderful strategy of Admiral Beatty in attacking such a powerful enemy. Could Admiral Sir John Jellicoe have brought his dreadnaughts into battle an hour sooner, they hold, the German fleet would have been clearly and severely defeated. As it was it escaped under cover of darkness just as the British fleet arrived. While this is a crumb of comfort to the distracted Britons, the fact remains that Germany made a far better showing on water than it had ever hoped for, encouraging them until another battle is now almost a foregone conclusion, sooner or later.

LORD KITCHENER, England's greatest fighting man and secretary of war for Great Britain, was killed last week when the cruiser on which he was traveling to Russia, for an important conference with the czar, was destroyed in the North Sea, either by a floating mine or by a submarine. The loss is a terrific one to England, coming just as the Russians and the English were about to cooperate in a big drive against the Germans and Austrians. Along with Kitchener there perished most of the members of his personal staff, together with the officers and crew of the cruiser, a loss all told of some 500 men. It is to Kitchener that credit is due for the 5,000,000-strong army which Great Britain has put into the field since the outbreak of hostilities less than two years ago. When war broke out England had only a few hundred thousand trained troops, a mere handful compared with the number Germany and Austria pitted against them. With characteristic coolness and thoroughness Kitchener went about building up and drilling the immense army which the situation demanded, with the result that there are now millions in the field where before there were only hundreds of thousands. Kitchener was the idol of the British people so far as his fighting and executive qualities were concerned, and while his work may be carried on by others (the ones most prominently mentioned as his successor being the chief of staff, Sir William Robertson, or David Lloyd George) his death coming at such an inopportune time is a severe blow to Britain's chances in the great war. Kitchener had been in service for almost a half century, having secured his first taste for fighting by enlisting with the French in the Franco-Prussian war, in 1870. He saw distinguished service in Egypt and India and worked his way until he was the head and front of the British armed forces. He was a relentless fighting man, one of the really great soldiers of the last century.

THE republican national convention (the sixteenth of its kind) was held at Chicago last week, coincident with the progressive national convention (the second of its kind). Extreme lassitude, approaching almost to indifference, marked the opening sessions of the republicans, while extreme enthusiasm, approaching almost to frenzy, marked the opening session of the progressives. Seldom have the republicans gathered for such a purpose with a less clearly defined working plan in advance or with less enthusiasm attending the advent of noted party leaders. An air of funereal gloom characterized the opening session, at which Senator Warren G. Harding, of Ohio, delivered what was supposed to be the campaign keynote of speech, as temporary chairman. He pleaded for a forgetfulness of the breach of 1912 and a return to united peace, but his plea did not arouse much enthusiasm. Senator Harding was afterwards made permanent chairman and Senator Henry C. Lodge, of Massachusetts, one of the old wheel horses of the G. O. P., was made chairman of the important committee on resolutions. The keynote speech of the progressives was delivered by a noted social worker, Raymond Robins, acting as temporary chairman. William Allen White, of Kansas, George W. Perkins, of New York, and Gov. Hirman Johnson, of California, were among the most prominent men in the progressive convention.

THE democratic national convention is being held in St. Louis this week, with the renomination of President Wilson a foregone conclusion. The main fight is over the vice presidency, which is still in doubt. A very serious effort is being made to shelve the present incumbent, Marshall, of Indiana, the president's choice being said to be Newton D. Barker, of Ohio, his recent appointee as secretary of war. President Wilson spent a good part of last week writing the platform on which he will make the campaign for reelection. It is understood that the platform will point to the success of the administration in guarding the honor and interests of the United States in face of obstacles and at the same time keeping the nation at peace. The administration's championship against all belligerents of the rights of America and all neutrals on the high seas will be praised, with the statement that the results will be of great importance to American commerce. The Mexican situation will be referred to by praise of the president's action in refusing to allow the nation to be drawn into the internal strife raging in Mexico and of his prompt action in ordering troops across the border after the Columbus massacre.

The Wisconsin Farmer

THURSDAY, JUNE 15, 1916

FAMILY CIRCLE TALKS
BY THE PUBLISHER

THE FARMER AND THE CONVENTIONS.

IT IS difficult to estimate as yet just how much history was made in Chicago last week. Political conventions always are epochal to a certain extent. We either show our indifference to the fundamental principles of our republican form of government by remaining in a rut and accepting the instructions and the nominations of the bosses or else we make history rapidly by overthrowing the old order and inaugurating reforms which, in time, make for a bigger, better and more united country. I cannot say at this writing in which class of conventions the two held in Chicago last week will eventually find themselves.

Only one thing seems certain to me as I read the press dispatches from the convention city, and that is this: There is a growing realization that more attention must be paid, by all political parties and all candidates, to the interests of the farmer. With the possible exception of the laboring man of the city, the interests of no class of workers is being so seriously studied as the farmer's. That is why we find the republican platform, as adopted at Chicago last week, laying particular stress upon an effective system of rural credits and the extension of the rural free delivery system, to say nothing of a non-partisan tariff commission (which shall give the farmer the relief he has long needed from the rapacity and cupidity of the tariff-tinkering muddlers) and of equal suffrage, to which I believe most of the farmers of this part of the country are now firmly pledged. If the democratic convention is as awake to the interests of the farmers we shall enter upon a national campaign which can hardly fail to convince the entire nation that prosperity depends upon the farmer and that it is he, rather than any other one man, who must be considered when it becomes a question of bringing about the greatest good to the greatest number.

Personally, there is no plank in the republican party platform, adopted unanimously last week, which is more pleasing than the one which declares in favor of an extension of the rural free delivery system. We should not allow politics to decide this issue or to prejudice us one way or another, but there is no question in my mind but that the recent action of the authorities in this matter has been a serious mistake. Combining rural routes and expecting one carrier to cover fifty miles a day, the year around, regardless of weather and the roads, is a grave error which will seriously impair and even permanently cripple the efficiency of the R. F. D. service if persisted in for a long time. I hope the platform makers of the democratic party will take as firm a stand as the republicans have and will see to it that the farmer is enabled to get his mail regularly and the carrier to give stable, permanent service all the year around without killing his horse or wearing the life out of his automobile engine.

The platform adopted at Chicago last week declares in favor of "an effective system of rural credits." There is hardly a question before the nation today on which there is greater difference of opinion than this one of official relief to the farmer-borrower. Bankers themselves disagree as to the need of relief and as to the merits of the recently-passed legislation. Here is something we need to study scientifically, leaving all question of politics out of all consideration.

I was not able, because of the stress of business, to attend either the republican or the progressive conventions last week, but our editorial staff was well represented. I shall continue to discuss the issues as they are taken up by all the parties, not in the hope of making political capital therefrom, but with an eye single to the best interests of the farmers. We have an opportunity this year to make history as we have not had it in a half century. I hope our history makers will continue to consider the farmers' interests paramount. There is no better sign of the times manifest today, in my opinion.

A TALK ON TEMPER.

A DISTRESSING road accident occurred last week, and I want to use it as the text of a little talk on forbearance. A farmer, compelled to jump from the path of an automobile, lost his temper and hurled a bucket of corn, which he happened to be carrying, at the machine. The missile struck a little eight-year-old girl and broke her neck. The farmer is now in jail, charged with murder.

How many of us have lost our patience and even our temper leaping from the path of an onrushing motor car? There is nothing more delightful to me than the exhilaration of bowling along a good country road in an easy-running automobile; yet why is it so many motorists seem to think the possession of a car gives them the right to "hog" the whole road and to jeopardize the life and property of whoever is venturesome enough to dare get in their way? Why cannot all of us enjoy a moderate pace along a good road and realize that the man we are about to meet or to pass has just as much right to the road, and to life, as we have?

I do not want you to think for a minute that I condone the offense of the farmer who hurled the bucket of corn and hit the unoffending little girl, causing her death. He is guilty of manslaughter, at the least, and should be punished for his crime, although the moment before the motor car swooped down upon him he may have been the most law-abiding citizen in the land. No matter how sorely we are tempted, now and then, to take the law into our hands and deal summarily with motor speeders, nothing is more important than that we learn how to control our temper and to mete out justice equably and coolly. If there is anything more exasperating than a city man driving his motor car at breakneck speed through the country, killing chickens and dogs, and imperiling the lives of every other traveler on the road, I do not know what it is. Yet neither do I know of anything more important than cultivating a firm hold upon one's temper. The farmer who murdered the little girl in the car did not do so intentionally. He is probably grieving as much today as the mother who gave her life, yet he should be punished, not only for his own offense, but as a deterrent to the tempers of others who may read of his plight. The poet was right, beyond all question and argument, when he wrote:

> Of all bad things by which mankind are curst,
> Their own bad tempers surely are the worst.

GASOLINE IN WAR AND PEACE.

I HAVE already pointed out that the present great European war finds gasoline playing a most important part, notwithstanding the constant and heavy demand for American horses. In the end, the war may be decided on the ability of the contestants to secure the necessary gasoline supply, for this motive power is sending the heavy guns, the men and the supplies back and forth from one battle field and trench line to another as never before in the world's history.

The importance of gasoline in the present struggle is shown by the fact that England is already taking summary steps to conserve its supply, going so far, this week, as to issue orders prohibiting the running of all automobiles on Sunday, except in the most urgent cases. Here in the grain belt, where our country roads are ladened with pleasure riders on Sunday, we can readily understand how such an order will cut down the gasoline consumption and be a real saving of the national supply. Out of the million motor cars in the grain belt, it is conservative to estimate that fully 750,000 are driven every nice Sunday, with an average consumption of from five to fifteen gallons for each car. If the Sunday motoring habit has reached anything like this pretentiousness in England it is a serious drain, indeed, on the gasoline supply, and it is small wonder that the government has taken summary action to stop it. The success of the English arms in the field may depend upon a cutting down of the joy riding along hedge-lined English lanes.

While we are considering the importance of gasoline in war let us not forget how vastly more important it is in the necessary works and arts of peace. I have seen it figured that a single gallon of gasoline, intelligently used, will furnish power to milk 300 cows, mix thirty-five cubic yards of concrete, bale four tons of hay, plow three-fifths of an acre of land, move a truck fourteen miles and generate enough electricity to light a farmhouse for thirty hours. In view of which widespread usefulness to the man who tills the soil and is the real wealth producer of the world, is it not a shame, indeed, that so much gasoline should be used nowadays to no other purpose than to destroy life and to perpetuate the horrible murder which masks under the guise of international war?

USE AND ABUSE OF WILLS.

IF I MAY judge by the large number of letters received, many of my readers do not agree with me on the question of will making. Perhaps those who think my advice sound have not troubled themselves to write; it is quite noticeable, however, that by far the majority of those who have written cite incidents where wills thwarted justice rather than furthered it. Perhaps I cannot express the views of my numerous correspondents better than to quote this letter from Mr. E. E. Sisley, R. R. 1, Parkersburg, Iowa:

> My Dear Mr. Pierce:—In the article entitled "Have You Made Your Will?" I infer that you would advise all to do so. This is good advise if the will is a just one, but sometimes wills are made when he or she who makes them is sick unto death and surrounded by schemers who have laid plans whereby they will be benefited if the property is willed thus and so. The schemers are successful, the will is made; he or she who makes the will dies, the will is probated, the rightful heirs are deprived of what is justly theirs. In order to get what is rightly theirs, they must go into the courts or say to the schemers, "We will contest this will if you do not do thus and so, but rather than go into the courts we are willing to give you a certain amount," which offer is accepted by the schemers. They receive a sum of money which they would not have received if there had been no will made and the courts had made the distribution of the property according to law. I have persona knowledge of a case of this kind.

So many subscribers write to me in a similar frame of mind, I cannot blind myself to the fact that there is much opposition to will making. Are not these instances, however, the abuse of a system rather than the use? I think so. Strictly speaking, a man's interest in his property ends with his last breath; he cannot take it with him, it is only by the sufferance of the law that he is permitted to say what shall become of it after he passes on. That is the legal interpretation of the matter. There is another side that appeals to me, however, far more than this technically legal side. It is this: A man labors hard all his life; he works early and late; he is thrifty and abstemious; he amasses a competency; in his old age he finds he has not the time to do with his money what he planned to do when he was amassing it; has he not every right to say how the money which he earned and saved shall be expended, even to the extent of cutting off some of those who may have hoped to receive a large share of the estate? Perhaps something changed the tenor of his life in his early age, in later years his mind reverts to that incident and he names as a beneficiary the organization or society (church, lodge, or whatever it is) which played the leading part in the crisis of his early life. Shall that bequest be set aside because some individual feels himself slighted? There are two sides to this matter, as to all others.

There are few of us who have reached mature years who do not say, sometime or other in our lives, "I hope my boy never has to struggle as I did or put up with the hardships I put up with," and this thought is uppermost in our minds in making our wills. Yet were not those early struggles and hardships the very things which tempered our spirits and developed us into the men and women we now are? I am not arguing that every boy and girl should have to suffer, should have to slave; but is there not danger of reaching a period when our widespread farming prosperity may react on itself and breed up a race which will look down upon the pioneers who builded with brawn and blood and forget the credit due them for what they wrought so nobly?

I may be a bit old-fashioned, but it seems to me we owe such a debt to those who laid the foundation of our prosperity that they should have a say in how the prosperity should be passed around, long after they have gone on. That is why I favor will making, even though I agree with my numerous correspondents and admit that there are instances where wills disinherit the worthy and enrich the undeserving. But it is simply another case of the abuses not being sufficient to counteract the uses of a system, in my opinion. I acknowledge that many of the richest men of the country, men who are financial experts, do not agree with me on this. For instance, James J. Hill, who died a couple of weeks ago, did not leave any will, although his estate is worth fully $100,000,000. But for me, however, I very much prefer the making of a will in ample time and I continue to believe that this is good business policy for the average farmer.

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-In-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Ave. Des Moines, Ia. | 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscription or advertising may be addressed.

MEMBER AGRICULTURAL PUBLISHERS' ASSOCIATION
MEMBER AUDIT BUREAU OF CIRCULATIONS

SUBSCRIPTION RATES—Single subscriptions, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of fifty or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription prices in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing give the same name and initials as you gave before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address WISCONSIN FARMER, MADISON, WISCONSIN

Wisconsin Live Stock Shipments.

NEVER before has there been such a demand for Wisconsin pure-bred live stock. Recently The Wisconsin Farmer quoted well-known Kansas men who had visited the state as saying that 90 per cent of the demand for dairy stock in their state was for Holstein cattle, and a majority of those who wanted Holsteins preferred Wisconsin pure-bred stock. Reports from several of the live-stock associations in the state show that there is a good outside demand for carload lots of breeding stock. There is also a good state demand. Shipments have been made recently from some of the southern and eastern Wisconsin stock farms to points in the western and northwestern part of the state, and mention of some of these shipments has been made in The Wisconsin Farmer. We note that John L. Fisher, of Janesville, has recently shipped eleven pure-bred Durocs to Hershey, Penn., to the Hershey Stock Farm. This indicates that good hogs will sell as well as good dairy cattle. Wisconsin has been steadily gaining a more prominent place in the pure-bred live stock world, and it is coming time to reap some of the rewards. There is good stock coming on each year, and all that our breeders need to know is to let the prospective buyers in other states know where this stock can be found. The community association work is increasing larger shipments. Contrary to expectations there is not the surplus in Wisconsin this year that might have been expected following the foot-and-mouth disease quarantine. The demand existing at present is a harbinger of better prices and bigger profits for the Wisconsin farmer who will stick to the pure-bred game and be honest and square in his dealings.

Mr. Swoboda's Article.

IN THIS issue will be found a report of the annual meeting of the Holstein-Friesian Association, of America, written by Mr. F. G. Swoboda, agricultural agent for Langlade county, Wisconsin. Mr. Swoboda is keenly interested in the dairy development of Wisconsin. He has been acquainted with a number of dairy herds in the southern portion of the state and has been instrumental in purchasing and distributing good stock in Langlade county. Mr. Swoboda will be able to return to the farmers of Langlade county with a bigger conception of the value of the dairy cow and her possibilities. The Wisconsin Farmer was fortunate in being able to secure the services of Mr. Swoboda at the Detroit meeting and we are sure thousands of farmers and dairymen who know of Mr. Swoboda's excellent service to the state, will be glad to read his review of the national meeting in this issue. The Wisconsin Farmer is pleased to note from Mr. Swoboda's report that this state was well represented at the meeting and that almost 400 proxies from Wisconsin Holstein breeders were voted on the floor of the convention. Next year the annual Holstein meeting will be held in Worcester, Massachusetts, and the year following it will probably come west again. It may be possible to get this big meeting for Wisconsin in 1918.

Wisconsin Swine Week.

WITH the present record of 2,250,000 hogs raised on the farms of Wisconsin in 1915, with a value of about $20,000,000, the swine breeders of the state feel it is time to call special attention to the growing importance of the "porker."

The corn-belt hog has long held first place in the eyes of the nation, but within recent years the production of swine has increased rapidly on the dairy farms of the Northwest, particularly in Wisconsin.

To crystallize the idea of "bigger and better hogs" on Badger farms will be the purpose of the Swine Week, now being planned by a committee of the state's leading live stock exponents. At present it is thought best to hold the event at or near the time of the annual Farmers' Week held at the college of agriculture each winter.

While the main purpose of the convention of pork producers is to exhibit animals and make sales of attractive offerings, a carefully prepared program of addresses, demonstrations and conferences on problems of breeding, feeding and handling swine will be included as an important part of the week's events.

The committee in charge of the affair are: Andrew W. Hopkins, Wisconsin Live Stock Breeders' Association; E. H. Parker, Janesville, Wisconsin Duroc Jersey Breeders' Association; James Fisher, Eastman, Wisconsin Chester White Breeders' Association; M. Madson, Madison, Wisconsin, Poland China Breeders' Association; H. C. Taylor, Beloit, Wisconsin Berkshire Breeders' Association; G. C. Humphrey, animal husbandry department, college of agriculture, Madison.

War-Time Farming in Germany.

UNDER the title of "War-Time Farming in Germany," Mr. Harry C. Evans, a leading member of the recent Ford Peace Party, wrties most entertainingly on page 6 of agricultural conditions in Germany today, with the great war at its height. Mr. Evans had exceptional opportunities to observe the efficiency of the Germans in the matter of land cultivation and he tells his story breezily and convincingly. We advise all readers of The Wisconsin Farmer to turn to page 6 and read Mr. Evans' article. It is timely and authoritative.

Next week Mr. Evans will continue his story of German agriculture and the week after that he will deal with English farming conditions, and the cry of "back to the land," as it is sure to be taken up, in England, once this war is at an end. Mr. Evans is a trained newspaper writer and his series of three articles written expressly for The Wisconsin Farmer make the biggest feature of their kind ever offered by any farm paper.

Wisconsin's Clover Seed Crop.

HANDLING the clover crop for seed is one of the important farming operations confronting Wisconsin farmers just at this time, as experience has proven that great care should be used in handling so as not to waste seed in cutting, stocking and hulling. Mr. E. J. Delwiche, in our last issue, discussed the value of clover as a seed crop, considering that it produces a greater return per acre when compared with most other farm crops raised for market. June 15th is considered about the right time for cutting medium red in central Wisconsin; about a week earlier for the southern section and a week later for the upper counties. Alsike and mammoth are too late in maturing to permit cutting a first crop for hay, although some growers pasture for a few weeks to retard growth. This practice Mr. Delwiche does not recommend under average conditions, but on the other hand, medium red, as a rule, furnishes a hay and a seed crop. Growers who pasture the first crop of medium red instead of cutting for hay will find it advisable to run the mower over the field afterwards to give the plants an even start and also to cut down weeds.

Mr. Delwiche points out that the largest yield of seed from the second crop is usually secured by cutting the first crop when about two-thirds of the plants have started to bloom. Weather conditions may affect the yield, but as a rule the yield of seed increases in direct ratio with earliness of cutting. This is borne out by this experiment at the Marshfield station in Wood county:

Date of cutting first crop	Yield of cured hay in first crop	Yield of seed in second crop
June 15	2,650 lbs.	240 1-3 lbs.
June 25	3,855 "	196½ "
July 5	3,976 "	19½ "
July 15	3,520 "	4 "

The seed crop of mammoth and medium red should be cut when the heads are all brown, with the seed firm and shiny. When cut before it is well matured there is always a large proportion of shriveled seed. On the other hand, if cut too late, some of the heads are likely to break off and reduce the yields of seed. Alsike is cut when the heads are brown and the seed in the dough stage. Too late cutting means a loss by shattering.

Mr. Delwiche, in discussing the need of great care in handling the seed crop, says:

Care must be used in handling the seed crop; otherwise much of the seed is likely to be wasted. A clover seed windrowing attachment, costing from $12 to $15, should be used when cutting with the mower. Such an implement not only saves seed, but effects a great saving of time. It takes three men to take clover out of the way of the team as fast as it is cut, when an attachment is used. The practice of raking up clover with the horse rake is extremely wasteful of seed. If the crop is well ripened, in order to avoid shattering, it should be cut in the early morning or evening when damp with dew.

Clover for seed should be handled as little as possible. Uusually the crop can be left to cure in windrows and turned just before hauling. In wet weather it is often necessary to lift the wet clover out of the stubble with a fork so as to help in drying. The practice of leaving the clover lie in the field for several weeks after it is cured, is bad from two standpoints at least. Much seed is likely to spoil through contact with the damp ground, and the clover straw and hulls will become rotted and of little value for feed.

Clover for seed should be properly sheltered from the weather since it does not shed water, but absorbs it like a sponge. Unless stacks are well covered with either boards, canvas, or even marsh hay, there is bound to be much loss of seed in a wet fall. A well-enclosed shed or barn is the best place in which to store clover before hauling.

An inspection will determine whether a crop of clover should be left for seed. With a full stand, well headed, approximately one bushel of seed per acre can be expected with an average of fifteen seeds per head. Clover may be hulled as soon as freezing weather sets in in the fall or at any time after it has had time to go through a sweat. Care in cutting and handling just at this time, though, will do much to increase the yield of seed.

Wisconsin Boys and Girls at the State Fair.

BOYS' and girls' club work, which includes corn growing, calf and pig raising, school contests; road work, tomato growing and canning; sewing, etc., has already become state wide in importance, but the recognition to be given this work at the state fair at Milwaukee this fall should make it of even greater service. Something like $1,500 in premiums in addition to over $6,000 worth of special prizes have been offered for the boys and girls' department and it is believed a thousand boys and probably 300 girls will compete.

No department of the fair this year, aside from the horse, swine, cattle and sheep department, promises to develop more interestingly than the boys and girls' department. Mr. T. L. Bewick is superintendent and public-spirited men have lent a helping hand by offering pure-bred calves, money, etc., to encourage the work. The department was first inaugurated last year. It will be located this year in the new grand stand, work on which is now under way.

The Wisconsin Farmer is pleased to see this recognition which the state fair is according the boys and girls. It is common knowledge what the community breeders' associations are doing by interesting the boys in fine live stock through judging and essay work. Many counties are engaged in corn contest work and other endeavors of this nature, and there is no doubt but that it all makes for a better agriculture and a better state. We hope to see this work broadened; to see it gain in importance and recognition of it by the state fair officials should prove a great encouragement. Of course, this is just one of the new efforts to make our fair a greater fair concerning which we will be pleased to make announcements from time to time.

Wisconsin Live Stock Breeders' Directory.

THE annual breeders' directory of the Wisconsin Breeders' Association is off the press. This book lists nearly 1,500 members in good standing. These members represent practically every county in Wisconsin, and this book is the best available reference at this time showing the state's live stock interests and giving the location and addresses of breeders.

In addition to the lists of farmers and breeders featuring one or more special kinds of live stock, arranged by counties and breeds, the pamphlet contains lists of community breeders' associations in the state, information relative to the numerous national registry associations, officers of the Wisconsin stockmen's organizations, and a handy digest of laws of importance to animal husbandmen. The directory with its seventy pages of up-to-the-minute information, compiled by Raymond Baker, assistant secretary of the association, should be in the hands of all progressive stockmen in the state. Copies may be obtained as long as the supply lasts by writing to the home office at Madison.

The Wisconsin Live Stock Breeders' Association was organized in 1902. Its first officers were: George McKerrow, Pewaukee, president; F. W. Harding, Waukesha, secretary; Charles L. Hill, Rosendale, treasurer. The original board of directors were: J. Q. Emery, former state dairy and food commissioner; W. L. Carlyle, now dean and director of the Oklahoma Agricultural Experiment Station; W. L. Houser, Mondovi, former secretary of state, and George Wylie, Leeds, former state senator.

The present officers are: Arthur Broughton, Albany, president; Earl Roberts, Oconomowoc, vice president; L. P. Martiny, Chippewa Falls, treasurer; Andrew W. Hopkins, Madison, secretary, and Raymond Baker, Madison, assistant secretary.

Our New Serial Starts.

WE COMMENCE the publication, this week, on page 9, of our new serial, "Told in the Hills," by Marah Ellis Ryan. This is a thrilling story of the West, when the West stood for romance and red blood and all manner of heroic deeds. We confidently believe that the readers of The Wisconsin Farmer will find every chapter of "Told in the Hills" so full of heart interest that it will surpass any other serial we have printed and will rank in their minds as one of the very best stories they ever read.

We propose to print large installments of this new story so that its publication will not consume more than two or three months. This will give every member of the farm family splendid reading matter throughout the entire summer, making it possible for us to open up the autumn reading campaign with still another good story, which we will annonce in due time.

We earnestly recommend to all our readers that they turn to page 9 and read the first installment of this new story. They will find it well worth their time, for we guarantee the story to be a first-class one in every respect.

In and Around Wisconsin

The Langlade County Fair will be held September 19th to 22d the week following the Wisconsin State Fair.

The H. J. Heinz Pickle Company has decided to operate its factory at Washburn this season, and a number of contracts with farmers have been made.

Nicholas Mellum exhibited in Dodgeville, Wisconsin, last week a bunch of alfalfa of the first cutting twenty-seven inches in length. Mr. Mellum has between six and seven acres.

Winnebago county, Illinois, farmers, under the leadership of County Agent Ten Eyck, will make an auto trip through Green county, Wisconsin, June 16th. The purpose is to study some of the dairy methods of the successful farmers of Green county.

The summer meeting of the Holstein breeders of Walworth county will be held June 20th, according to Sec. L. G. Rockwell, at Lake Lawn, Delavan Lake. John B. Irwin, of Minnesota, who developed the champion Holstein cow, Duchess Skylark Ormsby, will be the speaker of the day.

Sec. L. LeRoy Larson, of the Portage & Waupaca County Guernsey Breeders' Association, informs The Wisconsin Farmer that the summer picnic will be held June 20th in Gordon's grove at Nelsonville and that a record-breaking attendance is expected. J. L. Tormey, of Madison, and H. D. Griswold, of West Salem, will be the speakers

H. M. Scott, of Waldo, was chosen president of the Wisconsin Cheesemakers' & Factorymen's Association at the meeting in Plymouth, Sheyboygan county, recently. About a hundred members were present. H. A. Kalk, of Sheboygan Falls, was chosen vice president; H. A. Chaplin, of Plymouth, secretary; J. H. Peters, of Sheboygan Falls, treasurer; and A. A. Bettner, of Adell, director.

A miniature model farm in which the buildings illustrate the use of lumber preserving solutions and fireproofing treatment of timber, is being built at the manual arts department of the University of Wisconsin in conjunction with the forest products laboratory. This exhibit will later be used by the National Lumber Manufacturers' Association and will be carried to the chief cities of the country and shown.

James Van Etta, of Lima, was recently re-elected president of the Rock County Live Stock Breeders' Association. Other officers for the coming year are George Hemingway, Hanover, vice president; J. I. Greene, Clinton, treasurer; J. H. Fisher, Evansville, secretary; J. F. Kemerer, Clinton, and Ira Inman, Beloit, were named members of the executive committee. Fifty breeders attended the meeting, which was held at the Y. M. C. A. in Janesville, and was followed by a banquet Addresses were delivered by A. W. Hopkins, agricultural editor, University of Wisconsin, and H. C. Taylor, a stockman of Green county. Short talks were given by J. A. Craig, L A Markham, both of Janesville, and J F. Kemerer, of Clinton.

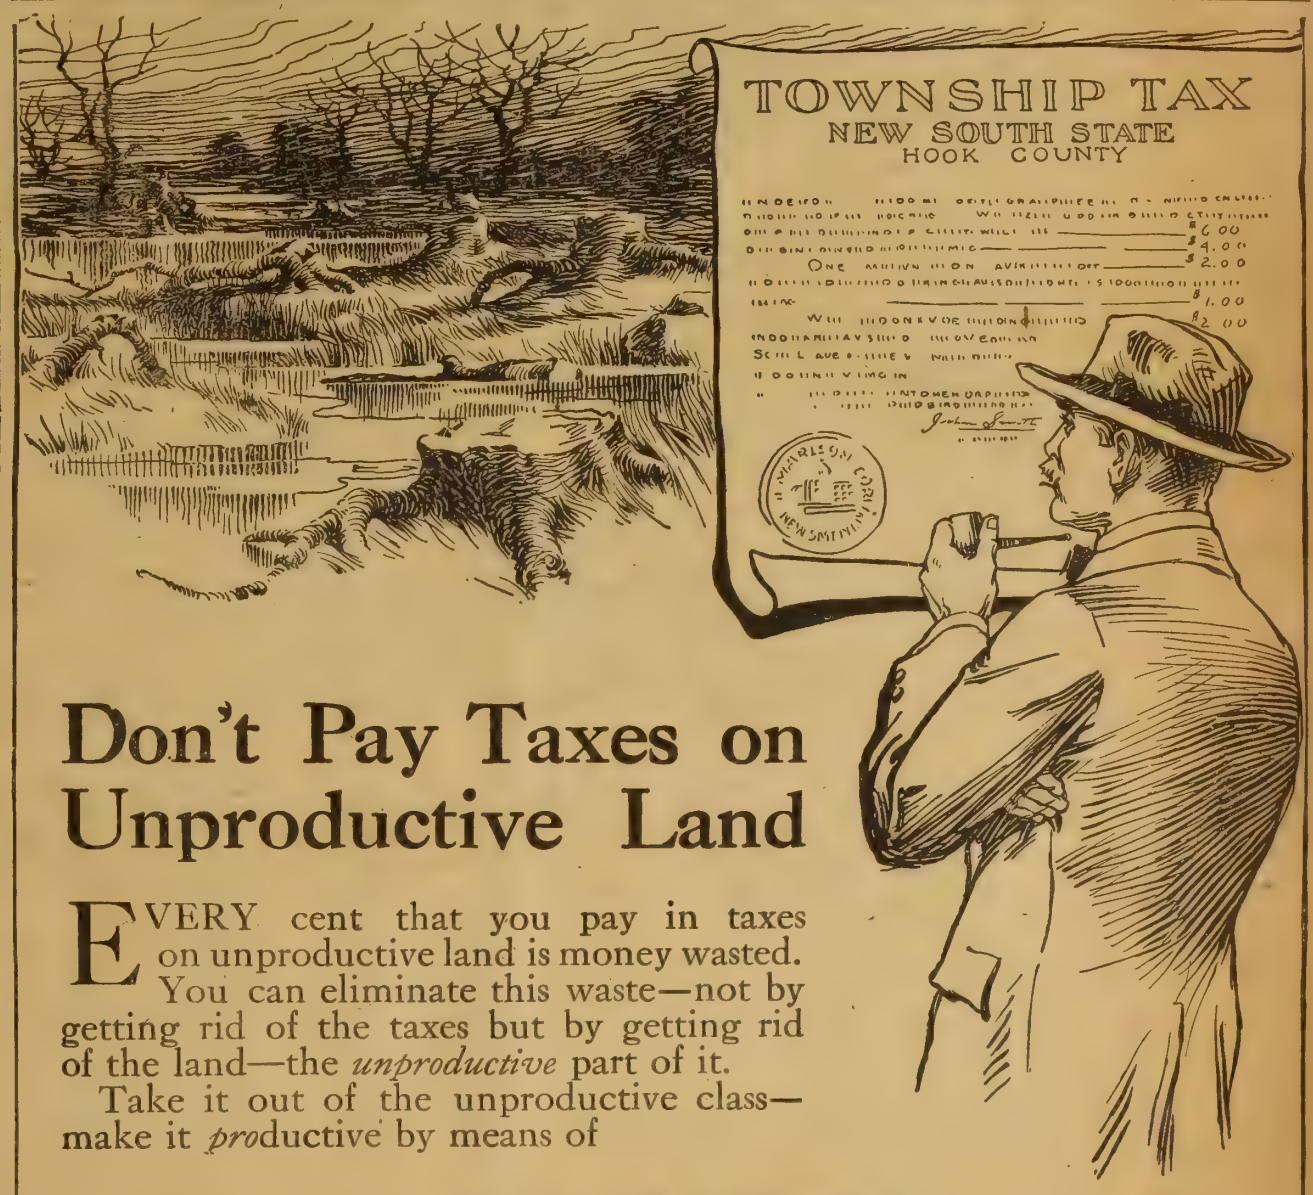
Minnesota has 622 co-operative creameries out of a total of 850. There are 189 individually owned creameries and thirty-nine centralized plants. A canvass made covering the month of March, showing that the co-operative creameries of the better grade paid 40 to 42 cents a pound for butter fat. A few of the co-operative creameries which are poorly supported paid as low as 30 cents. In each case where the price paid to farmers was low, the average production of butter was as low as 100 pounds a day. Many co-operative creameries making 200 to 300 pounds of butter a day paid 35 to 39 cents a pound for butter fat. Farmers who shipped cream, according to this statement, received an average of about 35 cents. The co-operative creameries which paid as high as 42 cents a pound for butter fat, were producing the highest amount of butter. The survey in brief, indicates that co-operative creameries pay the farmer the best price provided all the farmers will work together and stand by their own creamery. Even a co-operative business cannot be a great success where support is divided.

County Representative G. R. Ingalls and the superintendent of schools of Eau Claire county, Miss L. E. Johnson, have recently completed a census of the number of silos in Eau Claire county through the teachers and pupils of the rural schools. On January 1, 1915, there were 343 silos in the county. On January 1, 1916, there were 444 silos, or an increase of nearly 30 per cent during the year. The rural teachers took a great deal of interest in the work, and the count was made in a very short time.

A Colorado brewery, knocked out of business by the prohibition law, has been turned into a malted milk plant. An Iowa brewery which got the same jolt, is now making a success as a creamery.

C. P. Bull, of the division of agronomy, University Farm, St. Paul, has issued a warning to farmers to store all of the seed corn which they may have left over. This warning is due to the lateness of the present season. While the seed corn situation may be all right if we have a late summer and good fall season, it is best to be on the safe side. There are, however, not a very large number of farmers who will have seed corn to hold over.

Oconto county, Wisconsin, has organized its first cattle breeders' association. Fourteen Holstein breeders met recently at the Lehner & Lehner law office in Oconto Falls and formed an organization with the following officers: President, E. B. Dutton, Abrams; vice president, Leonard Fields, Spruce; secretary, Adolph P. Lehner, Oconto Falls; treasurer, A. L. Kieffer, Lena; directors, George Cota, Chase; Ira Telford, Little River; William Siegler, Oconto Falls; C. A. Maas, Lena; Charles Leemon, Chase. All breeders of Holstein cattle have been invited to join the association.



Don't Pay Taxes on Unproductive Land

EVERY cent that you pay in taxes on unproductive land is money wasted. You can eliminate this waste—not by getting rid of the taxes but by getting rid of the land—the *unproductive* part of it.

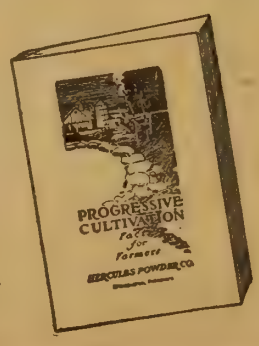
Take it out of the unproductive class—make it *pro*ductive by means of

HERCULES DYNAMITE

If you own land rendered useless by water, stumps, rocks, or by all three combined, Hercules Dynamite will clear it at the least possible expense.

If you have ever run a drainage ditch, pulled stumps, or removed rocks by hand power you know the amount of work involved. Hercules Dynamite will do the same job, and do it more thoroughly, at a small fraction of the cost in time, labor and money.

It will pay you to write us for an instructive and interesting book called "Progressive Cultivation". It is sent free on request. It treats fully not only the question of land clearing by means of dynamite but also subsoiling, tree planting, irrigation work, etc. Write for your copy today. Please use the coupon opposite.



HERCULES POWDER CO.

War-Time Farming in Germany.

Harry C. Evans, a Prominent Member of the Ford Peace Party, Writes His Observations of Agricultural Conditions in Germany, and Gives an Interesting Insight Into German Efficiency and Strength.

WHEN the German states were federated there commenced the greatest campaign for efficiency along all lines of human endeavor ever known among men, and the results of that campaign have been felt the world over. And in no line, not even in militarism or in the wonderful school system inaugurated, did the German thought toward efficiency run stronger than along the agricultural line. This thought was expressed by Bismarck, who said nearly fifty years ago:

> The German empire will collapse without firing a shot when German agriculture collapses.

And by another statesman of that early day in these words:

> Germany's armaments by land and sea and her industrial and commercial development are pointless and hopeless from the national standpoint except on the basis of Germany's national ability to feed her own population.

And again by Emperor Wilhelm:

> German agriculture must and can feed the whole of the population of Germany.

This language indicates not only the voice but the very heart of Germany.

A large portion of the very heart of Germany is a sandy plain. It reaches from the center of the empire north to the Baltic sea, from the Russian frontier, on the east, west to Holland, and comprises 100,000 square miles. Yet so efficient is the work of the German government and people, and so thorough the belief that every available inch of soil must be cultivated, this entire plain has been redeemed and today is an exceedingly valuable district.

Germany's financial and customs policy is based on the assumption that the agricultural population is most important to the welfare of the government. Agriculture is protected even by measures which bear hard upon the commercial and industrial population. The agricultural population, which is less than one-third of the total population, is the real backbone of the government. The Agrarian is one of the leading political parties. It is the party of the landowners. It is the kaiser's favorite party and this party usually supports the kaiser in all that he wants to do. The Agrarian is the conservative or the "stand pat" party of Germany. In return for their political support the kaiser favors the agriculturalists. They secure practically all the federal appointments. The government owns the railroads and if an agricultural district desires a spur of road into its territory it gets it. The government gets the profits from the railroads. In fact, they are the most important source of national income. This enables the government to levy a low rate of taxation and the lowest rate is upon land and money invested in land. If agriculture needs assistance the railroad rates are reduced to farmers. Thus are the farmer's products sent to market at minimum cost. One part of the country has never been discriminated against by railroad rates, as has been the practice in our country. The farmers and shippers have not been compelled to endure years of litigation in courts to secure fair rates, as our farmers and shippers have. No German business concern has ever been favored by rebates. The government has canalized the rivers and thus has further reduced the cost of transportation of farm products and also added to the source of national revenue.

HARRY C. EVANS.

Mr. Evans accompanied the Ford peace party which recently visited Europe in an effort to end the war and bring about international peace. Mr. Evans was one of the leaders of the party. He is a skilled newspaper observor and has prepared a series of three articles for this paper, giving his observation of agricultural condition in the nations now at war and interesting information, gathered first-hand on his recent visit, as to the cause and possible effect of the present great struggle. This first article deals with Germany; the other two will take up England and other nations. The second will appear next week.

The Agrarians are in favor of a high tariff. A heavy duty is laid on farm products, not so much for revenue as to protect the farmers from foreign competition. The tariff on live stock is practically prohibitive.

The political party of the Agrarians, or farmers, is as thoroughly organized as the German army or the German public schools. Notwithstanding the fact that they poll less votes than the social democrats and have a smaller representation than the social democrats in the Reichstag, nevertheless they are the most powerful political organization in Germany.

Two examples will suffice to show the activity of the Agrarians in German politics: At the time of the initiation of the German navy the landlords opposed the navy because they thought it would open up the way for imports of live stock and farm products into Germany. Their shibboleth is that Germany shall feed and support her own people. Similarly the Agrarians have opposed the canal schemes which connected the rich agricultural areas in eastern Germany with the industrial west and thus to the North sea. They think the canal will make it possible for the eastern provinces to be flooded by foreign produce shipped by canal.

Inasmuch as the government offices, including the civil service and places at court, are largely occupied by members of Agrarian families, who constantly watch agricultural interests, all other classes are officially discriminated against in favor of the farmer.

If there has been a crop failure of certain products, such as fodder for cattle, and the farmers are compelled to buy this particular product, the tariff is reduced or taken off for their benefit. There has been a long fight to introduce inheritance taxes, but inasmuch as the farms descend from father to sons the farmers have been able to defeat this proposition. In general, it may be stated that agriculture occupies a privileged position in Germany. This privileged position is partly due to remnants of feudalism and partly due to political influence of the farmers, but in the main it is based upon the theory that the agricultural population is the backbone of the empire and that, to quote the emperor, "Germany's agriculture must and can feed the whole population of Germany."

The amount of land under cultivation is about 80,000,000 acres. About 4,000,000 acres is divided into small holdings of about five acres each. About one-third of these small holdings is vine-growing land in southern Germany; another third is garden land. The next largest holdings, up to ten acres, are vineyards and corn lands. The middle-sized holdings, up to fifty acres, still show many vineyards and corn lands. Of the farms of 250 acres one-third is in beet sugar, one-third in corn and the balance in vineyards and roots. The farms of 300 acres and more are one-half planted to sugar beets and one-fourth to corn. These larger farms include about one-fourth of all the agricultural lands in Germany and farms in the neighborhood of 250 acres make up one-third of the total area of farm lands.

There are 2,000,000 land proprietors and 130,000 renters. There are 3,000,000 farm laborers, that is, "hired men." The condition of the farm laborer has been much improved in recent years, yet there is still much complaint of their maltreatment, low wages and abuses in connection with the electoral votes. The vote in many of the states of Germany is based on prop-

The German army plows the fields for the peasants of France and Belgium and thereby maintains the agricultural production of the land it has captured and now occupies. Herewith is shown a team of fifty-two plows at work in French territory held by the Germans.

erty holdings. Every man can cast one vote for a member of the Reichstag and he can cast additional votes in proportion to the property he owns. In one parliamentary district in Prussia on man owns so much property that he casts more votes than all the other men in the district.

The building up of the German industrial system has attracted many men from the farms, and, therefore, has compelled the landlords to be more considerate toward the farm laborers. A hundred years ago over 80 per cent of Germany's population was agricultural. Today less than 30 per cent is occupied by agriculture. While Germany has made faster strides in agriculture than most nations, she has outdistanced them all in her manufacturing industries. So it is that the drainage of labor from the farms to the towns has produced much better conditions among the farm laborers. Labor organizations have made but little progress in the country.

The average wage paid to the farm laborer is about 50 cents a day. A farm laborer whose wife also works in the field, and she usually does, can make an income of about $200 per annum. To this is to be added their housing and some dairy and garden produce.

When war broke out German agricultural experts agreed that an increase of 15 per cent in cereals and 5 per cent in meat was all that was necessary for Germany to feed her own population. That this deficit has been made up since the beginning of the war is evident. It has been done in

The bread ticket issued to Mr. Evans in Berlin, four coupons being torn off for two rolls.

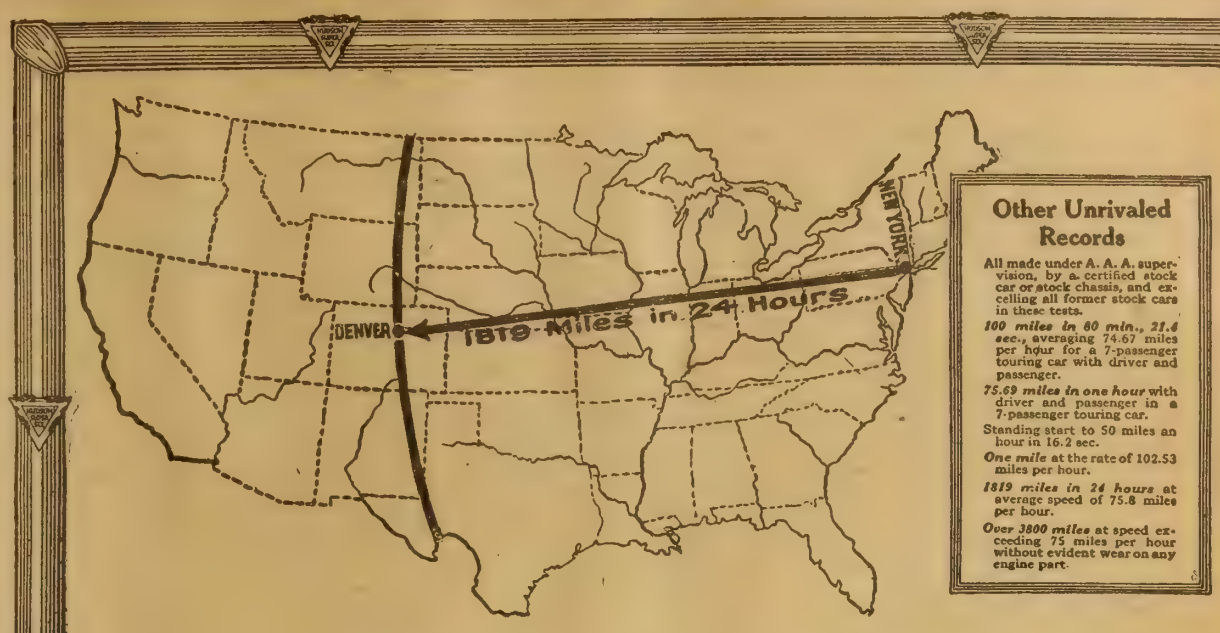
two ways. First, by an increase in the area of cultivated lands. I observed this increase in my travels through Germany. The land is cultivated clear up to the railroad tracks on either side; practically every front door yard in all the villages is under cultivation; in some of the larger cities I saw what had been extensive lawns about beautiful homes under cultivation; many of the graveyards have been plowed and planted to garden truck. The roads in Germany are not more than twenty feet wide, giving a saving to the farmers of thirty feet against the fifty-foot road in Iowa.

The second way of making up the deficit has been by saving. Two days out of each week no one, not even the kaiser, can buy any meat, and the amount he can buy on other days is limited. No one, from kaiser to peasant, can use more than five ordinary rolls of bread in a day. Bread tickets are issued daily to everybody in the hotels and cafes, and the amount of flour or meal that one family may buy per week is limited. Tickets are also issued for sugar, coffee and other necessities. I stopped at the Kaiserhoff Hotel as I passed through Berlin. I took one meal at this hotel. When I registered I was given a full day's bread ticket. Each ticket has ten coupons, and it takes two coupons to get one roll. At dinner I produced my bread ticket and ordered two rolls. Four coupons were torn off. The reader will find on this page a photograph of the balance of that bread ticket, showing six coupons remaining, which would have entitled me to three additional rolls that day. The ticket would have been taken up next morning had I remained and I would have been furnished with a new ticket for that day.

From these two sources, that is, the increased acreage and the saving, the observer is led to believe that the deficit has fairly been made up and that Germany today is producing sufficient foodstuffs to feed her people. This fact is tremendously important when we realize that England has established a blockade about Germany that prevents the importation of foodstuffs. Germany has conquered vast areas of farm territory during the war. She has all of Serbia, practically all of Belgium, a strip seventy miles by 200 miles of France, and she has driven a sheer 350 miles due east into the heart of Russia, and this Russian strip is 500 miles north and south. Elaborate preparations have been made by Germany since this territory was captured to farm it this year. It is now being prepared and seeded under the direction of German officials. The natives that are living in the captured territory will be assisted in this work by prisoners captured by Germany. There is no doubt in my mind but that the German army will have ample foodstuffs until the end of the war. If anyone is to suffer it will probably be the two and a half million prisoners Germany has captured and the inhabitants of the captured territories.

German agriculture perhaps was never maintained at a higher pitch than it will be this year, and, notwithstanding the fact that practically every young man has left the farms for the trench line, there will be no neglect of the farms. The German women know as much about farming as do the men. They have always worked in the fields. There are 400,000 unmarried women in Germany and many of these are field hands. These women and the prisoners will undoubtedly produce the greatest crop this year that Germany has ever known. In February I saw many women at work in the fields with ox teams. Even that early in southern Germany there was considerable plowing going on. I saw many women with ox carts scattering fertilization. The matter of fertilization and conservation of the soil and other details of farming in Germany will be treated in a subsequent article.

On the big farms, particularly those devoted to sugar beets which afford seasonable work, over 700,000 foreign laborers come into Germany to help



Other Unrivaled Records

All made under A. A. A. supervision, by a certified stock car or stock chassis, and excelling all former stock cars in these tests.

100 miles in 80 min., 21.4 sec., averaging 74.67 miles per hour for a 7-passenger touring car with driver and passenger.

75.69 miles in one hour with driver and passenger in a 7-passenger touring car.

Standing start to 50 miles an hour in 16.2 sec.

One mile at the rate of 102.53 miles per hour.

1819 miles in 24 hours at average speed of 75.8 miles per hour.

Over 3800 miles at speed exceeding 75 miles per hour without evident wear on any engine part.

Hudson Super-Six Sets New 24-Hour Endurance Mark

Fastest Time for Such Distance ever made by a Traveling Machine

No man today—if he knows the facts—doubts the Super-Six supremacy.

At first the truth seemed like a romance. Think of one new invention, applied to a light six, adding 80 per cent. to its power.

Then official records began to pile up, certified by the A. A. A. The whole motoring world then had to concede this the greatest motor built.

But many men asked, "What about the endurance? Can a motor so flexible, so speedy, so powerful, stand up in years of road use?"

So we asked Ralph Mulford to take a stock Super-Six chassis and, under official supervision, show the world its endurance.

All Records Broken

He took a Super-Six stock chassis—certified by A. A. A. officials.

It had already been driven over 2000 miles at speed exceeding 80 miles per hour.

It had made a mile at Daytona at the rate of 102.53 miles per hour.

And he drove that car 1819 miles, on Sheepshead Bay track, equal to the distance from New York to Denver—in 24 hours of continuous driving—at an average speed of 75.8 miles per hour. At the end of that test—after nearly 4,000 miles of record-breaking strain—the car, when officially examined, showed no appreciable wear.

How Much Endurance Has It?

It will be many years from now before we can tell you how long a Hudson Super-Six will last. But the records we cite cover the greatest strains a motor car ever met. Many a great engine has gone to pieces under far lesser strain. Years of ordinary driving would never tax a motor like those thousands of miles of speed tests.

Yet the wear on the Hudson Super-Six was almost nothing. Certain it is that no man has ever built a traveling machine to compare with this car in endurance.

Greatest Endurance Proved

That was the last question—this one of endurance. In all other ways it has long been evident that the Super-Six stands supreme. Never has a motor of this size shown anywhere near such power. Never was an engine made to match this in smoothness. Never has a stock car recorded equal performance—in hill-climbing, quick acceleration or speed.

Handsomer cars have never been shown. Finer engineering is simply unthinkable, with Howard E. Coffin at the head of this department.

You are getting the car of the day when you get the Super-Six. Every man who knows the facts knows that. And, in view of our patents, rivalry is impossible.

No Need to Wait

It is natural to say, "Let us wait and see," when we meet such radical advancements. We think that nothing can excel in so many ways without falling behind in one.

But not one fact about the Super-Six is left unproved today. Not in one respect has its performance been matched. Not in any way has a rival motor been made to compare with this.

There is no need to wait to get Time's verdict on the Super-Six. The records prove the Super-Six supreme. A half-hour's ride without those records would convince any man of the fact.

Thousands of these cars are now running. You will find them in every locality. And every owner will tell you that he never meets a car to compare with his, in looks or performance.

These are things to consider when you buy a car.

Phaeton, 7-passenger, $1475 Roadster, 2-passenger, $1475 Cabriolet, 3-passenger, $1775
Touring Sedan $2000 Limousine $2750
(Prices f. o. b. Detroit)

in the harvest. The wages paid these laborers are from 50 to 75 cents per day for the men and about 35 cents for the women.

Russia, the most productive country in the world, is so handicapped for the want of railroads that it is impossible to transport her products from one part of the country to another. Russia produces one-fifth of the cereals of the world today and corn is rotting in Siberia and selling at fabulous prices in Petrograd. There is but one railroad, and that a very poor one, out of Siberia to the markets of the world. Not so with Germany. In no country is the cost of inland transportation cheaper. The soil of the different states of Germany is varied and many states produce a cereal that is impossible to be produced in another state. There is, therefore, much interchange of products. The mileage of railroad to the area is very large and in addition there is the canalization of rivers and construction of artificial waterways. All this makes transportation between states very cheap. These improved methods of transportation are controlled and directed by the government in the interests of agriculture. In addition, various other schemes are devised for reducing the middleman's profits and for connecting the producer directly with the consumer.

The government is concerned not only in increasing products but in cheapening the production. One of the most important things relative to this is the improved machinery for farming and the developing of electric-driven agricultural machines; also the increase in the use of steam machinery. The number of steam threshing machines in Germany is now one-half million and there are thousands of steam plows.

Another institution benefiting the farmer is the co-operative societies. There are nearly 30,000 such societies connected with agriculture, with over 4,000,000 members. There are over 3,000 co-operative dairys, with 300,000 members. These cut out the profits of middlemen and commission men.

The value of the annual agricultural products of Germany is roughly estimated as follows:

Dairy products	$ 720,000,000
Sugar	115,000,000
Cattle and by-products	1,000,000,000
Grain and other products	1,000,000,000
Total	$2,835,000,000

Thinning Apples.

This month is "apple-thinning" time in Wisconsin. Orchardists in the state whose trees have experienced normal conditions this season will find it advisable to take off the over-abundant fruit. The time for doing this with the greatest success is after the "June drop" or early apple fall, which will soon be due.

The reasons for thinning apples are obvious. Under favorable conditions apple trees frequently "set" more fruit than can possibly mature to good advantage. This has been the case in most Wisconsin orchards this season, although all varieties have not been equally fruitful. If left alone, trees with too many "sets" would eventually bear an inferior product, and besides this their future producing power would be injured.

Bigger and better apples usually come from careful thinning at the right time. While the labor item is considerable in large orchards, it must be remembered that it is at least just as easy to pick apples at this time of the year as at harvest time. Because the crop is sure to be more uniform in quality and more nearly free from blemish, the cost of grading and packing is greatly reduced. Besides, the enhanced commercial value received for the better fruit will usually make the thinning operation highly profitable.

Some hints about thinning apples are given by George Potter, of the horticultural department, Wisconsin College of Agriculture, as follows:

The fingers or an ordinary pair of thinning shears and a ladder are all that are necessary with which to do the work. Care must be taken when picking off the fruit not to break off the spurs, or loosen other apples, which at this stage of their growth are usually about one-half to three-fourths of an inch in diameter. The shears will do a cleaner and safer job than hand thinning, but it takes more time.

Remove all apples at the ends of branches.

Whenever there are two or more apples on the same spur, it is well to remove all but one of them.

If the spurs are too close together, all the apples should be removed from some of them, so that no two apples will be within four or five inches of each other on the tree. For the larger sized apples on a tree, or the larger varieties, this distance may be increased to eight or ten inches.

In no case should any but the normal fruit be left to develop. Deformed, wormy, scabby apples should be removed. Next fall's satisfaction will pay for the extra trouble.

Wisconsin Land Clearing Special.

The Wisconsin Farmer is in receipt of a letter from Mr. Carl Livingston, in charge of the land clearing special train which is still touring Upper Wisconsin. Mr. Livingston advises us that the demonstrators have gotten down to the work in earnest and are clearing land much more rapidly than they were able to do at the first two or three stops. Most of the old timers in Upper Wisconsin are even admitting that they are learning a great deal from the demonstrations. The crews are able to clear land just about twice as fast as they did the first week. This proves that even the experts can learn by practical experience. Upper Wisconsin settlers are indebted to those who have made this land-clearing demonstration work possible, and we have no doubt more good will be accomplished than by any single activity of the state in the past year.

Farmers' Picnic at Onalaska.

More than 300 men, women and children representing farmers and business interests of La Crosse county gathered together Saturday, June 3d, on the beautiful grounds of the county agricultural school at Onalaska for the purpose of getting better acquainted, hearing good music and listening to interesting talks. It was the farmers' and business men's picnic day. The day was ideal, and not until late in the afternoon did the rain stop the ball game which ended ten to twenty-one in favor of the farmers.

The program was as follows:

11:15 a. m. C. P. Norgord, Commissioner of Agriculture, "The Business Man's Interest in Farming."
1:00 to 1:30 p. m. Music.
1:30 p. m. A. J. Glover, editor of Hoard's Dairyman, "How the Farmer May Benefit by Organization."
2:30 p. m. Baseball game, Farmers versus Business Men.

The West Salem Orchestra furnished music throughout the day.

Wisconsin Crops Coming Well.

Season a Little Late, But Small Grain Is Good, While Meadows and Pastures Are Excellent---Live Stock in Fine Condition.

Bayfield County.—Weather is too cool and wet for planting corn, but the crop is nearly all in. Most of the early potatoes are planted. Oats and spring wheat look good. Meadows are in good condition, especially the newly seeded clover. The acreage of strawberries planted this spring will be increased, in this locality, as much as 30 per cent and prospects are good for a splendid crop of berries. Apple and cherry trees are loaded with bloom. Cows are producing well on account of good pastures, but we need warmer weather.—E. C. Stevens.

Buffalo County.—Oats and barley are coming on in fine shape and there is every prospect of being a full crop. Corn is backward on account of wet weather and a few farmers are still planting. Meadows are excellent and pastures are good, so that live stock that have had a chance during the winter are now in fine shape. In spite of unfavorable weather, spring pigs are doing well. Gardens are late, but crops in them are thrifty.—Jas. G. Bates.

Chippewa County.—Clover is an excellent stand and it is now knee-high. Oats and wheat are well advanced and, although corn is a little backward on account of the heavy spring rains, there is every promise of a satisfactory crop. Early potatoes are up and looking good and late potatoes are now being planted. There will be more potatoes than usual in this locality and almost every farmer here will have from ten to ninety acres. No damage by frost to the fruit. Five carloads of live stock shipped to Duluth last week and one car sheep to Bayfield at fancy prices.—Ernest Netzel.

Crawford County.—Rye is headed out and oats and other spring grain crops are now about six inches high. Corn is all up, but it is not doing as well as it might. Heavy rains have beaten it down and the hillsides have washed badly. Some farmers are hustling the cultivators along. Potatoes are not up yet, but other vegetables are doing well. All classes of live sock are healthful and show an exceedingly thrifty condition this spring. Floods and heavy winds have done some damage in this locality. Pastures were never better.—H. H. Stuckey.

Douglas County.—We have too few warm days here and, therefore, conditions are a little backward for crops. Grass is doing well and live stock, therefore, is in good shape. Corn planting has been delayed and considerable acreage that was intended for corn will be seeded to barley and millet. Potato planting operations will close this week. There has never been better promise for hay crop.—B. W. Stone.

Juneau County.—We had a regular flood here on the first of June, and, therefore, our soil is too wet for growing crops, particularly on low ground. Corn planting is not yet finished and a considerable part of the early-planted corn has been replanted. Meadows and pastures are good.—C. W. Hale.

LaFayette County.—Oats and all small grain crops look good and these have flourished, especially during the last two weeks. Much grain has been replanted on account of poor seed the first time. Wireworms are working on sod corn, but not doing a great deal of damage. Meadows and pastures are in good shape, while early potatoes are looking thrifty, but somewhat late. Late potato planting has been practically completed. A number of young colts have died in this locality.—W. F. Pease.

Langlade County.—Corn and potatoes are up and cultivation will soon start. Small grains are looking fairly well. Hay is very scarce and high in price, selling from $18 to $20 per ton. Grass and clover are making fine headway. Young pigs are scarce in this locality. Those who are raising colts are meeting with fine success, as the little fellows are healthy and strong this spring. Stock of all kinds is healthy. Fruit trees are in good condition and insects are held back by the cool weather.—Chas. Parsons.

Manitowoc County.—Recent warm weather has given all kinds of grain crops a new start after a late seeding. Considerable corn has been planted and farmers are rushing the balance as rapidly as possible. The outlook is fair for a good crop of hay, as conditions have been favorable for the growth of grass.—Otto G. Birge.

Marinette County.—Spring work has been delayed at least three weeks by heavy rains and unseasonable cold weather. Low fields cannot be worked at all, so that the acreage of small grain and corn in this locality will be somewhat reduced. The small grain looks good and it has made exceedingly rapid growth during the last two weeks. Potato planting is about finished. Apple and cherry trees blossomed profusely and the fruit is, therefore good. Alfalfa and clover crops are killed on the low land.—W. E. Morton.

Marquette County.—The weather is fine in this locality and spring grains look good excepting where it was hurt by heavy winds. Winter rye is showing up 75 per cent of a crop and corn is all planted and the stand is good. Unfortunately, grub worms and cutworms are doing damage in the strawberries. The usual acreage of potatoes has been planted, but there will be more beans put in this year than usually. Pastures are good, but meadows will be light. All fruit is good, but strawberries are extra good. The young calf and colt crop never was better and young pigs are healthy and strong. Those who have sold cattle have realized excellent prices.—John M. Williams.

Pierce County.—Weather is wet and cold, but as fruit was late, it escaped the frost. Pastures and meadows are in fine condition. Rye will not make over two-thirds of a crop here. Spring grain is making a good showing thus far, excepting on the wet land, where it has turned yellow. Corn planting is practicallly finished and some cultivation has been done. Young colts are doing exceptionally well and cattle are in fine condition.—G. K. Moore.

Polk County.—Weather is still wet, but it is getting warmer and the corn that has been planted is showing up in fine shape. Potatoes will soon be all in and the entire acreage in this community has been planted with certified seed. Most growers have used "Rurals," "Green Mountains" and "Burbanks." Small grain is late, but it is looking good and meadows are excellent. The first crop of alfalfa will be ready to cut in ten days. Pickle growers are now putting in their crop. Many pigs were lost in this locality, as they seemed to lack vitality when they were young. Live stock is doing fine and the local creamery reports a heavy run.—P. F. Amery.

Portage County.—The recent warm weather accompanied by timely rains has greatly benefited crops, and, as a result, spring grain is looking exceedingly well. Corn is mostly all up and the stand is good. Some of the clover was winterkilled, and, therefore, meadows do not look extra well. Potatoes are about one-half planted and there will be about the average acreage put in this year. Live stock never was in better condition.—A. H. Peterson.

Price County.—Weather is too cold and wet here for best results in crops. Clover and timothy look good and oats are really looking fine considering all conditions. Potatoes are coming up and fruit trees are now in blossom, showing splendid promise. Corn is backward for this time of year. Live stock all doing well.—C. F. Glissendorf.

Rusk County.—Oats and barley are looking good and corn is beginning to show up in good shape. There are just a few farmers who have not finished planting. Meadows and pastures never were better, on account of the frequent rains, and as a result all live stock is in the pink of condition. Farmers' Co-operative Creamery here are receiving exceedingly large quantities of cream, indicating that we have good cows in this locality and that they are receiving milk-making foods.—T. M. Thomas.

St. Croix County.—All small grain excepting rye is in excellent condition and growth is very rapid. Rye is a thin stand for some unknown reason. Corn is all planted and is making very satisfactory headway. New clover seeding is excellent and prospects are very good for a good crop of hay. Pastures are growing faster than they can be eaten down by live stock, and milk production is, therefore, good. Some farmers are complaining of too much rain, but they are happy nevertheless.—A Subscriber.

Taylor County.—Hay land and pastures are looking good. Small grain is just looking fair. Considerable corn and potatoes are still to be planted, the delay being due to heavy and frequent rains. Truck crops are not very good on account of the weather being unfavorable for their growth.—J. C. Hoffman.

Washburn County.—The past two weeks of good growing weather has greatly improved crop conditions. Timothy meadows and pastures are good and I have never seen clover better. Some grain is a little late, but making good headway. A little corn still to plant here, but most of the crop is showing up fine. Cutworms are doing some damage. Apples, plums and berries promise well. The usual acreage of potatoes will be planted.—L. D. Gainhart.

Washington County.—Spring grain in this section is fine and there is no evidence of a cool spring having injured it in any way. Winter wheat and rye will be about one-half a crop. Two weeks ago, grass was poor, but now it is coming on in good shape. Two-thirds of the alfalfa was killed in this locality. Nine acres on my farm was entirely killed. Red and alsyke clover also suffered, although one-third of these crops might be left. Corn and potatoes are late and fruit blossoms were two weeks later than they were last year. The Holstein breeders' organization will hold a meeting in June. We have also a fine cow-testing association.—M. P. Salter.

(Copyright Rand McNally & Co.)

PART FIRST---The Pledge.

"THE only one of the name who is not a gentleman;" those words were repeated over and over by a young fellow who walked, one autumn morning, under the shade of old trees and along a street of aristocratic houses in old New Orleans.

He would have been handsome had it not been for the absolutely wicked expression of his face as he muttered to himself while he walked. He looked about twenty-five—dark and tall—so tall as to be a noticeable man among many men, and so well proportioned, and so confidently careless in movement as not to be ungainly—the confidence of strength.

Some negroes whom he passed turned to look after him, even the whites he met eyed him seriously. He looked like a man off a sleepless journey, his eyes were bloodshot, his face haggard, and over all was a malignant expression as of lurking devilishness.

He stopped at a house set back from the street, and half-smothered in the shade of the trees and great creeping vines that flung out long arms from the stone walls. There was a stately magnificence about its grand entrance, and its massive proportions—it showed so plainly the habitation of wealth. Evidently the ill-natured looking individual was not a frequent visitor there, for he examined the house, and the numbers about, with some indecision; then his eyes fell on the horse block, in the stone of which a name was carved. A muttered something, which was not a blessing, issued from his lips as he read it, but with indecision at an end he strode up the walk to the house. A question was answered by the dubious-looking darky at the door, and a message was sent somewhere to the upper regions; then the darky, looking no less puzzled, requested the gentleman to follow him to the "Young Massa's" study. The gentleman did so, noting with those wicked side glances of his the magnificence of the surroundings, and stopping short before a picture of a brunette, willowy girl that rested on an easel. The face was lovely enough to win praise from any man, but an expression, strangely akin to that bestowed on the carven name outside, escaped him. Through the lattice of the window the laughter of women came to him—as fresh and cheery as the light of the young sun, and bits of broken sentences also—words of banter and retort.

"Ah, but he is beautiful—your husband!" sighed a girlish voice with the accent of France; "so impressibly charming! And so young. You two children!"

Some gay remonstrance against childishness was returned and then the first voice went on:

"And the love of one quick meeting, and one quick grand passion that only the priest could bring cure for? And how shy you were, and how sweet—was it not delightful? Another Juliet and her Romeo. Only it is well your papa is not so ill-pleased."

"Why should he be? My family is no better than my husband's—only some richer; but we never thought of that—we two. I thought of his beautiful changeable eyes, and he thought of my black ones, and—well, I came home to papa a wife, and my husband said only, 'I love her,' when we were blamed for the haste and the secrecy, and papa was won—as I think everyone is, by his charming boyishness; but," with a little laugh, "he is not a boy."

"Though he is younger than yourself?"

"Well, what then? I am twenty-three. You see we are quite an old couple, for he is almost within a year of being as old. Come; my lord has not yet come down. I have time to show you the roses. I am sure they are the kind you want."

Their chatter and gaiety grew fainter as they walked away from the window, and their playful chat added no light to the visitor's face. He paced up and down the room with the eager restlessness of some caged thing. A step sounded outside that brought him to a halt—a step and a mellow voice with the sweetness of youth in it. Then the door opened and a tall form entered swiftly, and quick words of welcome and of surprise came from him as he held out his hand heartily.

But it was not taken. The visitor stuck his hands in the pockets of his coat, and surveyed his host with a good deal of contempt.

Yet he was a fine, manly looking fellow, almost as tall as his visitor, and fairer in coloring. His hair was a warmer brown, while the other man's was black. His eyes were frank and open, while the other's were scowling and contracted. They looked like allegorical types of light and darkness as they stood there, yet something in the breadth of forehead and form of the nose gave a suggestion of likeness to their faces.

The younger one clouded indignantly as he drew back his offered hand.

"Why, look here, old fellow, what's up?" he asked hastily, and then the indignation fled before some warmer feeling, and he went forward impulsively, laying his hand on the other's arm.

"Just drop that," growled his visitor, "I didn't come here for that sort of thing, but for business—yes—you can bet your money on that!"

His host laughed and dropped into a chair.

"Well, you don't look as if you come on a pleasure trip," he agreed, "and I think you might look a little more pleasant, considering the occasion and—and—everything. I thought father would come down sure, when I wrote I was married, but I didn't expect to see anyone come in this sort of a temper. What is it? Has your three-year-old come in last in the fall race, or have you lost money on some other fellow's stock, and what the mischief do you mean by sulking at me?"

"It isn't the three year old and it isn't money lost," and the dark eyes were watching every feature of the frank young face; "the business I've come on is—you."

"Look here," and the young fellow straightened up with the conviction that he had struck the question, "is it because of my—marriage?"

"Rather." Still those watchful eyes never changed.

"Well," and the fair face flushed a little, "I suppose it wasn't just the correct thing; but you're not exactly the preacher for correct deportment, are you?" and the words, though ironical, were accompanied by such a bright smile that no offense could be taken from them. "But I'll tell you how it happened. Sit down. I would have sent word before, if I'd suspected it myself, but I didn't. Now don't look so glum, old fellow. I never imagined you would care. You see we were invited to make up a yachting party and go to Key West. We never had seen each other until the trip, and—well, we made up for the time we had lost in the rest of our lives; though I honestly did not think of getting married—any more than you would. And then, all at once, what little brains I had were upset. It began in jest, one evening in Key West, and the finale of it was that before we went to sleep that night we were married. No one knew it until we got back to New Orleans, and then I wrote home at once. Now, I'm ready for objections."

"When you left home you were to be back in two months—it is four now. Why didn't you come?"

"Well, you know I was offered the position of assistant here to Doctor Grenier; that was too good to let go."

"Exactly; but you could have got off, I reckon, to have spent your devoted father's birthday at home—if you had wanted to."

"He was your father first," was the good-humored retort.

"Why didn't you come home?"

There was a hesitation in the younger face. For the first time he looked ill at ease.

"I don't know why I should give you any reason except that I did not want to," he returned, and then he arose, walking back and forth a couple of times across the room and stopping at a window, with his back to his visitor. "But I will," he added, impulsively. "I stayed away on account of—Annie."

The dark eyes fairly blazed at the name.

"Yes?"

"I—I was a fool when I was home last spring," continued the young fellow, still with his face to the window. "I had never realized before that she had grown up or that she was prettier than anyone I knew, until you warned me about it—you remember?"

"I reckon I do," was the grim reply.

"Well, I tried to be sensible. I did try," he protested, though no contradiction was made. "And after I left I concluded I had better stay away until—well, until we were both a little older and more level-headed."

"It's a pity you didn't reach that idea before you left," said the other significantly.

"What!"

"And before you turned back for that picture you had forgotten."

"What do you mean?" and for the first time a sort of terror shone in his face—a dread of the dark eyes that were watching him so cruelly. "Tell me what it is you mean, brother."

"You can just drop that word," was the cold remark. "I haven't any relatives to my knowledge. Your father told me this morning I was the only one of the name who was not a gentleman. I reckon I'll get along without either father or brother for the rest of my life. The thing I came here to see about is the homestead. It is yours and mine—or will be some day. What do you intend doing with your share?"

"Well, I'm not ready to make my will yet," said the other, still looking uneasy as he waited further explanations.

"I rather think you'll change your mind about that, and fix it right here, and now. Today I want you to transfer every acre of your share to Annie."

"What?"

"To insure her the home you promised your mother she should always have."

"But look here—"

"To insure it for her and—her child."

The face at the window was no longer merely startled, it was white as death.

"Surely you don't mean that!" he gasped. "It is not true. It can't be true!"

"You contemptible cur! You low-down liar!" muttered the other through his teeth. "You sit there like the whelp that you are, telling me of this woman you have married, with not a thought of that girl up in Kentucky that you had a right to marry. Shooting you wouldn't do her any good or I wouldn't leave the work undone. Now I reckon you'll make the transfer."

The other had sat down helplessly, with his head in his hands.

"I can't believe it—I can't believe it," he repeated heavily. "Why—why did she not write to me?"

"It wasn't an easy thing to write, I reckon," said the other bitterly, "and she waited for you to come back. She did send one letter, but you were out on the water with your fine friends and it was returned. The next we heard was the marriage. Word got there two days ago, and then—she told me."

"You!" and he really looked unsympathetic enough to exempt him from being chosen as confidant of heart secrets.

"Yes; and she shan't be sorry for it if I can help it. What about that transfer?"

"I'll make it;" and the younger man rose to his feet again with eyes in which tears shone. "I'll do anything under heaven for her! I've never got rid of the sight of her face. It—it hoodooed me. I couldn't get rid of it! —or of remorse. I thought it best to stay away, we were so young to marry, and there was my profession to work for yet; and then on top of all my sensible plans there came that invitation on the yacht—and so you know the whole story; and now—what will become of her?"

"You fix that transfer and I'll look after her."

"You! I don't deserve this of you, and—"

"No; I don't reckon you do," returned the other, tersely; "and when you—drat your conceit!—catch me doing that or anything else on your account, just let me know. It isn't for either one of you, for that matter. It's because I promised."

The younger dropped his arms and head on the table.

"You promised," he groaned. "I—I promised as well as you, and mother believed me—trusted me, and, now—oh, mother! mother!"

His remorseful emotion did not stir the least sympathy in his listener, only a chilly unconcern as to his feelings in the matter.

"You, you cried just about that way when you made the promise," he remarked indifferently. "It was wasted time and breath then, and I reckon it's the same thing now. You can put in the rest of your life in the wailing and gnashing of teeth business if you want to—you might get the woman you married to help you, if you tell her what she has for a husband. But just now there are other things to attend to. I am leaving this part of the country in less than six hours, and this thing must be settled first. I want your promise to transfer to Annie all interest you have in the homestead during your lifetime, and leave it to her by will in case the world is lucky enough to get rid of you."

"I promise."

His head was still on the table; he did not look up or resent in any way the taunts thrown at him. He seemed utterly crushed by the revelations he had listened to.

"And another thing I want settled is, that you are never again to put foot on that place or in that house, or allow the woman you married to go there, that you will neither write to Annie nor try to see her."

"But there might be circumstances —"

"There are no circumstances that will keep me from shooting you like the dog you are, if you don't make that promise, and keep it," said the other deliberately. "I don't intend to trust to your word. But you'll never find me too far out of the world to get back here if you make it necessary for me to come. And the promise I expect is that you'll never set foot on the old place again without my consent—" and the phrase was too ironical to leave much room for hope.

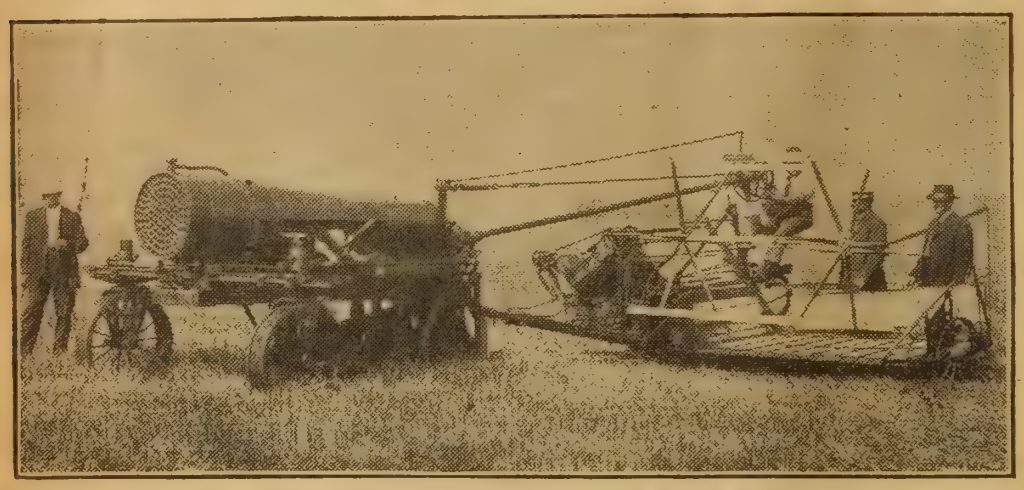
"I promise. I tell you I'll do anything to make amends," he moaned miserably.

"Your whole worthless life wouldn't do that!" was the bitter retort. "Now, there is one thing more I want understood," and his face became more set and hardened; "Annie and her child are to live in the house that should be theirs by right, and they are to live there respected—do you hear? That man you call father has about as much heart in him as a sponge. He would turn her out of the house if he knew the truth, and in this transfer of yours he is to know nothing of the reason—understand that. He is quite ready to think it prompted by your generous, affectionate heart, and the more he thinks the better it will be for Annie. You will have a chance to pose for the rest of your life as one of the most honorable of men, and the most loyal to a dead mother's trust," and a sound that would have been a laugh but for its bitterness broke from him as he walked to the door; that will suit you, I reckon. One more lie doesn't matter, and the thing I expect you to do is to make that transfer today and send it to Annie with a letter that anyone could read, and be none the wiser—the only letter you're ever to write her. You have betrayed that trust; it's mine now."

"And you'll be worth it," burst out the other heart-brokenly; "worth a dozen times over more than I ever could be if I tried my best. You'll

(Continued on page 19.)

VARIETY OF USES FOR TRACTOR



TRACTOR IN MANY CASES USED IN HARVEST FIELDS WITH MOST GRATIFYING RESULTS—SOLVES AN IMPORTANT PROBLEM.

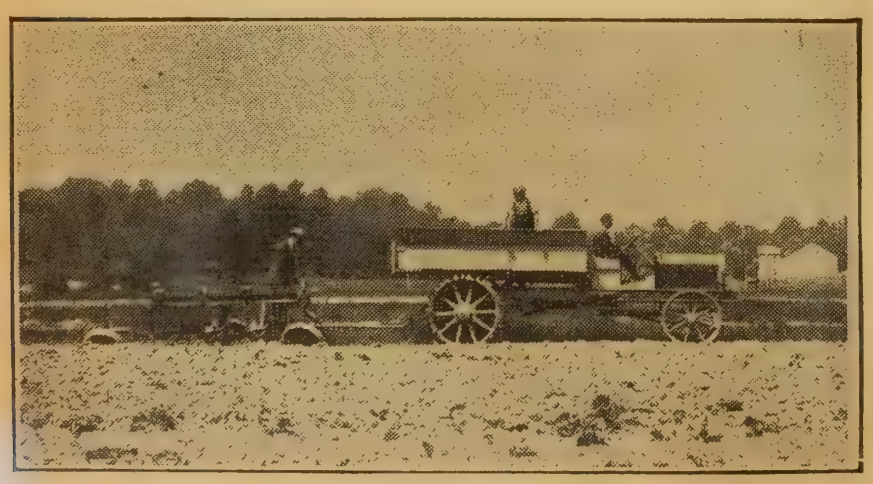
FIFTEEN ACRES A FAIR DAY'S WORK WITH A FOUR-BOTTOM OUTFIT—HARROW MAY BE TRAILED ALSO WITH SAME POWER.

PUBLIC DEMONSTRATIONS HAVE DONE MUCH TO CONVINCE FARMERS THAT THE TRACTOR HAS BEEN BUILT FOR REAL SERVICE.

A LOADED TEN-FOOT DISK IS BUT A PLAYTHING FOR A STURDY TYPE OF TRACTOR—FIFTEEN ACRES A DAY MAY BE COVERED.

GREAT VARIETY OB BELT TASKS CAN BE PERFORMED BY TRACTOR ON ALMOST EVERY FARM, PARTICULARLY WHERE LIVE STOCK FARMING IS CARRIED ON.

AN EIGHT-INCH FURROW MAY BE TURNED WITH EASE—NO SWEATING, NO "WINDING" STOPS AND NO COLLAR GALLS THAT REQUIRE ATTENTION.



TRUCK SOMETIMES PUT INTO FIELD SERVICE IN PLOWING, DISKING, HARROWING AND SEEDNG WITH EXCELLENT RESULTS.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

QUESTIONS AND ANSWERS.

Power of Motor—Use of Kerosene.

I have a Mitchell 1912 model auto. The motor has a four and one-fourth inch bore, five-inch stroke. How many horse power would this be? Would it be practical to run it with kerosene in place of gasoline, if I install a kerosene carburetor? Could I obtain the same horse power per gallon? What would a kerosene carburetor cost?

Answer.—By the common rating, your motor has 28.9 horse power. As a rule it is not practical to run an automobile motor on kerosene. Kerosene should give more power per gallon than gasoline, but it will not unless it is well carburized. If you wish to experiment along this line, consult your auto supply man for prices on kerosene carburetors.

Installing Ammeter on Hudson Auto.

I have a 1914 model Hudson car with Delco lighting and starting system. How could I connect a charging and discharging gauge? For what current? Do you think it economical to mix high-grade kerosene with gasoline for use in an auto motor?

Answer.—You will find a small brass plate on your generator, with a binding post at one end and a nut at the other. Saw the plate apart half way between the post and the nut. Solder a wire to each of the halves of the plate. Connect the wires to the terminals of the gauge—a thirty-ampere ammeter. There is little economy in mixing kerosene with the gasoline.

Engine Misses Fire.

I have a 1910 Overland car that is causing me considerable trouble. The engine misses almost continually. Sometimes it fires fairly well, but at other times it only fires on two or three cylinders. The motor seems in good condition, scarcely worn at all. The car has run 10,000 miles. The magneto has been overhauled and the magnets recharged. The coil is O. K. New wires have been put on. The valves have been ground. The motor is free from carbon, and is timed correctly. I have tried an Air-friction carburetor without much success. Any advice you can give me will be appreciated.

Answer.—You have evidently attended to most of the conditions that usually are the cause of motor trouble. It may be that your trouble is due to a weak spark due to some overlooked defect in the magneto or wiring. It may be that your piston rings or cylinders are worn so that too much oil works up over the rings. If considerable smoke comes from the exhaust, and if you are bothered with fouled spark plugs and rapid accumulations of carbon, too much oil is undoubtedly the trouble. Test the spark plugs to make sure that each of them delivers a good, fat spark. See that the spark plug points are adjusted so that a smooth dime just passes between them.

One of the most common defects of an old car is worn valve stem guides. If the guides are worn on the intake side the air leaks into the intake, making the mixture uncertain, and thereby causing the motor to misfire. An air leak, squirt gasoline from an oil has the same effect. To test for an air leak, squire gasoline from an oil can onto the suspected points while the motor is running. If there is an air leak the motor will either slow down or speed up.

Pull of Motor; Lifting Magnets.

I would like to know how many pounds of pull there is to the explosion stroke of a motor that has a cylinder with a four-inch bore and four and three-fourths inch stroke. Where can I obtain literature on electric lifting magnets?

Answer.—The explosion pressure varies with the compression of the engine; the higher the compression, the greater the pressure. The average compression pressure is about sixty-five pounds per square inch. For this compression the explosion pressure is about 200 pounds per square inch. In a four-inch cylinder this would give a momentary pull—or rather, push—of 2,500 pounds. This pressure falls rapidly, averaging about seventy pounds per square inch for the whole stroke.

The International Correspondence schools of Scranton, Pa., publish a handbook that gives some information on the design of lifting magnets.

Lighting from Magneto and Battery.

Kindly advise me through the columns of your paper. I am using a storage battery for lights on my Ford car. How can I wire the same so that I can light on either magneto or storage battery at will?

Answer.—If you are using nine-volt lights and have an eighteen-volt battery the wiring would be as illustrated in Figure 1. Ground one battery terminal, and run the other to a three-point switch. The other two switch terminals are connected to the lights and magneto as shown. If you are using an eight-volt battery, wire as shown in Figure 2; which is the same as Figure 1, with the addition of a two pole, double throw switch, wired as shown, so that the lights are in series when using the magneto, and in parallel when using the battery. Each light should be protected by a fuse.

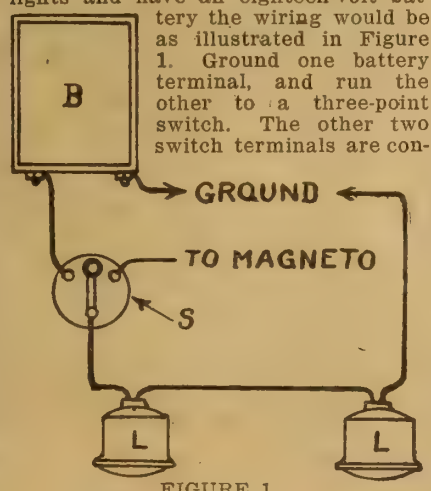


FIGURE 1.

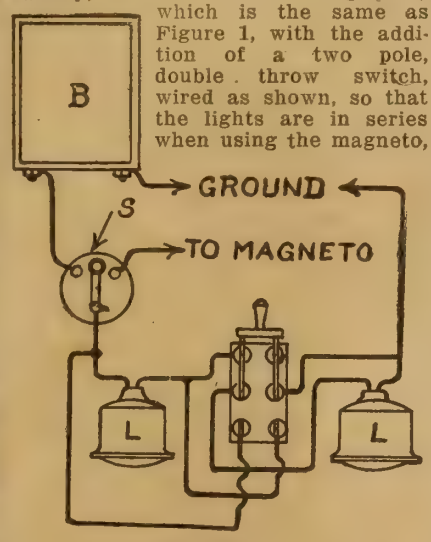

FIGURE 2.

For batteries of any other voltages it would be necessary to introduce resistance, which would not be economical for battery use, and might overload the magneto.

Eccentric or Crank.

Could an eccentric with a three-inch throw be run as fast as a crankshaft? Which would be the smoother running? Which would run the longer?

Answer.—The eccentric could not be run as fast, as the bearing surface is larger in diameter. The larger the diameter of a bearing the slower must be the speed. Cranks and eccentrics run equally smooth when properly adjusted. A crank may be used as either the driver or the driven member. An eccentric is seldom used except as a driver.

Carburetor Floods.

I have a Model A. Stromberg carburetor with a hot air pipe. Gasoline leaks out under the air shutter of the hot-air pipe. A new float was put in last August, but has not relieved the trouble. What would you advise me to do?

Answer.—Your carburetor is "flooding," due to lint or dirt under the float valve, a worn float valve, a leaky float, or some other defect of the float chamber mechanism. Remove the cover of the glass float chamber, and clean the parts thoroughly. Replace the float valve if worn. Make sure that the float does not leak. See that the float levers work freely.

Steam Boiler Compound.

How can I stop the steam from leaking out at the joints of my steam engine? What is a good boiler compound to use where a lime feed water is used?

Answer.—If the steam leaks at a bolted joint put in a gasket of "Rainbow," "Permanite," or other sheet packing. If the leak is at a riveted joint beat the edge of the top plate down tight on the bottom plate, using a cold chisel with the end ground off flat. This is known as "calking." To stop leaks around the tubes, a tube expander is necessary. The expander expands the ends of the tubes out tight against the heads.

There are many fake boiler compounds on the market. The only sure way to get a good boiler compound is to have a chemist to analyze the feed water, and recommend what and how much compound to use. A compound that is good for some water may be worse than nothing for another. For gypsum waters, soda ash is generally used. For lime waters, milk of lime may be used. Hard scale may be softened by using kerosene in the boiler. Never use crude oil. The best way to use the kerosene is to fill the boiler nearly full of water and then put in the kerosene and allow the water to run out. The kerosene will stick to the scale and soften it so that it may be scraped out. Boiler compounds are likely to cause foaming. When compound is used, the boiler should be blown off frequently.

COULD I MAKE IT STRONGER?

At the end of twelve months if a Galloway Spreader has not paid for itself, provided you have hauled out 100 loads of manure or more, and it has not proven everything I say for it, I agree to take it back, pay freight both ways and return your money no matter on which of my six plans you buy. Could I make this offer if I was not sure of my ground—that the spreader would please you—that it would pay for itself—that everything I have said about it would be backed up by the spreader itself? My new steel beater and wide-spreading V-rake pulverizes and tears the manure to shreds—worth $15 extra on any spreader, costs you nothing extra on the Galloway. INVINCIBLE PATENTED ROLLER FEED; this great exclusive feature on the Galloway Spreader makes it superior to all others—the secret of light draft—a feature worth $25 alone on any spreader—exclusive on the Galloway, but costs you nothing extra. NEW EVERLASTING PRESSED STEEL unbreakable tongue worth $5 more on any spreader—no extra charge on a Galloway. PATENTED AUTOMATIC STOP uniform clean out push-board, worth $10 on any spreader, exclusive on the Galloway, but costs you nothing extra. These features have caused thousands of Galloway Spreader users to write us that the Galloway is the best spreader on earth. TOP DRESS CROPS NOW! Don't buy a spreader of any make or kind until you have tried a genuine Galloway at our risk.

Ditching 12 Acres Pays for This Ditcher

The Rest Is All Profit

This is a real riding ditcher—complete in every detail and selling at a price which is in every farmer's reach. You need it on your farm right now.

It makes drainage easy, thus improving your land to such an extent that the increased crop from even as little as 12 acres will pay for this ditcher in one season. On more than this you get clear profit the very first year.

The Pile PATENTED Riding Ditcher-Grader

Operates with two or three horses and one man. Two seats for changing position of operator when changing direction. Sturdily and simply made, nothing to break readily or get out of order. It does what you want done without wearing out the operator or team.

Farmers who have used the Pile declare they would not be without it. When not using it yourself you can do work for your neighbors and make money. Turn the odds and ends of farm time into money making days.

Uses

Ditching for drainage, or irrigation, terracing, leveling, building levees, cleaning ditches and gutters, road making, grading, dragging, etc,

Cuts Quick, Clean Ditch—Any Depth

It holds straight to the line. Digs through any ordinary soil, will cut small roots and turn out all small stones. The Pile cuts a clean even trench any depth and travels as fast as you can plow a furrow. It has all the successful principles of the large scraper but is built in medium size for use on the average farm.

The Pile cuts a V-shaped ditch. This is the most successful type because the sloping banks do not crumble and you can cultivate to the water's edge. No waste lands. You can drive a wagon across the ditch without a bridge.

Guarantee If after ten days use, the Pile is not what we claim for it return it and get your money back. We guarantee the Pile for one year against breakage on account of defective material or workmanship.

Write for Special Ditching Book FREE. It tells all about the value of ditching and shows why this machine will do your work quicker and cheaper than any other. Write for your copy now.

Made in Different Styles and Sizes

The Old Standby

Every farmer who has used an EAGLE Ensilage Cutter knows its **absolute reliability.** When your corn or other silage feed is ready for the silo, you want quick service with a safe, reliable, large capacity silo filler. Experience shows that the EAGLE is a **compact, safe, well built, clean-cutting machine of extra large cutting capacity and reliable service.**

EAGLE Ensilage Cutters

are simple, durable, light running machines. The deep-grooved and non-winding spike rolls give far greater feeding possibilities than any other cutter. **Reverse lever permits instant stopping and reversing.** They are machines with easy running, durable, positive-drive blowers that will not clog. *Get catalog at once showing other special features.* 26

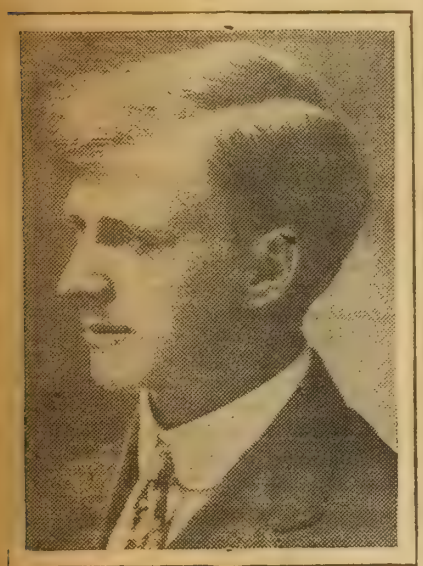
Delegates to the Thirty-first Annual Gathering of the National Holstein-Friesian Association of A

NATIONAL HOLSTEIN MEETING.

Greatest Gathering in the History of the Breed Meets in Detroit and Listens to Encouraging Reports—Wisconsin Well Represented—By F. G. Swoboda, of Langlade County, Wisconsin.

HOLSTEIN breeders of the nation gathered last week at Detroit, Michigan, for the thirty-first annual meeting. It was generally conceded to be the best meeting ever held by the Holstein-Friesian Association of America. The attendance was large and without question more thoroughly representative of all sections of the country than that at any previous session. In the words of one of the most widely-known breeders who has been attending these gatherings for years, "It was the best meeting of the association which I have ever known." There was evident a whole-souled spirit of co-operation and good will which



F. G. Swoboda, Langlade county, Wis., pecial representative for The Wisconsin Farmer at National Holstein meeting.

speaks volumes for the success of such a gathering and the cause represented. Capping the climax was the magnificent banquet served at Hotel Statler, to all the visiting breeders and their wives, by the Michigan breeders. Good fellowship abounded. The banqueters were most pleasantly and instructively entertained by addresses delivered by Hon. Carl Vrooman, assistant secretary of the department of agriculture; Dr. J. H. Kellogg, of Battle Creek; Prof. C. N. Anderson, of East Lansing, Michigan; A. J. Glover, of Fort Atkinson, Wisconsin; and James Schermerhorn, editor of the Detroit Times.

The Holstein sale, following the convention, proved to be the best of its kind the breed has yet known. The quality of the offerings was superior, I believe, to that gotten together in any sales ring regardless of breed, and a high level of prices was maintained. The average for the first day or sixty head sold was $1,044. The top of the sale was the bull calf, King [illegible] Apple Champion, consigned by Oliver Cabana, Jr., and this animal W. Green, Middlefield, Ohio. Numerous sales were made at $1,000 to $3,000 and better.

President Aitken's address before the breeders, the reports of the several under officers and committees and that of the superintendent of advanced registry, revealed progress and a condition of prosperity for the Holstein breed, such as the association has never before known. With a membership of almost 9,000 and with a cash balance of $215,390, the Holstein association occupies a position enviable among the breeders' associations of the country.

The amount of testing for advanced registry, done in the past year, far exceeded the record for any preceding year. This fact coupled with the wholesale breaking of records in practically every classification bespoke an enthusiasm for, and confidence in the future.

Hon, D. D. Aitken, of Flint, Michigan, was re-elected to the position of president for a third term. Col. G. W. French, of Davenport, Iowa, was chosen vice president. This office brought out an interesting contest. Other nominees for the office were Col. Fred Pabst, of Oconomowoc, Wisconsin, and O. L. Langworthy, of New York state. A. A. Cortelyou, of Somerville, New Jersey, and J. B. Erwin, of Minneapolis, were re-elected to succeed themselves as directors. William Bishop, of Washington, was chosen to fill the vacancy caused by the death of G. A. Dimoc, of Kalamazoo, Michigan. Frederick L. Houghton was, of course, returned to the position of secretary, and Malcom Gardner, of Delavan, Wisconsin, superintendent of advanced registry. William R. Smith, of Syracuse, New York, was re-elected to the position of treasurer, a post which he has filled with credit to himself for a number of years.

Special tribute was paid to two distinguished members of the association, Dr. Harry B. Favill, of Chicago (formerly of Wisconsin and a member of the Jefferson county family which has taken such a great interest in Holstein cattle) and Mr. G. A. Dimoc, of Kalamazoo, Michigan, who died during the year. Secretary Houghton reported sixty-five deaths of members within the year just passed.

The session voted to authorize, in the advanced registry classification for a 305-day test, under the same regulations and classifications as those now governing the 365-day test. The object of this new classification is to provide for breeders who want a long-period test without interfering with the normal calf production. Under the 365-day test it is not possible for a cow to produce a calf every year. It was provided that prizes be given for the 305-day records the same as for the 365-day records. Provision was also made, in cases where breeders so desire, to arrange for prolonging the 305-day test into the 365-day test.

Worcester, Mass., was chosen as the place of meeting for 1917. As an inducement for attendance of ladies next year, a Massachusetts breeder offers a $500 calf to the best looking lady in attendance at the 1917 convention.

Wisconsin was well represented both at the Detroit meeting and at the Holstein sale. About fifty Badger Holstein breeders were present and they took greater interest in the details of the proceedings than in any former meeting. Due to the special efforts of the secretary of the Wisconsin Holstein Breeders' Association nearly 400 Wisconsin proxies were represented on the floor of the convention. Among the Wisconsin men who were present and prominent at the meeting I noticed the following: Fred Pabst, F. Rhoda, Dr. David Roberts, S. S. Kramer, R. P. Ames, A. Babler, S. Randall, Sidney Jones, W. E. Jones, S. H. Bird, Jerry Riordan, R. A. Torrey, William Everson, F. H. Green, C. M. Beveridge, Mr. and Mrs. Malcom Gardner, R. E. Schaefer, F. G. Bemis, Mr. Gerow, A. J. Glover, Baird Brothers, Bert Baird, Harry Dunbar, Honselit & McNutt, H. S. Hoard, Will Mann, Will Wright, Jesse Crump, Gred Gurr, J. Favill, Mr. Hutchinson, H. A. Arneson, and A. A. Lukken.

The total attendance at the national meeting was about 400. These, with the proxies which had been gathered, represented a total voting strength of 2,683. The exact number of Wisconsin proxies represented was 386.

Secretary Houghton's report showed an exact membership in the Holstein-Friesian Association of America of 8,885, an increase of 1,260 during the year. Wisconsin ranks second in membership with 1,289, New York leading with 2,435. Ohio is third with 838 members. Michigan has 618, Minnesota 290, Iowa 211, Nebraska sixty-five and South Dakota fifty-five members. The following interesting comparisons give an idea of the increase in business in the national association:

	1916	1915
Cow registration	46,549	42,063
Bull registration	26,116	25,617
Cow transfers	42,014	41,117
Bull transfers	26,752	25,659
Totals	142,120	135,280
Total certificates, 1916	142,120	
Total certificates, 1915	135,280	
Gain, 1916	6,840	

The cash receipts of the secretary's office for the past year reached the total sum of $202,292, of which $128,833 was for registering pedigrees, $21,101 for transfers and $31,175 for memberships. Seventy-seven clerks have been employed to handle the immense amount of office work carried on by the association. Disbursements in the payment of labor and other items attendant upon the business of the association amounted to $79,321.84, leaving a balance of $119,318. The herd book will, owing to the large increase in number of registrations, be published in two separate volumes. Volume 34, now on the press, will contain 16,659 bulls and 28,879 cows.

Superintendent Gardner, of Delavan, Wisconsin, reports the amount of official testing done equivalent to the testing of 20,198 cows for a term of one

Aaggie Texal Wayne 2d, owned by C. C. Fries & Son, Richland Center, Wis.

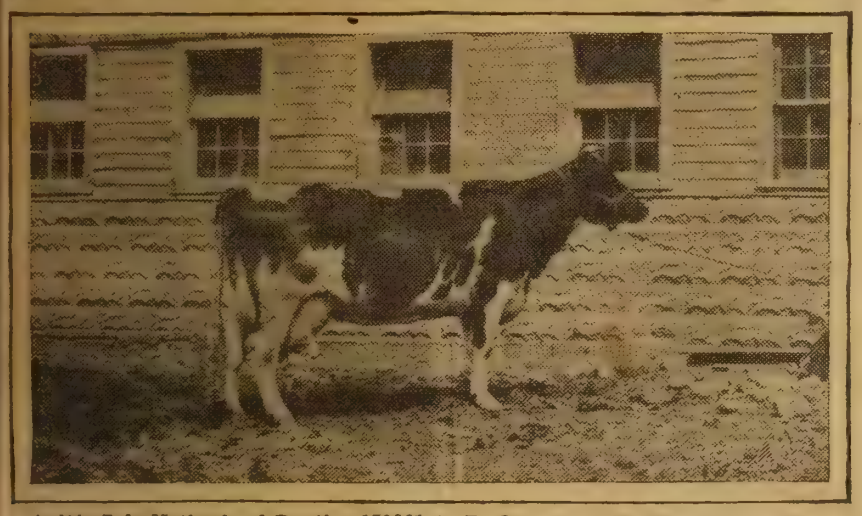
, Standing in Front of Their Meeting Place at Hotel Statler, Detroit, Michigan.

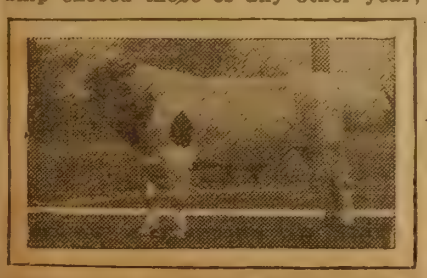
week each. Twelve thousand eight hundred and two cows were under test for periods of not less than seven days. Seven hundred and fifty cows met the requirements of semiofficial yearly test. Records of the preceding year were exceeded in thirty-two instances. This included eight times in the seven-day division, four times in the thirty-day division, thirteen times in the eight months' division and seven times in the yearly division.

An expenditure of $25,000 was made the past year by the publicity committee for advertising space taken in agricultural journals, magazines and journals of general circulation. A part of this sum was spent in distribution of literature. As an evidence of the value of this publicity it was reported that the average sale price at auction of Holstein cattle has increased from $156 a head in 1908 to $202 a head in 1915. The committee has a follow-up system to its advertising which includes sending out literature concerning the breed. This literature is sent to all members of the association. A total of 313,800 pieces under thirty-three titles were sent out last year. The committee on special prizes at fairs reported $1,955 spent in prizes at the Panama-Pacific Exposition. Prizes at all other fairs and shows withdrawn at the beginning of the year because of the existence of the foot-and-mouth disease.



Aaltje Salo Netherland Pontiac 152061, A. R. O. record, 33.66 pounds butter in seven days as a five year old. Owned by Arthur J. Rust, West Allis, Wis.

In his annual address Pres. D. D. Aitken said it is a fitting tribute to the organization that the attendance at this gathering was the largest in history; that the transactions of the past year were heretofore unequaled in volume; that the accessions in membership exceed those of any other year; that the world has witnessed the production by a Holstein cow of the largest yield of butter ever made by any cow. Receipts from registrations and transfers and memberships reached the magnificent sum of $181,109, and the favor of the Holstein cow with dairymen of the United States has shown a corresponding increase to the increase in business of the association. Accumulation of money designated as the reserve fund has now reached $163,999.01. A glance at the association accounts shows that the annual requirements are $50,000 for advanced registry and butter fat prizes, $25,000 for advertising, $8,000 for prizes at fairs, $11,000 for keeping up the herd book. A glance at the books might cause the thoughtless to say that the association has a lot of money standing idle. But this is not the case. It is the wealth of the association that gives it standing in the world. All money is earning at a rate of better than 3¾ per cent per annum.



Canary Oak De Kol Homestead 101268. Owned by S. W. Favill, Lake Mills, Wis.

President Aitken urged that a census of the number of pure-bred Holstein cattle be taken and that provision be made for its repetition at stated intervals.

President Aitken urged the encouragement of local and community breeders' clubs as a means of spreading the good news regarding the Holstein cow and consequent uplift of the dairy world.

The value of the Holstein cow as a general-purpose cow for the average farmer was forcibly shown by President Aitken. Not only did he characterize the Holstein as efficient as a milker but when her usefulness at the pail has been impaired by age or injury she has a distinct beef value greater than that of the usual strictly dairy cow. He cited instances showing that on the St. Paul market registered Holstein cows sold as high as $116 for beef and bulls as high as $161—record prices for cows and bulls of any breed on this market. In the matter of destruction of diseased cattle under federal authorization, President Aitken insists that the breeder should receive what the slaughtered animals was worth and that the remuneration should be determined by beef, dairy and breeding value. Fullest co-operation between breeders and the federal authorities was urged.

A campaign of education on the value of milk as a food, not only for children but for adults, was suggested by the president and appropriation of sufficient funds to make the campaign a success was urged. The work of the National Dairy Council was strongly endorsed.

Mr. Aitken defended in his address the position taken by the directors in regard to nonassumption of responsibility on the part of the association where certificates were fraudulently obtained. This plan, he says, will place the individual on his guard and prevent the association from being imposed upon. Concluding his address President Aitken said the Holstein association is not only the largest but the most progressive organization of pure-bred live stock owners in the world. He urged straightforward and honorable conduct on the part of each individual breeder as a safeguard against the association and its splendid work falling into disrepute.

Record-Breaking Sale.

Holstein breeders at Detroit last week established a new record for prices at a public sale. One hundred and forty-two head brought $155,715, or an average of $1,096.58 per head. Prices ran uniformly high throughout the sale, bulls, mature cows and heifers selling commonly at $800 to $1,000. The record price of the sale was the seven-months-old bull calf, King Champion Rag Apple, consigned by Oliver Cabana, Jr., of New York, and purchased by A. W. Green, of Middlefield, Ohio, for $20,000. This bull is a son of Rag Apple Korndyke 8th, the bull for which Mr. Cabana paid $25,000 at the dollar dispersion sale. His dam is the world's record three year old, Lady Pontiac Johanna, with a seven-day record of 41.81 pounds of butter at three and one-half years.

But this was not the only high-priced animal of the sale. A yearling son of King of the Pontiacs out of a dam with a thirty-three-pound seven-day record was sold to Flanders Farm, at Orchard Lake, Mich., for $6,000. Third highest-priced bull, a yearling consigned by John Arfman, went to the Allamuchy Farms, New Jersey, at $4,950.

Iowa laid claim to the record-priced cow, Jessie Fobes Bessie Homestead, a 34.96 pound cow consigned by Munsol Co., of Washington, selling to the Cass Farms at Sumner, Iowa, for $4,600. This cow was a magnificent animal, easily one of the choicest ones of the sale. Her two-year-old daughters sold for $2,000. Next highest-priced female was Pietertje Hengerveld Creamelle, consigned by Lawson Holding Company, which sold for $3,200.

A conception of the extremely high range of prices is gained when it is learned that four head sold for more than $4,600 each, five others for $3,000 or more, one for $2,500, six between $2,000 and $2,500, nine between $1,500 and $2,000, twenty-seven between $1,000 and $1,500, fourteen between $700 and $1,000, twenty-two between $500 and $700, twenty-seven between $300 and $500, and ten under $300. None sold under $200. The above figures cover the first 125 sold, except the averages, which cover the total.

Probably never before was such a splendid bunch of individuals backed by such uniformly high records gotten together in one sales ring. There were an exceptionally large number of cows with butter records for seven days of thirty pounds or better. Several of the bulls came from dams with better than thirty-five-pound records; also splendid yearly records. Interest and enthusiasm were well maintained throughout the sale, bidding at times arousing a tense excitement typical of a football game.

Wisconsin, Minnesota and Iowa breeders were on hand, a number of choice individuals going to each state. To Iowa goes the credit of taking the highest-priced cow, she selling as noted for $4,600. Wisconsin breeders who secured stock were O. Babler and Pierce, of Monroe, who bought a sire at $1,325. Honselit and McNutt, of Oxford, purchased several head. Swoboda Bros., of Troy Center, secured a half sister to Findern Holingen Fayne, at one time world's champion butter cow.

Dr. David Roberts, Baird Bros., Will Wright and W. Mann, of Waukesha, purchased a $2,025 eighteen-months bull, out of King Segis Pontiac Columbo, dam Milanhurst Americo De Kol, with a four-year-old seven-day record of 34.08 pounds of butter and a yearly record of 1,231 pounds of butter from 26,433 pounds of milk.

Greatest satisfaction was expressed at the manner in which the sale was conducted. H. A. Moyer, of Syracuse, who acted as director, personally visited all the farms which consigned animals, and selected only such as he felt would be a credit to the breed. Every animal was sound and guaranteed all right in every way. All over six months were tuberculin tested. When it was found that time would not permit the selling of all the 183 listed Michigan breeders courteously withdrew many of their offerings.

New York, Michigan, Ohio and New Jersey breeders bought most liberally. Pennsylvania, Delaware, Massachusetts, Kansas, Washington and South Dakota, in addition to the state's previously mentioned also took some.

The auctioneers were B. V. Kelly, of Syracuse, N. Y.; J. E. Mack, of Fort Atkinson, Wis.; D. L. Perry, of Columbus, O., and R. E. Haeger, of Algonquin, Ill

A detailed list of sales with prices will be published in a later issue of this paper.

DAIRY

Chilton Cow-Testing Report.

The following is a list furnished us by Edwin T. Weeks, secretary of the Chilton Co-operative Cow-Testing Association, of the official records of cows that produced more than forty pounds of butter fat during a period of thirty days ending May 13, 1916, as found by Oscar Kossmann, the official tester of the association:

Owner and breed	Age	When fresh	Lbs. milk	Per cent fat	Lbs. B. fat

Do Not Rob Your Cow.

We hear a lot these days about the "robber cow." There are a few such, of course, but very seldom do we find a well-bred cow a robber unless she has first been robbed. Many times one cow in a herd will lose out worse than the others by stinted feeding. This is not all; very often it is what under proper conditions would be the best cow of the lot. The excess nervous force may be used either for good or bad.

The testing associations are doing a great work; in fact, it is the only practical way for the farmer who keeps a few dairy cows as a sideline to get his milk tested. It is a long ways off, we suspect, the time when every farm will possess a tester of its own.

However, in testing a herd of cows, it should be done by computing the feed as a basis. While it is probably true that each individual cow possesses a fixed composition that is natural to her, in the matter of butter fat, just so surely as we ignore the most important of all factors, that of the feed to produce the milk, just so certain will our best cows be branded as "robbers."

A man who kept from six to ten cows, or an average of about eight, was shipping only a little more than a five-gallon can of cream each week. It was not nearly enough, but it helped out, and the heifer calves were all raised, which also helped out. Then, too, two bunches of pigs yearly were grown on the skim milk. All in all, the cows were not doing what they should, but it all helped.

It became necessary, fortunately, for a sale to be held at that farm to raise some ready money, and, of course, the dairy cows were the drawing card. People came from a distance, because they knew that the stock was well bred, and besides, although they could not know that the stuff had not been doing its best, it was a well-known fact that the cows had kept this family out of a hole every time. They sold from $70 to $85 per head, only three choice heifers being kept to build up another herd.

"How do you manage without that blessed old cream check," was asked the owner. "Oh, we ship cream, or did until just now, and one of the cows will soon be fresh." "How often do you ship?" was almost incredulously asked. "A can each week," was the cheerful reply. "You do not mean to say that you ship as much cream from three heifers as you did from eight cows?" "Just what I'm tellin' you!"

Then with a mischievous twinkle he said: "I almost found this out once before, that the feed all given to half as many cows, when you cannot afford to give what they actually need, will bring better returns, besides cutting the stabling and labor in two. But it seemed that there was no place to begin; we could not afford to part with this one and we could not part with that one and so they all stayed until money, fortunately, had to be raised, and now that I know to a certainty that the system was all wrong it will not be repeated."

Now, if those cows had been tested with no thought to the rations they were expected to manufacture butter fat from the greater part of them would have been condemned, when, in fact, it was one of the best dairy herds in this country. It had been built up little by little, buying a choice heifer where it was to be found, keeping the heifer calves and selling off the poorer individuals.

Sweet Cream For Butter Making.

To the Editor:—In general, the souring of cream is an indication of its age and condition under which it has been kept. Very sour cream, then, naturally indicates that the cream is very old or has been kept at too high a temperature. In the creamery it makes little difference whether the cream is very sour from old age or has been kept at too high a temperature, for in neither case can the cream be made into first-class butter. Therefore, the marget value of cream does not depend on the per cent of fat alone, but on the sourness or percentage of acid as well.

Sour cream generally results from the lack of immediate or thorough cooling after separation. Investigation shows that sweet cream of a good quality can be produced on the average farm with but little extra labor and expense. In fact, many dairymen are selling only sweet cream and are not delivering oftener than two or three times a week during the summer months. These farmers are not

Try Cow-Ease. Money Back If You Are Not Satisfied—

I will pay you your money back. My personal guarantee shows my own confidence in this wonderful fly repellent.

COW-EASE

Keeps Flies Off Cattle and Horses

Sold by Reliable Dealers Everywhere.

A gallon of Cow-Ease will spray one cow 200 times. Its cost is trifling, and it will positively keep flies away. It is perfectly harmless, does not gum the hair or blister the skin.

I know what I am talking about, for I originated Cow-Ease fifteen years ago, and have sold it to hundreds of thousands of dairymen and farmers.

I stand ready to guarantee it—and that means I will give you your money back, without fuss or argument, if you are not satisfied. Is there any stronger argument than that?

TRIAL OFFER
If your dealer cannot supply you, send me his name and $1.25, and I will deliver prepaid to your address a half-gallon can of COW-EASE and SPRAYER for applying. For west of Missouri River and for Canada, above Trial Offer, $1.50.

M. Elton Nye
Assistant Treasurer.

more milk from your cows or your money back

APPLETON Silo Filler

Actual records prove that Appleton Silo Fillers cost the least

per ton of silage put up or per year of life. Tremendously strong construction makes an Appleton practically proof against breakdown. Solid oak and steel frame, mortised, braced and bolted; impossible to pull out of line. Many exclusive power and labor saving features, such as independent belt driven blower allowing speed to be adjusted for minimum use of power for any height silo; frictionless feed table running on chilled iron rollers; knives spiraled to give clean shearing cut, requiring least use of power. (10 lengths of cut, 5-16 to 2½ inches.) Lowdown cut-under frame, easy to handle. Both feed rolls and table controlled by single lever. Positive self-working safety device.

Two Books Free: One on silo building and silage crops; the other a complete catalog of Appleton Silo Fillers in four sizes for 4 h. p. gasoline engines and up. Write

Appleton Mfg. Co., 4122 Fargo Street, Batavia, Ill.

Guaranteed to do more and better work with less power than any other silo filler.

Built on this Block

of imperishable vitrified Brazil fire clay. Solid as flint, fireproof, weatherproof. Triple air spaces insulate against moisture, frost and air. No repairs, no rebuilding.

B-V-T Silo

The strongest silo made. Mortar joints absolutely air tight. No spoiled silage—100 per cent. efficient. There's much profitable information in our Silo Book

Brazil Hollow Brick & Tile Co.
Brazil, Indiana

DRICO HOLLOW-WALL SILO

IS FROST PROOF

INSIDE and outside wood lining forms three-inch dead air space. Strong, durable and securely anchored. No hoops to tighten, no guy wires to get loose. Sectional construction makes it easy to erect in a few hours, with no special scaffolding. No expert help needed. Has Expansion Doors which can't stick or bind. Write for catalog and attractive prices. Agents wanted.

ine

vering sweet cream simply to comwith the wishes of the creamerymaı; they find it more profitable and rather a simple matter to keep it sweet. In some parts of the state farmers are advantageously making use of natural ice stored during the winter months for cooling the cream, while others are resorting to the use of running water, a tank, a cool spring or well, or a cool, well-ventilated cellar which greatly assist in maintaining a fairly low temperature. Special cabinets for cooling the cream with ice or running water can be constructed at little cost. Such a cabinet will aid in cooling the cream more rapidly as well as in saving ice. If a limited amount of ice or water under pressure is available the corrugated surface coolers can be advantageously used. One-half ton of ice per cow is probably sufficient for cooling the cream during the summer.

The farmers should bear in mind that the man who controls the quality and price of creamery butter is the one who produces the cream. The producer is responsible to a large degree for the low prices paid for cream and received for butter manufactured therefrom. Wholesale butter merchants are continually looking for high-grade butter and are willing to pay a special premium for it, but the poorer grades of butter roughly estimated at about 80 per cent, soon glut and dull the market because of the limited demand. In order to force this kind of butter on the market the price is dropped far below that of the higher grades of butter, and it is this price that regulates the price paid for the cream from which that butter was made.

Sweet cream is worth from 2 to 4 cents more than sour cream to the creamery purchasing it for buttermaking, and the dairymen should urge rather than discourage the grading of cream and the paying for same according to quality. This system is being used successfully by several creameries, and as a result the old sour cream received has gradually decreased until some are receiving only a few pounds each month. The cream grading system of paying according to quality must eventually be adopted by all creameries, as it is generally admitted to be the only method whereby the quality of cream and butter can be improved. O. W. Holmes.

Guernseys For Cheese.

[Editor's Note.—The following article was written for The Commonwealth by M. Michaels, well-known dairyman, of Fond du Lac, Wis.]

All markets constantly clamor for Guernsey milk, cream and butter because of their wonderful flavor and golden color. Yes, and even the cheesemakers are beginning to realize the importance and the necessity of Guernsey cattle among their patrons. A cheesemaker of experience, other things being equal, will pay more to own a cheese factory in a community where Guernseys are bred because of the higher percentage of fat contained in their milk. Guernsey milk is not only highest in butter fat, but is also highest in casein and milk sugar content, enabling the cheesemaker to make more cheese per 100 pounds of milk and also make a cheese of better quality.

Winter dairying dates back only twenty to twenty-five years—before this time practically all cows freshened in the spring, ending their period of lactation in the fall of the year, usually in November. How well do we remember the high quality of cheese made in September, October and November. How eager cheese-buyers were to contract fall-made cheese, usually this cheese brought twice the price that spring-made cheese did. We also remember the high yields of cheese per 100 pounds of milk in the fall when we could make one pound of cheese out of every eight pounds of milk delivered. In the spring the yield would be low, often taking as much as twelve to thirteen pounds of milk to produce one pound of cheese.

Why all this difference? Simply because at the end of the season the milk was just that much richer in fat and cheese-producing material due to the advanced period in lactation. High-testing milk is as much preferred to low-testing milk in the making of cheese as it is in buttermaking.

It is nothing more than a plain business proposition for a cheesemaker to seek Guernsey milk. It not only enables him to pay a higher price per 100 pounds of milk, but also to make a higher grade of cheese, hereby giving the best of satisfaction and getting a high standing among his patrons. The patron who receives $2 per 100 pounds of milk or 50 cents more than his neighbor, finds not only more pleasure in carrying on his farm operations but in getting more money out of his business.

From our own experience of owning and operating cheese factories, some that were supplied with low-testing, others with high-testing milk, we have always found the factories that were supplied with the high test yielded fully as high a proportion of cheese per 100 pounds of fat delivered as did the factories with low-testing milk. What little difference we have found has always been in favor of richer milk. In practice we find that on an average we obtain from 260 to 265 pounds of cheese per 100 pounds of fat regardless of the test of milk.

The New York Experiment Station has published data which demonstrate that the proportion of cheese to fat remains practically constant in all milk regardless of test. This is shown by the figures worked out in the following table:

Per cent fat in milk	Lbs. cheese per 100 lbs. milk	Value of milk per 100 lbs.
3.5	9.45	1.59
4.0	10.60	1.80
4.5	11.74	1.99
5.0	12.95	2.20

The figures in the above table show conclusively the high value of Guernsey milk which will average about 5.0 per cent or better for fat.

The price of cheese was figured at 17 cents net. The high price has been realized the past winter and no doubt cheese prices will be high for some time to come. This, I think, is due to the increased demands for market milk, both for the city trades and the condensing factories.

Warm Weather Care of Milk.

To the Editor:—The loss of a few messes of milk in the course of the season eats quite a hole in the profits, but there is a loss which comes from milk and butter that are not quite up to the standard because of lack of proper care far surpassing any that comes through having now and then a can of milk sour.

Just as soon as the weather gets warm our milk is at once taken out of the stable after it is taken from the cow and strained into a can. When we have as much in this can as we can cool conveniently we take another and set the first one into a tub of water right from the well. If we had a stream of running water we would use a trough for this purpose, lowering the temperature if need be by the use of ice. While the animal heat is escaping from the milk in the can we stir the contents once in a while. That helps to cool the milk as quickly as possible and releases the cow smell from it, which might otherwise affect the entire mess before morning.

Another good way to cool milk is by the use of the aerator. The use of this device is more and more coming into general use. Not all farmers, however, understand just what it is, so let me say that it is a tin vessel, not altogether unlike a big strainer top-side down through which the milk may be run, cooling it by exposing it to a cool surface on the way down. There are more expensive coolers, consisting of pipes running back and forth, with a tank at the top into which the milk may be poured, coming out below into a can. This ought to have running water, either artificial or natural.

But by simply pouring new milk back and forth from one pail or can into another we may do a very good job at cooling at no other expense than the outlay of a little time and strength. And certainly this is a great deal better than to have the milk sour or retain its bad flavor until it reaches the customer, for it is a fact that the natural animal smell of milk, while not altogether disagreeable in the beginning, if permitted to stand shut up begins to change very quickly if not let out in some way, thus setting up a process of decay.

The care of milk in warm weather includes keeping every pan, strainer, can, pail and cloth that is in any way connected with the business just as clean as possible. If the least bit of milk or cream or even creamy water be left on one of these things in a very little while heat starts the rotting process and that is disastrous to good milk, cream or butter.

The good care of milk also has a bearing on the way the stable work is done. Clean stables, clean cows and clean clothes for the milkers all have their part to bear in the production of first-class dairy products.

E. L. V.

What a DE LAVAL Cream Separator SAVES Over any other Separator or Creaming System

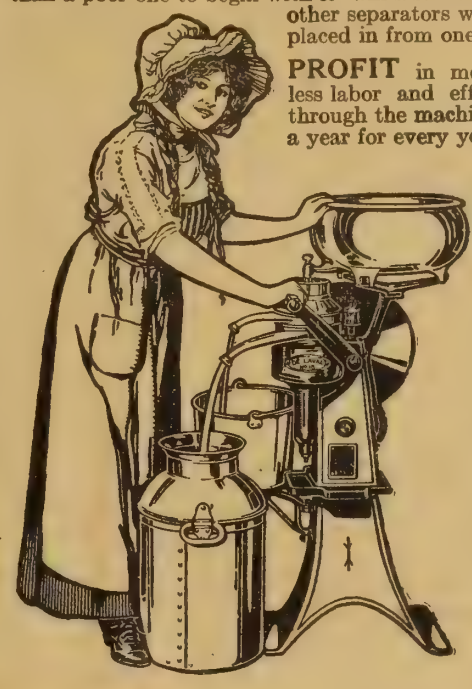
QUANTITY of cream that no other separator will recover completely, particularly under the harder conditions of every day use.

QUALITY of cream as evidenced by De Laval butter always scoring highest in every important contest.

LABOR in every way over any gravity system, and also over any other separator, by turning easier, being simpler, easier to clean, and requiring no adjustment.

TIME by hours over any gravity system, and as well over any other separator by reason of greater capacity and the same reasons that save labor.

COST since while a De Laval Cream Separator may cost a little more than a poor one to begin with it will last from ten to twenty years, while other separators wear out and need to be replaced in from one to five years.



PROFIT in more and better cream, with less labor and effort, every time milk is put through the machine, twice a day, or 730 times a year for every year the separator lasts.

SATISFACTION, which is no small consideration, and can only come from knowing you have the best separator, with which you are sure you are at all times accomplishing the best possible results.

EASILY PROVEN--- these are all facts capable of easy demonstration and proof to any user or intending buyer of a cream separator Every De Laval agent is glad of a chance to prove them by a De Laval machine itself---without the slightest obligation to the prospective buyer unless entirely satisfied.

If you don't know the Nearest De Laval agent simply address the nearest main office as below.

LAW QUESTIONS.

Sheep-Tight Fences.

Mr. Fred Powers, Gillett, Wis.—My neighbor owns forty acres of timber land adjoining my farm, and intends to pasture sheep on it. (1) Can he compel me to built my half of the partition fence sheep tight? (2) What is a lawful fence in Wisconsin?

Answer.—(1) He can by having the fence viewers meet and view the premises and make an order requiring you to build such fence. (2) The law of Wisconsin describes several kinds of partition fences, all of which are declared lawful, and are practically sheep tight, but a detailed description of the same is too long for these columns. See chapter on fences in the Wisconsin laws of 1907, to be found in any justice's office.

Removal of Shanty from Land.

A Subscriber, Phelps, Wis.—I bought a piece of land in Wisconsin from a land company and made my first payment, and built a shanty on the land, and paid for the same. I cannot keep up my payments on the land and intend to let it go. The shanty is not built on a wall, or on posts set in the ground, but on loose block foundation. Can I lawfully remove or sell the shanty?

Answer.—This is a close question, but as the shanty was set upon a loose block foundation, and not on a permanent foundation, we are of the opinion that you have a right to sell the shanty or remove it.

Wisconsin stood second in May in the list of states securing transfers of cattle ownership issued by the Holstein-Friesian Association of America. During a two weeks' period in May 467 transfers were issued to Wisconsin stockmen.

THE HOME

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

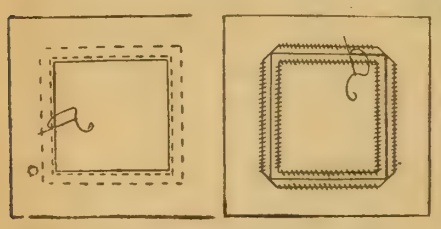
Patching and Darning.

Mending is very important from an economical standpoint, for if neatly done it makes a garment almost as good as new, though too much time spent on old garments is wasted. It is also important from an esthetic standpoint, since it is untidy to wear clothes that are torn, yet mending is one of the most difficult tasks for many girls and women.

There are two methods of repairing a hole or a torn place—patching and darning. Patching is re-enforcement of worn places or holes with cloth. Darning is re-enforcement by means of threads. The accompanying diagrams are those used by the Household Arts Department of the University of Missouri in teaching its students how to do neat patching and darning.

Patches are used when the hole is too large to darn, and should match the material in color and design. Where there is a figure it should be matched so the patch will be as inconspicuous as possible. Patches are much neater when made square or oblong, and less noticeable when the lines of stitches are put in on lines of the goods where it is least conspicuous. The size of the patch depends upon the size of the hole, the size of the worn place and the quality of the material. A new piece may be too strong or the garment may have faded. It is well to wash some pieces of colored material every time the dress is laudered, or a piece can be faded by boiling with soap and water to which soda has been added. All pieces to be used for patching articles which have been laundered should be washed at least once to allow for shrinkage. If a patch of the worn garment cannot be obtained, use a light-weight material especially if the garment is very old. Use white or colored cotton thread on wash materials, split silk or raveled threads of the material on silk or woolen goods.

To make a hemmed patch put pins in at the four corners, after creasing

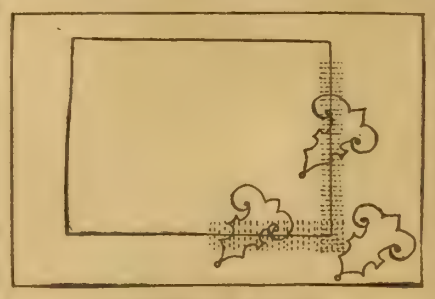


Hemmed patch. Overhand patch.

along the thread or stripe, equally distant from the center of the worn place on a direct line with each other, forming a perfect square or rectangle. Cut from the hole diagonally to the pins and turn back the edges, on a thread toward the wrong side, and baste in place. Then slip the piece underneath, placing the pins in the corners to match the figure and threads (the warp and woof must run in exactly the same direction as in the material), and baste carefully. Put in tiny hemming stitches on the right side. Cut edge of main piece one-eighth inch from the seam. Cut patch so its line of hemming will be on the line of contrast or one-fourth inch from the first hem. Then hem down on the wrong side, after turning the edge under evenly.

The overhand patch is less conspicuous than the hemmed patch though not so strong. The worn part is cut away and the edges turned and basted as before. The patch is creased to make it exactly the size of the hole, with the threads and pattern matching. It is then folded back onto the body cloth, basted and stitched on alternate edges, to keep it straight. The overhand stitch is used, and being a straight stitch is imbedded in the threads of the material on the right side. The edges of the wrong side are finished with the overcast stitch to prevent fraying. This patch may be used also on silk and on woolen materials.

For the darned-in patch cut the hole so that all weakened threads will be removed and it will be square or rectangular with the threads of the material. Cut the patch the same size as the hole, with threads and figures matching. Baste in with long anchoring stitches on alternate sides on the right side of the material to keep it straight. Use the darning stitch, back and forth on the wrong side, catching the edge by stitching over it. The darning stitch is a series of small run-

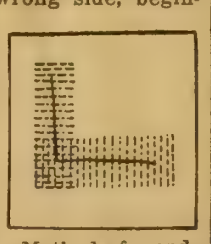


DARNED-IN PATCH.

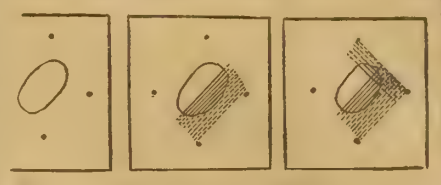
ning stitches (if any difference in length, be sure the short ones are on the right side), perpendicular to the edge of the hole. Go all the way to the end on each side, thus making it strong at the corners. Split silk is used to make the thread thinner so it will sink into the cloth. This is the proper patch to use on table linens and is sometimes called the damask patch.

The darning stitch is also used on the bias tear, with split silk or threads of the material. Often both warp and woof threads are used, the warp threads being inserted first. The edges are woven together by passing alternately over and under the edge. Stitches should always follow the weave of the material.

For the corner tear put in basting threads as for the darned-in patch on the right side. The darning stitches are put in on the wrong side, beginning away from the tear to re-enforce this part. At the corner the stitches are perpendicular to each other. Stocking darning is always a problem because it must not only be done neatly but also so that it will be comfortable to the foot. Trim away frayed portions from the hole—this part always causes unnecessary thickness. Place pins (dots in the figures represent the pins) in the shape of a diamond. They are used as a guide in keeping the correct shape. Then proceed as shown in the diagrams, being careful to make the stitch and space alternate. Use the



Method of mending a corner tear.



STOCKING DARNING.

same method in re-enforcing the worn portions. Always work on the wrong side and use a darning ball, as it is impossible to get good results without it.

Do Not Use Black Canning Rubbers.

Housewives are warned not to use the black rubber rings that are frequently given free with new jars for canning. These are made of a cheap grade of rubber and contain tar. The tar flavor may get into the fruit or vegetable and cause serious loss and disappointment. Use gray, white, or red rubbers of good grade. New rubbers should be obtained for vegetables and fruits, but old rubbers may be used for jellies and marmalades.

How to Use Aluminum Ware.

Many people who have used aluminum have found that, after a few weeks of use, such dishes show a number of small pits, undoubtedly due to the use of alkalies either occurring in the food by way of added soda or as applied in cleaning the utensil, or by use of very caustic soaps or washing powders.

Aluminum should never be cleaned with anything else than a very neutral soap. Ordinary yellow laundry soap and all forms of scouring and washing powders, so called, should be avoided. If an aluminum utensil becomes coated with a white film of lime, it may be readily removed by a very weak solution of nitric acid, which will not only remove the lime but will form a light coat of oxide of aluminum which will in turn protect the ware against further deposits. Stronger acids, or acids of other mineral types, such as muriatic, cannot be used for this purpose as they will dissolve the metal.

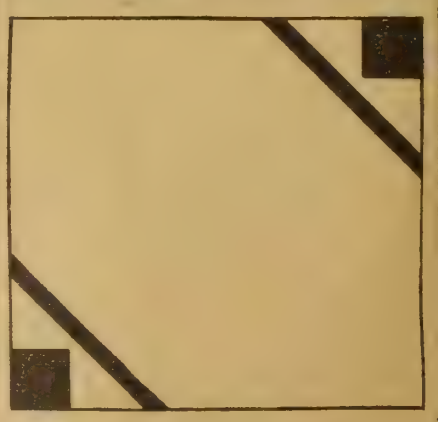
While the first cost of aluminum ware is very much greater than that of enamel ware, its lightness and cleanly appearance, together with its efficiency in conducting heat and its durability, if not abused, recommend it for general use in cooking.

As is generally known, utensils made from tin, tinplate, or from any material containing even a small amount of zinc, are dangerous, especially when used as containers of any food that is inclined to be acid. Aluminum ware is very little attacked by the weaker acids, such as are found in the common fruits and vegetables. Hence, such ware may be used with safety. On the contrary, alkaline solutions, such as are met with in cooking where soda is present, are very injurious to aluminum ware.

Porch Pillows.

To the Editor:—I was surprised when I was invited to visit the Home Department again. I will do the best I can, and hope it will benefit those who want to make porch pillows like mine.

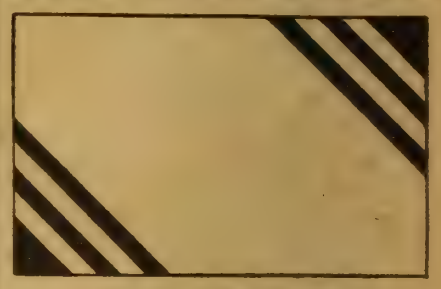
I made two sizes, one eighteen by eighteen inches square and one sixteen by twenty-two inches when finished. Most everyone has old material that will do for these pillows, as they are pretty roughly used, especially when the men and boys get hold of them.



PILLOW 18x18 INCHES.

I took a piece of heavy cloth (an old heavy comfort will do), cut it as big again as I wanted my pillow, put a layer of excelsior on one-half, folded the other half over it and sewed it around the edge. Then I covered the pillow with a piece of ticking. Of course, feathers make the nicest pillows but excelsior does very well for porch pillows. The porch pads you buy are often filled with it.

Now I am ready for the slip. I take nice gunny sacks, and if not clean I wash and iron them. When cutting allow for big seams. Cut the top and bottom separate, sew the trimming on and sew the two pieces together. I use plain colored gingham or Indianhead muslin for trimming so that they can be laundered occasionally. The diagram will show how I trimmed mine, but most any design could be



PILLOW 16x22 INCHES.

used. Some people cut out the flower designs from bright cretonne and use that for trimming and it launders well also. Mrs. F. E. T.

Home-Canned Soups.

A supply of canned soups is frequently of great convenience to the housewife, as such soup may be prepared ready for serving at almost a moment's notice. Many economical and palatable soups may be put up in the summer and early fall, and in this way the odds and ends of vegetables and cereals may be utilized as well as meat scraps, bones, and ligaments that are often wasted. "The canning of vegetable soups, purees, and consommes is thoroughly practical and should be a part of the canning work of every home as well as canning-club member," say the specialists in home canning instruction of the extension work, north and west, states relation service.

The following recipes, in which the soup stock is made from beef, are prepared for the use of home canning clubs, and the products are intended for home consumption. When these products are intended to be sold, those undertaking this work are cautioned to inform themselves as to the requirements of state and federal food laws and meat-inspection regulations:

Soup Stock.—Secure twenty-five pounds of beef hocks, joints and bones containing marrow. Strip off the fat and meat and crack the bones with a hatchet or cleaver. Put the broken bones in a thin cloth sack and place them in a large kettle containing five gallons of cold water. Simmer (do not boil) for six or seven hours. Do not salt while simmering. Skim off all fat. This should make about five gallons of stock. Pack hot in glass jars, bottles, or enamel or lacquered tin cans. Partially seal glass jars. (Cap and tip tin cans.) Sterilize forty minutes if using a hot-water bath outfit; thirty minutes if using a water-seal or five-pound steam-pressure outfit; twenty-five minutes if using a pressure-cooker outfit.

Vegetable Soup.—Soak one-fourth pound of lima beans and one pound of rice for twelve hours. Cook one-half pound of pearl barley for two hours. Blanch one pound of carrots, one pound of onions, one medium-sized potato, and one red pepper for three minutes and cold dip. Prepare the vegetables and cut into small cubes. Mix thoroughly lima beans, rice, barley, carrots, onions, potato, red pepper. Fill glass jars or the enameled tin ca s three-fourths full of the above mixture of vegetables and cereals. Make a smooth paste of one-half pound of wheat flour and blend in five gallons of soup stock. Boil three minutes and add four ounces of salt. Pour this stock over vegetables and fill cans. Partially seal glass jars. (Cap and tip tin cans.) Sterilize ninety minutes if using the hot-water bath outfit; seventy-five minutes if using a water-seal of five-pound steam-pressure outfit; forty-five minutes if using a pressure-cooker outfit.

Cream of Pea Soup.—Soak eight pounds of dry peas overnight. Cook until soft. Mash fine. Add the mashed peas to five and one-half gallons of soup stock and bring to boil. Pass the boiling liquid through a fine sieve. Make

a smooth paste of one-half pound of flour and add paste, ten ounces of sugar, and three ounces of salt to the soup stock. Cook until soup begins to thicken. Pack in glass jars or tin cans. Partially seal glass jars. (Cap and tip tin cans.) Sterilize ninety minutes if using a hot-water bath outfit; eighty minutes if using a water-seal outfit; seventy minutes if using a five-pound steam-pressure outfit; forty-five minutes if using a pressure-cooker outfit.

Cream of Potato Soup.—Boil one and one-half pounds of potatoes, sliced thin, and five gallons of soup stock for ten minutes. Add three ounces of salt, one-fourth teaspoonful of pepper, and one-half pound of butter and boil slowly for five minutes. Make three tablespoonfuls of flour into smooth paste and add to the above. Cook three minutes and pack in glass jars or tin cans while hot. Partially seal glass jars. (Cap and tip tin cans.) Sterilize ninety minutes if using a hot-water bath outfit; seventy-five minutes if using a water-seal outfit; sixty-five minutes if using a five-pound steam-pressure outfit; forty-five minutes if using a pressure-cooker outfit.

Bean Soup.—Soak three pounds of beans twelve hours in cold water. Cut two pounds of ham meat into one-fourth-inch cubes and place in a small sack. Place the beans, ham and four gallons of water in a kettle and boil slowly until the beans are very soft. Remove the ham and beans from the liquor and mash the beans fine. Return the ham and mashed beans to the liquor and add five gallons of soup stock and seasoning, and bring to boil. Fill into glass jars and tin cans while hot. Partially seal glass jars. (Cap and tip tin cans.) Sterilize two hours if using a hot-water bath outfit; ninety-minutes if using a water-seal outfit; seventy-five minutes if using a five-pound steam-pressure outfit; sixty minutes if using a pressure-cooker outfit.

Okra Soup.—Slice eight pounds of okra into thin disks. Blanch ten minutes and cold dip. Boil one and one-half pounds of rice for twenty-five minutes. Mix the okra and rice and fill the cans or jars half full. To five gallons of soup stock add five ounces of salt, one-fourth teaspoonful of coriander seed, and one-fourth teaspoonful of powdered cloves, and bring to a boil. Fill the remaining portion of the jars or cans. Partially seal the glass jars. (Cap and tip tin cans.) Sterilize two hours if using a hot-water bath outfit; ninety minutes if using a water-seal outfit; seventy-five minutes if using a five-pound steam-pressure outfit; sixty minutes if using a pressure-cooker outfit.

To the Housewife.

If a sugary coat is desired on lemon pies, sift powdered sugar over the top just before it is put into the oven.

The juice of a lemon added to a pan of water will freshen wilted vegetables if they are soaked in this an hour.

Strong ammonia water is excellent for removing iodine stains.

The best scheme for keeping centerpieces is to roll them over a pasteboard roll about twenty-seven inches in diameter, then wrap the whole in blue paper or blue cloth to keep them from turning yellow.

Do not put a bedspread through the wringer, after the last rinsing water, but hang it on the line dripping wet. It will dry without a crease, will not require ironing, and the fringe will be as fluffy as when new.

To dry a sweater run part of the clothes line or a strong cord through the sleeves, so they are extended full length. Pin the pockets in position. the weight of the sweater being evenly distributed, the air and sun can reach every part of it, drying it very quickly.

To clean a white straw hat brush the hat well, then dip into a solution of two quarts of boiling water and a tablespoonful of ammonia. When the hat is thoroughly soaked remove it and cover it with a thin layer of sulphur. Let stand until the hat is dry, then brush thoroughly with a stiff whisk broom.

The Buttercups.

There must be fairy miners
Just underneath the mold,
Such wondrous quaint designers
Who live in caves of gold.

They take the shining metals,
And beat them into shreds;
And mold them into petals,
To make the flowers' heads.

Sometimes they melt the flowers
To tiny seeds like pears,
And store them up in bowers
For little boys and girls.

And still a tiny fan turns
Above a forge of gold,
To keep, with fairy lanterns,
The world from growing old.

—Wilfrid Thorley in Kansas City Star.

Recipes.

Apple Puff.—Make one quart of thick apple sauce in the usual way. While still hot, sweeten with one-half cupful of sugar and one-half cupful of pure maple sirup. Fold into this the whites of two eggs beaten to a stiff froth. Place in a medium oven for fifteen minutes. This makes a dainty dessert and when served as a breakfast dish with hot muffins it is delicious.

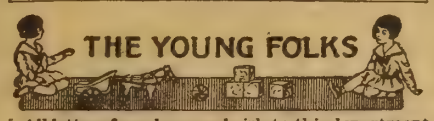
Rhubarb With Raisins.—Two pints of rhubarb cut in inch pieces, one cupful of raisins, three-fourths cupful of sugar. Put rhubarb in a saucepan over a very low fire until the juice runs freely. Do not let it at any time boil hard. Add the raisins and let this boil until the rhubarb is nearly reduced to a pulp; then add the sugar. Boil up, remove from fire, and put aside to cool. Serve cold with cream.

Scotch Broth.—Soak two pounds of lean mutton from the neck in two quarts for an hour. Simmer for an hour and a half, adding water to keep the bulk to about three pints. Now add a carrot, an onion and a turnip, chopped fine, and a tablespoonful of barley. Salt and pepper to taste. Cook three hours at the simmer point. Serve with chopped parsley and small sour pickles.

Corn Oysters.—Beat two eggs and add to a can of corn; sift a teaspoonful of baking powder with a half cupful of flour; soften a tablespoonful of butter. Mix all together and fry in deep fat or on a hot griddle.

Almond Cake.—One-half pound almonds (shelled and powdered), one cupful of sugar, seven eggs, one teaspoonful of baking powder. Beat yolks of eggs until thick and lemon colored. Add sugar and continue beating. Beat egg whites until stiff. Add powdered almond and baking powder to yolk mixture. Lastly add egg whites. Mix by lifting the wire egg beater straight up and down through the mixture. Turn at once into an ungreased pan. Bake in moderate oven.

Roll Jelly Cake.—Beat three eggs light, then add a cupful of sugar, two tablespoonfuls of cold water and a pinch of salt, and fold in gradually a cupful of flour that has been sifted with two tablespoonfuls of baking powder. Bake in a good-sized dripping pan, well greased. Turn out on a towel wrung out of cold water. Spread with jelly and roll up at once while warm. Sprinkle with powdered sugar.



All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Going to Buy Her Own Piano.

Dear Young Folks:—I live on a farm of 200 acres about one mile from town. I have a cat named Tommy, a calf named Princess Nancy, a colt named Jane and a Barred Plymouth Rock hen named Emma. Emma is seven years old and she is very tame. She will eat out of my hand.

I am very anxious to get a piano and, as my parents cannot buy one now, I am going to raise Triumph potatoes this summer and try to earn the piano myself. I think it would be much nicer to earn it than to have it given to me.

I enjoyed Angeline's letter very much and I think Lorna must be quite a farmer.

I am twelve years old and am in the seventh grade. I can tat, crochet and play on the organ. —Florence.

Read Twenty-seven Books This Year.

Dear Young Folks:—I certainly love to read the Young Folks' page and I want to join your circle. I live on a farm of 160 acres. My father owns four farms, each containing 160 acres. We have lots of fun out on the farm.

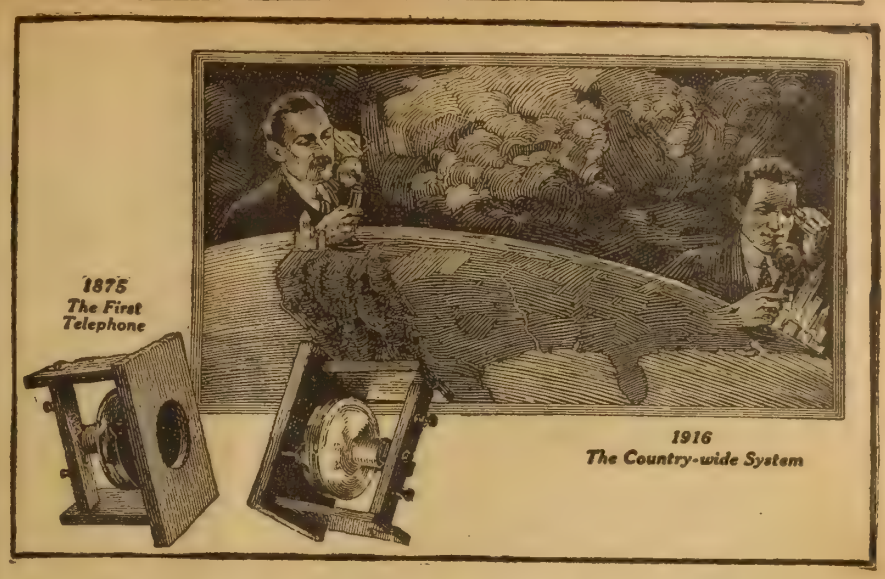
I have four brothers and three sisters. Two of my sisters are married. One of them has a pair of twins, a boy and a girl and the other one has a baby boy named Adolf. I love them very much.

We have four dogs, besides cattle and horses and chickens and ducks.

My little brothers and I go to school every day. It is a mile to our schoolhouse and we have to walk every morning, but I think that is good exercise. Don't you? There are thirty-nine pupils in our school, which is the largest one around here. We all like our teacher very much because she is good and kind to the children. At noon the big boys play baseball and we girls watch them or play some other game. We have quite a lot of pretty things in our schoolhouse, and we have some lilies which bloom nicely before school is out.

I have already read twenty-seven different library books this year.

—Matilda.



Forty-one Years of Telephone Progress

The faint musical sound of a plucked spring was electrically carried from one room to another and recognized on June 2, 1875. That sound was the birth-cry of the telephone.

The original instrument—the very first telephone in the world—is shown in the picture above.

From this now-historic instrument has been developed an art of profound importance in the world's civilization.

At this anniversary time, the Bell System looks back on forty-one years of scientific achievement and economic progress, and gives this account of its stewardship:

It has provided a system of communication adequate to public needs and sufficiently in advance of existing conditions to meet all private demands or national emergencies.

It has made the telephone the most economical servant of the people for social and commercial intercourse.

It has organized an operating staff loyal to public interests and ideals; and by its policy of service it has won the appreciation and good will of the people.

With these things in mind, the Bell System looks forward with confidence to a future of greater opportunity and greater achievement.

One Policy *One System* *Universal Service*

An Industrious Boy.

Dear Young Folks:—I like to read your letters. I am eleven years old and am in the sixth grade. I have one mile and a half to go to school. We live about two miles from town.

I can do much work in the field. I can disk with four horses, harrow, plow, mow hay and rake it. I like best to disk and haul grain to town.

We farm 196 acres and have thirteen horses and colts. My brother and I do all the milking. We have four calves, and one of them plays with us just like a little dog. I have one colt and a cow all my own.

Perhaps I will write again sometime. —Frankie.

Tells How to Make Jam.

Dear Young Folks:—I live on a farm near town. I have one sister and six brothers. We go to town school and enjoy it very much. I am fourteen and expect to be in the second year of high school next year. I take domestic arts at school. We sew every Wednesday at school and I do lots of the home sewing and help with the housework.

I will tell you how I make strawberry and pineapple jam. Pare the pineapples and pick them into small pieces with a silver fork. Boil the pieces in a little water until tender. Make a heavy sirup and drop in the pineapple while it is boiling. Continue the boiling for ten minutes. Then drop in firm, slightly under-ripe strawberries that have been washed and stemmed. Continue the boiling very slowly for ten or fifteen minutes longer. Seal the jam in jars. —Mary.

A Motherly Hen.

Dear Young Folks:—I am a little girl seven years old and live with my mamma and papa in the country. I go to school in town and am in the second grade. I have never missed a day and have only been tardy once during the year.

We have a pet hen. She wanted to set very early, so mamma set her in the kitchen and she hatched eight chickens. Now she comes and lays every day in the same corner where she hatched her chickens. When she comes to the door she pecks at it for someone to let her in. Mamma has ninety-nine little incubator chickens, and one night she wanted to hover all the ninety-nine little chickens.

—Ruby.

June is a strenuous month for Wisconsin farmers. The heavy milk flow due at this time, the coming on of the hay harvest, corn cultivation and scores of other pressing tasks of early summer all combine to make the sixth month of the year one of the busiest in the rural calendar. But in addition to their everyday work many Wisconsin farmers have planned to attend special farmers' meetings and co-operative conferences at this, the rush season of the year.

International Sunday School Lesson.

Lesson for June 18, 1916.
(By E. O. SELLERS, Acting Director of Sunday School Course.)

LESSON TEXT—Acts 16:16-40.

GOLDEN TEXT—Believe on the Lord Jesus and thou shalt be saved, thou and thy house.—Acts 16:31.

Dean Vaughn has said of this lesson that in it "we have an epitome of the whole history of the gospel." The time was A. D. 50 or 52 and the place was Philippi, an important city, as before suggested.

I. The Damsel Delivered of Demons (vv. 16-18). On their way to the praying place where they had met Lydia, the disciples met this maid who "had a spirit, a Python." Greek soothsayers were supposed to be inspired by Apollo, who killed a great snake at Mt. Parnassus and left it to rot. The girl was probably possessed of hysteria and thus spoke strange words, and her condition brought much profit to her masters, who professed to interpret her words. This evidence of evil possession awoke a sympathetic response in Paul's heart. "Her misery and degradation were a symbol of the degradation, as Lydia's sweet and benevolent Christian character was of the transfiguration of womanhood."—Stalker. Her cry after Paul was perhaps that they were the slaves of some god, even as she was the slave of Apollo. The Gadarene (Luke 8:28) used similar language. Paul did not at once stop her (v. 8), perhaps to avoid a controversy, but his deliberation made more profound the final deliverance wrought. Worn out at last with her cries, but taking no credit himself, Paul spoke the name of Power which had foretold just such acts (Mk. 16:17; Lk. 9:1; Lk. 10:17).

II. The Disciples in Prison (vv. 19-24.) Of no further commercial value, the slave drivers sought revenge by inciting a mob to attack Paul and his companions. So today the liquor interests would seek remuneration for the loss of their "business," and anathematize their opponents, while the underworld tries to overthrow all who seek to restrain them. Paul and Silas were accused of "troubling" the city, for the trade had been interfered with. It, indeed, went hard with them thus to be unjustly set upon and finally, through the connivance of the spineless authorities, to be incarcerated in a filthy dungeon. Still, though the majority were against them, yet the mob was not right (compare 17:5; 18:12; 10:28-29), and they had One on their side who was sufficient (Rom. 8:28).

III. Deliverance and Salvation (vv. 25-35). Christ before Pilate was accused of sedition, and these flogged disciples were likewise innocent sufferers. (1) Prayer and praise (25-26). Note the circumstances — darkness, torn and bleeding, aching backs and a morrow filled with blackness. There was no sleep for the disciples at that midnight hour, but often strength is better gained in prayer than sleep. "Praying, they sang hymns,"—in the midst of that heterogenious lot of prisoners they did not, could not, keep silent. The result was attentive listening by the other prisoners and by a loving Heavenly Father, who shook the place to evidence his interest (v. 26). (2) The jailed delivered. The place was so shaken that every barred door was opened and the staples of the stocks were so loosened as to liberate every prisoner. (3) The jailer saved. The brutal one is now the anxious inquirer, and becomes a good type for all to follow who are out of Christ. (a) He saw he was lost. He was subject to the same death as his escaped prisoners. "Supposing" (v. 27) has darkened many lives, and our greatest sorrows are often imagined. Face to face with death, the jailer would plunge into an eternity for which he was not prepared. Paul's clarion call brought the jailer to express his anxiety (v. 29), and it was not a trifling nor skeptically indifferent man who appealed to Paul. He was brought face to face with two holy men, with God and with eternity.

Those to whom he came knew the facts, had faith, and could meet the emergencies of life with confidence.

IV. The Humbled Magistrates (vv. 35-40). The jailer evidences joy, hospitality and a changed home, which news must have reached the magistrates. Their early command was to "let these fellows go," Paul here rises to his full dignity. Beaten openly, condemned without trial and verdict, does not allow them to cover their crime and blunder by stealth.

The magistrates were liable to loss of position, goods, and even life, and hence willingly did all that Paul required.

Thus the imprisonment turned out to the honor of the apostle and the glory of God. Nor did Paul hasten at all in leaving the city. After recovering strength to travel and encouraging the members of the infant church they departed, taking Timothy (17:14) with them.

Thus God gloriously delivered those who labored amidst sore trials, and there was established in Philippi a church which was dear to Paul and which was especially kind to Paul, and to which is directed one of his most tender epistles.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and inclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery.

CATALOG OF SPRING AND SUMMER FASHIONS.

Send 10 cents in silver or stamps for our up-to-date 1916 large spring and summer catalog, containing over 400 designs of ladies', misses' and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, MADISON, WISCONSIN.

9930—A splendid apron model. The pattern is cut in 5 sizes: 4, 6, 8, 10 and 12 years. It requires 2⅛ yards of 27-inch material for a 6-year size.

1629—A popular "twenty-minute" apron. Just the thing to make "in a hurry" and to find convenient and comfortable ever after. The pattern is cut in 3 sizes: Small, medium and large. It requires 5½ yards of 27-inch material for a medium size.

1430—Girls' and misses' combination corset cover and petticoat. The pattern is cut in 5 sizes: 12, 14, 16, 18 and 20 years. It requires 3½ yards of 27-inch material for the skirt, and 1⅜ yards for the corset cover, with 3½ yards of 6-inch flouncing for the ruffle for a 14-year size.

1729—A simple, becoming dress for the little miss. The pattern is cut in 4 sizes: 2, 4, 6 and 8 years. It requires 3 yards of 40-inch material for a 6-year size.

1740—A smart little dress for mother's girl. The pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It requires 3 yards of 44-inch material for a 6-year size.

1745-1746—A charming gown for dinner or theater. For this development ladies' waist pattern 1745 and ladies' skirt pattern 1746 was used. The waist pattern 1745 is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. The skirt pattern 1746 is cut in 6 sizes; 22, 24, 26, 28, 30 and 32 inches waist measure. It requires 8⅞ yards of 36-inch material with the drapery, without, it will require one yard less for a 36-inch size. Two separate patterns. Ten cents for each pattern.

1426—A simple and attractive tub dress. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6½ yards of 36-inch material for a 36-inch size.

1739—Ladies' dress in surplice style. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 7 yards of 36-inch material for a 36-inch size.

1482—A new shirt waist model. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 2½ yards of 36-inch material for a 36-inch size.

9909—Children's rompers with long or shorter sleeve. The pattern is cut in 4 sizes: 2, 4, 6 and 8 years. It requires 2⅝ yards of 36-inch material for a 4-year size.

1722—A dainty dress for party or best wear with or without tunic. The pattern is cut in 4 sizes: 8, 10, 12 and 14 years. It requires 4¼ yards of 44-inch material for a 12-year size.

1699—A fashionable serviceable yoke skirt. The pattern is cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It requires 4¼ yards of 54-inch material for a 24-inch size.

THRESH FAST

BUT THRESH CLEAN

ALWAYS

Warehouse and elevator dockage is heavy and reduces the profit that you anticipate when fast threshing is done by a sloppy machine.

BEAT OUT THE GRAIN

THROW OUT THE STRAW, CHAFF AND DIRT

THE RED RIVER SPECIAL WAY

The milling of this marvelous machine is as good as its separation of the grain. The crop comes clean and ready for market, because it is built to do thorough work and plenty of it with every part. The mill is no exception.

ITS WORK COMES CLEAN

There are plenty of big grain farmers who insist on having their threshing done by a Red River Special. Other machines have fooled them on net results. You had better send for a copy of the Home Edition of the Red River Special paper and find out what kind of machine your own neighbors prefer before you buy a new threshing rig. The Big Catalog may help you to make your choice. Have one sent with the paper.

Told in the Hills.

(Continued from page 9.)

e good care of her, and—and—
d heavens! If I could only speak
her once!"
If you do, I'll know it, and I'll kill
!" said the man at the door.
He was about to walk out when the
er arose bewilderedly.
Wait," he said, and his livid face
s convulsed pitifully. He was so
le more than a boy. "This that you
e told me has muddled my head. I
't think. I know the promises, and
keep them. If shooting myself
uld help her I'd do that; but you
you are leaving the country, and
nie is to live on at the old place,
l—and yet be respected? I can't
lerstand how, with—under the—
circumstances. I—"
No, I don't reckon you can,"
wled the other, altogether un-
ved by the despairing eyes and
oken, remorseful words. "It isn't
ural that you should understand a
n, or how a man feels; but Annie's
me shall be one you had a right to
e her four months ago—"
"What are you saying!" broke in the
er with feverish intensity; "tell
! tell me what it is you mean!"
"I mean that she shan't be cheated
of a name for herself and child by
r damned rascality! Her name for
rest of her life will be the same as
rs—just remember that when you
ward that transfer. She is my
e. We were married an hour be-
e I started."
Then the door closed, and the dark,
lignant looking fellow stalked out
o the morning sunlight, and through
scented walk where late lilies
ided as he passed. He seemed lit-
in keeping with their fragrant
iteness, for he looked not a whit
s scowling wicked than on his en-
nce; and of some men working on
lawn, one said to another:
"Looks like he got de berry debbel
dem snappin' eyes—see how dey
ne. Mighty rakish young genelman
walk out o' dat doah—look like he
en on a big spree."
And when the bride and her friends
ne chattering in, with their hands
l of roses, they found a strange, un-
ard-of thing had happened. The tall
ng husband, so strong, so long ac-
mated, had succumbed to the heat
the morning, or the fragrance of
tuberose beside him, and had
len in a fainting fit by the door.

ART 2d—"A Cultus Corrie."

CHAPTER I.

On Scot's Mountain.

THE de'il tak' them wi' their weeman folk, whose nerves are too delicate for a squaw man, or an Injun guide. I'd tak' no heed o' them if I was well, an' I'll do s now I'm plagued wi' this reminder that grizzly's hug. It gives me ny's the twinge whilst out lookin' to e traps."
"Where's your gallantry, Mac-ugall?" asked a deep, rather musi-l voice from the cabin door; "and ur national love for the 'winsome x,' as I've heard you call it? If lies are with them you can't re-se."
"Can I not? Well, I can that same w," said the first speaker, emphasiz-g his speech by the vim with which pitched a broken-handled skillet to the cupboard—a cupboard made a wooden box. "Mayhap you think haven't seen a white woman these x months, I'll be a breakin' my neck get to their camp across there. ell, I will not; they may be all very ne, no doubt—folk from the East; it ye well know a lot o' tenderfeet the bush are a sight worse to tak' e care of than the wild things they'll tryin' to hunt. 'A man's a fool who umbles over the same stone twice,' an old, true sayin', an' I know what m talkin' of. It's four years this utumn since I was down in the Walla alla country, an' there was a fine arty from the East, just as these are; o' they would go up into the Blue ountains, an' they would have me r a guide; an' if the Lord'll forgive e for associatin' with a pack o' luna-cs for that trip I'll never be caught i' the same bait again."
"What did they do to you?" asked e voice, with a tinge of amusement it.
"To me? They did naught to me but pester me wi' questions of insane devisin'. Scarce a man o' them could tether a beast or lasso one that was astray. They had a man servant, a sort o' flunky, to wait on them and he just sat around like a bump on a log and looked fearsomely for Injuns an' grizzlies. They would palaver until all hours in the night, about the scientific causes of all things we came across. Many a good laugh I might had, if I had na been disgusted wi' the pretenses o' the poor bodies. Why, they knew not a thing but the learnin' o' books. They were from the East—down East, they said; that is, the Southeast, I suppose they meant to say; and their flunky said they were well-to-do at home, and very learned, the poor fools! Well, I'll weary myself wi' none others o' the same ilk."
"You're getting cranky, Mac, from being too much alone;" and the owner of the voice lounged lazily up from the seat of the cabin door and stood looking in at the disgusted Scotchman, bending ever so slightly a dark, well-shaped head that was taller than the crosspiece above the door.
"Am I, now?" asked the old man, getting up stiffly from filling a pan of milk for the cat. "Well, then, I have a neighbor across on the Maple range that is subject o' late to the same complaint, but from a wide difference o' reason;" and he nodded his head significantly at the man in the door, adding: "An' there's a subject for a debate, Jack Genesee, whether loneliness is worse on the disposition than the influence o' wrong company."
Jack Genesee straightened out of his lounging attitude, and stepped back from the doorway with a decision that would impress a man as meaning business.
"None o' that, MacDougall," he said curtly, dropping his hand with a hillman's instinct to the belt where his revolvers rested. "I reckon you and I will be better friends through minding our own business and keeping to our own territory in future;" and whistling to a brown mare that was browsing close to the cabin, he turned to mount her, when the old man crossed the floor quickly and laid a sinewy, brown hand on his arm.
"Bide a bit, Genesee," he said, his native accent always creeping upward in any emotion. "Friends are rare and scarce in this Chinook land. You're a bit hasty in your way, and mayhaps I'm a bit curious in mine; but I'll no let ye leave Davy MacDougall's like that just for the want o' sayin' I'm regretful at havin said more than I should o' you and yours. I canna lose a friend o' four years for a trifle like that."
The frankness of the old man's words made the other man drop the bridle and turn back with outstretched hand.
"That's all right Mac," he said, heartily; "say no more about it. I am uglier than the devil to get along with sometimes, and you're about straight when you say I'm a crank; only—well, it's nobody's fault but my own."
"No, o' course not," said MacDougall in a conciliatory tone as he went back to his dish washing at the table—the dishes were tin pans and cups, and the dish pan was an iron pot—"to be sure not; but the half-breeds are pizen in a man's cabin, an' that Talapa, wi' the name that's got from a prairie wolf an' the Injin de'il, is well called—a full-blood Injun is easier to manage, my lad; an' then," he added, quizzically, "I'm but givin' ye the lay o' the land where I've fought myself, an' mayhaps got wounded."
The "lad," who was about thirty-five, laughed heartily at this characteristic confession. There was evidently some decided incongruity between the old Scotchman's statement and his quaint housewifery, as he wrapped a cloth reduced to strings around a fork and washed out a coffee pot with the improvised mop. Something there was in it that this man Genesee appreciated, and his continued laughter drew the beautiful mare again to his side, slipping her velvety nose close to his ear, and muzzling there like a familiar spirit that had a right to share her master's emotions.
"All right, Mowitza," he said in a promising tone; "we'll hit the bush by and by. But old sulky here is slinging poisoned arrows at our Kloocheman. We can't stand that, you know. We don't like cooking our own grub, do we, Mowitza? Shake your head and tell him 'halo'—that's right. Skookum Kiutan! Skookum, Mowitza!"
And the man caressed the silky brown head, and murmured to her the Indian jargon of endearment and praise, and the mare muzzled closer and whinnied an understanding of her master. MacDougall put away the last pan, threw a few knots of cedar on the bit of fire in the stone fireplace, and came to the door just as the sun, falling back of the western mountains, threw a flood of glory about the old cabin of the mountaineer. The hillgrass back of it changed from uncertain green to spears of amber as the soft September winds stole through it. Away below in the valley the purple gloom of dark spruces was burying itself in night's shadows. Here and there a poison vine flashed back defiance under its crimson banners, and again a white-limbed aspen shone like a shapely ghost from between lichen-covered bowlders. But slowly the gloaming crept upward until the shadow line fell at the cabin door, and then up, up, past spruce and cedar, past the scrub of the dwarf growths, past the invisible line that the snakes will not cross, on up to the splintered crest, where the snows glimmer in the sunshine, and about which the last rays of the sun linger and kiss and fondle, long after a good-by has been given to the world beneath.
Such was but one of the many recurring vistas of beauty which the dwellers of the northern hills are given to delight in—if they care to open their eyes and see the glorious smile with which the earth ever responds to the kiss of God.

$25 Prize for Best Pony Name

Solve this Puzzle

Here are seven ponies in a pen. By drawing three straight lines you can put each one in a pen by himself. You can do this if you try, and I will give a $25 cash prize to the boy or girl who gives the best name for the little pony in the center of the pen. Draw the lines and send in the best name you can think of today. Send no money.

Two Ponies Given Away

Also tell me whether you would like to earn a pony, for I am going to give away two beautiful Shetlands. If you want to work for one of them say so in your letter and I will send you my great offer.

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

AILING ANIMALS.

Moon Blindness.

I bought a couple of brood mares and afterward found that they were both moon-eyed. I have since been told that they inherited it. If they do inherit it, would it be the same result if bred to a jack?

It makes very little difference if susceptibility to this disease whether a mare is bred to a horse or jack. If the mare has had it there is a good chance for the colt in time to be affected in the same way.

Hand-Fed Colt.

I would like to ask through your columns how to feed and care for a colt by hand. I have a mare that would not own her colt last year and killed it. A few nights ago she gave birth to a large mare colt that is strong and drinks cow's milk from a pan. I feed it a cupful about every two hours with a teaspoonful of sugar. Is that the proper way to feed it?

You are doing very well feeding the colt, but remember cow's milk, if new, is pretty strong for a colt and should be weakened somewhat with water.

Cough in Horses.

Can you tell me what to do for my horses. They have been coughing nearly all winter and also they run at the nose.

This is quite a common complaint among horses this spring. Give your animals plenty of sun and good clean quarters and give the following tonic: Fowler's solution in half-ounce doses once daily to each horse. Give this with a half pint of water. See that the feed and water is pure and clean.

Supernumerary Teats.

I have a yearling heifer that I wish to keep for a milk cow, but find that she has five well-developed teats there being three on left side. The center one is somewhat smaller than the front and back ones. Do you think the small one could be cut off and the wound healed up successfully, to avoid its troublesome existence?

If the extra teat is not too large it may be cut off and the injured surface seared so as to cause heavy scab. This work should, however, be done by a competent veterinarian.

Nail Puncture.

I have a bay horse nine years old that ran a sixpenny nail in his right hind foot just at the side of the frog. The nail went in to the head. This occurred May 7th. He will hardly step on the foot. The last few days his leg has begun to swell. I have been syringing carbolic acid water into the hole and then use tincture of iodine. This does not seem to help him much.

There is probably a pus cavity present in this horse's foot, caused from the nail injury. You should have a veterinarian examine this immediately and take steps to relieve the existing condition. Such injuries as this should not be trifled with.

Cow Has Cough.

I have a two-year-old heifer that was fresh in March. She has a bad cough and pants badly with very little exercise. She has had this cough since she was fresh. I had her tested for tuberculosis last week and the veterinarian found no symptoms. I feed oats, corn and oil meal. She is a very heavy milker. What is the cause of the cough?

Since you have proven that tuberculosis is not present it may be your cow is affected with some parasite of the lung or has bronchitis, or ever digestive disturbances may cause the cough.

A Lame Mare.

I have a mare that became a little lame in her right hind foot last November. I took her to a blacksmith, but he could not find anything wrong. I was ready to move, so drove her 250 miles. When we arrived she did not seem much worse, but had a swelling on the inside of the leg, near the stifle joint. She is not much worse, but has favored that leg all winter until now her hip seems sweenied or shrunk away. About two months ago I took her to a blacksmith and he examined the foot and found gravel in it. He doctored it until it is seemingly well. We live so far from a veterinarian I cannot take her to one. She has just had a fine colt and got along well. I have worked her for two months. She eats grain well, but falls off in flesh. She does not eat hay very well.

It seems as though your mare has a multitude of troubles which need attention. It would be hard to say without an examination just what the swelling inside the stifle is. It might be any one of a number of troubles. It might be an abscess or enlargement of joint capsule, etc. The primary cause of the trouble is the one you should get to work on and if it can be improved then the sweeny should be treated. It seems to us that if you value your mare very highly you should have a veterinarian come and see her even if he is a considerable distance from you. Since she does not eat hay very well, tooth trouble should be suspected also.

ABSORBINE

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Beef Scraps Better Than Tankage.

The flock of "E. J." requires protein, and the tankage is, in a way, valuable to them. Tankage is not to be recommended though, as it is not the most wholesome of food to manufacture into eggs. High grade beef scraps is preferable, and the most dependable form of meat rations. Aside from the health of the fowl, we must consider the flavor that different food gives to eggs.

A flock of fowls a few years ago helped themselves to tankage without the aid of any middlemen. It was after the family butchering, and the eggs were so badly flavored that the odor was nauseating.

Many well-cared-for flocks disappoint their keeper, because they do not have the element absolutely required, viz., meat in a wholesome form. If it were given, about 10 per cent in bran, there would be no long wait for "the bugs to come."

Then, after the worms and insects that are available have mostly disappeared the egg yield would not fall off so badly if the layers were furnished with the material required to compose eggs. No matter what the breed, the care or what not, unless she has the where-with-all to manufacture the egg, she does not lay it. Farm people get careless about providing shell-making material, too, after the first few months in the spring and summer. Professional poultrymen never make such grave mistakes; cannot afford to. Unless the income goes on each and every day in the year the feed bill soon puts them out of business.

E. J.'s flock is very well fed, and cared for, only he confesses that there is not a very warm place for them. This condition admits of so many variations that it might, or it might not, be abominable. If three sides are tight, with ventilation on the other side, and the house is dry—so dry that the litter is crisp and dry, then, unless the inmates are really uncomfortable, it is O. K.

Egg-Eating Hens.

Don't you remember how it was the last cold, rainy day that the biddies could not be out of doors? You went out to gather the eggs, and there were not nearly so many as usual, and besides they were broken and dirty and sticky. "Crummy," the boys said.

Well, it is just such days as this that gets the hens to eating the eggs, just as it gets the boys "in bad" when the weather is so bad that they cannot get out of doors to run off the surplus energy. And the worst feature of the whole business is the fact that the most energetic hen, as well as the boy worth while, is the most incorrigible, and more often falls from grace.

About the only lore we hear about this case is that the hens have not been well fed, and one would be led to believe that he had fairly starved his poor chickens to death—nearly. In a few cases the fowls' appetites do crave something they have not access to, but in nine times out of ten, yes out of a hundred, it began on a day when they could not get out and inquisitively pecked at an egg, broke it, and more especially if there had not been enough lime in the shape of crushed shells and the egg shell was soft, and found that their appetites "craved" eggs forever after.

Gather the eggs several times each day. Once a hen begins to eat she becomes almost a fiend. Just watch them. Many times a hen has been found waiting for one of her mates to come from the nest, when she calmly devours the egg. If she sees you watching her, she acts as sneaking as a sheep-killing dog. All there is for it is to make a potpie for supper. The writer has been accused of faking about an egg-eating hen at this time of the year when one gets hungry for chicken, and can hardly afford to kill one, while it would be easier to steal a chicken this time of the season than to ask a neighbor to sell one.

Granting that the hens are well fed, watch the nests and remove the eggs as soon as laid. If a hen develops a taste do not spare her. As well try to break a great, big, hulking yearling calf from stealing the milk from the Jersey cow.

For White Diarrhea.

To the Editor:—Have seen many complaints of white diarrhea from time to time and find that in each instance they are steady users of mixed chick feed, which proves, with my own experience, that the steady use of it for little chicks is not the thing for them. If "Mrs. Wm. Z" will try coarse cracked corn, small wheat and dry, pressed sour milk curds for her little birds, leave out bran and use ginger or red pepper in a moist feed of curd and meal until her chicks are better of the disease, and, of course, change the coop to clean quarters, she will have better results. I use the feed very little and then only once or twice a week. This may help others. Mrs. M. F. T.
Dane Co., Wisconsin.

Bumper Grain Crops
Good Markets — High Prices
Prizes Awarded to Western Canada for Wheat, Oats, Barley, Alfalfa and Grasses

The winnings of Western Canada at the Soil Products Exposition at Denver were easily made. The list comprised Wheat, Oats, Barley and Grasses, the most important being the prizes for Wheat and Oats and sweep stake on Alfalfa.

No less important than the splendid quality of Western Canada's wheat and other grains, is the excellence of the cattle fed and fattened on the grasses of that country. A recent shipment of cattle to Chicago topped the market in that city for quality and price.

Western Canada produced in 1915 one-third as much wheat as all of the United States, or over 300,000,000 bushels.

Canada in proportion to population has a greater exportable surplus of wheat this year than any country in the world, and at present prices you can figure out the revenue for the producer.

In Western Canada you will find good markets, splendid schools, exceptional social conditions, perfect climate, and other great attractions. **There is no war tax on land and no conscription.**

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

A 33.66-Pound Holstein Bull.

T IS the ambition of nearly every breeder of Holstein cattle to have a hirty-pound bull at the head of his erd, for every breeder realizes that a ull is half the herd. However, there re not thirty-pound bulls enough to ll the demand and it is very difficult o find many bulls of good type and onformation out of cows who have ade records over thirty pounds. Our eaders now have an opportunity to urchase such a bull in Sir Aaltje Salo Daisy Johanna 169801, that is adver-ised for sale on page 23. This bull is ow eighteen months old and is ready or immediate service. He was bred and s offered for sale by Arthur J. Rust, West Allis, Wis., of Rust Bros.' Stock Farms. This is one of the oldest breed-ng Holstein establishments in Wis-consin and many of the greatest fam-ilies of the breed originated on this farm. The bull offered for sale is out of Aaltje Salo Netherland Pontiac, a wonderfully high-producing cow. In seven days she gave 570.9 pounds of milk testing 4.72 per cent of fat and making 33.66 pounds of butter. In thirty days she made 134.86 pounds but-ter from 2,175.2 pounds of milk, testing 4.9 per cent fat. She is a daughter of Johanna Pontiac De Kol that has twen-ty-three A. R. O. daughters, five of which have records of 33.66, 29.74, 28.63, 27.99, 27.54, all but one of which were made as four year olds. He also has seven others with records above twenty pounds. This cow is a granddaughter of Johanna Rue 2d's Lad, that has for-ty-nine A. R. O. daughters, four with records from thirty to thirty-six pounds of butter, eight thirty-pound grand-daughters. She is also a granddaughter of Pontiac Echo De Kol, which was sired by Hengerveld De Kol. The bull offered for sale is a son of Daisy Johan-na 5th, whose first daughters are just coming into milk. He is a twenty-seven-pound bull which as a two year old won first at the Wisconsin State Fair. This bull, both individually and in breeding, is fit to head any herd, and those who are desirous of owning a thirty-pound bull are advised to write to the above address.—Adv.

Grove Bros.' Holsteins.

THE great records made by the cows in the Maplecrest herd have demon-strated that careful breeding along the right lines will produce cows of high-production ability. It is impossible to purchase these great cows from this herd and it is almost equally impos-sible for the average breeder to pay the price demanded for a bull from this herd. However, it is possible for any breeder to secure the same blood that produced such great cows as Bonostine Belle De Kol, which made 13,000 pounds butter in a year, Highlawn Hartog De Kol, which made 1,247 pounds butter, Daisy Grace De Kol, which made 1,203 pounds butter and five others with rec-ords from 1,000 to 1,200 pounds butter in a year. Grove Bros., Columbus, Wis., whose advertisement appears on page 22 are offering bulls of such breeding. Their senior herd sire is Maplecrest Hengerveld De Kol. He is a 29.50-pound son of Friend Hengerveld De Kol Butter Boy and out of a 29.50-pound daughter of Pontiac Aaggie Korndyke. These two bulls have eight daughters which have made from 1,000 to 1,300 pounds of butter in a year. At the pres-ent time Grove Bros. are offering two fine young bulls sired by Maplecrest Hengerveld De Kol. For extended pedigrees and further information write to the above address.—Adv.

Keep Flys Off the Cows.

FARMERS who desire to keep their cows and horses free from the wor-ry of fighting flies will be interested in the advertisement on page 14 of this issue of the Carpenter-Moore Co., 77 Sudbury street, Boston, Mass., manu-facturers of the well-known fly repel-lant, Cow-Ease. Every dairyman knows that his cows are better milkers when kept free of flies and Cow-Ease is per-fectly harmless. It does not blister the skin or gum the hair and one gallon will spray one cow 200 times which makes the cost trifling. M. Elton Vose, who originated Cow-Ease fifteen years ago personally guarantees that it will keep the flies away and agrees to send prepaid to any point east of the Mis-souri river a trial half gallon for $1.25 if the reader's regular dealer cannot supply him. This price also includes a sprayer for applying. Mention of this paper in writing will be appreciated.—Adv.

Cortte's Berkshires.

ATTENTION is called to the new ad-vertisement of A. P. Cortte, Lomira, Wis., on page 22. Mr. Cortte's herd of Berkshires is commanding the atten-tion of Berkshire breeders throughout the Northwest, as he has bred and de-veloped many of the animals which have been heavy prize winners at the state fair. At the present time he is offering February, March and April pigs of either sex at very reasonable prices. They will be sold in single, pairs or trios. These were sired by the boars, Pabst Rivaleer 3d and King of the Rivals, two exceptionally fine boars of good size and refined quality. Mr. Cortte's spring pigs are in fine condi-tion, being well grown and very active. The writer recently spent a very pleas-ant afternoon, going over this herd of Mr. Corte and we advise our Berkshire readers to get in correspondence with this breeder whenever in the market for breeding stock.—Adv.

E. J.'s Crimson Wonder.

YOU Duroc Jersey men that expect to show an aged boar at Minnesota this fall should keep E. J.'s Crimson Wonder in mind, for he will be a con-tender and unless we miss our guess he will be strong competition. This boar is owned jointly by John Swenson, Willmar, Minn., and M. Anderson, Cot-tonwood, Minn. He was bred by E. J. Wilson and is sired by R. J.'s Wonder he by Crimson Wonder Again out of H. A.'s Queen. Dam by Chief's Protec-tion by Ohio Chief. Mr. Swenson has been using this boar heavily of late and has just started to get him ready for the fall shows. He weighed right at 800 the day the writer was there and we feel confident he will be shown weighing between 950 and 1,000 pounds. He is a grand individual and a good sire. This is also the home of the Iowa champion, Big Wonder, the $1,000 boar. He is now five years old, but is just as smooth as he was when he won the purple ribbon. Big Wonder is not as large as some boars, but he is bred big and the stuff we saw sired by him have plenty of size. Mr. Swenson is a real hog man and without a doubt we saw the best spring pigs on this place that we have seen this spring, numbers con-sidered. He is fitting some futurity lit-ters that are real prospects. The sow herd is made up of some great breeding matrons and they carry the blood of the most noted boars of the breed. Daughters of such boars as Big Won-der, Burke's Good Enough, Lee's De-fender, Illustrator, Chief's Defender, King the Col., E. J.'s Crimson Wonder and Golden Model 2d. Those that fol-low the swine game know that it neces-sitates quite an outlay of money to get together a bunch of sows of this breed-ing, especially when the individuals are as good as they are in the Swenson herd. Mr. Swenson will have out a strong herd this fall and he will make someone go some. He also expects to show at Omaha. We are glad to rec-ommend this herd, for he has the goods and we know that the owner has a reputation for fair dealing. He will hold a bred sow sale January 5th.—Adv.

E. J. Wilson, Renville, Minn., Durocs.

E. J. WILSON, Renville, Minn., is one of the most popular Duroc breed-ers of the Northwest and has a herd of Durocs that ranks among the best. His herd number around 250 head and the feature of the herd is the good sows that we saw on the place. We like to see a good boar at the head of the herd, but we are equally well pleased when we find a lot of good breeding matrons. When Mr. Wilson gets a good brood sow she stays in the herd and we saw several sows from four to sev-en years old and in each instance these were the dams of the best pigs we saw on the farm. "When you get a good thing stick to it." We won't say much about the Wilson herd at this time, but a little later we will have some things to say about this good herd that will be "eye-openers." Keep this fact in mind. Mr. Wilson's winter sale date is January 4th.—Adv.

Offering Good Short-horns.

IF you are in the market for Short-horns do not overlook the Williams Brothers, at Bangor, Wis. They haven't the largest herd in the state, but they have some good individuals and have good bulls at the head of the herd. Their cows are good milkers, also pos-sess good beef qualities. The young stuff is sired by Nominee Cumberland, a good roan son of the good sire, Prince Cumberland. You can depend on this herd. If you write for infor-mation please mention The Wisconsin Farmer. See page 24.—Adv.

The 1,000-Pound "Chief Invincible."

WE continually read and hear about 1,000-pound Duroc boars, but we all know that it is only a few that make the half-ton figure, though we would like to see more of them. We advocate big boars—big with quality—though it may be necessary to give up for the time being some of the "fine" points to get the size needed. We all know that even though big boars are used we get more of the medium types than we do of the big ones. When you go to a swine show, the big ones are the ones that take your eye. When you go to a breeder's boar pen, don't you always pick the big ones, other points being equal? The writer recently made a trip to Lake Crystal, Minn., to see the F. M. Washburn herd and incidentally to see Chief Invincible. We saw this boar last year and liked him then and now, after seeing the pigs sired by him we continue to place him among the three or four outstanding boars of the Northwest. Chief Invincible is sure a thousand pounder and he has the oth-er good qualities to go with his size. He has one of the best backs we ever saw on a boar of any breed. He has an ideal head and his feet and bone are the best. To make a long story short he is "some boar" and several Wisconsin breeders would do well if they would get some of his get in their herds. His pigs show up well at this time, so he is no failure as a sire. For the benefit of those that are not acquainted with his breeding will say that he is sired by Invincible Chief by Cherry Chief, dam Van Patten Maid by Echo Top King by Echo Top, farrowed March 7, 1913. Mr. Washburn is making plans now to put up the greatest offering of Duroc sows ever seen in the Northwest. He will make a sow sale in January. Here is a good herd, keep it in mind.—Adv.

Hudson Super-Six Travels 1,819 Miles in Twenty-four Hours.

THE Hudson Super-Six Motor Car has set a new endurance mark by traveling 1,819 miles in twenty-four hours, a distance equal to that from New York to Denver. This remarkable performance was made at an average speed of 75.8 miles per hour and clearly demonstrates the endurance and power of the Hudson Super-Six. A stock Super-Six chassis was used which had already traveled more than 2,000 miles before the test, and, when officially ex-amined after the test, was found to show no very appreciable wear. Thus it has been proved that a motor can be built with such great flexibility, speed and power as the Super-Six, and still have the sturdiness to keep up under the most strenuous service. Thousands of Hudson Super-Sixes are now in use; they are found in every locality, and their owners are strong in their praise. The Hudson Motor Car Company, De-troit, Mich., has achieved great success in building into the Super-Six endur-ance, power, flexibility, beauty and comfort—these are the things to con-sider when you buy a car. See page 7. —Adv.

McChief Gaining Nicely.

WE have just received a letter from J. D. McDonald, North Bend, Wis., advising that his aged Poland China boar is coming along fine. He said that he weighed him on May 27th at which time he weighed 937 pounds. We saw this boar some time ago and think he is a wonderful hog. He was not fat at that time and if he gains accordingly as he has the past month, he will weigh 1,100 pounds by fair time. McDonald has the goods and when you want Po-lands, don't forget his herd. See page 24.—Adv.

Deadly Blackleg.

THE one disease that should especial-ly interest our readers at this time, so that they may save their calves, is blackleg. It is most prevalent in the spring; and unless a stock raiser knows how to control the disease, it may go through his whole herd and kill off many valuable calves. Blackleg de-velops so quickly that it may do a world of damage unless the animals are protected by vaccination. It is true that vaccination will not in every in-stance save calves from blackleg. But it is also true that this fatal disease can be controlled to a great extent by vac-cinating the animals with a reliable blackleg vaccine before they are ex-posed, thus immunizing them against it. This is proved by the fact that the per-centage of loss, which in the past was very high, has been, by the use of blackleg vaccine, reduced to a mini-mum. The safest and most economical method of vaccinating calves is to use Blacklegoids. They are small pills (made by Parke, Davis & Co., Detroit, Mich.,) and, as each is a measured dose of blackleg vaccine all you have to do is to inject them under the skin with a vaccine injector. When using this style of vaccine you do not have to stop to mix, measure or filter it, for each pill is an accurate and reliable dose. Leading stockmen all over the world use Black-legoids and highly commend their effi-ciency. If you wait until your calves become infected with blackleg it means certain loss. Vaccinate before the dead-ly disease shows in your herd. The cost of vaccination is little as compared with the loss which you are liable to have if you do not use a reliable vaccine. Give special attention to calves that were not vaccinated last fall, as they are now liable to contract the disease. If you will write Parke, Davis & Co., Depart-ment of Animal Industry, Detroit, Mich., they will be pleased to send you de-scriptive literature on blackleg and its prevention and tell you how to use Blacklegoids. Our readers should be interested in receiving this information. —Adv.

Studebaker and His Trip of '53.

THE flight of time—the passing of sixty-three years—has not dimmed the importance, in the mind of J. M. Studebaker, of that memorable pioneer-ing journey which he took across the continent to California in quest of gold. So dear is that trip of 1853 to the mem-ory of Mr. Studebaker, in fact, that he desires to hear from any of the pioneers who were in the party of sixty-five men, women and children—or, in fact, any of the descendants of those who pushed their way westward to the Pacific coast. Mr. Studebaker has a yearning for a renewal of the companionship and com-radeship of his fellow travelers. As examples of the perilous nature of the journey to the coast, there were moun-tains to climb, rivers to ford and In-dians to fight. The leader of the party died en route from the bite of a scor-pion and was buried in a lonely grave. After five months and eight days of travel, the party reached its destina-tion, poor in purse, worn with the hard-ships of their trip, but still hopeful of accomplishing the object in view. After trying mining for a time until con-vinced it held no large possibilities, Mr. Studebaker went to work at his trade on the advice of men he met soon after his arrival. He took a contract for making wheelbarrows for a man named H. L. Hines, who subsequently became associated with him in South Bend, Ind., in the business of the Studebaker Bros. Mfg. Co. Mr. Studebaker returned from California in 1857 with a few thousand dollars he had saved from his earnings and from good investments, and invest-ed the money with his brothers in the business which has grown from a small beginning to a position where Stude-bakers today are the largest producers of vehicles in the world. Anyone who happened to be on that memorable trip with Mr. Studebaker, or who is a de-scendant of such a person, or knows a descendant, can reach Mr. Studebaker by addressing him at South Bend, Ind., and will gain his gratitude by so doing. See page 19.—Adv.

An Easy, Economical Ditcher.

PROPER drainage is one of the big problems of the average farmer to-day, as the most expensive spot on the farm is the spot just dry enough to plow, but too wet to produce. The Pile riding ditcher-grader advertisement on page 15 of this issue by the Interna-tional Farm Implement Company, (Inc.) 141 West Third street, Owensboro, Ky., will make drainage work easy for the farmer. It cuts a V-shaped ditch any depth and the company has discovered by experiments that ditching twelve acres will pay for the machine and the rest is all profit. It does not waste land, as it is possible to drive a wagon across a Pile ditch without a bridge. It operates with two or three horses with changeable seats for the driver and be-hind each ditcher is a guarantee for one year against breakage on account of defective material or workmanship. If after ten days' trial a buyer is not satisfied the company will take the ditcher back and give the buyer his money. A special ditching book issued by this company is available free of

Nearly 90,000 Farmers Read These Live Stock Advertisements Each Week

IF your live stock is to bring the best market price it is up to you to see that the buying public is informed about your offering. Inserting a little reader or a small ad. in your local paper is good, but it is not enough. To get the best returns on your investment you must reach out farther. You must tell the farmers from your market radius —Wisconsin—what animals you have for sale and wherein they excel.

The larger the per cent of the home-state farmers your advertisement reaches, the more valuable does it become. And the greater the confidence the readers have in the paper you use, the greater the number of sales your advertisement will bring.

That's why The Wisconsin Farmer will prove the best medium for your advertisement. It has nearly 90,000 circulation, of which 75 per cent are in Wisconsin. It goes to 35 8-10 per cent of the Wisconsin farm homes, while the next largest farm weekly in Wisconsin reaches only 32 and 8-10 per cent of the farm homes in the state.

The Wisconsin Farmer has a force of efficient field men. They are there to be of service to you. Write the man in your territory and he will be glad to call on you and help you plan your advertising.

THE WISCONSIN FARMER **MADISON, WISCONSIN**

REGISTERED HOLSTEIN COWS

FOR SALE, choicely bred, of high individual merit and good producers. Write or call and see them.
Chas. F. Grebel - Randolph, Wisconsin

REG. HOLSTEINS

Bulls for sale of various ages.
R. F. Roberts - Randolph, Wisconsin

FOR SALE

HOLSTEIN bulls sired by a grandson of **Pontiac Korndyke,** ¾ white—well grown. I will also price a few heifers and cows.
Peter Larson - Randolph, Wisconsin

A. F. BARSTOW

RANDOLPH, WISCONSIN
BREEDER of Registered Holstein Cattle. When in need of Holsteins send me your wants.

John Bradley

Randolph Wisconsin

A FEW yearling bulls and younger from A. R. O. dams with creditable records. Send for pedigree and price.

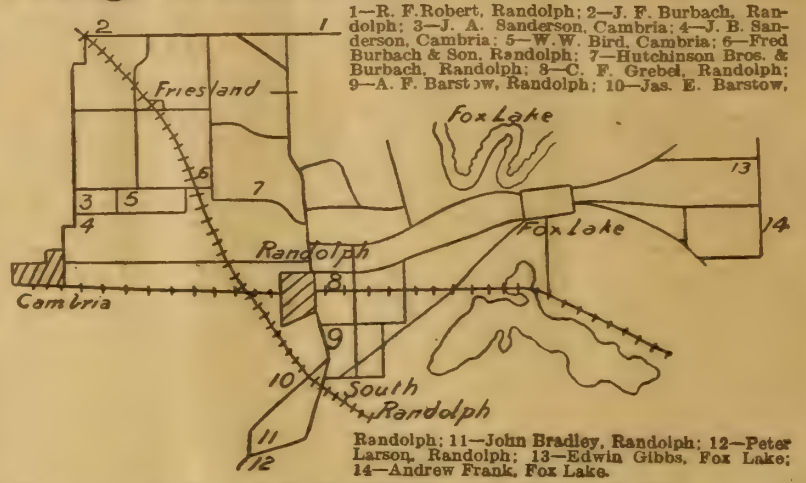
Registered Holstein Bulls

FROM A. R. O. dams with records up to 24 pounds butter in seven days. **Four registered Holstein cows,** good producers, choicely bred and of good type. Send for pedigrees and price.
Fred W. Burbach & Son - Randolph, Wis.

WE CAN SPARE A FEW HEIFERS

OF CHOICE De Kol Wit breeding. They are **from A. R. O. dams** with good records. They are safe in calf to our great herd sire, **King Pietertje Hengerveld Ormsby,** full brother to the former world's record cow, **Pietertje Maid Ormsby.** Send for pedigrees or come and see these heifers. They are right in every way. **Hutchinson Brothers & Burbach, Randolph, Wis.**

Portage Prairie Holstein Breeders' Ass'n



1—R. F. Robert, Randolph; 2—J. F. Burbach, Randolph; 3—J. A. Sanderson, Cambria; 4—J. B. Sanderson, Cambria; 5—W. W. FOR HIGH-GRADE OR REGISTERED HOLSTEINS

Yearling Holstein Bulls

READY for service and younger, sired by the richly bred bull **Wisconsin Star Champion 110275,** whose dam made 28.70 pounds butter as a five year old. These bulls are from good producing cows and are well developed and well marked. Prices right.
Andrew Frank - Fox Lake, Wisconsin

Registered Holsteins

BULLS from A. R. O. dams, of the right type to improve your herd. Prices reasonable.
W. W. Bird - - Cambria, Wisconsin

charge and mention of this paper in requesting a copy will be greatly appreciated.—Adv.

Use Dynamite to Make Non-Producing Land Productive.

OWNERS of land rendered useless by stumps, water or stones or by all three combined will be interested in the book called "Progressive Cultivation" which is mentioned in the advertisement of Hercules dynamite on page 5 of this issue of The Wisconsin Farmer. This book may be secured free by addressing the Hercules Powder Co., 3 West 10th street, Wilmington, Del. It relates how easily and economically stumps, water or stones can be removed by the use of dynamite. Dynamite will do the work thoroughly and there is no reason why any person should pay taxes on land that is unproductive when, at small cost and labor, it can be made productive. This book also treats the questions of subsoiling; tree planting; ditching, etc., with dynamite, as well as land clearing and mention of The Wisconsin Farmer in writing will be appreciated.—Adv.

The Vanderhyde Durocs.

THE Duroc firm of F. S. Vanderhyde & Son, West Concord, Minn., may be strangers to some of The Wisconsin Farmer readers, but he is not a stranger to those that keep tab on the good herds of the Northwest. The attraction on this farm is the Minnesota grand champion, Van's Wonder, and he is a great boar. In the first place he is big, has a great back, is very smooth, in fact is a real show boar, as his winnings show. The nice thing about Vanderhyde's winnings and by the way he was the heaviest winner of the breed at the Minnesota Fair—he raises his own show stuff. This is the home of Van's Crimson, the boar that has produced the winners for several years and he still is getting the good ones. Van's Crimson is by Crimson Chief by Top Notcher Chief and his dam was by I. X. L. Advancer by Advancer. The grand champion is by Van's Crimson out of Roxy by Van's Duroc Wonder. This great brood sow is now six years old and for the past four years her produce has won at the various fairs. The best junior yearling sow that we have seen so far this year we saw on this farm, she is a full sister to the champion boar. She will be a great show sow by fall. He will also have a good aged sow. His futurity pigs will make some of the showmen go some at the Minnesota Fair. This is a good herd of Durocs and one of the best boars we have seen heads the herd. Keep this in mind. He will make a sow sale on January 2d.—Adv.

Prepare to Store Your Grain.

HARVESTING season will soon be at hand and the attention of our readers is called to the necessity of having a good grain bin ready by the advertisement on page 8 of this issue by the Bushnell Tank Works, Inc., Dept. D, Bushnell, Ill. They manufacture a bin built for a lifetime; guaranteed for five years that is fire, rat and weatherproof. It is easily erected and moved and a request will bring to your door one of their free catalogs illustrating their full line. Mention of this paper will be appreciated.—Adv.

Sources of Wisconsin Farm Profits

Many Interesting Disclosures From Study of Farms in State Contest Were Announced at Recent Meeting at Ft. Atkinson.

SOURCES of farm profits and their relative importance were discussed rather fully at the state meeting of the Wisconsin farm management contest at Ft. Atkinson on June 5th, the winners of which were announced in our issue last week. D. H. Otis and R. V. Gunn, of the college of agriculture, who have been directing the contest, discussed these matters and many interesting things were uncovered in the study of more than 800 farms which took part in the contest.

Among the interesting conclusions arrived at was the economic importance of alfalfa and silage in Wisconsin. Mr. Otis said that the study of the reports showed conclusively that alfalfa, silage and clover is the basis of feeding live stock under Wisconsin conditions and that the farms with these crops reported invariably the largest net profits

On a four-year average the conclusions relative to the importance of silage follow:

Six hundred and forty-four farms with silage made a net profit of $877 per farm.

One hundred and eighty-six farms without silage made a net profit of $534 per farm.

Relative to the value of alfalfa in Wisconsin, Mr. Otis' report showed the following:

Three hundred and seventy-seven farms growing alfalfa made a net profit of $1,200 per farm.

Five hundred and eleven farms with no alfalfa made a net profit of $728 per farm.

The farm contest work also served to disclose the most popular crops in Wisconsin, and the average cost per acre of producing such crops. The average cost of producing an acre of barley, it was found, was $14; corn, $18; oats, $13; peas, $20; rye, $10; wheat, $13; potatoes, $30; alfalfa, $13; clover, $10; clover and timothy, $9; silage, $25; pasture, $5.

Several present at the Ft. Atkinson meeting took issue over the costs of production, but it must be borne in mind that these are the average costs arrived at by the study of the farms entered in the contest and, of course, may vary under different conditions. However, being representative of all sections of the state, they serve as a basis for calculating such costs.

The cost of keeping live stock was also averaged in the same way and this was especially interesting in disclosing the difference in cost of keeping ordinary and pure-bred cows. The cost per animal for the general dairymen was estimated to be $75 per year; for the pure-bred breeder, $100, and for the market milk producers, where milk is produced under special conditions, $125. Seven sheep or fourteen lambs were considered as an animal unit and the cost per unit per year was $75. The cost of producing 1,500 pounds of pork (considered as an animal unit) was also $75 and of keeping 100 hens it was $75.

Table I, shown herewith, shows the relative profitableness of various crops as well as the popularity of crops. For compiling this table seventy-eight farms were studied, and it will be seen that on seventy-three of the seventy-eight oats were grown; on forty-six alfalfa and on sixty-five corn for silage, while on only thirty-four was corn grown for grain. This table also shows the profits per farm and acre as well as the acres of each per farm:

TABLE I.

Crop	Number of farms averaged	Acres per farm	Profits per farm	Profits per acre
Barley	41	8.7	67.58	7.74
Corn (grain)	34	12.3	28.18	2.28
Oats	72	18.4	114.45	6.21
Peas	2	18	370	20.55
Rye	13	7.7	43.54	5.64
Wheat	16	.62	13.44	3.70
Potatoes	10	8.5	186.80	21.88
Alfalfa	46	9.76	224.15	22.95
Clover	46	11.74	194.45	16.55
Mixed hay	58	17.14	152.53	9.37
Silage	65	19.43	—58.64	—3.02
Pasture	75	43.4	....	....

It has often been said that the best feeders get the best results, and this was borne out by the study of these farms. The farms entered were divided into three groups for comparison and convenience. Table II therefore discloses that although Group 3 spent 145 per cent more for feed than Group I, although feeding only 33 per cent more stock, that in the end it proved profitable to feed liberally. In this table the receipts and profits per animal unit are for all stock kept on the farm:

TABLE II.

	Group 1	Group II	Group III
Value of feed fed	$1,280.00	$1,424.00	$3,311.00
Returns per $1 of feed fed	1.17	.87	2.04
Receipts per cow, dairy products	58.00	62.00	114.00
Receipts per animal unit (all stock)	65.00	45.00	173.00
Profits per animal unit (all stock)	—16.00	—18.00	30.00

In connection with Table II was prepared Table III, which shows the total receipts and profits in these three groups. This table also bears out the contention that those who spend the most get the most in return:

TABLE III.

Receipts and profits per farm	Group I	Group II	Group III
Total Receipts	$3,265	$2,867	$9,741
Crops	1,619	1,359	2,658
Live stock	1,493	1,380	6,775
Miscellaneous	153	128	308
Net Profits	174	—405	2,086
Crops	399	42	617
Live stock	—378	—575	1,161
Miscellaneous	153	128	308

Mr. J. A. Craig, of Janesville, spoke on the subject of the farmer helping himself, in which he said the farmer was too much inclined to set back and wait when he should take the initiative, especially in matters of vital importance to himself. Responsibility makes men and women, he said, and if they are to succeed they must shoulder the responsibilities. He also urged co-operation and organization for the farmers, as success is far more difficult where each farmer works separately.

TOO LATE TO CLASSIFY.

2 Sons of the 29.50-lb. Bull MAPLECREST HENGERVELD DE KOL

WHOSE sire, Friend Hengerveld De Kol Butter Boy, and dam's sire, Pontiac Aaggie Korndyke, have more daughters with records over 1,200 lbs. of butter in one year than any other two bulls of any breed. The Percy W. Young Poland Herd.

THE Northwest needs more breeders like P. W. Young, Prosper, Minn. When it comes to big-type Poland China hogs most of you will have to take your hat off to this breeder, for he certainly has the good ones. We spent the first day of June at Prosper and if at any time some of you breeders want to see a herd of big ones that have the quality just take a trip to the above town. We have had some people tell us that the Poland China doesn't raise enough pigs, but we took the herd book and found that the average number of pigs raised on the Young farm was eight pigs to the litter. Isn't that good enough? The big noise in this good herd is the herd boars. With perhaps two exceptions, we don't know of another Poland China breeder that has two herd boars the equal of these. The senior boar is Master's Giant, a son of Mondamin Master he by Lyon Chief out of Gentle Jessie. His dam is Mable's Choice 2d, out of the noted sow, Mable's Choice. That's good enough for the most critical. Individually he is "some boar." In the yearling futurity at Iowa State Fair, 1913, he stood first. Last year he was taken out again, weighing 1,005 pounds and although being injured en route to Des Moines he was placed second in the aged class. Now, as a four year old, he is very smooth, has a wonderful back an ideal head, and I will say that I never saw a boar of his age of any breed that has a better foot. Orange Wonder is a two-year old and a boar of great scale combined with quality. He was shown at the Minnesota State Fair last year and was first in class as a senior yearling. He is by Brown's Big Orange by Big Orange and his dam, Ellerbroeck Lady A. was by A Wonder 143421. Very desirable breeding. As we said above, these are both great boars and it is barely possible that the latter boar will be shown again this year. Master's Giant has sired some wonderful large, smooth sows and by using Orange Wonder on the daughters of Master's Giant, we feel that Mr. Young will gain another notch in breed development.

WANTED FARMERS and BUTCHERS Do Not Throw Away
CALF RENNETS the Rennets if you kill over ten calves per month, but write us.
THE MARSCHALL DAIRY LABORATORY
Madison, Wis.

Notice the breeding of the sow herd. Daughters of Master's Giant, Big Knox by Big Orange, Pawnee Defender, Ike's Big Orange, B.'s Wonder by A Wonder 107353, Long Jumbo (Halford) Long Jumbo (Mouw), Farver's Goliath, Chief Big Bone and Grandmaster. Where would one go to get a more fashionable or better line of breeding? We will have more to say about this good herd of Poland Chinas, but bear in mind that this is without a doubt one of the best herds of the breed in the country.—Adv.

Every Holstein Breeder Wants 30-Lb. Bull

BUT there are few who are able to get them. You can be one—here is your opportunity. A 33.66 pound yearling ready for service, Sir Aaltje Salo Daisy Johanna, whose dam, Aaltje Salo Netherland Pontiac, as a 5 year old made 33.66 pounds butter in 7 days. CURRENT EVENTS

WOODROW WILSON, of New Jersey, and Thomas R. Marshall, of Indiana, were renominated for the presidency and vice presidency at the democratic national convention in St. Louis last week. The convention was a sort of democratic love feast, with President Wilson held up continually as one of the greatest presidents in the history of the country. The main interest centered in the adoption of the platform, which was written in large part by the president himself, and in the selection of vice president, several incipient booms of favorite sons being started in opposition to Mr. Marshall. The keynote speech was delivered by the temporary chairman, Governor Martin Glynn, of New York, who declared that "the policy of the administration has been just as American as the American flag itself." Then he added: "This policy may not satisfy the fire-eater and the swashbuckler. But it does satisfy the mothers of the land at whose hearth and fireside no jingoistic war has placed an empty chair. It does satisfy the daughters of this land from whom bluster and brag have sent no loving brother to the dissolution of the grave. It does satisfy the fathers of this land and the sons of this land who will fight for our flag and die for our flag when reason primes the rifle; when honor draws the sword and when justice breathes a blessing on the standard they uphold." Before the platform was finally adopted President Wilson approved a plank on Americanism which arraigns individuals or alliances seeking to embarrass the government in negotiations with foreign nations and condemns any political party which modifies its policy for fear of political consequences. The plank accuses a small group of Americans of foreign extraction of attempting to "levy political blackmail" to gain their ends. It further states that the democratic party will not be influenced by such "blackmail," and in effect challenges the republican nominee to take a similar stand.

THE fiercest, most deadly fighting of the entire European war is said to be now in progress, the Russians bearing the brunt of the attack against the Germans and Austrians. The Russians have been making a terrific drive on Austria-Hungary, pushing the Austrians back relentlessly and working their way well toward the Carpathian mountains, the Teutonic allies being unable to hold them back very materially. This offensive was first thought to be for the purpose of relieving the pressure against the French at Verdun and against the Italians at Trent, but now it is believed to be a separate attempt to crush the Austrians and to turn the tide of the war. Other fortifications around Verdun continue to fall into the hands of the Germans, but the main fortress and town remain intact, although the Germans freely predict that they will fall by the 1st of July. A terrific toll of human lives is being exacted all along the battle line.

CHARLES E. HUGHES, republican nominee for president, has made it plain thus early in the campaign that he proposes to put up a good, hard fight for election. Within an hour after he had been nominated he resigned from the supreme court and issued a statement in which he declared positively for preparedness and unadulterated Americanism. During the week there have been numerous statements to the effect that Mr. Hughes' nomination was brought about by the German-Americans who opposed President Wilson on account of his stand on the submarine question and his consequent correspondence with the German government. A strong German-American political organization has issued a public statement declaring that it has worked for the past six months to secure the Hughes' nomination and that there are 3,000,000 German-American voters in the United States who will be swung, in a body, to Hughes. Largely to offset these reports and to maintain his undefiled Americanism Mr. Hughes issued a statement this week in the course of which he said: "My attitude is one of undiluted Americanism and anybody that supports me is supporting an out-and-out American and an out-and-out policy, absolutely nothing else." While the campaign plans have not been definitely announced, it is expected that Mr. Hughes will swing around the circle and give the people in all parts of the country an opportunity to see and hear him.

HOME rule for Ireland seems more imminent today than ever before. David Lloyd George has been studying the Irish problem first-hand and has definitely decided to recommend local self-government, separating the Protestant and the Catholic counties of Ireland so that there will not be any conflict over religion, as there has been heretofore. It is quite possible that home rule will be granted, on these terms, immediately, thus giving to the loyal Irishmen the self-government they have long struggled for. With the exception of the ill-timed and unfortunate outbreak in Dublin recently, the Irish have been proving their loyalty to Great Britain by recruiting in large number and helping the home government in every way possible. Lloyd George was selected as the man best fitted to bring the factions together, and home rule, separating the counties by religion, is his solution of the affair.

THE Italian cabinet resigned last week, confirming the frequent reports that things were far from being harmonious in that country. Widespread dissatisfaction seems to exist, not only with the way the war is being prosecuted but with many of the generals and even with King Victor Emanuel himself. The truth is that Italy went into the war, after it was well under way, in the belief that it would hardly last more than six months and that by turning against its former allies (Germany and Austria) and lining up with England, France and Russia it would secure a good part of the spoils of war without much cost to itself. But the war has dragged along and Italy has been obliged to pay a great price, both in money and in human lives. Recently the Austrians have been making a great drive against the Italians and have been quite successful, pushing the Italians out of the provinces they captured early in the war and back into their own territory. Things have been going from bad to worse and the people are thoroughly aroused. The socialist and peace parties have been growing tremendously since the Austrian offensive began and the movement for a radical reconstruction of the whole structure of the government promises to become general. Even if the country survives the present crisis it is feared by even the most optimistic statesmen that sooner or later the powerful movement that has been fermenting for many months will win the upper hand, and if it does, revolt is looked for as the inevitable climax.

TROUBLE continues to make itself manifest on the Mexican border, aggravated by the insulting tone of Carranza's latest demand for the withdrawal of the American troops from Mexico. With 1,500 additional regular troops ordered to the Mexican border and reports of the rapid spread of anti-American feeling continuing to pour in from consuls all over northern Mexico, officials made no attempt to disguise their uneasiness. It is officially admitted that there is a growing alarm over what the agitation may produce and the possibility of an attack on General Pershing's expedition. There is a general feeling that Carranza is not giving the United States the assistance that he should to restore a stable condition of affairs. There are continued rumors that the Carranza government itself is tottering, the general impression being that Obregon, Carranza's minister of war, is the strongest man in that country today and the only one who can be relied upon to bring any semblance of order out of the existing chaos. A sharp rejoinder is being prepared to the Carranza note. It will repeat the determination of President Wilson to keep American troops in Mexico until the Carranza forces have shown their ability and intention to properly police the border states. It is also to rebuke the Carranza government for questioning the good faith of the Washington administration.

SELECT THE RIGHT DIGGER

To get the greatest profits you must use a properly designed digger. Hand digging and unsuitable diggers waste thousands of dollars yearly. No one digger is adapted to all conditions of soil. Thru our extensive study we are enabled to offer the Farquhar Elevator Digger in three sizes as shown below. These machines are equipped with different attachments suitable for any soil. We also have the renowned Success Junior and Gilt Edge Walking Harvesters for small crops. New booklet, "Harvesting the Potato Crop," gives full particulars of the different Farquhar machines. Write and tell us the acreage planted and we will send you a copy free.

A. B. FARQUHAR CO., LTD. Box 215, York, Pa.

We also manufacture Engines, Sawmills, Threshers, Hydraulic Cider Presses

Eli HAY BALERS

More bales per hour. Fast, big feed—won't choke. Dense, uniform bales that pack better and bring higher prices. Many exclusive construction advantages. Must be seen to be appreciated. L. J. Campbell, Caldwell, Kans., writes: "The most perfect baler I ever saw." You'll agree. 40 styles and sizes. WRITE FOR LATEST CATALOG and tell us what you bale. We'll recommend best machine for you.

COLLINS PLOW COMPANY, 2029 Hampshire Street, Quincy, Ill.

BALE YOUR HAY With the Lightning Line

MAKE BIG PROFITS Simplicity, strength, durability, make the Lightning Press the most economical to buy; big capacity, quick work, no trouble, lasts for years, best farm money-maker. We make a complete line of both heavy and light presses, horse, engine and tractor power. We will make good terms to right customers. Send name today for complete catalog, showing all styles and prices.

20 YEARS THE LEADER

KANSAS CITY HAY PRESS CO., - KANSAS CITY, MISSOURI

Cattle Congress in Marinette County.

To the Editor:—Success of the great Marinette County Cattle Congress, which will be held on August 17th of this year in connection with the annual new settlers' picnic was assured when Supt. R. M. Smith, of the Marinette County Farm at Peshtigo agreed to accept the entire management of the cattle show.

The appointment was made by a sub-committee of the Marinette county new settlers' picnic committee, the sub-committee consisting of A. F. Hose, of Intervale; W. B, Sanderson, of Loomis, and S. E. Bennett, of Waukesha, the latter being chairman of the general committee.

The great annual settlers' picnic will be held this year at Wausaukee on Thursday, August 17th. With satisfactory weather it is believed that from 5,000 to 6,000 people will attend the picnic this year. The picnic last year was attended by over 4,000.

Since the decision to make a cattle congress, particularly of dairy cattle, one of the big features of the picnic for this year, it has been recognized that the success of such an event would depend entirely upon the management. Satisfactory management meant not only the selection of a man who was an expert on dairy cattle, but who had exceptional organizing and managerial ability. Throughout the county the choice appeared to fall on Superintendent Smith.

According to tentative plans, about $400 will be offered in prizes in the various cattle classes. Considering the fact that only Marinette county cattle will be eligible to entrance, the amount of the prizes is considered large.

But Marinette county cattle owners will not exhibit for the prizes alone. They are enthusiastic in the dairy future of this locality and they realize the stimulating effect which a cattle congress will have on the further development of dairying in Marinette county.

No cattle from the county farm at Peshtigo will be entered in competition. At the request of the sub-committee Superintendent Smith will exhibit some of the asylum stock in non-competitive classes, but because of the fact that the county farm is a county institution, and not an individual institution, Mr. Smith stated at once that it would not be policy to enter the farm stock in competition. This decidedly generous attitude on the part of Superintendent Smith will be appreciated by stock owners throughout the county.

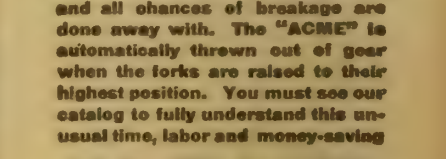
From now on until the day of the picnic preparations will be under way. Chairman Bennett, who is now serving as county farmers' agent, will have more opportunity this year than last year to devote time to picnic preparations, and he has a very strong committee to work with him.

Big features of last year's picnic will be carried out again this year, and in addition there will be new ones besides the cattle congress. There will be tractor, milking machine, silo filling and other machinery demonstrations, and special high-class entertainment features. There will be several speakers of great note, and no less than three bands. Special trains will be run to Wausaukee, and hundreds of autoists will make the trip in their cars. The roads will be placed in particularly good condition before the date of the picnic, so that an auto trip to Wausaukee to the picnic will be an easy run from any point in the lower part of the county, or points north of Wausaukee.

A new feature this year is a big exhibit hall, fitted with booths. These concessions will be sold to agricultural machinery exhibitors, and other business people, a very large number of applications for space already being on file.

H. I. Wood.

Marinette, Wis.



You get two machines in one when you buy the "ACME" Side Delivery Rake. By just changing the chain drive from one sprocket to another the "Acme" is made into a Tedder.

This up-to-the-minute machine is made entirely of steel—strong, rigid, and all chances of breakage are done away with. The "ACME" is automatically thrown out of gear when the forks are raised to their highest position. You must see our catalog to fully understand this unusual time, labor and money-saving

"ACME machines are all the name means—side delivery RAKE and TEDDER

FAMILY CIRCLE TALKS
BY THE PUBLISHER

THE DEMOCRATIC PLATFORM

NOTWITHSTANDING the fact that newspaper reports during the week have been predicting that the platform to be adopted at the democratic national convention would endorse the sweeping changes made in the R. F. D. service, the completed and adopted text of that document does not mention this subject. I am sincerely glad that this is the case. We should not allow our rural mail service to become a political issue, but there is no doubt in my mind but that the present administration has made a serious mistake in attempting to combine routes, in the so-called interests of economy, the main result being the serious impairment of the service. I called attention last week to the fact that the republican platform declares in favor of an extension of the rural free delivery system. Apparently the democratic platform is silent on this subject in which the farmers of the nation are so vitally interested, yet this silence is undoubtedly preferable, in my opinion, to an endorsement of a policy which gives the farmers mail infrequently rather than regularly and makes the carriers attempt the almost impossible task of covering fifty miles a day, rain or shine, storm or cold.

The main paragraphs of the democratic platform in which the farmers are interested are the following:

> The happiness, comfort and prosperity of rural life, and the development of the city, are alike conserved by the construction of public highways. We, therefore, favor national aid in the construction of post roads and roads for military purposes.
>
> We favor the vigorous prosecution of investigations and plans to render agriculture more profitable and country life more healthful, comfortable and attractive and we believe that this should be a dominant aim of the nation as well as of the states.

Now that the issues are duly joined and both parties have made their nominations and outlined their policies, we enter upon one of the most important national campaigns in all our history. I shall discuss the issues frequently in this department, but always with a view to the welfare of the farmer, rather than merely from a partisan standpoint. In this way we can have an interchange of ideas and opinions and find out what is for the best of the greatest number.

EUROPE'S SHORTAGE OF LIVE STOCK.

MR. EVANS' article, found on another page, confirms the impression I have received from many miscellaneous articles as to the live stock shortage in Germany and, to an almost equal degree, in the other belligerent countries of Europe. If you will turn to Mr. Evans' article you will find these words:

> Four times I crossed the empire from north to south and I did not see a hog or a sheep, and but two small herds of cattle. In Austria the only meat served in the hotels is goat meat. That there was no live stock in that part of Germany which I passed through was further proven by the fact that there was no fodder. I did not see a stack of hay or a shock of fodder and the pasture lands are being broken up and planted in cereals.

Last week, you may recall, in his first article, Mr. Evans declared that two days in each week no one in Germany, not even the kaiser, can buy any meat, and the amount he can buy on other days is limited by law. I do not want you to think I am arguing that because of this shortage of live stock Germany is necessarily in a fair way to lose out in the present titanic struggle; there is ample evidence that the other countries are in every bit as bad condition. Here, for instance, is a dispatch in today's newspapers stating that the Russian duma, or congress, has adopted a bill calling for the abstention from eating meat four days in each week, or two days more than the Germans are now prohibited from buying it. I have no doubt but that the situation is equally serious throughout France, where the devastated fields, harrowed back and forth by the terrific onslaught of millions of fighting men, must have given up their last animal many months ago.

There does not seem to be any question but that the live stock supply of Europe will be an almost negligible quantity by the time the war comes to an end. The situation will get worse rather than better. The fine breeding animals, so eagerly sought after by American stockmen before the outbreak of the war, are being commandeered by the various governments and made to do the most menial labor of war. In despair, the European farmer and stockman will turn to America for all manner of stock with which to replenish his depleted herds, once this awful war is over. Is there not, therefore, an opportunity here for the American farmer and stockman—and particularly of the grain belt, where nearly 40 per cent of the cattle, 50 per cent of the horses and 50 per cent of the hogs of the United States are to be found? In my opinion the opportunity was never surpassed in all our national history.

With the cessation of hostilities and the opening of the international lanes of trade to the commerce of the world I look for such a quickening of the live stock industry—such a boom for the farmer and stockman who has the supplies which the world demands—as was never witnessed before. Shall we prepare for this golden opportunity by building up our herds and devoting more and more attention to the advantages and the profits of live stock farming? That is certainly my advice. Let us see to it that our herds are built up and bred up to the very highest stage of efficiency, that we exercise our capabilities along this line to the very extreme and leave nothing undone which will enable us to take advantage of the opportunity—it is likewise, I feel, a duty—which bids fair to be ours in such unstinted measure in the near future?

THE CALL FOR HARVEST HANDS.

NOW that the harvest season is almost upon us and the insistent call for harvest hands is going up from thousands of farms, there is a pertinent timeliness in a warning article in one of the large city newspapers which I have just read. This article calls attention to the fact that the harvest fields demand more than mere brawn, that one of the saddest sights of the early summer is the work-hungry man struggling countryward from the city only to find that he is not fitted for the arduous toil of the harvest fields under the hot sun and cannot stand the strain. Around harvest season is the worst time of the year to answer the call "back to the land" if one knows absolutely nothing of farming.

One of the unexplainable things about the average city man is his inability to realize that farming requires a particular aptitude and a careful training as much as any other business or calling. So many city men seem to think that a person can "fall back" upon farming when other callings are impossible and that all it takes is a strong right arm and a back that does not ache too quickly under toil. I wish they could, and would, read the article which I have just read, in the large city newspaper, describing the army of disappointed and sometimes well-nigh heart-broken toilers who seek work in the harvest field, only to find disappointments where they had expected to mint the golden wheat heads into eagles and double eagles. Here is a portion of the article that appeals to me with particular force:

> Clerks, students, school-teachers and others not accustomed to manual labor join the army of would-be workers, only to find that they cannot measure up to the work. Foreigners who speak no English, reading the call in papers published in their own tongue, infer that a knowledge of English is not necessary. They go with the others, only to find, in many cases, that the farmer cannot use the non-English speaking men. Men who are accustomed to hard, manual labor, find upon arrival, that they cannot endure the direct rays of the burning sun. All of these are disappointed, disheartened, and frequently stranded in a country where there is no work suited to their experience and abilities.
>
> Then we hear from them: "Fraud! fraud!" There is no fraud. To the farmer a harvest hand is a man physically able and willing to do harvest work, just as to the blacksmith, a horseshoer is one who can shoe horses; to the automobile owner, a chauffeur is one who can handle a car; to the office man, a stenographer and typewriter who can do this work. So when the farmer calls for "harvest hands," he does not want clerks, tailors, barbers, and men of other callings, unless they are men who know his work and are able and willing to do it.

There are certain requisites for a successful harvest hand which might well be summed up in this manner: First: strength, robustness and endurance. Second: The ability to stand hard manual labor under the direct rays of the sun, to do without ordinary comforts for the time-being and to put up with long hours of labor. Third: A readiness and willingness to take chances as to weather, realizing that there must be ready funds to tide over when storms interfere with steady employment and to get the worker on to the next field and job when employment one place comes to an end. If the eager college students and city men who read the offers of $2.50 to $4 a day and board in the harvest fields would only realize that all these things are absolutely necessary and that, failing in any one of them, they are doomed to disappointment just as much in the harvest fields as though they tried to be locomotive engineers or automobile mechanics without a particle of preparation or aptness for the work, the situation would be relieved and many heartaches would be avoided. We are almost to the season when the Macedonian cry for men in the wheat fields and the oats fields will be heard on every hand, but the cry is for men who understand their work, just as much in farming as in any other business or profession.

THE VALUE OF A HITCH RACK.

A SUBSCRIBER gives me some interesting facts showing the value of the hitch rack. He is a farmer living near a prosperous grain-belt town with a population of about 3,500. This town has recently erected a fine $100,000 courthouse, and having some rather citified ideas concerning town beautification it decided to dispense with the hitch racks which surrounded the old courthouse, not stopping to think how this action might affect the farmers on whose trade the prosperity and progress of the town really depend.

Results were not long in coming and the merchants quickly found that farmers who do not feel themselves welcome in a town soon get out of the habit of going there to do their trading. A half dozen little towns in the neighborhood began to find trade picking up wonderfully, and the county seat found business declining proportionately. The merchants' faces became long, indeed, but it was several weeks before they definitely came to the conclusion that the courthouse hitch racks were to blame. Once they found out the trouble, I am delighted to be able to report, they lost no time in removing it.

According to the word which my subscriber friend sends me in his interesting letter, eighteen merchants of this county-seat town have subscribed $100 each for a hitch-rack fund. They have bought a lot near the center of the town and are paving and roofing it and providing hitching accommodations for more than 100 teams. They are confident that just as soon as the farmers learn what they are doing they will come back to them to do their trading, and so their investment of $1,800 for a municipal hitch rack will be money well expended, for without the farmers' trade this town knows it cannot progress or even maintain its recent prosperity.

It seems to me there is a decided lesson in this incident for all small towns. It is just this: There is no man whose interests and welfare should be more carefully considered than the farmer, nor one whose trade should be more eagerly sought. A hitch rack around the courthouse square may seem like a trivial thing to some townsfolk, but when a farmer is obliged to patronize a private feed yard for accommodations while he does his trading and spend the proceeds from a pound of butter for this accommodation he is going to look about, without undue waste of time, for some town which appreciates his trade a little more. I recall the statement which the late Senator George E. Scott, of Prairie Farm, Wisconsin, proprietor of what is undoubtedly the model country store of the world, once made. He was referring to the great stable to the rear of his store into which, in stormy weather, his farmer customers were wont to drive to shelter their animals. "The horses that bring customers to my store deserve better treatment than to be left outside," he said, and nothing could possibly have outlined the character of the man better. He was not only a lover of horses, but he knew full well that the country merchant who succeeds must cater to his farmer customers and give them every possible accommodation and convenience.

Perhaps it is too much to say that a hitch rack is worth $1,800 to every town, as it has been proved to be worth to the town of which my correspondent tells me, but it has its value, in dollars and cents, and that value is high. The merchant who makes the trading trips pleasant and profitable to the farmer is the one who is going to get ahead in the world, mark my words on that.

Coming Back to Wisconsin.

THE WISCONSIN FARMER is advised that no less than fifteen families, who were formerly residents of Marinette county but who thought they could better themselves elsewhere, have returned during the recent spring months and again commenced farming in Wisconsin. In practically every case they returned poorer than they were when they left. They also bring reports of other Wisconsin families, some of them, unfortunately, in such a bad way that they are not able to come back for lack of funds. Others would be glad to come back if they could dispose of their holdings in the new countries to which they were lured with such great expectations. We quote from a letter which we have received from a Marinette county man in whom we have every confidence. He writes:

A widely-known man who has just returned from Alabama, where he has been farming the past fifteen years, is William Ramsay, a brother of the late R. C. Ramsay, who was for many years superintendent of Marinette county schools and one of the best known educators of the state. Mr. Ramsay is moving to Dunbar, in the upper part of Marinette county, and will begin farming operations soon. He was raised on a farm in Marinette county, and after fifteen years of farming operations in the South he is convinced Upper Wisconsin today offers better opportunities than any other section in the country where cheap lands are to be had.

This same condition doubtless exists with reference to farmers in other sections of Wisconsin. Of course, not all lands outside of Wisconsin are poor lands. There are other portions of the Union in which a good living can be made and in which farmers become rich, but when it comes to picking out places where the opportunities are better than they are in Upper Wisconsin such places will be pretty hard to find. It takes work to build up a farm in Upper Wisconsin. It takes hard work. The fellow who is afraid of hard work might as well leave the country. In fact, Upper Wisconsin would be just as well off without him. The only way that a man can clear Upper Wisconsin land and make it valuable without hard work is to hire someone else to do the hard work. But we know of no place where the remuneration is greater or more certain than in Upper Wisconsin. Not long ago a farmer in one of the corn-belt states approached the writer and said he had a proposition to trade for 400 acres in Marinette county land, and he asked us whether it was worth while to go and look at it. We found that he had several good, healthy boys who did not have enough to do on the small farm he owned. We advised him to make a trip to Upper Wisconsin and see for himself. We advised him further that he would make no mistake on most of the land in Marinette county. We told him that if the boys were not afraid to work, the 400 acres would probably make the whole family independent. At last reports from this man we heard that he had a team and stump puller at work every day. He has cleared considerable land which will be in potatoes this year. He expects to establish a dairy farm, and we have not the slightest doubt but that he will succeed.

Farming in any new country is not an easy job. It means hardships. Upper Wisconsin has a tremendous advantage in that it is not far removed from civilization. It is close to markets, and this the settler will find to be greatly in his favor.

Don't move away from Upper Wisconsin, nor from any other part of Wisconsin, until you are pretty sure you are going to be better off.

Wisconsin Man on Dairy Characteristics.

A JOINT summer meeting of the Holstein, Guernsey and Jersey breeders of Monroe county and vicinity was announced to be held Saturday, June 17th, at the Indian school grounds, Tomah, Wisconsin. The Wisconsin Farmer goes to press too early this week to receive any report of this meeting. One of the prominent men connected with this meeting is Mr. E. E. Wyatt, of Tomah. Mr. Wyatt is well known to Wisconsin farmers, having been connected with the institute work for several years. Not long ago we heard him speak on the characteristics which stamp the dairy cow with the mark of efficiency. He said the relation between conformation and production of milk is clearly demonstrated by comparative results from different types of animals. We quote the following from Mr. Wyatt's remarks:

It is not the type that has developed the capacity to produce milk economically, but the intensified ability with its hereditary breeding powers that have produced the conformation of these animals and made it their universal formation, thus standardizing this type. Efficiency of dairy herds may, therefore, well be maintained on this basis.

Mr. Wyatt referred to May Rilma, grand champion Holstein, and Sophie 19th, champion Jersey cow, and others, to indicate features common in all, such as the clear-cut conformation, lack of superfluous meat, a strong, bony frame neatly put together, but in such a manner as to insure a capacity for consuming and assimilating a large amount of feed. Such an animal makes a good milk producer. Quoting again from Mr. Wyatt:

Viewing this type from the side view, one notices the wedge shape, starting with the chest, gradually deepening through the abdomen and udder. From the front one sees a wide chest with a gradual widening through the body to the paunch. This should show a well-filled and distended body conformation, and on the top line a close, clean, sharp shoulder, and viewing the top line, a gradual widening as the ribs spring from the back. The hip bones set out as a base of the wedge, which develops another wedge through the body, chest and abdomen. At the chest the body must indicate plenty of room for the heart and lungs, vital organs in the dairy cow, as in her work more blood and necessarily more air must be mixed in her lungs than in the lungs of any of the rest of our animals with size considered. This means plenty of depth and width. The back, too, must be strong, with large, well-shaped vertebrae indicating a strong nervous makeup and also making a good, roomy body. The ribs are so placed as to make a large "barrel," well spread, and having plenty of "give and take" in it. In this "barrel" the rough and concentrate feeds and water are manufactured into those elements which make the milk for the udder. The loins are broad and well supported; the hips wide apart, with plenty of width.

The udder is the real milk factory. Here is plenty of room to denote capacity and ability. Thin thighs and wide set limbs give room for the udder. The attachment should be firm and even, avoiding a loose and pendulous attachment with no fleshiness or meatiness beyond a necessary amount of frame to load up the supplies of the milk-making elements between periods of secretion. The lower parts form well-placed, well-shaped and easily operated teats. The texture of the udder should be very pliable, the skin loose and soft, indicating a good circulation; the hair soft, not long and wiry; the milk veins large, with plenty of carrying capacity for the blood from the udder.

The face and head of this type of dairy cow also should show to the trained eye a similar neat and outstanding nervous system. Their size should conform with the body set on a clean neck; the face broad between the eyes, indicating plenty of brain development; nostrils capacious with a clean-cut appearance. The eyes indicate a good deal also; they should be bright, alert and clean, but not staring nor wild.

All these individual features of the dairy cow must harmonize and mingle in a symmetrical conclusion which is not to be described and can be appreciated only by one who studies them in an entirety.

It is plain that Mr. Wyatt has been a student of the dairy cow, and his remarks, though uttered some months ago, are worthy of general publicity at any time.

Would Organize Wisconsin Hampshire Breeders.

MR. A. L. DAMON, of Dellbrook Farm, Richland Center, Richland county, asks The Wisconsin Farmer to join him in an appeal to breeders of Hampshire swine in Wisconsin to organize a state association. His letter, which is self-explanatory, follows:

To the Editor:—I want to organize a state Hampshire swine association in the near future, and I thought perhaps you might put a notice in your paper asking all Hampshire breeders to write me, as I do not know how many breeders there are in the state. I want to get Hampshire hogs on the experimental farm at Madison and I can't do it without organization. Any help you can give me in this matter will be greatly appreciated.

Yours truly, A. L. DAMON.

The Wisconsin Farmer is pleased that it can be of service to Mr. Damon in this respect. We realize, as Mr. Damon does, that nothing makes for success like organization and co-operation, and we would urge that every breeder of the belted hogs get into communication at once with Mr. Damon, who is prominent in Hampshire circles and well known throughout the state. His postoffice address is Richland Center.

The Poland China, Chester White, Duroc Jersey and Berkshire breeders of Wisconsin all have their state organizations, and there is no reason why the Hampshire breeders should lag behind in this respect. These organizations meet each winter when matters of vital importance to the breed and the breeders in Wisconsin are discussed, and there is no doubt but that all the organized swine associations are accomplishing good results. Mr. Damon hopes to induce the college of agriculture to add Hampshires to the university farm herd, and he is correct in assuming that his efforts along this line will receive more attention if backed by a strong state organization of the lovers of this breed. No doubt he has many other things in mind for such an association such as organizing a state fair futurity; increasing the entries of Hampshires at the state and county fairs, etc. There is no end of work which such an organization can undertake and bring to a successful end. Unless the Hampshire breeders get together as the other breeders have done they have little cause to find fault if they seem to be neglected. The Poland China breeders and the Duroc Jersey breeders have their association to thank for the state fair futurities this year. We are citing the work of the other breed lovers merely to arouse the enthusiasm of the Hampshire breeders and bring to their attention the functions of such an association as Mr. Damon desires to organize.

No organization can succeed without a leader or leaders. In Mr. Damon the Hampshire breeders have a voluntary leader who has the interests of the breed at heart, and The Wisconsin Farmer trusts his fellow breeders will join and support this movement.

Live Stock in Germany.

UNDER the title of "Live Stock Scarce in Germany" we print on page 10 the second of the series of articles written expressly for The Wisconsin Farmer by Mr. Harry C. Evans, a prominent member of the recent Ford peace party. Mr. Evans crossed the German empire, back and forth, four times in the course of his recent trip and had exceptional opportunities to witness the agricultural conditions and the herculean efforts which the people are making to maintain their ability to feed themselves. Mr. Evans was greatly impressed with the efficiency of the Germans in an agricultural way, finding it to be equal to their efficiency in a military way. His article is the most authoritative on the agricultural side of the war that has ever been printed.

Next week we will print the third of Mr. Evans' articles under the title of "When the War Is Over." This will set forth a very interesting interview with a young English lieutenant who predicts that when the war is over a great majority of the men now fighting in the trenches will demand a tract of land and will turn from city pursuits to farming for a living. We believe that the third article will be found fully as interesting and as entertaining as the first two. We sincerely hope that all of our readers are following Mr. Evans' articles and will not miss a word of the entire series.

A Summary of Wisconsin Feed Laws.

THE sale and analysis of concentrated feeding stuffs has been issued by the agricultural experiment station in the form of a bulletin by W. H. Strowd. The bulletin is entitled, "Facts for the Feed Buyer," and is identified as Bulletin 267.

The following feeding stuffs are subject to the provisions of Wisconsin laws: Linseed meal, cottonseed meal, cocoanut meal, oil meals of all kinds, gluten meal, gluten feeds, pea meal, maize feeds, starch feeds, sugar feeds, molasses feeds, hominy feed, cerealine feed, distillers' grains, dried brewers' grains, malt sprouts, alfalfa meal, dried beet pulp, corn bran, wheat bran, middlings or shorts, rye bran, middlings or shorts, buckwheat bran, middlings or shorts, rice meal, oat feed, barley feed, corn and oats feed, dried blood, tankage, ground beef, fish scrap, mixed feeds of all kinds, condimental stock food, patented and proprietary stock foods (claimed to possess nutritive as well as medicinal properties), and all other materials intended for feeding to domestic animals except hays and straws and the whole seeds and the unmixed meals made entirely from the whole grain of wheat, rye, barley, oats, Indian corn, buckwheat, sorghum, broom corn, and flaxseed.

Manufacturers who wish to sell concentrated commercial feed in Wisconsin should comply with the following conditions:

1. Secure application blanks for license from the director of the agricultural experiment station, feed inspection service, Madison, Wis.
2. Fill out blanks with names of feed sold, together with a guaranteed analysis of the same, distinguishing trade-mark, and giving the minimum percentage of protein and fat and the maximum percentage of fiber, return license with a $25 license fee and receive certificate entitling licensee to sell feeds covered by the application during the calendar year.
3. When feed is sold in bags the law is that there be printed on the bags, or on tags firmly attached thereto, the following information:
   (a) Name of person or firm under whose license feed is sold.
   (b) Net weight of the feed.
   (c) The registered name of the feed.
   (d) Minimum percentage of protein.
   (e) Minimum percentage of fat.
   (f) Maximum percentage of fiber.

When feed is sold in bulk a certified copy of statement including the above data should be supplied to the purchaser. Any manufacturer who desires to add to his line within the time limit of his license may do so by separate application, for which there is no additional charge.

Manufacturers or dealers who sell or expose for sale any concentrated feed without complying with the law are subject to a fine of not less than $25 or more than $100 for the first offense and a maximum fine of not to exceed $200 for each subsequent offense.

The inspector in charge of the state service advises us that it is not possible to comply with the request of the large number of private individuals who desire analysis of their feeds. However, an analysis is made each year of practically every feed sold in any considerable quantity in the state. Wherever analysis is of public interest the inspector expects to furnish it. When it is for personal information it cannot always be furnished. Any information or analysis in the hands of the inspector, whether published or otherwise, is avail-

able for any interested person in the state. We suggest that farmers of Wisconsin who are interested in more complete information on commercial feeding stuffs secure a copy of Bulletin 267. They will find there listed practically every concentrated feed which is offered for sale in Wisconsin and an analysis of the same.

An Active County Superintendent.

WAUKESHA county has become so largely known for its dairying activities that the outsider often loses sight of her farming operations. This is true particularly of the work among the boys and girls in the county as it affects their interest in other branches of farming aside from dairying. The county breed organizatons have kept up the interest of the coming generation in dairying through contests and activities of like nature in connection with their annual meetings. Sometimes it is an essay contest or more often a judging contest, but always with appropriate prizes, and with the result that the boys and girls are kept constantly reminded of the future of Waukesha county as a dairy center.

However, we should not lose sight of the splendid work which is going on among the girls and boys in other farming operations, such as corn growing, gardening, etc. In a county which is caring for so many dairy cows at Waukesha county, it is necessary to produce considerable feed, and the work in interesting the boys in this branch of the work has been left largely to County Superintendent of Schools Rose, who finds time while directing 118 school districts in that county to conduct a corn-growing contest among the boys and a tomato-canning contest for the girls. The writer had the pleasure of spending an hour recently with Mr. Rose and of learning how he is doing practical agricultural work in the rural schools. His idea is that a school superintendent should be interested in everything in which the rural children are interested. He believes the pupils should be educated along practical lines at the same time they are studying from books. The result is that wherever breeders and farmers and their families gather Mr. Rose may usually be found. He is always on the job and the fact that much of the success of the judging contest at the recent Guernsey picnic was due to his enlisting and coaching of the boys speaks well for his activity along these lines.

Mr. Rose has more than 400 school boys in the ten-acre corn contest this year and more than 300 girls in the tomato growing and canning contest. He furnishes the seed which comes through the college of agriculture at Madison and bankers and business men are co-operating by supplying the funds for prizes. In addition there are twenty boys engaged this year in acre corn-growing contests and about an equal number in the calf-raising contest, which are under the direction of the county Y. M. C. A.

There is more contest work among boys and girls in Wisconsin this year than ever before. This is a favorable sign and The Wisconsin Farmer would be pleased to see every county doing something along the lines carried out in Waukesha county to center the interest of the boy and girl on the farm. Mr. Rose says he finds the bankers in every town willing to help out with cash prizes. He is willing to supply the energy and assume the managerial role which bears out our belief that there is always opportunity for such co-operation where there is a leader who is willing to sacrifice a little of his own time for the common good.

Distribution of Guernseys.

THE splendid showing of Wisconsin as a Guernsey state is illustrated by a map recently published by the Guernsey Breeders' Journal. This map shows that Wisconsin has eighty-eight members of The American Guernsey Cattle Club, and fifty breeders who have a total of 215 cows on test. New York state has eighty-six members, and forty-four breeders who have a total of 174 cows on test. Pennsylvania has eighty-nine members, but only eighteen breeders with a total of eighty-five cows on test. Minnesota is coming to the front with Guernseys, having now twelve members of the club, and twelve breeders who have a total of fifty-nine cows on test. This is a better showing than is made by Iowa, which has five members with seven breeders owning forty-one cows on test. Other states in this part of the country have the following showing:

Michigan, 20 members, and 9 breeders with 71 cows on test.

Illinois, 26 members, and 9 breeders with a total of 47 cows on test.

Indiana, 3 members, and 3 breeders with a total of 16 cows on test.

Ohio, 24 members, 16 breeders with 57 cows on test.

The Guernsey is getting a foothold in the West. In California there are ten members of the Guernsey Cattle Club, and five breeders who have forty-four cows in advanced registry work. Washington and Oregon each have four members of the club and four breeders with cows on test. The Guernsey cow is popular in the East, but has not made much of a showing in the southern states. South Carolina, Georgia, Florida, Alabama, Mississippi, Arkansas, Oklahoma, New Mexico and Arizona have no members of the American Guernsey Cattle Club, while Texas, Louisiana, North Carolina, Kansas, Nebraska and Kentucky have only one each. The Guernsey, of course, makes its strongest showing in the great dairy centers of the country, and Wisconsin is at the head of the list on the Guernsey map. This is not only true in numbers but in quality of stock.

The Serial Well Started.

THE second installment of our new serial, "Told in the Hills," will be found on page 17. The principal characters are now introduced to the reader and the rapid action of the story gives promise of ample romance and heart interest. The scenes, however, shift from New Orleans, where the prologue was laid, to the Kootenai country in the Northwest. The author, Mrs. Ryan, has handled her material in a splendid manner and has written a thrilling and exciting story which we are confident will appeal to every reader. We sincerely hope that every reader of The Wisconsin Farmer will read every installment of this excellent story, which will be followed by still another high-grade novel.

Co-operative Electricity Societies.

MR. C. L. STEWART, of the department of economics, University of Illinois, has written an interesting article on co-operation among farmers as it may be applied to electricity. Societies for obtaining electricity in the rural districts have been developing in France and Germany for the past fifteen years. In 1910, according to Dr. Stewart, there were 257 such societies in Germany alone. In some sections of Germany grain dealers have paid a premium on grain which was threshed by electric power. Such a recognition of the value of electricity, of course, has brought this power into prominence and popularity. Dr. Stewart says that the farmers of Europe use electricity more for power than for light, and thus electricity becomes more of an economic proposition than a matter of convenience.

In regularity, dependableness, especially in cold weather, cleanliness and freedom from the necessity of supplying materials, the electric motor is characterized by Dr. Stewart, as superior to steam. Furthermore, it has great advantage over steam when applied to smaller implements, and when power is needed in out-of-the-way places such as the barn loft or the basement. It requires time and fuel to get up steam for power, and a steam engine runs at full blast regardless of the load. Shafts and belts are expensive and in the way. A steam engine has more parts to wear out than an electric motor.

That we may in time expect a general use of electricity on farms in the United States is suggested by Dr. Stewart, who says that conditions now in the country are about the same as they were in Germany when farmers' co-operative electricity societies were first suggested. In some places in our country there is water power where electricity may be easily developed. But it is necessary to put in a system and to run extensive wires, and this means an expense which one or two farmers cannot stand. Probably no state is better fixed for water power than Wisconsin. Farmers who live within 200 or 300 miles of the Keokuk dam, at Keokuk, Iowa, might be supplied with electricity for power and light if they would club together and agree to use the service so that a company could afford to install the systems. There is power enough along the Wisconsin river in Wisconsin to furnish light and power to thousands of farmers and eventually it will be utilized. The latest survey of Sauk county, Wisconsin, shows almost 100 farmers using electricity for light and a good many using it for power. Electricity is being used for milking machines in many counties throughout the grain belt. A large number of farmers have found it profitable to install individual plants, and if this expense is found worth while how much more certain is the use of electricity on farms to become general when by co-operation, the expense of current can be greatly reduced. The extension of interurban lines which usually have ample power and to spare, has been a boon to farmers in many sections.

Discussing experiences with co-operative societies, Dr. Stewart says:

Experience in Germany seems to support the argument that farmers' electricity societies should not attempt to own more than the conducting installation. The individual members have considerable expense to meet in tapping the society's wires, wiring and fitting their homes, outbuildings, and providing wire, motors and motor-driven machinery for operations in the house, field, barn and lots. Ordinarily, therefore, the expenses incurred by the organizations must be met by loans. The larger the investment the heavier the debt, and the greater the liability to which the members must subject themselves. German co-operative banks to which the farmers usually appeared wanted unlimited liability, and go no farther than to loan subject to tenfold liability on the part of the borrowers. In spite of the careful study made by German bankers many of the societies were ill conceived. Too frequently they failed to assure enough custom, having too small a membership. These societies were formed in most cases under the inspiration of agents representing the producers, or machinery companies. The agents, of course, wanted to interest enough farmers to get things started in a particular neighborhood and were then disposed to pass on to other neighborhoods. The result was the sale of more machinery for power plants, house, barn and field operations than might otherwise have occurred so quickly. On the other hand, many German societies found that interest, amortization and salaries for skilled electricians were entirely too heavy for the amount of current employed by the members. The result was well-nigh disastrous in a number of cases.

The conclusion reached by co-operative leaders is that the electricity societies should seldom build their own overland central stations. They should by all means be assured sufficient custom. The average membership in societies owning their power works is between 300 and 400, and it is best for the membership to go into four figures.

It is a dream of the future, perhaps at considerable distance, but we fully expect that some day the rural districts will be supplied with electric wires as they are now supplied with telephone wires, and that parctically every farmhouse and barn will have electric light and power. If we had predicted thirty years ago that farmers would nearly all be connected by rural telephones in 1916 almost everyone would have laughed at us.

Late Seeding of Buckwheat Advised.

IT IS NOT too late to sow buckwheat with reasonable expectations of obtaining a good crop. In a press bulletin recently published by the department of agriculture it is pointed out that buckwheat will give very good results even if seeded as late as the last week in June or the first week of July. Late seeding is advised and indeed it is almost absolutely essential if a good crop is obtained, because buckwheat "fills" better in cool weather. In any event, the crop will mature in about ten weeks. Under abnormal conditions, it seldom requires longer than twelve weeks.

It goes without saying that land should be well prepared for a crop of this kind. So much the better if the seed bed has been prepared for corn, but for some unaccountable reason corn has not been planted. In that case, the soil will be in fine condition for the reception of the seed.

Buckwheat when sown broadcast is generally seeded at the rate of from three to four pecks per acre. If a drill is used, however, one-half of this amount of seed will generally give good results. Those who use drills have found that two pecks per acre will result in a satisfactory stand. The advantage of the drill is that all the seed is covered to a sufficient depth so that germination is insured.

Buckwheat is recommended as a satisfactory crop to grow on infertile lands. It is well suited to light, well-drained soils such as sandy loam or silt loam soils. Even if the land is too strongly acid to produce legumes satisfactorily, it will not interfere with the growth of buckwheat. Of course, the richer the soil the larger will be the crop within certain limits, but let it be remembered that buckwheat has inordinate power to take plant foods from soils where the fertility supply has reached low ebb.

The harvesting of buckwheat is not a difficult task, as it may be cut with an ordinary binder and afterwards shocked in the same manner as one would shock a grain crop. In all probabilities there will be bloom on the plants even at the time of cutting. It matures well in the sheaf after being shocked and usually it is left in the field until it is dry enough to thresh. In other words threshing is done direct from the shock, as there is usually too much sap in the buckwheat stem to risk curing out in the stack or in the mow.

Buckwheat has the virtue of being an excellent smother crop and where there is a rank growth of such perennial weeds as quack grass, morning-glory or thistles, these may be weakened and in many cases completely killed out by thoroughly tilling the soil and sowing buckwheat rather thickly late in June or early in July. It is very important that all the leaves that are above the surface should be destroyed and so much the better if everything can be cut back to the depth of three or four inches. This end can be attained ideally by free use of the disk. Not only will buckwheat be most useful as a smother crop, but it brings the soil into a fine, mellow condition. Indeed, the seed bed following this crop will be very much in the same condition as will result from a thorough system of summer fallowing.

Time to Think About Furnaces.

PERHAPS our readers will think this is not an appropriate summer topic. However, we insist that it is. The time to think about the new furnaces or the new stoves is in the summer or early fall before such things are badly needed. Those who expect to put in new furnaces before next winter should give the matter attention now. Those who already have a furnace and want to avoid trouble with it next winter should give the furnace attention before it is time to make fire in it. Doubtless the smoke passages and the fire box need a thorough cleaning. One of the best times to do this is in the summer when it is certain there will be no need of fire. There is a certain amount of dust and soot which collects in the smoke passages of the best furnaces. This ought to be swept or scraped out. The housewife is fortunate who can get her husband to attend to this matter during housecleaning.

If there are any of our readers who did not assist in the housecleaning work to this extent they ought to finish up their part of the job at once. The smoke pipe should be taken out and cleaned of all soot. It is better to clean out the chimney and stop it up with paper than to leave the pipe in place all summer. One of the furnace companies recommends that a peck of unslaked lime be placed in a box in the fire-pot of the furnace to prevent rust. At one of our agricultural stations there is a school for janitors where the subject of caring for furnaces is given particular attention. The head of this department states that a furnace can wear out as rapidly in the summer as in the winter unless it is given proper care.

Western Wisconsin Dairy Picnic.

Dairymen to the number of about 400 with their families gathered at Tomah, Monroe county, on Saturday, June 17th, for the annual farmer-breeders' picnic. The gathering was one of the most successful ever held, despite adverse weather conditions. Towering clouds which threatened showers at any moment during the forenoon no doubt kept many breeders away, which, combined with muddy roads, made it impracticable for breeders who had planned to come from a distance by automobile to attend. However, the weather cleared during the afternoon, which made it possible to carry to completion a most interesting and instructive program.

The meeting was a joint gathering of the lovers of the three principal dairy breeds in that community and was under the auspices of the Western Wisconsin Holstein Breeders' Association, the Monroe County Guernsey Breeders' Association and the Monroe County Jersey Breeders' Association. It was held at the farm of the government's Indian school, two and one-half miles from Tomah, and a more suitable spot for holding such a meeting could hardly be desired. The Indian school farm consists of 340 acres worked by the students of the school and the breeders present had the special pleasure of viewing the splendid herd of about eighty Holsteins on this farm, all of which are registered. The buildings are all modern and the cow barns an especial delight to those who appreciate well-lighted, well-ventilated, sanitary cow homes. Mr. L. M. Compton, who has been superintendent of this farm for twenty years, was host on this occasion and he left no stone unturned to make it successful.

The school is maintained by the government and there are now 255 Indian boys and girls enrolled, coming from all parts of the northwest. The government pays all the expenses, including the transportation, and Mr. Compton told the writer that these Indian boys enjoyed the farm work immensely and took hold of the work with considerable enthusiasm. This farm also serves as a demonstrational farm for this territory and Mr. Compton has just seeded forty acres to alfalfa, which illustrates his faith in this crop. Thirteen acres of alfalfa completely killed out during the past winter because of the severe sleet storms, but this strengthened rather than destroyed his faith in alfalfa.

No attempt was made to hold business meetings, the day having been set aside for pleasure and the best things in agriculture. Breeders reported a steadily increasing demand for good stock and that the number of pure-bred females was rapidly increasing in this co unity. Mr. E. E. Wyatt, of Tomah, prominent Jersey breeder, presided at the afternoon's meeting, which was addressed by H. T. Russell, dean of the college of agriculture; C. P. Norgord, commissioner of agriculture, and Ford Allen, dairy commissioner for the Chicago North-Western Railroad.

During the day music was furnished by the student band of the Indian school and luncheon was served by the girl students under the direction of Mrs. Compton. A stock judging contest in which girls and boys, as well as men participated, concluded the day's festivities. For prizes the business men of Tomah subscribed about $60, which illustrates the co-operation there between merchants and farmers. Nothing was left undone to insure the visitors that they were heartily welcome in Tomah.

The afternoon program was held in the school auditorium because of the threatening weather. The hall was too small to accommodate the large crowd which overflowed into the lobby.

Dean Russell discussed most interestingly the tuberculosis situation, taking it up from the money standpoint, as the most sensitive spot about man is his pocketbook, and that when he realizes tuberculosis affects the pocketbook he realizes it is time to consider this disease. Dean Russell dealt in truths and pointed out what it means in dollars and cents to weed out the tubercular cows. Of the 50,000 cows tested in Wisconsin last year he said 1,716 reacted, which, although that might seem bad, 3,000 out of 41,200 tested in New York state reacted.

Dean Russell pleaded for clean herds and pointed out that Wisconsin's dairy development must come with such a reputation as a foundation. He read from a Wyoming state report criticizing Wisconsin because twenty-one of a purchase of 103 head developed the disease, declaring that it is just such occurrences that will undermine Wisconsin's standing. This is the situation, he said, that confronts every breeder of pure-bred and high-grade stock and that every breeder must realize that buyers are not only demanding quality now but also healthy animals. Aside from the economic phase of having clean herds, he said, there was a second phase—sanitary and health. He pointed out the danger of babies contracting tuberculosis through milk from infected cows and declared it a moral obligation of every dairyman to see that his herds were free of disease.

The spread of disease through whey from cheese factories, skim milk and buttermilk from creameries was also explained and Dean Russell declared a law requiring the pasteurization of by-products is badly needed and would do much to check the spread of the disease.

Mr. Norgord discussed the growing of alfalfa and farming from a business standpoint. He explained the need of liming acid soils for alfalfa as well as the necessity of inoculation and declared much of the soil, especially that along and below the ridges of Monroe county, was especially suited for this crop. He discussed the advantages of co-operation, the need of better marketing facilities and better rural credit. Some scheme, he said, must be worked out to extend more credit to the farmer who needs money in his business as well as the business man and said the co-operation of bankers could do much to ease the situation. Mr. Allen spoke briefly of the efforts of the railroads to encourage better dairying, the use of pure-bred sires and the elimination of "boarders" by cow testing.

Each of the three breeds were given a boost by representatives of the three associations. Mr. C. V. Vanderschaff, of Sparta, spoke for the Holsteins; Mr. Gothern Liddle, of Sparta, for the Guernseys, and Mr. Wyatt for the Jerseys.

In and Around Wisconsin.

Walworth county Holstein breeders are establishing a splendid reputation for that county through the admission of their cows to the advanced registry. Considerable official testing has been done this spring with the result that between April 25th to 27th a total of thirty-nine Walworth county Holsteins made the advanced registry. This was 14¾ per cent of all the cows which were admitted during that period.

Group 6 of the Wisconsin Bankers' Association, which met recently at Stevens Point, elected the following officers for the coming year: President, R. C. Ballstadt, Merrill; vice president, Harry Haslett, Loyal; secretary-treasurer, John V. Berens, Wild Rose. Executive committee, the above officers and E. C. Jost, of New London, and S. J. Flack, of Unity. As it is the custom to hold the annual convention in the home city of the president the 1917 gathering will undoubtedly be at Merrill.

Lawrence F. Murphy, proprietor of the Badger Stock Farms, Hartford, Wisconsin, recently shipped a carload of Holstein cattle to Alton Bros., River Falls, Wisconsin. The cattle were picked from the herds of John Mahar, Paul Kahlscheuer, John Monroe, Martin Monroe, Clarence Manning, John Buckley, and The Badger Stock Farm. Mr. Murphy also shipped a fine bull to Dan Ferguson, Escanaba, Michigan, the same week. These shipments indicate the success which farmers in the vicinity of Hartford are having with their Holstein cattle.

Holstein breeders of Polk county who are members of the county association enjoyed on June 13th an excursion into Minnesota which will no doubt turn out very profitably for them. They first went to Withrow, where they were met by members of the Washington County Holstein Breeders' Association and taken by automobile to the Wm. Jena and Brosious farms; then to Stillwater, where they visited the state prison; then to V. S. Culver's, W. S. Moscrip's, J. B. Irwin's and Arden farms, where they looked over fine dairy herds.

Kenneth Livingston won the judging contest held in connection with the meeting of the Southwestern Wisconsin and the Western Guernsey Breeders' Association at Ore Hill Farm, of Dale Rundell, on June 1st. First prize was a pure-bred Guernsey bull valued at $100, but as the winner did not have a herd in which to use him, it went to Elgar Nicholson, who won second honors. Stuart Watson and Henry Williams tied for third place and Charles Schaife won fifth prize. All the boys were from Livingston and had taken instruction in judging from Prof. Wiseman. There were eighteen entered.

Largely through the efforts of a Wisconsin stockman, Frank Harding, of Waukesha, the stock raisers of South American republics and this country have been brought into the most friendly of relationships. Two men from Buenos Aires have been chosen as judges at the International to be held in Chicago in December, and as a reciprocal compliment several American stockmen will attend and judge at the leading breeders' show to be held in the Argentine this summer. Among the number will be R. B. Ogilvie, a former resident of this state, who will judge the draft horses exhibited at this important exposition.

A second cow-testing association has just been organized in Barron county and started work on June 8th. The new association, formed by County Representative Cuff and State Supervisor Searles, has a membership of thirty-five farmers, representing about 400 cows. It has been so arranged that the tester may group certain herds and take care of three herds in one day so as to test all during the month. Mr. Cuff also announces that plans are forming for two more associations, one at Brill and one at Chetek.

Plans for "Wisconsin's Swine Week," to be held in mid-winter of next year, were developed at a meeting of the special committee held in Madison on June 3d. The members of the committee are G. C. Humphrey, representing the college of agriculture; James Fisher, Eastman, the Wisconsin Chester White Breeders' Association; H. C. Taylor, Orfordville, the Wisconsin Berkshire Breeders' Association; E. Parker, Janesville, the Wisconsin Duroc Jersey Breeders' Association; M. Madson, Syene, the Wisconsin Poland China Breeders' Association, and Andrew W. Hopkins, Madison, the Wisconsin Live Stock Breeders' Association.

Treat her right and she'll treat you right

Poultry is one of the best paying things on some farms; on others it is hardly considered worth bothering about. The difference is all in the thought and care given

About the first thing the careful poultry raiser has to figure on is how to house his flock, whether large or small, in the most healthful and practical manner

"Old Faithful" HEMLOCK Lumber

has been the farmer's stand-by for more than 200 years. Its price is right. It is light and easy to handle, easy to work and holds nails, paint or stain in great shape. Under proper conditions it lasts—oh, say 100 years. (You should worry, after that!) To get your eye on these facts, we have had prepared, by architects who know how, plans for modern poultry houses and other farm buildings which we will be glad to supply you free.

Free Poultry House Plans! Send for the new HEMLOCK booklet and use the PLAN COUPON which is in it. All you have to do is to present the coupon to your LOCAL LUMBER DEALER and he will supply you FREE with any one or two plans in our book which contains houses, barns, garages and small farm buildings. All plans are new and original and are drawn by architects who know the farmer's needs. If your lumber dealer hasn't the plans he can get them from us.

THE HEMLOCK MANUFACTURERS

RIVER FALLS STOCK SHOW.

Co-operation and the "Get-Together" Spirit Have Made This Show, Started Four Years Ago, One of the Important Annual Events of Wisconsin—By W. S. Welles, Director Agriculture at State Normal School.

PARTIAL VIEW OF "COW ALLEY" WITH THE RIVER FALLS NORMAL SCHOOL IN THE BACKGROUND.

FOUR years ago June 12th the state normal school at River Falls, Wisconsin, through its school of educational agriculture, held the first community stock show in this part of the state. This movement began as an offset to the annual crop show and farmers' institute which was held regularly in the late fall. It was not quite enough to be showing corn and oats and clover in the fall. We needed an outlet of the same kind in the matter of stock and the spring was apparently the natural time for a stock show as against the crop show.

Two dozen or more cards were mailed to business men and farmers of the community calling a meeting at the town hall to plan a stock exhibit. A good number responded and a permanent organization known as the Crop and Stock Improvement Association of River Falls was formed. The same chairman has been re-elected each year, and it has been the writer's good fortune to be thus associated with it through the four years.

The exhibits have grown in size and in quality each year. This year there were more than 100 fine animals on the grounds. They were scattered among the classes as shown by the premium list. There were two or three animals that were not pure bred. The keenest interest is shown in these shows. Farmers bring in stock from points eleven miles distant, over all sorts of roads. The prizes have been ribbons only until this year, when cash prizes of $3, $2 and $1 were given.

The judges are the best that Wisconsin, Minnesota and Iowa can furnish. This year Prof. J. F. Tormey, of Wisconsin, and Mr. W. S. Moscrip, professors in the agricultural school. The judging of stock comes as a sort of finish to the stock work of the school year.

The expenses of the stock show are met by free will offering of the men of the community. We do not have a dollar the day before the stock is shown, but the evening of that day finds every dollar needed for expense in the hands of the treasurer of the association. The spirit of co-operation in town and country is fine. The judges are asked to explain the reasons for their placings and the illustrations show how keen the listeners are to get it all.

The students in the school of agriculture (a picture of the building and a part of the enrollment are shown here) take the hard work part in conducting the show. The general management of it is in the hands of the extend the show another day. It is held on the athletic field and farmstead of the normal farm.

This year we were exceedingly fortunate in having as our guest of honor Gov. Emanuel L. Philipp, of Wisconsin. Governor Philipp gave a short talk and a large number of farmers and townspeople had a chance to meet him during his all-day stay on the grounds. He spoke to the assembled normal school at the general exercises. The commercial club of River Falls invited the governor and leading men from surrounding towns to remain for a banquet in the evening. Over 200 plates were laid. Governor Philipp spoke at some length on state educational and political matters and somewhat upon national politics. He took us quite generously into his confidence and we enjoyed his intimate personal view of matters.

His remarks were largely reminiscent of the economic history of the state and in a happy vein. He reminded those present that in the seventies and eighties, although Wisconsin farmers were an industrious lot, they did not prosper, the prices of their products being low. Butter frequently sold as low as 5 cents a pound. It did not rise until one of the railroad companies provided special facilities for shipping it to eastern markets. This was the first step. Then the university developed the science of dairying. Co-operation, between capital, science and labor were required to bring dairying to its present successful stage in Wisconsin.

Governor Philipp on left and W. S. Welles, manager of show, on right.

The entry of draft horses was splendid, Norman Percherons largely predominating. Only one or two drivers and other roadsters were to be judge from every part of the grounds and in gratifying numbers and quality. It caused us to believe that the automobile hadn't as yet entirely eliminated the horse from our midst.

In the cattle divisions the sweepstakes were as follows:

SWEEPSTAKES, DAIRY BREEDS.

Best Cow, 3 Years or Older—H. A. Lowe (Holstein).

Best Heifer, 2 Years Old—1st D. E. Flower (Holstein).

Best Bull Calf, 4 to 8 Months Old—1st D. E. Flower (Holstein).

Best Heifer, 1 Year Old—1st F. D. Pierce & Son (Jersey).

Bull, 3 Years or Older—1st F. D. Pierce (Jersey).

Grand Champion Bull—1st John Chapman (Holstein).

SWEEPSTAKES, BEEF BREEDS.

Best Bull, 1 Year or Older—1st W. H. Scruton.

Best Cow, 1 Year or Older—1st W. H. Scruton.

Holstein, Jersey and Short-horn cattle were well represented. The Guernseys did not appear in numbers commensurate with the popularity of that breed in this locality.

Great credit is due our bankers, merchants, farmers, school men and students for the smooth running of the show. Farmers have said since that this was the most successful year so far and the quality of exhibits has steadily improved.

[Editor's Note.—It is gratifying to note that the state institutions are remembering the farmer and the importance of agriculture and live stock as industries of this great state. Every year the practical side of "learnin'" is being more fully emphasized and The Wisconsin Farmer wishes to congratulate the River Falls Normal on the success of the work herein outlined.]

HOLSTEINS IN THE JUDGING RING AT THE RIVER FALLS SHOW.

DOWN TO BUSINESS IN HORSE JUDGING AT THE STOCK SHOW.

GOVERNOR PHILIPP ADDRESSING THE CROWD OF 600 PERSONS.

Sweepstakes Short-horn bull, owned by W. H. Scruton, of Beldenville.

Young Jersey cow owned by F. D. Pierce, of River Falls.

First-prize Holstein bull owned by John Chapman, of River Falls.

Prize-winning stallion owned by Walter Glass, of River Falls.

SOME SPLENDID TYPES OF ANIMALS AT THE RIVER FALLS (PIERCE COUNTY) STOCK SHOW.

of Lake Elmo, Minnesota, were the judges. Great improvement has been shown in the stock of the community since these shows began, for they are total expense this year is about $300. The normal school bears part of it.

The show lasts for one day. This year a strong movement is on foot to seen at any time in the stalls. But when the call came for judging them matched teams and single buggy horses rallied in array before the

Address to Guernsey Breeders.

The Following Address Was Delivered by Pres. S. L. Dudley at La Crosse County Breeders' Meeting at West Salem, June 10

THE object of this association is to promote the breeding and improvement of high-grade and pure-bred Guernsey cattle in La Crosse county and to aid its members in buying and selling first-class animals.

Co-operation will do wonders for us in selling and buying cattle. We can all see why this is true, but I do not think we realize to a sufficiently great extent the need of good, constructive breeding. It is only by careful breeding that we will be able to improve our herds to such an extent that we can compete with other localities and bring up our profits to what they should be. This is the only way we can make this country a market place for high-class animals.

What is constructive breeding? Constructive breeding is the mating of animals whose offspring will be better than the parents mating, the result of which will be a progression and not a retrogression. We can't do this by using a scrub bull, a grade bull or an inferior pure-bred bull. Very few use scrub bulls now, but too many farmers are using grades or inferior pure breds. Why shouldn't we use a good grade bull or an inferior pure bred? Simply because they have no fixed traits, or, if they do happen to prove a benefit, are able to do so because they are exceptions. It takes generations to fix a trait in an animal. You may get some excellent animals from a grade bull, but at the same time you will get many very mediocre animals. There are many factors that enter into the background or ancestry of an animal. A grade cow may be a wonderful producer at the pail and yet not have a single heifer that approaches her ability of production simply because this milk yield factor was not fixed. Why should we expect a bull from such a cow to be prepotent? I am not saying he won't be, but the trouble is he may not be. Experiment stations tell us that milk yield is Mendelian, that is, high yielders produce offspring that become either high or medium yielders. Dams that are low yielders produce offspring that are high. Low and medium yielders and the proportion of each varies, dependent upon the number of crosses preceding whereby this trait has become more or less fixed.

We can easily see from this law of heredity that offspring from grades whose traits have not become fixed are pretty much of a gamble and offspring from pure breds would also be a gamble were it not for other factors, which I shall mention presently, which guide us in the choice of mates.

So I say it is up to us to use pure-bred sires and good pure-bred sires. How are we to choose a good sire? These are the factors that enter into our choice of mates which take away most of the gamble. First, by his ancestry. His dam should be a good producer—with an official record if possible—for they tell us the characteristics of the dam rather than those of the sire are stamped upon the son. Second, by the individual's temperament and constitution as shown by his wide muzzle, lean face and full jaw, his masculine neck and well-sprung ribs, a large and deep barrel and long, wide rump. His hide should be thin, loose and pliable and the hair fine. He should have good size for his age.

They say that the prepotency of a bull can be estimated from the work of his dam, grandam and sisters. I'm not so sure of this, but if the bull has offspring old enough to produce milk we have a sure proof of the worth of a bull and so the third factor is prepotency. This is the most important factor and should bear more weight in your selection.

We have an advanced registry for bulls and cows, but I believe that the requirements for entry for a bull should mean 50 per cent more to us than the milk record of a cow. If a bull has a female offspring that fulfills the requirements of the A. R., why he is eligible to A. R.? The difference is just this: The bull is selected for the quality of his offspring, while the selection of a cow is based upon the performance of the individual alone.

Dr. C. B. Davenport, of Long Island, says, "The adoption of the method of selecting sires on the basis of quality as breeders is the principal cause for the advance in milk productions." Such bulls cost money, of course, but how much is such a bull worth? "A bull is half the herd." Now it is our herds we wish to improve. Every individual in the herd has to be fed and cared for. Each animal either pays a profit or is a loss. We are more interested in having a herd that averages 350 to 400 pounds of butter fat than to have one cow produce 900 pounds of butter fat and the rest average 200 to 250 pounds butter fat.

Now, if you have a bull who, because of his dam's record, or the quality of his get, or because of his proven prepotency will increase the average yield of your herd of twenty cows from 300 to 320 pounds of butter fat, what is he worth? At the end of four years with reasonable luck, you will have replaced your twenty cows with heifers sired by this bull. At the end of ten years, after allowing for all risks, will have amounted to 2,800 pounds, which at 33 cents per pound is $124. Besides this, the stock sold would have been worth more, so that your increased income for ten years, figuring very conservatively, would be at least $1,200—all credited to this bull. Call this bull worth $500. You paid that for him. You used him two years and sold him at the yards for $70. Figure interest on your investment at 6 per cent for ten years and your total cost is $766, leaving a balance of $434 in favor of your $500 bull. Of course, this bull should not have been sold for beef and in that case your balance would be much larger.

The trouble is we are afraid to pay enough for our bulls. We must have good bulls and good bulls cost money. The man who will improve his herd, raise his average yield per cow from 300 to 350 pounds or 350 to 400, as the case might be, is a greater breeder than the man who has one record of 1,000 pounds of butter fat and the rest of the herd just fair. The man who stakes nothing makes little or no progress. The man who sees into the future and has as a goal a herd averaging 450 pounds of butter fat will soon be working for a 500-pound average.

"I have been using a pure-bred Guernsey bull in my herd for eleven years," writes L. E. Gordon, Jr., of Nelsonville, Wisconsin. He says further:

"The following is the average record of my cows in 1915, which were of no particular breed but just cows and of my grade Guernseys in the testing association in 1914 and 1915, which are descended from the cows whose records are from 1915:

	Lbs. milk	Per cent fat	Lbs. B. fat
"Just cows," 1915....	5,844	4.07	238
Their descendants grade Guernseys, 1914-1915	6,876	5.46	376

"Three of these grades (which are all the grades I have left in my herd) averaged last year 410 pounds of butter fat."

Let our slogan be "A pure-bred Guernsey bull on every farm in the county," but let's be sure that every one of these bulls is a rattling good one.

Annually the La Crosse County Guernsey Breeders get together for an exchange of ideas and a day of real enjoyment is always had. This year their annual picnic was held on the high school grounds at West Salem. While the rush of work caused by rainy weather kept some farmers and breeders at home, a good crowd was present. The West Salem Military Band furnished the music and it was a real treat, as this is the best band in western Wisconsin. After everyone had done justice to a good dinner the following program was listened to with interest:

"The Future of Our Association"—Pres. S. L. Dudley.
"Better Dairying"—Prof. G. C. Humphrey.
Impromptu talks from breeders and visitors.
Music—Band.
Address "Citizenship"—John F. Doherty.
Music—Band.

Mr. Doherty, speaking on "Citizenship," made a stirring appeal for patriotism and undivided loyalty to the nation.

Waukesha County Guernsey Breeders' Sale.

In spite of the heavy downpour on June 7th, which lasted practicallly all day, the attendance at the Guernsey sale was very gratifying. The sale too was a success, an average of $260 being obtained, but there is no doubt that had the weather been more pleasant that a higher average would have been made. The top price was $505, while several others sold from $400 to $495. Gustave Pabst was a liberal buyer, taking many of the nice animals in the sale. Connell Brothers, Colgate, Wis., made an addition to their herd. Barian Farms, Byron, Ill., owned by Medill McCormick, purchased several head. Dr. R. J. Palmer, Detroit, Mich., was a heavy buyer. Other buyers from Indiana, Illinois and Iowa took home a few head each, while Wisconsin buyers from all parts of the state enriched their herds with a few. A detailed list of the sales is given below:

FEMALES.

Empress of Riverdale, Aug. 25, 1914; Dr. R. J. Palmer, Detroit, Mich...$295
Princess Utopia, Aug. 8, 1913; Tom F. Bitts, Eagle, Wis. 225
McKerrow Raymond's Daughter, Jan. 21, 1915; Barian Farms, Byron, Ill. 200
Vera Cruz, Nov. 23, 1914; Sinnissippi Farms, Oregon, Ill. 240
Fantine of Sarnia, Sept. 19, 1915; W. H. Steele, Pewaukee, Wis. 165
Alecia, June 18, 1908; White Oak Stock Farm, Colgate, Wis. 225
Nancy Lee of Evergreen Place, June 12, 1915; Barian Farms 185
Goldy Guernsey Roberta, Aug. 8, 1910; A. W. Lawrence, Sturgeon Bay, Wis. 825
Dousman's Belle, Jully 15, 1915; Jno. M. Norvicki, Jr., Mauston, Wis... 125
Meridan's Daisy, Nov. 25, 1915; Hugo H. Grovert, Newhall, Ia.... 185
Fairfield Lady, July 20, 1914; Nels Nelson, Bloomer, Wis. 300
Francesca of Sarnia, May 2, 1915; Barian Farms 250
Queen Marie of Harriton, May 9, 1913; Dr. R. J. Palmer..... 300
Stella's Beauty of Maple Heights, Jan. 19, 1915; S. S. Telger, Ft. Atkinson, Wis. 255
Stella Beauty, Mar. 20, 1912; A. W. Lawrence 270
Jewel of Elder Lawn, July 17, 1914; Barian Farms 250
Hedge Lawn's Patricia, Oct. 18, 1914; Barian Farms 250
Lady Juliette, July 4, 1912; Gustave Pabst, Dousman, Wis. 305
Adeline of Sarnia, Nov. 10, 1910; W. E. Fisher, Wauwatosa, Wis. 315
Vera of Sunny Side, March 1, 1913; John Van Hesche, South Bend, Ind. 210
Buttercup's Beauty of Tillybardin, Sept. 13, 1914; H. R. Wisch & Son, Jefferson, Wis. 355
Substitute for No. 32..... 505
Village Highland Girl, March 26, 1913; Dr. R. J. Palmer..... 300
Sequel's Aurea of Denmark, Oct. 19,1912; Gustave Pabst 310
Kosher of Glyndwr, Aug. 3, 1910; Moulton B. Goff, Sturgeon Bay, Wis. 325
Bright Eyes of Sunny Side, Nov. 25, 1913; Geo. A. Stiviruis, Fennimore, Wis. 240
Lady Twinkle, Aug. 27, 1911; C. J. & W. A. Connell, Menomonee Falls, Wis. 305
Daisy Jones, Jan. 18, 1906; H. G. Maxham, Reedsburg, Wis. 290
Daisy of Willowdale, May 28, 1905; W. A. & R. E. Freehoff, Waukesha, Wis. 265
Alecia's Queen, Oct., 23, 1910; Gustave Pabst 240
Vega Talladeen of Iron Springs, July 25, 1912; Samuel Siewert, Colgate, Wis. 400
Cissy of Knollwood, Jan. 1, 1913; Dr. R. J. Palmer..... 265
Adelaide Walter May Rose of Walter Maple, Feb. 19, 1914; W. A. & R. E. Freehoff 285
Princess Mary of Maple Heights, Oct. 6, 1914; W. J. Heid, Ft. Atkinson, Wis. 200
Ellis Moline of Spring City, Sept. 10, 1910; Geo. A. Stivarins..... 215
Imp. Hartfield Rose of the Couture 3d, July 26, 1906; R. W. Lawrence 425
Simple Sue, March 31, 1910; Edw. A. Walter, Walworth, Wis. 290
Berceuse, Aug. 27, 1912; Gustave Pabst 350
Ellen of Evergreen Place, Oct. 15, 1914; Gustave Pabst 260

Small Grains and Grasses Are Doing Well.

Meadows and Pastures Are Above Normal---Cereals Will Make Good Crop---Corn and Potatoes Are Below Average.

Barron County.—Wet weather has delayed corn and potato planting. Some potato planting must be done yet and some corn must be replanted. Winter grain is looking fine. Clover is the best it has been for years. Spring grain is backward—a little yellow, also, from too much rain. Field peas are looking very good, but they are later than usual. Sugar beets were late in being planted, but are coming up now. —Wm. Bartlett.

Bayfield County.—Weather has been quite cool until the last week, with plenty of rain. Small grain is doing fine. Corn was late in being planted, but will make good silage. Gardens are growing rapidly and the prospects for potatoes are good. Fruit crop looks exceptionally good. Danger of frost is past and trees are full of bloom and healthy. Strawberries will make a bumper crop, if dry weather does not cut them short.—W. R. Moore.

Burnett County.—Clover will make a big crop. Meadows are doing their best. Timothy is slow on account of heavy rains, but will make a fair crop. Small grain of all kinds are very slow, because of the wet, cold spring. The warm weather of the last week is making the pastures look fine. Potato planting is delayed by wet weather; the acreage promises to exceed that of any previous year. Vegetable crops are slow.—A. G. Peterson.

Chippewa County.—Crops are looking well, with the exception of corn. Warm weather is helping the corn along, and prospects are still hopeful. Grains, hay and peas are doing fine. Early potatoes are up and look fine; most of the late potatoes are planted. The recent cold, wet weather held the young pigs back and killed some that were exposed. Pastures are good and cattle are doing fine. About 65 per cent of the small colts are being saved.—Jas. A. Smith.

Crawford County.—Small grain is doing well; wheat and rye are in blossom; early oats are heading out, but the straw will be short, as too much wet weather checked its growth. Hay is going to be a good crop. It is rather short yet, but is thick and heavy. Pastures are in good shape and grass is more plentiful than cattle. A very heavy rain on June 1st damaged the cornfields considerably. On prairie land which is sandy, about one-third of the corn was covered up so deeply that it will have to be replanted; on low ground it is too wet for corn to grow, and there will be little replanting because the season is getting too late; on hilly land some fields were washed down to the depth of plowing. Early potatoes are in bloom and late potatoes are nearly all planted. Fruit looks well. Vegetables are growing well, but not many are raised here.—George Ashbacher.

Dodge County.—Small grain, especially barley, has suffered from the excessive amount of rain. Corn seems to be growing fairly well, but is rather late. Grass in pastures and meadows is in good condition. Eearly potatoes are up, and a few of the late ones have been planted.—E. R. F.

Dunn County.—Season has been cold and wet. All crops, except corn, are excellent. It is a little too wet to work corn, but the corn crop depends a good deal on future conditions, which may bring it out all right. Pastures are good. Potatoes are coming up and look fine. Fruit prospects are still promising.—E. A. Finley.

Eau Claire County.—Oats and barley are not doing well on account of the great amount of rain; in low ground much of these crops are drowned out, and the rest looks yellow. Dry, warm weather would help this condition. Corn is at a standstill; planting is just finished and the ground is very weedy in places. Early potatoes are doing well, but late potatoes are not up yet. Pastures are short, but with warmer weather will improve. On old meadows the hay crop will not be large; the new seeding will be fair. Peas are growing well. Strawberries look well, but need sunshine.—C. A. Koll.

Grant County.—Small grain in this section looks exceptionally well, because of the cool, wet weather. Pasture and hay are also good. Corn looks like a failure because of so much replanting due to poor seed and bad weather. Potatoes promise to make a splendid crop. Garden truck is looking well. From appearances fruit will be good.—V. A.

Green Lake County.—Small grains look fairly well. Early planted corn has been suffering some from the effects of wet, cold weather. Early potatoes are backward. Cherries are poor; early varieties of apples bloomed poorly but the late varieties are doing better. —G. B. W.

Iron County.—Weather conditions are fine. Clover and new meadows are doing well. Potato planting is nearly finished. Pastures are in fine condition. Live stock are healthy.—J. A. Becker.

Oznukee County.—The small grain prospects are much better this year Cold, wet weather has not hurt the small grain and grass, but it has delayed the corn crop. About two-thirds of the farmers had to replant corn. It has been too cold and wet for potatoes also, which are just coming up.—Nic J. Mueller

Juneau County.—Pastures, small grain and meadows are making good growth. Ground is wet and heavy from abundant rains. Corn is backward and weedy, with a poor stand. On low, flat ground corn is not planted yet. Many potatoes that were planted have rotted and will have to be replanted. A heavy rain on June 1st did considerable damage.—J. H. McNown.

Kewaunee County.—Rye, oats and barley look fine. Hay is backward, but in good condition. Nearly half the corn is planted and some of it is up, but appears to be in poor condition. Some will have to be replanted. Early potatoes on heavy ground have been injured by abundant rains. Pastures are looking splendid. All indications point to a good apple crop.—Fred Lutz.

Polk County.—Weather is warmer and everything is growing rapidly. Corn has a good color and some is ready for cultivation. Small grains, especially oats, looks fine. Oats have a good color and are stooling well. Clover is just coming into bloom, and in most cases will make a heavy crop. Old meadows are not very good. Potatoes are just coming up. Gardens are later than usual, but look well. Fruit promises to be good. Pastures are fine and cows are doing well. Creameries are paying from 33 to 35 cents for butter fat.—Wallace Fountain.

Price County.—Weather is turning warm. Grain is doing fine. Corn is up and doing well, but a lot of low land must be replanted. Potatoes are backward, and the ground has been too wet for them. Hay meadows and pastures are doing extra well. A big hay crop is expected. Good cows are in demand, but prices are lower than a month ago. Farmers of this county have held more sales in 1916 than ever before. Small fruits are doing fine.—J. W. F.

Richland County.—Small grains and grasses are doing well. Corn is small that has come up; some farmers have plowed through their corn twice. Pastures are fine. Late potatoes are nearly all planted. A terrible rainstorm damaged the cornfields badly. Live stock are doing well; many veal calves are being sold.—E. C. Stewart.

Sauk County.—The long-continued cold spell is apparently broken, but the corn crop is about two weeks late. Many farmers have had to replant whole fields of corn. Potato planting has just been completed. Small grains, as oats, wheat, rye and barley are showing up in great shape. Pastures could not be better and meadows promise a very heavy hay crop, although in some fields clover was badly winterkilled. There will be few cherries or plums, but a light apple crop.—Richard F. Klemm.

Shawano County.—Crops are backward and wet weather has injured small grain. Clover, timothy and alfalfa look well. Weeds are getting a bad start on corn and potatoes because

(Concluded on page 21.)

Clear out that Stump and Boulder patch

ON even the best of farms there are uncultivated "bald patches" caused by old stumps, rocks, or a bit of swampy ground. There may be some on yours.

Under the methods formerly employed the expense of clearing such a patch seemed more than the land was worth. But every foot of unproductive land is costly to you—is worth clearing if the clearing can be done cheaply enough. It can be by means of

HERCULES DYNAMITE

There is no comparison between the cost of removing stumps and rocks, or running drainage ditches, by hand and horse power and doing the same work with Hercules Dynamite. The dynamite wins every time. It makes it possible for you to cultivate land that you have never counted on before.

Suppose you have a stump to remove. Instead of pulling and tugging at it for an hour or two, perhaps half a day, and then only getting part of it, you bore a hole under it in a few minutes, insert the dynamite—and the stump is fire wood ready for your stove.

If you have never used Hercules Dynamite you owe it to yourself and your farm to write for our book, "Progressive Cultivation". It is sent free upon request. It tells of the many uses for dynamite on the farm—land clearing, tree planting, subsoiling, irrigation work, etc.

Write today for your copy of "Progressive Cultivation". Use the coupon below.

LIVE STOCK SCARCE IN GERMANY.

Second in the Series of War-Farming Articles Written Expressly For This Paper by Harry C. Evans, a Prominent Member of the Ford Peace Party.

THE manufacturing industries of Germany lie west of the Oder river; the richest agricultural districts are to the east of this river. One hundred years ago 80 per cent of the German population was engaged in farming. Now but 30 per cent is so engaged, and the annual decrease of the farming population the past few years has been about 50,000. The farmers are going into the industries and emigrating. There is a tremendous waste of labor occasioned by military service. Every able-bodied young man of Germany is compelled to serve in the army two years. Then he becomes a member of the reserve army, and must serve a short period each year in active military service for the next five years. The aggregated time lost by the German people in military service is of tremendous import, and this alone furnishes a substantial reason for manual labor on the part of the women. The German men do not seem to have a very high opinion of their women folk. I do not mean that they do not love them, or that they are not kind to them. They believe that woman's function is to bear children and to do manual labor. They believe that women have lost their true function if they are not "broad bosomed mothers of stalwart sons." I talked with four women who were at work in the fields with ox carts. They were about forty years old. Each of them had one or more sons in the army. Two of the women were unmarried.

There are long stretches of flat country. Many of the farmers are living in villages, where the low, red-roofed houses cluster together. Some of the farmhouses are of brick and some of timber, and many have thatched roofs. In the preparation of the soil for the crop in this flat land arrangements are made both against drouth and flood. The land is gridironed with numerous small ditches. The water drains into the ditches, and in wet seasons the sluiceways are opened and the water drains off. If it is a dry season the sluiceways are closed and what water falls is retained. In some places the ditches are used for irrigation.

The rolling ground on the hills is arranged to hold the water. A number of saucer-shaped holes are made in the hillsides, and these hold the water against drouth. This same arrangement maintains in reforestation. Ditches are dug through the newly-planted forests and holes are made in the side hills where young trees have been planted. Thus the rain that falls is held and the young roots are watered. The young trees are pruned and often the ground is cultivated. The Germans lead the world in reforestation and rapid growth of young forests.

So it is that by shaping the surface of the earth to meet every condition of weather, by careful selection of seed, by heavy fertilization, rotation of crops and chemical treatment, Germany is practically sure of a crop.

Live stock has become scarce in Germany since the war began. Four times I crossed the empire from north to south and I did not see a hog or a sheep, and but two small herds of cattle. In Austria the only meat served in the hotels is goat meat. The live stock of Germany, however, has been taken over by the government, and what is left of it is now herded in the low lands and in the neighborhood of the trenches to feed the soldiers. There was four times as much stock killed in the municipal abattoirs last year as in ordinary years. Much of it was canned or tinned for use by the soldiers. That there was no live stock in that part of Germany which I passed through was further proven by the fact that there was no fodder. I did not see a stack of hay or a shock of fodder, and the pasture lands are being broken up and planted in cereals.

I have never seen better looking farms than I saw in Germany. There are no fence corners or outlying places overgrown with weeds. Practically all swamp lands have been reclaimed. I saw but one swamp, in which reeds were growing, and these had been cut and shocked. There is no litter or fallen timber or brush lying about the farms, as there is on the farms in our country. If a tree is cut down every particle of it is saved. The wood is carefully corded, the chips are gathered and the twigs to the smallest tip are gathered and bound. The bottom lands do not overflow, for the creeks have been straightened, and in some places the rivers diked.

Women were in the fields with ox carts scattering fertilization. The fertilization from the cities and towns is gathered and moved out into the country. Every cow has a fixed valuation as a fertilizer. If a tenant or a laborer on a farm owns a cow he is given credit by the owner of the land for a stated sum for fertilization. Then there is much artificial manure. There is an abundant supply of potash in Germany. On the poorer lands of Prussia 1,000 pounds of potash is used annually for every acre. On the better lands of Bavaria 100 pounds is used annually per acre. The farmer has the constant assistance of the chemists and experts from the great German universities, and the farmer himself is taught to conserve his land, the relation of seed to soil, and all things else that tend to make the soil produce abundantly. The farmer gives more thought and more time to the conservation and care of his lands than he does to the rearing of his children.

There are many castes and classes in Germany. There is the official caste of the empire, and there are so many departments of public life and activity that the grades of officialdom are numerous. Many of the farmers and farmers' sons are found in this official class, for the officials of Germany are largely drawn from the Agrarians. The wealthy farm owners form a class all their own, and are ranked just below the official class. Then come the poorer landowners; that is, those who own small parcels, and below these the tenant and the farm laborer. The peasant loves his pipe and beer, and his chief pleasure is dancing. The peasant boys and girls will trudge for miles to the village, dressed in medieval costumes. The boys wear scarlet breeches, long black velvet coats and three-cornered hats. The girls are decked in gay-colored skirts and mushroomed hats. In the villages they meet their neighbors and hold high carnival in dancing, shooting and other sports.

The small farmers live, as a rule, in low houses, some of them thatched, some with straw and some with shingled roofs. The thatched roofs are darkened with age and have drooping eaves, outside staircases and balconies. The cattle are sheltered in the basement or ground floor, the family in the upper floor, and grain is stored in the attic. The thatched and straw-covered roofs are giving way to slate roofs on account of danger of fire. On large estates the laborers live in long barracks, where families herd like rabbits in a warren. The whole family has to sleep, eat, wash and cook in one room. The furnishings of most of the rooms are very meager. I was told of a woman sixty-five years old in a village in Bavaria, who was a milkmaid or stablemaid. Her "home" consisted of a wide plank in an upper story of a stable, swung by ropes from the roof. On this was a straw mattress, and here she had slept most of her life. Her small belongings were in a chest that stood in the garret. The family she had so faithfully served for so many years allowed her the actual necessities of life and paid her less than 50 cents a week.

In the country near the Vistula river, which is in the extreme eastern part of Prussia, corn is still ground with a stone hand mill, and they bake their bread in the open air in parish baking houses. The men fish on the river in canoes hollowed out of tree trunks. So we find that in parts of Germany there has been little progress, and the people still practice medieval habits and customs. The reader may be astonished to learn this, yet if I were to describe some of the things I have seen in the slums of Chicago and New York City, the picture would be much blacker than could be painted of Germany.

It must be remembered that the soil of much of Germany is ungenerous and the climate severe. People of the northeastern part of Prussia have ever had a hard fight for subsistence. They have to endure the extreme of heat and cold as bad as that of central Russia. There is no black soil. It is mostly sand, and life has ever been a hard battle. Here now, however, they are raising immense quantities of sugar beets. In the southern part of Germany, in Baden and Bavaria, the soil is very rich. Here the farm holdings are small and the products are largely grapes, fruit and tobacco. From Frankfort on the Main south to the Swiss line, some 200 miles, the earth is a veritable garden and grape vineyard. The fields are turned up into beds very much the same as we arrange our gardens. The bed will

In order to secure the necessary food supply, public parks in Germany are being cultivated as gardens by the school children. The above picture was brought back from Prussia by Mr. Evans, who was one of the leaders of the party taken to Europe by Henry Ford in the hope of restoring peace. Mr. Evans' first article appeared last week under the title "War-Time Farming in Germany." The third article of the series will appear next week and will deal with the English soldier's yearning for the land which he is fighting to save.

run clear across a field of forty acres, and will not be over thirty feet wide. As we neared the Swiss frontier we saw the wonderful terraced grape vineyards. We were traveling along the historic river Rhine, a river along whose banks men have fought for centuries. The valley of the Rhine is not wide here, but the hills are very high, and they have been so leveled and fashioned that practically every foot is utilized in the vineyards. One vineyard will rest ten or more feet above another, and the line between them is perpendicular. They look like great pyramids. There are thousands and thousands of acres here given over to grape growing. In these vineyards we saw women and boys clearing up the ground with baskets in their hands. They would pick up every leaf and stick, and were pruning all the dead limbs and resticking the vines.

The study of farm life in Germany just now when Germany has her back to the wall fighting the world is intensely interesting. The women are calm and self-possessed, and one had to look twice into their faces to understand the deep sorrow that is theirs. They go about everywhere in the same way they did when their husbands and sons were by their sides, except they feel that a greater responsibility than they have ever known before is upon them. Theirs it is to feed their loved ones who are on the fighting line, and with shoulders squared and with backs bent they go about the drudgery of the farm, demanding from the earth the very limit of its yield that their loved ones may be sustained. It is believed that this new responsibility which has come upon the German women, and which they have so splendidly met, will raise them a litle higher in the social sunlight, and that in the future they may take their place by the side of their men in social, civic and public life. They have too long held their places by the side of their men in manual labor only.

UPPER WISCONSIN

Successful Farm Once a Logging Camp.

There are many examples of how the thousands of acres of cut-over lands in Wisconsin can be turned into profitable farms, but there are few, if any, examples more striking than on Tamarack farm, a few miles from Rhinelander, Oneida county. This farm, once a logging camp and in the heart of the timber belt, is being developed by its owners, Brown Bros., of Rhinelander, with Charles Kugel as farm foreman.

CHAS. KUGEL WAIST HIGH IN OATS ON TAMARACK FARM.

Tamarack farm first sprung into prominence in Upper Wisconsin as the home of the high-producing Guernsey cow, Oneida Bess. It has often been said that the Babcock test discovered Oneida Bess and that her praises as one of the high-producing Guernseys would never have been sung except for a short course which Mr. Kugel attended and at which he was fired with the enthusiasm of seeing what the cows on Tamarack farm were doing for their owners. It was at this short course that Mr. Kugel first learned of the Babcock test and when he began the test to determine which cows were his "boarders" he found that one of his cows, since named Oneida Bess, produced 10,000 pounds of milk, testing 5.5, the equivalent of 550 pounds of butter fat. She had been a member of Tamarack herd for some time. All knew she was a good producer, but none realized her true value until the test was applied. The test has been continually in use on the farm since that time and Oneida Bess has continued her performance, at nine years old producing in excess of 700 pounds of fat. There are now on this farm thirty-six Guernseys, all grades. Twelve of these cows have a test record of more than 400 pounds of fat and Mr. Kugel informed the writer that there was not a mature cow on the farm last winter which could not make the advanced registry if she was pure bred.

A FEW OF THE HIGH-PRODUCING GUERNSEY GRADES ON TAMARACK FARM.

The writer visited Tamarack farm in company with Mr. W. D. Juday, county agricultural representative of Oneida county. It was a pleasure to stop at such a farm, located as it is ten miles from the county seat and in the heart of the timber section. Gradually the acreage is being enlarged by clearing operations each winter, from thirty to forty acres being made each year for the plow. The work is being carried on just as thousands of settlers are clearing land today in Upper Wisconsin. Mr. Kugel, after eight years of service as foreman, has reason to feel gratified at the results obtained and the success which the farm is making, especially in a country noted principally for years for lumbering and logging.

The farm started as a logging camp. Where the buildings now stand the lumberjacks once pitched their camps. As the timber was taken out the owners decided to turn to farming with the result that Tamarack farm became a reality. The country is very rolling with considerable timber remaining and on every hand there are charred stumps that must be cleared before the plow can follow. However, about these stumps cattle are pastured when the second growth timber has been removed. The farmhouse and barns are situated on the north shore of a beautiful lake which makes it an ideal location in the summer. In the logging days the lumberjacks cleared just enough land to grow timothy for the stock in the camps with the result that when it was decided to start the farm the soil was fertile and had not been cropped out.

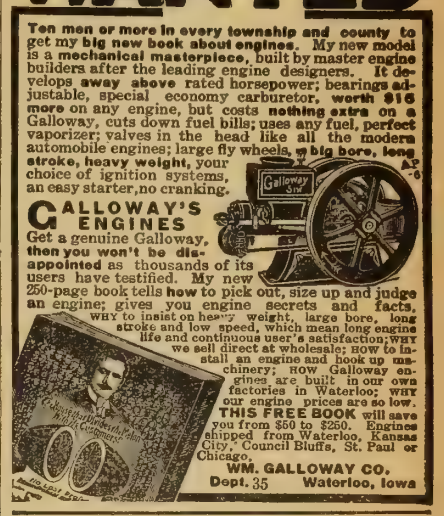
Mr. Kugel has had splendid success with his dairy herd, as noted above, despite the handicap of sending the milk ten miles to Rhinelander. But with grain crops he has also had good results, which proves the crop value of this cut-over soil when cleared and made ready for the plow. The 1915 corn failure, Mr. Kugel told the writer, was the first he had had in the seven summers that he has been at Tamarack, but what was lost in corn was more than made up in oats.

Oats yielded an average of sixty-four and one-half bushels per acre for a total of thirty-two acres, some of the manured fields yielding as high as eighty-five bushels of oats per acre. There are 140 acres under cultivation and in addition to thirty-two acres in oats Mr. Kugel had thirty acres in corn last season, seventeen acres in potatoes, twenty-three acres in clover and four acres in alfalfa. Potatoes are one of the principal cash crops of this county and the yield on Tamarack farm was up to the county's standard. Nothing but pedigree oats was grown last year with the result that when the writer visited the farm Mr. Kugel had 1,000 bushels of splendid seed.

The barn is 36x108 and has room for sixty head of cows and young stock. The loft will hold 150 tons of hay in addition to oats and other small grains, and, although not a rich man's barn, it is comfortable, well lighted and ventilated and typical of the good barns to be found in Upper Wisconsin.

Wisconsin Hemp Crop.

Hemp is becoming one of the favorite crops with farmers in Dodge and Green Lake counties. This year, according to observations made by a representative of the United States Department of Agriculture, about 1,200 acres have been planted to this crop and principally on farms near Waupun and Brandon. This is an appreciable increase over last year. Growers claim a larger acreage would have been planted this season had seed been obtainable in larger quantities at reasonable prices. Conditions in this state favor the growth of hemp, but it cannot be grown to advantage on poor soils. The Indo-China variety, grown in large quantities in Kentucky, is by far the most suitable. An association of hemp growers has been formed in Wisconsin, and they have purchased a new machine for the "breaking" of the crop. By combining the crop grown in central Wisconsin and offering it for sale in a solid block of guaranteed quality it has been possible to greatly increase the market price.



Demonstration at Indian Farm.

The Indian school farm located near Tomah is to be used officially this season in demonstrational and experimental work. Through co-operative relations with the University of Wisconsin, experiments dealing with local farm problems have been started and field demonstrations will be made this summer. To compare results in smut eradication, oats were sown this spring in both the treated and untreated form. Tested and untested corn was planted in special plots to be used for demonstration purposes. Special attention is also being given to the culture of alfalfa and pedigree grains. Everything possible will be done to accomplish a twofold purpose—that of educating the young Indians in modern farming and aiding other farmers in that section in the improvement of their soils.

LAW QUESTIONS.

Owner Liable for Taxes.

A Subscriber, New Richmond, Wis.—A hired a team of horses from B, to work from the spring work season until November 1st and then deliver the team back to B, the owner. Who is legally required to pay taxes on the team, A or B?

Answer.—B.

Borrowed Horse—Damages.

A Wisconsin Subscriber.—A bought a horse from B and gave B his note drawing 7 per cent interest for the price, and a mortgage to secure the note. He then allowed B to keep the horse and work it without charge against B for its work. While working the horse B lamed it and otherwise injured it. Can A recover damages from B for so injuring the horse?

Answer.—A can recover a judgment for damages against B for the injuries to the horse. The law requires the borrower of an animal for work to take extra care of it when he pays nothing for its work and he is liable for all damages caused by the lack of such care.

Silverize Your Silage

for Better Fat Stock and Dairy Profits

CORN cut by Silver's "Ohio" Silo Filler makes better silage according to the records of "Ohio" users.

There's a difference in silage just as there is a difference in the machines that cut it. Some silage goes into the silo with long shreds and leaves which form air pockets and spoil the silage. Other silage is cut in uneven lengths—the sugar does not get out to properly act in the fermenting process. Silverized silage is cut in *short, even lengths.* The sugar juices around the joints of the cornstalks are *released*—the silage packs down air-tight in a homogeneous mass. Makes the *right* kind of food to bring *maximum milk yield* from dairy cows—or to put *weight* on fat stock.

Silver's "Ohio"

The Logical Silo Filler

"Ohio" cut silage is cut finer and more uniform than ordinary silage. Shorter lengths. Not just in spots but all the way from bottom to the top of the silo. The reason is, the knives hold their position. For example, if you set them at half inch, they cut half inch right along. Pressure of the material cannot spring them out of place. They are of the sturdy cylinder type, with bearings at *both* ends. Have accurate, patented adjustments for a quick, short, clean, shearing cut. The material is cut to a mold-proof semi-pulp—fine and free from "air pockets" and uncut leaves.

And this is but one of the many big features on Silver's "Ohio." Write and let us tell you about the others. About the new beater self-feed that saves a man's work at the feed table; the direct drive—drive pulley, knife cylinder and blower fan all on one shaft, reducing friction and saving power; the low-speed, explosion-proof blower fan; single lever control; bull-dog grip feed rollers, friction reverse and others.

Books Free

One is our catalog—tells about Silver construction and why Silver's "Ohio"—the pioneer—is the logical silo filler for the custom man or the man who does only his own work. The other is a booklet that shows in dollars and cents why it pays to "*Silverize your silage.*" Write today.

The Silver Mfg. Co.
312 **Broadway**
Salem Ohio

Silver's "Ohio" is made in seven sizes—fit any farm or purse. For 4 h.p. gas to big tractors. 40 to 300 tons a day. Special light draft models for 4 to 8 h.p. engine.

"Modern Silage Methods" 264 pages—sent for 10c—coin or stamps

When writing to advertisers kindly mention The Wisconsin Farmer.

DAIRY

Better Butter in America.

To the Editor—Is the butter of the dairy farmer of this country going to be shut out of the market? If so, why and who is to blame for it? Have we come to a time when all the milk which is turned into butter in America must be manufactured in creameries, so that the individual farmer will no longer have a place as a producer as he has in the past?

Not long ago a farmer I know sent a tub of dairy butter to a big city for sale on commission. That butter came back almost as quickly as the express could get it there, with the statement that the market could not use it. Why? Was that butter off in any way? It happened that I saw the butter after it came back and smelled of it and tasted of it. And I know what good butter is, if I do say it. That was nice, sweet, beautiful butter. The young man who made it has a new separator and keeps it in excellent condition. The disks and other parts are washed carefully every time the machine is used. He has been to considerable expense to fit up a milk and churn room with gasoline engine and everything in first-class condition and is trying hard to work up a trade for his butter. Then to have this setback—why, it hurt some, that is all.

And since then I have taken some pains to ask dealers in a fair-sized city about their trade in butter. Some do not handle farm butter at all; others none made anywhere that is packed in tubs. And when I inquired into the reason I found that these men claim that farm butter is not marketable because it is not up to the standard of taste of the consumers. These people will pay 40 cents a pound for creamery print butter, when they will not take farm butter at 30 cents. So the dealers told me. And yet, not two days ago a woman asked me if I knew where she could get butter of a farmer, and I know of many who would be glad to do the same if they only could.

What is wrong here? I'll tell you, and it is a thing that ought to encourage every one of us. Many farmers may make a good deal better butter than they do. If everybody would think that the poor butter turned out on the farms of the country is what is hurting our trade and would do his level best to improve his own product it would not be long before dairy butter would hold the first place in the estimation of the consumer.

What are some of the little things we can do in this direction? We can be just as neat as a pin about milking, straining, cooling and keeping our milk. We can have a place for cream and milk that is free from any bad smells. We can wash our pails, cans, pans and churns thoroughly every time they are used. If we have no separator we can get one if we really set out about it and wash that perfectly clean every day. We can think and study and visit other dairies and read good papers and educate our taste and smell so that it will tell us when everything is right and we can use good water, good salt and good packages.

So little by little we may improve the quality and the demand for the dairy butter of America. Many are doing all this now and they are reaping their harvest every day.

Subscriber.

A Good Udder Important.

To the Editor:—A good udder is one of the most important items to consider in the selection of a profitable dairy cow. The size and shape of the udder will determine largely the quality of the cow, and whether or not she is capacitated to produce a large amount of milk. It should be rather square in shape, with plenty of depth, width and length. The lower portion of the udder should be level and broad. It should reach far upward on the under side of the cow and should extend well up between the legs.

Size is by no means the most important feature in considering a good udder. Good quality is far more essential. A good-quality udder can be judged by the skin being of fine texture, and very soft and pliable. The thick, coarse skin, that feels hard to the touch, should be avoided. Fleshiness and coarseness of the udder is an indication of inferior quality.

The good-quality udder that possesses a fine, pliable skin will shrink considerably after the milk has been drawn. The skin will lie in soft folds, that will fill out before the next milking time. With the fleshy udder there is not a great deal of difference before and after milking, but it seems to be full of milk all the time.

The good-quality udder can best be detected after milking. If one was only looking for size in udder he surely wouldn't pick on the one with the soft, pliable skin. But the man who is onto his job will avoid the fleshy udder, and will understand why size is not all we expect in a well-developed udder.

The udder should develop uniformly. Each quarter of both portions should be the same size, and the fore and hind part should hang on the same level. It means poor milking qualities to see one quarter of the udder smaller than the rest. The development of the udder depends a great deal on how the heifer is milked. Care should be taken when milking the heifer so that all parts will receive the same attention.

The teats should be wide apart on the udder. Improper milking will often cause the front teats to be wider apart than the back ones. Short teats are very difficult to milk. However, we frequently find heifers with short teats that attain quite a growth as they get older. Teats should be rather pointed at the end, instead of flat.

Subscriber.

Sour Milk—Its Uses and Food Value.

To the Editor:—The souring of milk is due to the action of a species of germs called lactic acid bacteria. Milk forms an ideal medium for germs to work in, as the favorable conditions for growth (food, heat and moisture) are all found there if milk is kept even slightly warm. This shows the necessity of keeping milk on ice, or in a cold place, if it is to be kept sweet.

However, if milk does sour, and it does, as we all know, some use must be made of it. In farm homes this is not so great a problem as in the cities where good milk is expensive. On the farm where there are usually multitudes of hungry chickens and ducks the sour milk problem can be quickly solved, as that offending article forms an ideal food for the feathered folk of our yards.

The culinary uses of sour milk are many and varied, although a number of housewives are ignorant of many of them. Most people know that the action of our milk with soda will lighten cake, muffins, biscuits, etc., but do they know why? The reason is simple. Any acid, as that contained in sour milk, combined with a carbonate, as soda, forms carbon dioxide gas and this gas, in its upward progress, lightens the whole mass in which it is placed.

A caution must be added in this connection regarding the amount of soda to use in proportion to the amount of sour milk. If too much soda is used the finished product has a greenish tinge and has a peculiar flavor and odor. On the contrary, if too little is used the finished products are not light enough. One-half level teaspoonful of soda to one-half pint of milk will usually prove sufficient, the amount of soda varying slightly with the degree of acidity in the milk. In some cases three-fourths level teaspoonful is necessary if the milk is very sour so it will neutralize the acid.

There are other important uses of sour milk in the home. It makes a very good silver polish and is used for this purpose by merely placing the tarnished silver in it a few hours. This

saves much labor for the housewife. Cottage or Dutch cheese is a delicacy made from thick, clabbered milk and one that should be eaten abundantly, as it has a very high food value, containing all of the protein or casein of the milk. If one likes the flavor of thick, sour milk it may be served with "trimmings" for a Sunday evening lunch. Served in bowls with nutmeg or cinnamon sprinkled lightly over the top, with a sprig of parsley to garnish, it is relished by many people.

I quote here another use, which, while it may be surprising to some, is accounted very good by all who have eaten it. "Lacto," as it is popularly called, is composed of sour milk, fruit juice, preferably cherry or raspberry, and sugar. This is frozen as any ice cream and when ready to eat much resembles a sherbet. It has a high food value, but is not as rich as ice cream, therefore it can be partaken of more freely. It is one of the most easily digested of all frozen foods.

Sour milk has a very high food value, being similar to that of fresh milk except that in the sour milk the cream or fat globules have all been removed, thus taking away much of the heat and energy given by fat. Nevertheless, the soured skim milk gives heat and energy, this being due to the milk sugar, or lactose, found in it. When cottage cheese is made this carbohydrate is left in the whey, which may be used in bread making. The curd remaining contains the protein of the milk, the office of which is to build and repair bodily tissues.

H. M. Steen.

Essentials in Raising Calves.

An ill-kept cow cannot be made a profitable dairy cow. She cannot grow and produce the best of calves. Hence it is essential to begin early in the life of the dam and calf to look after every detail in breeding and feeding. Fred Stubley, of Black Earth, Dane county, of the Farmers' Institute staff, has given us some pointers along the line.

Some of Mr. Stubley's valuable suggestions on these points are: Pure, fresh water should be given to calves daily as soon as they have learned to drink.

Salt should be kept where they can have free access to it at all times.

All changes in feed should be made gradually.

Foam which forms on separator skim milk should never be fed, as it will cause indigestion and scours, bloat or other troubles which follow.

Calves should be separated or fastened in stanchions at the time they receive their milk and fed dry grain immediately after drinking the milk, which will tend to prevent the bad habit of sucking one another.

The stables should be cleaned regularly and kept dry.

If the stable is provided with a concrete floor it will be worth while to have an inch board overlaid to keep calves off the damp, cold concrete.

In winter time cold drafts of air in the stable should be avoided.

In summer it is well to darken the stable to give protection from flies and to keep it as cool as possible.

Young calves should never be exposed to a hot, scalding sun.

Watch calves and keep them free from lice. Thorough washing or dipping calves with a 5 per cent solution of some of the coal tar series of disinfectants like zenoleum, creolin, etc., and repeating the washing after ten days, is the most effective means of destroying lice.

Aim to do everything possible to keep calves gaining in live weight at the rate of one and a half to two pounds daily.

Avoid calf scours by keeping them in clean, well-lighted and well-ventilated quarters and feeding them regularly milk at the proper temperature from pails scrupulously clean. Treat any indications of scouring by reducing the feed. Give two to four tablespoonfuls of castor oil mixed with one-half pint of milk. Following this in four to six hours or immedaitely, if necessary, with one teaspoonful of a mixture of one part salol and two parts subnitrate of bismuth mixed with one-half pint of milk, has proved a good remedy for bad cases of scours. The salon and subnitrate of bismuth can be secured from any druggists mixed in the proper proportions, and thus be available for use at any time.

Wetting the navel of the new-born calf with a 1 to 500 solution of bichloride of mercury is considered a safeguard against contagious scours.

Mr. Stubley emphasizes the necessity of a clean, well-lighted box stall, well bedded and dry, for the dam, and of plenty of disinfectant in barn and stall at all times. Raising good heifer cows is more satisfactory and profitable than buying cows, in Mr. Stubley's opinion. It does away with the necessity of expending time and money in buying cows, safeguards the herd from such contagious diseases as tuberculosis and abortion; enables the dairyman to secure a herd of cows of uniform breeding, individuality and ability to produce profitably; makes it possible to keep a herd of comparatively young cows from which individuals may be sold from time to time at remunerative prices; and affords greater satisfaction than does the mere milking of cows and getting proceeds from the milk. By the time purchased cows adapt themselves to a strange herd and return over cost of feed an amount equal to their purchased price and losses when account is made of the result from dealing with cows of unknown breeding and character, the dairyman, writes Mr Stubley, realizes it is cheaper to raise calves than to buy cows.

Other essentials for growing calves, he notes, are good breeding, favorable environment, careful feeding, beginning before the calf is born and continuing through the first six weeks—the delicate age, and through the skim milk age, the oft-neglected age from six to twelve months after birth, and finally the breeding age.

Empire Cow-Testing Association.

Roy H. Monroe, official tester of the Empire Cow-Testing Association, Fond du Lac county, has made his first official report. For the first month a registered Holstein owned by C. W. Keys and a grade Holstein owned by Casper Bros. are tied for the high record. The monthly report is as follows:

Gain Two Hours a Day
That's what one man with a few cows says of his Empire Milker. It enables you to make more money by keeping more cows with less work.
The Empire Teat Cup massages the teats by natural air pressure. No compressed air used. Cannot cause sore, inflamed teats and udders. In many cases it increases the milk yield.
55 Cows—90 Minutes
The Empire Way
is the economical way. One double or two-cow unit takes care of 20 to 30 cows per hour. No elaborate and costly installation necessary.
The Empire Mechanical Milker
is the simplest milking machine on the market. Easiest to install—easiest to operate—requires but one tank and one pipe line.
Empire Cream Separator
Its quiet, light-running qualities have made the Empire Separator famous among the most successful dairymen everywhere. Let us send you descriptions and pictures, showing the Empire Milker and Empire Separators in use. We will also send you our offer on Empire Engines and Empire Star Feed Mills. ROSS SILO FILLING MACHINERY
Especially Designed for Gas Engine Power
Guaranteed to deliver silage into the silo at 50% less speed and 30% less power than ordinarily required.
Our 85th Year
Cuts the silage in uniform lengths, which insures the Best of Feed. Silage packs closer, which permits of more tonnage into the silo. For strength, durability, capacity and easy-to-feed—Ross Machines are unexcelled. Write for catalog.
Guaranteed free from defects, not only for one year, but for life of machine.
THE E. W. ROSS CO.
Box 154 Springfield, Ohio
We also manufacture the Ross Wood and IN-DE-STR-UCT-O Metal Silo.
ROSS

Use A Wood Tire Hollow Wall Silo
Cannot Sag, Blow Down or Rot.
Cures and preserves silage perfectly. Prevents freezing of silage. Easy to construct. A real farm building, permanent and rigid. No hoops to get loose. No guy wires. No staves to shrink or swell, but a smooth, double wall from base to roof, the inner wall being of *California Redwood*.
Guaranteed for 20 Years
"But Lasts a Lifetime"
WOOD TIRE
The patented wood "tire" is built up of inch boards, and shipped in sections. The boards overlap in step formation at both ends. When nailed together, these sections form a ring of unusual strength. The silo frame forms its own scaffolding.

THE HOME

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

Hygiene of Breathing.

The development of a child's face and the determination of his facial appearance depend quite largely upon the way he breathes. Seventy-five per cent of the children with deformed bones of the face, as well as those considered dull and listless in school could be greatly improved by careful attention to their breathing, says the Nebraska College of Medicine.

To breathe properly the nose should be the principal entrance for air; very little should be taken in through the mouth. When the breathing is carried on properly through the nose, the bones of the face grow properly, the teeth come in properly, the character of the nose is maintained and the child will look as nature intended. When the breathing is carried on improperly through the mouth, the bones do not grow as was intended by nature, the teeth are misplaced, especially the upper front teeth which become prominent and project forward, the nose is flat, and the child is given a dull, unattractive appearance. Besides changing the facial appearance, improper breathing brings on a catarrhal condition in the nose and throat which retards normal growth, starts deafness, renders the child more liable to disease, and quite generally handicaps him in school and in life.

The first signs of bad breathing very often are—1st keeping the mouth open when sleeping; 2d, persistent loud breathing or snoring when asleep; 3d, tendency to frequent colds; 4th, persistent discharge from the nose.

If these signs are heeded and simple care started, the deformities and bad health which would later follow may, without doubt, be avoided.

Prepare to Keep Cool.

There is no better time of year to begin this intelligent campaign for "keeping cool and comfortable," externally and internally, bodily and mentally, than in the early summer. If there be any time in the year when one ought to be comfortable without an effort or a thought, it is on "a day in June." If by any chance you are not cool and comfortable, then there is something seriously wrong with your environment or habits or conscience. June time is the time of peace in which to prepare for war. Don't wait until you are sweating and gasping and heat prostrated and mosquito bitten; beat the enemy to it.

Of course, as a first step toward making yourself comfortable for the summer, it goes without saying that you will put screens over all the windows and doors of your house, and screen in at least one wide porch. Since we discovered that malaria is carried by mosquitoes and by no other means, and that flies carry typhoid, summer dysentery, and other infectious diseases, screens have been lifted out of the class of mere comforts and luxuries, and have become necessities of life and health. Also screens have been found to be not only life savers, but good investments in a commercial way, for even cows give more milk if they are kept in screened stables and cool sheds, and protected from the maddening attacks of flies.

The next step toward making yourself comfortable for the summer is to provide some sort of porch—screened in if flies and mosquitoes breed near you—large enough to be used as both sitting room and dining room, and capable of being turned into a general living room for the family during the summer.

Next to fresh air in the campaign for coolness and comfort, comes the necessity for abundant bathing and splashing and sponging with cool water. In hot weather the bathroom becomes one of the most important rooms in the house, and a refreshingly cool bath in the morning and another one at night should be as regular as sunrise and sunset.

For children free and frequent dabbling and splashing and paddling in water is even more important and health protecting than in the case of adults. Heat, just plain heat, seldom does any very serious harm to grown-ups who are in fair condition, but to children, with their translucent skins, and big brains, and delicate nervous systems, heat is a serious danger. Give the little ones a bath at least three times a day, and let them splash and rollick and play frog or fish in the tub as long as they wish.

Last and by no means least in the comfort code comes the admonition,

HARRY AND DALE RICHARDSON.
Sons of Mr. and Mrs. G. M. Richardson, age four and a half and three years.

"Be good to yourself in the matter of food in summer time." Fortunately, there is usually an abundance of wholesome, appetizing foods to be had at this time of the year—such things as fruits, fresh vegetables, milk, eggs, butter, ices and ice cream.

A high place in the summer diet should be given to ice cream, iced puddings and frozen custards. Their combination of sugar and fat gives them a high nutritive value, and they are readily digested by a healthy stomach, especially if eaten slowly, with plenty of good cake, homemade cookies or salted crackers. Every family should be equipped with a good ice cream freezer and should use it at least three times a week. A couple of nice sandwiches, a large saucer of ice cream (one pint) and a plate of good cookies make not only an attractive lunch but a full meal with a fuel value of over 1,000 calories.—[Woods Hutchinson in Good Housekeeping.

Do You Read the Pure Food Labels?

The national food law has accomplished much considering the conditions at the time of its enactment as compared with present conditions. Though the law has sometimes been used to protect manufacturers in attempted defraud, the aim of its authors is that securing pure and wholesome food products for the consumer. It is to be hoped that satisfactory amendments to the law enacted June 30, 1906, will eventually accomplish the original aim of the authors of the law. The pure food law has been an agent working to "clean up," and keep cleaned up, the production, storing, handling and distribution of foods.

The matter of food is one of the biggest questions before the public. Improper nourishment is responsible for much of the population in our institutions for the feeble minded, the penitentiary, and of over 80 per cent of the physical ailments humanity is suffering from today. The pure food law has taken out of the market a lot of stuff unfit for the human stomach.

The "food label" has a very interesting history. Until the passage of the "pure food law" the label upon a food product was, in many instances, a pretty and attractive covering to a package containing unfit food for the human being. It literally covered "a multitude of sins" beneath it, which were perpetrated upon the unsuspecting public. Such evil practices as the use of injurious preservatives, filthy adulterations of foods, harmful coloring matter, short weights, etc., were followed by food manufacturers and covered up by an attractive looking label.

The passing of the pure food laws in 1906 was a great step toward reform in the production of foods, and, though our federal laws are still believed to be weak, time and the progressive housewife will strengthen them, as needed. The label stands as the housewife's interpreter of food products today, and the wise housewife will read its message. The law has shut out most of the chemical and

JOHN JENNINGS RICHARDSON.
Five-months-old son of Mr. and Mrs. G. M. Richardson.

harmful preservatives, and the best food manufacturers no longer use them. The few that are allowed, and are used, must be stated upon the label so the purchaser may reject these if she reads the labels and wishes to. All states have such laws. For example, food laws and food departments now prohibit formaldehyde in milk; borax, boracic or sulphurous acid from meat; salicylic acid from catsup; salicylic, benzoic or sulphurous acid from cider; coal tar dyes from jams and jellies; borax, boracic acid, saccharine, salicylic and sulphurous acids from all canned fruits and vegetables, and so on. Since war sent benzoates up from 18 cents to $2 a pound, we are protected in a measure from its use.

The label also tells the housewife that there are different grades of goods. Jobbing houses grade their goods for the retailers by means of different labels. The housewife should visit her grocer and ask him to explain to her the grades of goods he carries, then she may make her purchases intelligently. Prices, of course, are determnied by the grade. Difference in grade does not necessarily mean undesirable or unwholesome goods; it usually just means that there are differences in selection and packing of materials, the more carefully selected and packed bringing the higher prices.

When a housewife learns all she can about grades of foods her grocer will see that she understands and he will not try to palm off a low grade at a high price.

These are some of the things a label upon food products will tell the housewife: (1) The quality or grade of food; (2) the manufacturer's or jobber's name and address; (3) the net weight, or measure; (4) the materials in the composition; (5) statements of preservatives used, if any.

Read your labels, housewives, and help in the great campaign afoot for the protective standards for food products. Learn to know the superior from the inferior brands of goods. In the majority of cases the grocer has the standard articles upon his shelves and is willing to give the housewife what she asks for. Carelessness upon the housekeeper's part may bring her undesirable goods. When she asks for a bottle of vanilla extract it should be sent, not an imitation vanilla substitute flavor. Let the practice of such ordering as "Send me up some like the last" give way to a more definite expression of what you know you want, and you will get it.—[Laura B. Breese.

Wheel Tray Saves Many Steps.

Some people forget "the shortest distance between two points is a straight line" and follow roundabout methods in the accomplishment of routine tasks. We still find many housewives taking the numerous trips to her kitchen in clearing her dining table when the wheel tray or the small table upon rollers or even a large hand tray would reduce the time and steps considerably each time this task is done. The wheel trays also save many steps in the kitchen, and if those in the market are found too expensive they can be made for little cost. Discarded baby carriage wheels may be used for the wheels, and odd pieces of lumber used for the shelves, then the tray may be painted or stained the color desired.

Easy Way to Clean Silver.

To the Editor:—I enjoy reading the Home page so much, and I have often thought I would write. I would like to tell my friends an easy way to clean silverware that has become tarnished. I put all the knives and forks in an aluminum pail or kettle, put two handfuls of salt in, then pour boiling water over them and let them stand until the water is cool enough to put your hands in. Then wash with soap and water, rinse and dry.

Mrs. E. Grosshuesch.

To Take Out Wagon Grease.

To the Editor:—Will some of the readers tell me what will take out wagon grease from a rubberized rain coat without taking out the color? The coat is tan and I do not know what to use on it so that it will not fade. I will be very thankful for any advice. Mrs. E. C. J.

The sealers of weights and measures of the Wausau, Wisconsin, district will attempt to have the legislature fix the standard weight for a loaf of bread at fifteen ounces and to obtain regulation of water content of cake. A proposal also has been considered for selling eggs by weight and not by the dozen.

Ask your neighbor to subscribe for The Wisconsin Farmer.

Recipes.

Omelet With Macaroni.—Omelet—Four eggs, whites and yolks, beaten separately, four teaspoons milk, pinch of salt. Melt tablespoonful of butter in omelet pan or spider. Beat yolks of eggs thoroughly, add salt and milk, beat again, then cut in the stiffly beaten whites, turn into hot omelet pan, cover and cook one or two minutes, uncover and set in hot oven one minute to dry off. Place part of macaroni and sauce in center and fold, turn on platter and add remainder of sauce.

Fish Omelet.—This is a good way of using up the remains of cold fish left over from a meal. Free the fish from all skin and bones and break up into very small pieces or shreds. Put this into a saucepan with about half an ounce of butter, season with pepper and salt, and add enough white sauce or milk to moisten the fish. Stand aside and keep hot while you prepare the following mixture: Break three eggs into a basin, beat up lightly, add one tablespoonful of milk. Melt an ounce of butter in an omelet pan. Pour in the eggs, stir over a quick fire until the mixture begins to set, then shake well. Put the prepared dish into the middle of this, and fold over. Serve at once.

Grape Juice Pudding.—Mix a tablespoon of flour with one-half cup of sugar. Add two cups of water and boil five minutes. Remove from fire, add one-half pint of grape juice. Beat one egg and pour over it the hot grape-juice mixture. Chill thoroughly and serve with whipped cream.

Cucumbers With Sour Cream.—Slice cucumbers and let them stand a half hour in cold water, then serve with sour cream, salt, pepper and a little vinegar, with a teaspoonful of grated onion. Shredded cabbage well crisped in water and served with sweet cream, sugar, a dash of salt, and a little vinegar is another appetizing salad well liked.

String Bean Salad.—Cook the beans whole, drain and arrange in a ring of lemon peel five or six string beans to a serving; place on lettuce and serve with French dressing seasoned with chopped chives, salt and pepper.

Fig Custard.—Wash a pound of figs and cover them with water to cook an hour, add the juice of a lemon, a few bits of peel, which may be removed after the figs are tender. Make cup custards, using four eggs, a half cupful of sugar, a quart of milk and a pinch of salt. Cook the custards and on top of each place two spoonfuls of the fig mixture, cover with a meringue or whipped cream and serve cold.

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Lives on a Hundred-Acre Farm.

Dear Young Folks:—I have been reading your letters and enjoy them very much. I can hardly wait till the paper comes. I am eleven years old, and in the fifth grade. I ride my pony half a mile to school and come home to dinner. Our school closed June 1st. We had a picnic dinner, and gave an entertainment in the afternoon. The teacher and pupils of another school came and spent the day with us. We children all had a dandy time. I liked by teacher very much. I am going to take music lessons this vacation; will soon be in the third grade.

I live on a hundred-acre farm; its name is Maple Leaf. I like my home very much. We have a number of different flowers. Mamma and I enjoy them very much. I go to Sunday school every Sunday unless someone is sick. I dearly love to go.

I saw in one of the Young Folks' letters a riddle which is, "What has eyes and cannot see?" and the answer is a potato. I will ask one too: House full, yard full; can't catch a thimbleful. —Inez.

The King and the Haymaker.

Dear Young Folks:—I enjoy the letters which so many boys and girls have written. There are so many boys and girls that go to our school we have lots of fun. I am in the eighth grade and like to go to school.

I will now tell a story of the king and the haymaker.

One day George III was visiting a small town in England, and being anxious to see something of the country took a solitary walk. He came to a hayfield in which there was only one woman at work. The king asked where the rest were. She said that they were all gone into town to see the king. "Why didn't you go, too?" asked his majesty. "Pooh!' she answered, "I wouldnt walk three yards to see him. Besides, they've lost a day's work by going and I am too poor to do that, with five little children to feed." The king slipped a sovereign into her hand and said, "When the rest come back tell them that while they were gone to see the king, the king came to see you and left you his portrait in gold to remember him by." When the rest came home they were disappointed because they didn't see the king after so long a journey.

I wish some of the Young Folks would write the story of the thief and the turtle. —Velma.

The Butcher Bird.

Dear Young Folks:—In answer to Dorothy's letter I want to say that she has seen the Loggerhead Shrike or Butcher Bird. This last name is given because it catches other song birds and hangs them on thorns to die. For this reason we kill all of the Butcher Birds we see. I, too, have read "Rebecca of Sunnybrook Farm," and enjoyed it very much.

I hope Dorothy will write again.
—"Tater."

Little Orphant Annie.

Little Orphant Annie's come to our house to stay,
An' wash the cups and saucers up, and brush the crumbs away,
An' shoo the chickens off the porch, an' dust the hearth, an' sweep,
An' make the fire, an' bake the bread, an' earn her board-an'-keep;
An' all us other children, when the supper things is done,
We set around the kitchen fire an' has the mostest fun
A-list'nin' to the witch tales 'at Annie tells about,
An' the gobble-uns 'at gits you
Ef you
Don't
Watch
Out!

Onc't they was a little boy wouldn't say his pray'rs—
An' when he went to bed at night, away upstairs,
His mammy heerd him holler, an' his daddy heerd him bawl,
An' when they turn't the kivvers down, he wasn't there at all!
An' they seeked him in the rafter-room, an' cubby-hole, an' press,
An' seeked him up the chimbly-flue, an' ever'wheres, I guess,
But all they ever found was thist his pants an' roundabout!
An' the gobble-uns'll git you
Ef you
Don't
Watch
Out!

An' one time little girl 'ud allus laugh an' grin,
An' make fun of ever'one an' all her blood-an'-kin,
An' onc't when they was "company," an' ole folks was there,
She mocked 'em an' shocked 'em, an' said she didn't care!
An' thist as she kicked her heels, an' turn'd to run an' hide,
They was two great big Black Things a-standin' by her side,
An' they snatched her through the ceilin' 'fore she know'd what she's about!
An' the gobble-uns'll git you
Ef you
Don't
Watch
Out!

An' little Orphant Annie says, when the blaze is blue,
An' the lampwick sputters, an' the wind goes woo-oo!
An' you hear the crickets quit, an' the moon is gray,
An' the lightnin'-bugs in dew is all squenched away—
You better mind yer parents, and yer teachers fond and dear,
An' churish 'em 'at loves you, an' dry the orphant's tear,
An' help the pore an' needy ones 'at clusters all about,
Er' the gobble-uns'll git you
Ef you
Don't
Watch
Out!
—James Whitcomb Riley.

Do you always have a tired feeling about this time of year? asks an Ohio College of Agriculture bulletin. Do you crave different diets and relish new dishes? Then provide plenty of garden produce for the table, for vegetables and fruits furnish a large part of the mineral salts that are necessary to the well-being of the human system. Vegetables in the diet are worth more than their food or money value. The need of tonics and other medicines in the spring is due largely to the lack of vegetables and fruit in the winter diet. If more succulent food were used less money would be spent in doctor's fees and for medicine.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and inclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery.

CATALOG OF SPRING AND SUMMER FASHIONS.

Send 10 cents in silver or stamps for our up-to-date 1916 large spring and summer catalog, containing over 400 designs of ladies', misses' and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, MADISON, WISCONSIN.

1424—A simple but chic costume with sleeve in either of two lengths. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 7 yards of 44-inch material for a 36-inch size.

1751—A charming summer frock. The pattern is cut in 4 sizes: 14, 16, 18 and 20 years. It requires 4 yards of 44-inch material for the dress with ruffles, and 3 yards without ruffles, for a 14-year size.

1730-1744—A splendid dress in tailored style. The waist pattern 1730 is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. The skirt pattern 1744 is cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It will require 8⅛ yards of 36-inch material to make the entire dress for a medium size. Two separate patterns. Price 10 cents for each pattern.

1597—A unique and easily adjusted apron. The pattern is cut in 3 sizes: Small, medium and large. It requires for a medium size 5⅞ yards of 36-inch material.

1352—Girls' suspender skirt and guimpe. The pattern is cut in 4 sizes: 6, 8, 10 and 12 years. It requires 3 yards of 36-inch material for 10-year size.

1600—Children's envelope night dress in high, round or square neck edge and with sleeve in either of two lengths. The pattern is cut in 5 sizes: 6 months, 1, 2, 4 and 6 years. Size 2 will require 2½ yards of 36-inch material.

1742—A comfortable and attractive jumper dress, with guimpe having long or short sleeves. The pattern is cut in 5 sizes: 4, 6, 8, 10 and 12 years. It requires 1¾ yard of 27-inch material for the guimpe, and 2⅝ yards of 36-inch material for the dress, for an 8-year size.

1638—A simple practical house dress with sleeve in either of two lengths. This desirable model is cut in 7 sizes: 32, 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 7¼ yards of 36-inch material for a 36-inch size.

1748—A dainty negligee. The pattern is cut in 3 sizes: Small, medium and large. It requires 3⅝ yards of 36-inch material for a medium size.

1673—A trim and becoming style middy dress with skirt attached to an underwaist and with sleeve in either of two lengths. The pattern is cut in 5 sizes: 4, 6, 8, 10 and 12 years. It requires 4⅛ yards of 40-inch material for an 8-year size.

1747—Girls' dress, with or without belt at empire waistline, and with sleeve in either of two lengths. The pattern is cut in 4 sizes: 1, 2, 3 and 4 years. It requires 2 yards of 36-inch material for a 2-year size.

1735—Men's negligee or outing shirt, with sleeve in either of two lengths, and collar rolled high or low. The pattern is cut in 7 sizes: 38, 40, 42, 44, 46, 48 and 50 inches breast measure, neck measure to correspond in sizes 15, 15½, 16, 16½, 17, 17½ and 18. It requires 3½ yards of 36-inch material for a 17-inch neck size.

International Sunday School Lesson.

Lesson for June 25, 1916.
(By E. O. SELLERS, Acting Director of Sunday School Course.)

REVIEW, SECOND QUARTER.

READING LESSON—Philippians 1:1-11; 4:1-9.

GOLDEN TEXT—Finally, brethren, whatsoever things are honorable, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things.—Phil. 4:8.

The lessons for the past three months extend over a period of perhaps fifteen years, from A. D. 37 or 40 to A. D. 52 or 55. It is the history of an ever expanding church and the ever widening influence of the work which Jesus began and continued to do after His resurrection, through the Holy Spirit. No adequate or proper review can be conducted without the aid of a map. If none is available, take a large sheet of manila paper and let some of the scholars make an outline map showing the strategic centers, Jerusalem, Damascus, Antioch and as far west as Philippi, also the country involved, the coast line of the "Great Sea," etc. It is a good idea not to locate the chief cities, but have pupils attach to the map small, round, red and white stickers on which might be printed the name of each city. Then other pupils might trace on the map the course of Paul's journeys. If all of this work is done in the presence of the entire school it will aid greatly in holding attention as well as placing before the scholars a visible delineation of the lands involved in this portion of sacred history. The most outstanding incidents which have been studied during the past quarter, such as the conversion of Saul, the healing of Aeneas, the raising of Dorcas, Peter's visit to Cornelius, etc., could also be located geographically by means of thumb tacks with tags attached. A most interesting review would be to organize in the school a number of travel clubs. Let each club come prepared to give a "travelogue," or travel talk, describing some of the chief events, such as the Damascus journey, a journey to Joppa, to Cyprus, to Iconium, from Antioch to Jerusalem, etc. Let the pupils write out their accounts and as each is written have some scholar indicate on the map the places involved, and others hang up in plain sight of the entire school a piece of cardboard bearing a single sentence indicative of the leading lesson of the event described. This latter will mean to use a sentence or parts of sentences as: "We are men of like passions as you." The element of contest could be employed by having all the pupils in a given department bring such sentences relating to the lessons on cards, and let that scholar who can bring the greatest number of sentences be declared the winner. The teacher must, of course, help materially in such a contest by direct suggestion and by encouraging the pupils to undertake the task before them.

For the adult and older 'teen age classes it might be well to assign to different scholars a number of great problems which have been treated in the lessons of the quarter, and let each come to the class prepared to read a brief essay or to discuss the subject assigned, relating it, of course, to the work of the review. (Lesson I.). "How the Holy Spirit converts men today." (Lesson V) "How can the church be aroused to the great work of missions." (Lesson VIII) "The Perils of Popularity." (Lesson XI) "The conditions of salvation" and so on. Another interesting plan would be to have different members of the class prepare at home a brief synopsis of the chief characters of the quarter's lessons.

Such a use of charts is valuable in that it appeals to the eye, is a real test of knowledge and helps to systematize our information for future use.

The facts of the quarter are about as follows:

Lesson I. The risen Christ by His overwhelming glory conquers His bitter enemy, Saul.

Lesson II. Men are healed and the dead risen by the power of the risen Christ.

Lesson III. Peter, the Jew, is prepared and Cornelius, the Gentile, is called to a momentous conference.

Lesson IV. Jew and Gentile alike receive the gospel and are sealed by the Holy Spirit.

Lesson V. The risen Christ by His angel delivers His servant, Peter.

Lesson VI. The Holy Spirit calls Barnabas and Saul to a world ministry.

Lesson VII. The preaching of Christ causes separation.

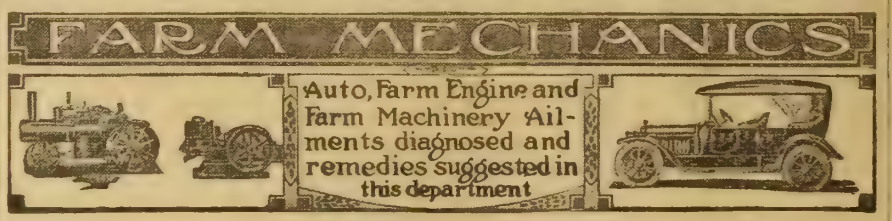
Lesson VIII. The power of the risen Christ heals the lame and revives Paul.

Lesson IX. Christ, Who fulfilled the Jewish law, removes its burden.

Lesson X. Lydia's open-hearted response to the gospel.

Lesson XI. The temperance lesson shows our relations to others in the Kingdom.

Lesson XII. The ever present Christ delivers His servants and convicts and saves the sin-hardened jailer



QUESTIONS AND ANSWERS.

Motor Knocks.

Would you please tell me what is the matter with my Ford car? When we bought the car in 1913 it had a knock, but not a bad one. After we had had it six months, we took it to a shop to have it fixed, but they could not find where the knock was. It is not caused by the spark, as it knocks at any position of the spark. It is a dull, loud knock.

Answer.—A knock such as you describe is usually caused by the crankshaft fitting the main bearings too loosely. The connecting rod bearings may also need adjustment.

Horse Power of Engine.

What is the horse power of my engine? It has a seven-inch bore and ten-inch stroke. It runs 300 R. P. M. What width and length of belt would you advise to get the best results? I want to use it for filling my silo.

Answer.—Your engine should develop ten-horse power. The size of belt required depends upon the diameter of the drive pulley as well as upon the horse power transmitted. Using a drive pulley twelve inches in diameter, a belt six inches wide could be used. The faster a belt runs the more horse power it will transmit. A belt this large should be at least eight feet between pulley centers, and would run better at fifteen or twenty feet.

Size of Pulleys.

I have a sixteen-horse-power steam engine, whose speed is 250 revolutions per minute. It has a forty-inch drive pulley. What size pulley will I have to use to drive a machine 1,200 R. P. M.; 800 R. P. M.? What is the rule for finding the diameter of the driven pulley when the diameter of the drive pulley and the speed of the two shafts are known?

Answer.—The rule is: Multiply the diameter of the driving pulley by the speed of the driving shaft, and divide by the speed of the driven shaft. In the above example the driven pulley for 1,200-horse-power motor should have a diameter of 40x250÷1,200=8.3 inches.

For 800-horse-power motor the diameter of the driven pulley should be 40x250÷800=12.5 inches.

What Is "Single Phase"?

Please inform me what is meant by "single phase," "two phase" and "three phase" currents.

Answer.—The above terms apply to alternating currents only. An alternating current flows first in one direction and then in the opposite direction. In a "single phase" motor winding, there is a single current flowing backward and forward. If the motor has a "two phase" winding there are two sets of windings on the motor. At any instant the current is flowing in exactly opposite directions in the two windings. A "three-phase" motor has three separate windings, the current in each winding flowing in a different direction at any instant. Windings of more than one phase are often called "polyphase" windings.

A Jump Spark Coil.

Please inform me how a jump spark coil can be constructed at very little expense. I have a buzzer from an old coil which is in good working order. Can I use it to make a new coil?

Answer.—You can use your buzzer on a new coil. Instructions for making a jump spark coil were given in these columns in the issue of April 22, 1915. Space will not at present permit us to republish these instructions. If you have access to a library you can find a description of these coils in some electrical or automobile book. Briefly, about 200 turns of No. 16 single cotton-covered copper wire are wound upon a soft iron core made of a bundle of wires, the core being about three-quarters of an inch in diameter. One end of the copper wire is attached to the ground terminal of the coil, and the other end is attached to the vibrator plate of the buzzer. The end of the iron core forms a magnet to operate the buzzer. Around the first coils are wound 2,000 turns of No. 36 double cotton-covered copper wire, one end being fastened to the ground terminal of the coil, and the other end to the spark plug terminal. A condenser, made of alternate layers of tin foil and paraffine paper, is connected between the contact points of the buzzer.

Taking Off Ceiling Lights.

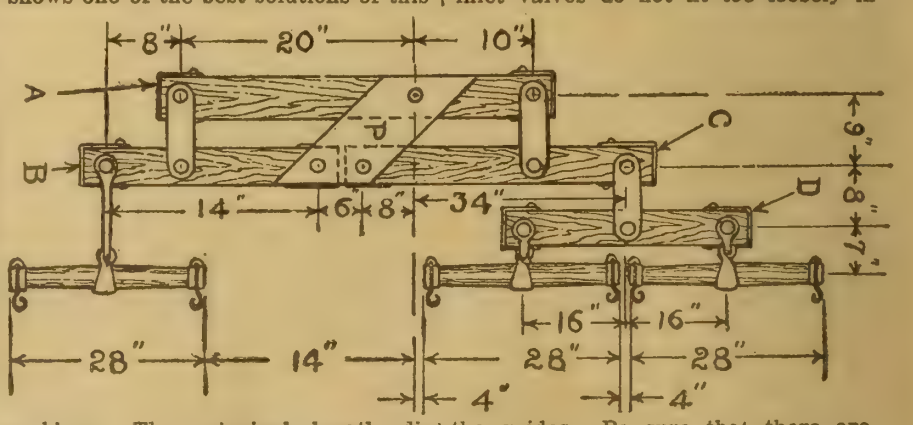
How may I take ceiling lights from the circuit above, when the wires are running parallel with the beams? Also when they are running crosswise through the beams?

Answer.—Remove about one and one-half inches of the insulation from each of the two lead wires near the outlet. Remove about two inches of insulation from the ends of the two outlet wires. Having scraped all wires bright, wrap the outlet wires several times around the lead wires and solder the joints, using a soldering paste to make the solder stick. Then wrap each joint with sheet rubber and cement it in place. Then wrap with insulating tape. Install two porcelain knobs on the beams near the outlet. Bring the two outlet wires to these knobs, and give the wires a hitch around them. Then run the wires to the outlet box. A piece of circular loom must be placed on each outlet wire, extending from the knob into the outlet box.

A Three-Horse Evener.

Please explain to me how to make a three-horse evener for a wagon. I want it for my manure spreader. I want to have two horses on one side of the tongue, and one on the other.

Answer.—We have had several requests for information as to how to construct an evener of this kind. It is not an easy matter to hitch two horses on one side and one on the other and avoid side draft without placing the single horse quite a distance from the tongue. The figure shows one of the best solutions of this problem. The principal length dimensions are shown, the figures being inches. The sketch is not to scale. The singletrees should be twenty-eight inches long. They should be about two and three-eighths inches diameter at the middle, and taper down to one and three-fourths inches at the ends. Hickory is the best material for homemade trees, but pressed steel makes a lighter and stronger tree. The doubletree D should be thirty-six inches long over all; one and three-eighths inches thick, and three and three-fourths inches wide. C should be the same width and thickness, and forty-six inches long over all. B should be the same width and thickness, and eighteen inches long over all. A should be one and three-fourths inches thick and four and one-half inches wide. It should be thirty-five inches long over all.



The singletrees should have ferrules and hooks as shown, the hooks being made of three-eights-inch-diameter steel rod. The ends of the doubletrees should be bound with strap iron, about three-thirty-seconds of an inch thick, to prevent splitting. The straps connecting the doubletrees should be made of strap iron, one-fourth inch thick and two inches wide. Place these straps both below and above the doubletrees, so as to avoid a twisting strain. Use five-eighths diameter machine bolts for pins. The plates P should be one-fourth of an inch thick, ten inches wide, and long enough to cut off as shown. All joints must work freely.

Auto Runs Poorly.

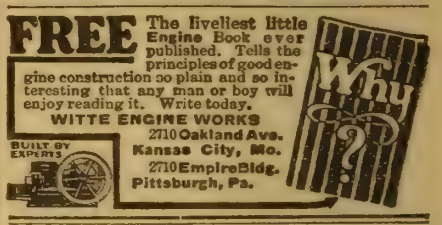
I have a number 79 Overland car. It seems to run all right except on a hard pull. If the speed slows up a little, it knocks and clicks. The car will make about thirty-five mils per hour on the road. I have had the magneto repaired, and it seems to run all right. Would a Bosch magneto give more speed?

Answer.—A new magneto would probably help your car, but it evidently needs a general overhauling by a competent mechanic. See that you have good compression, and that the inlet valves do not fit too loosely in the guides. Be sure that there are no air leaks at the intake manifold gaskets. The motor bearings should be adjusted, and the worn parts of the clutch and transmission replaced.

Dynamo Does Not Generate.

I have an Apple dynamo, ten volts, 1,300 R. P. M. Some time ago this dynamo stopped generating. I put in new brushes without results. I cleaned it up and rewired it, but still it will not give any current. I use it to run a fifteen-horse-power gasoline engine. What is my trouble?

Answer.—There is probably a break in the field wires, or a loose connection. If you cannot easily locate it you better send the generator to the maker for repairs.



TOLD IN THE HILLS

By Marah Ellis Ryan

Author of "That Girl Montana," "The Bondwoman," "My Quaker Maid," Etc., Etc.

(Copyright Rand McNally & Co.)

SYNOPSIS OF PRECEDING CHAPTERS

The prologue, or Part First, is laid in New Orleans and concerns two brothers, one of whom has proved faithless to the girl who trusted him, the other one marrying the girl and giving her the name and home which the faithless brother had well-nigh robbed her of. The scene then shifts to the Kootenai country, in the Pacific Northwest, where Genesee Jack is prospecting for gold and "bunking" with an old Scotchman, named MacDougall, his only companion, save his beloved horse, Mowitza. He was talking to the horse, preparatory to a ride through the hills, when the last installment closed.

CHAPTER I—Continued.

MacDougall had seen many of the grand panoramas which day and night on Scot's mountain give one, and he stood in the door unheeding this one. His keen eyes, under their shaggy brows, were directed to the younger man's bronzed face.

"There ye go!" he said, half peevishly; "ye jabber Chinook to that Talapa and to the mare until it's a wonder ye know any English at all; an' when ye be goin' back where ye belong, it'll be fine, queer times ye'll have with your ways of speech."

Genesee only laughed shortly—an Indian laugh, in which there is no melody.

"I don't reckon I belong anywhere, by this time, except in this Chinook region; consequently," he added, looking up in the old man's interested face, "I'm not likely to be moving anywhere, if that's what you're trying to find out."

MacDougall made a half-dissenting murmur against trying to find out anything, but Genesee cut him short without ceremony.

"The fact is, Mac," he continued; "You are a precious old galoot—a regular nervous old numskull. You've been as restless as a newly caught grizzly ever since I went down to Coeur d'Alene two weeks ago—afraid I was going to cut loose from Tamanous Peak and pack my traps and go back to the diggin's; is that it? Don't lie about it. The whole trip wasn't worth a good lie, and all it panned out for me was empty pockets."

"Lad! ye canna mean to say ye lost—"

"Every damned red," finished Mr. Genesee complacently.

"An' how—"

"Cards and mixed drinks," he said laconically. "Angels in the wine rooms and a slick individual at the table who had a better poker hand than I had. How's that as a trade for six months' work? How does it pan out in the balance with half-breeds?"

Evidently it staggered MacDougall. "It is no much like ye to dissipate, Genesee," he said, doubtfully. "O' course, a man likes to try his chance on the chips once in a way, and to the kelpies o' the drinkin' places one must leave a few dollars, but the mixin' o' drinks or the muddlin' o' brains is no natural to ye; it may be a diversion after the hill life, but there's many a kind that's healthier."

"You're a confounded old humbug," said Genesee coolly; "you preach temperance to me and get drunk as a fiddler all alone by yourself—not much Scotch in that way of drinking, I can tell you. Hello! who's that?"

MacDougall leaned forward and peered down the path where the sound of a horse's feet were heard coming around the bend.

"It's that man o' Hardy's comin' again about a guide, I have na doubt. I'll send him across Seven-mile Creek to Tyee-Kamooks. They can get a Siwash guide from him, or they can lose themsel's for all me," he said, grumpily, incited thereto, no doubt, by Genesee's criticism of his habits. He often grumbled that his friend from the Maple range was mighty "techy" about his own faults and mighty cool in his opinions of others.

A dark, well-built horse came at an easy, swinging pace out of the gloom of the spruce boughs and over the green sward toward the cabin; his rider, a fair, fine-looking fellow in a ranchman's buckskin suit, touched his hat ever so lightly in a salute, a courtesy the others returned, Genesee adding the Chinook word that is either salutation or farewell, "Klahowya, stranger," and the old man giving the more English speech of "Good evening; won't ye light, stranger?"

"No; obliged to you, but haven't time. I suppose I'm speaking to Mr. MacDougall," and he took his eyes from the tall, dark form of Genesee to address his speech to the old trapper.

"Yes, I'm Davy MacDougall, an' I give a guess you're from the new sheep ranch that's located down Kootenai Park; you're one of Hardy's men."

"No; I'm Hardy."

"Are ye, now?" queried the old fellow in surprise. "I expected to see an older man—only by the cause of hearin' you were married, I suppose. Well, now, I'm right glad to meet wi' a new neighbor—to think of a ranch but a bit of ten miles from Scot's Mountain, an' a white family on it, too! Will ye no light an' have a crack at a pipe an' a glass?"

Hardy himself was evidently making a much better impression on MacDougall than the messenger who had come to the cabin in the morning.

"No, partner, not any for me," answered the young ranchman, but with so pleasant a negative that even a Westerner could not but accept graciously such a refusal. "I just rode up from camp myself to see you about a guide for a small party over into the west branch of the Rockies. Ivans, who came to see you this morning, tells me that you are disabled yourself—"

"Yes; that is, I had a hug of a grizzly two weeks back that left the ribs o' my right side a bit sore; but—"

The old man hesitated; evidently his reluctance to act as guide to the poor fools was weakening. This specimen of an Eastern man was not at all the style of the tourists who had disgusted him so.

"An' so I told your man I thought I could na guide you," he continued in a debatable way, at which Hardy's blonde mustache twitched suspiciously and Genesee stooped to fasten a spur that had not needed attention before; for the fact was Mac had felt "ower cranky" that morning, and the messenger had been a stupid fellow who irritated him until he swore by all the carpenter's outfit of a certain workman in Nazareth that he would be no guide for "weemen folk and tenderfeet" in the hills. His vehemence had caused the refusal of Ivans to make a return trip, and Hardy, remembering Ivan's account, was amused, and had an idea that the dark, quiet fellow with the musical voice was amused as well.

"Yes," agreed the stranger, "I understood you could not come, but I wanted to ask you if you could recommend an Indian guide. I had Jim Kale engaged—he's the only white man I know in this region; the men on my place are all from south of the Flathead country. He sent me word yesterday he couldn't come for a week—confound these squaw men! He's gone to hunt caribou with his squaw's people, so I brought my party so far myself, but am doubtful of the trail ahead. One of the ladies is rather nervous about Indians, and that prevented me from getting a guide from them at first; but if we continue she must accustom herself to Montana surroundings."

"That's the worst o' the weemen folk when it comes to the hills," broke in MacDougall, "they're over easy to be frightened at shadows; a roof an' four walls is the best stoppin' place for a' o' them."

The young ranchman laughed easily. "I don't believe you have known many of our Kentucky women, Mr. MacDougall; they are not hothouse plants, by any means."

Genesee pushed a wide-brimmed light hat back from his face a little, and for the first time joined the conversation.

"A Kentucky party, did you say, sir?" he queried, with half-careless interest.

"Yes," said Harding, turning toward him; "relatives of mine from back East, and I wanted to give them a taste of Montana hill life and a little hunting. But I can't go any farther into the hills alone, especially as there are three ladies in the party; and a man can't take many risks when he has them to consider."

"That's so," said Genesee, with brief sympathy; "big gang?"

"No—only six of us. My sister and her husband, and a cousin, a young lady, are the strangers. Then one of the men off my ranch who came to look after the pack mules, and my wife and self. I have an extra horse for a guide if I can pick one up."

"I shouldn't be surprised if you could," said Genesee reflectively; "the woods are full of them, if you want Indian guides, and if you don't—well, it doesn't seem the right thing to let visitors leave the country disappointed, especially ladies, and I reckon I might take charge of your outfit for a week or so."

MacDougall nearly dropped his pipe in his surprise at the offer.

"Well, I'll be—" he began; but Genesee turned on him.

"What's the matter with that?" he asked, looking at Mac levelly, with a glance that said: "Keep your mouth shut." "If I want to turn guide and drop digging in that hill back there, why shouldn't I? It'll be the 'divarsion' you were suggesting a little while back; and if Mr. Hardy wants a guide, give me a recommend, can't you?"

"Do you know the country northwest of here?" asked Hardy eagerly. It was plain to be seen he was pleased at his "find." "Do you live here in the Chinook country? You may be a neighbor of mine, but I haven't the pleasure of knowing your name."

"That's Mac's fault," said the other fellow coolly; "he's master of ceremonies in these diggin's, and has forgotten his business. They call me Genesee Jack mostly, and I know the Kootenai hills a little."

"Indeed, then, he does, Mr. Hardy," said MacDougall, finding his voice. "Ye'll find no Siwash born on the hills who knows them better than does Genesee, only he's been bewitched like, by picks and shovels an' a gulch in the Maple range; but you're a lucky man to be gettin' him, Mr. Hardy, I'll tell ye that much."

"I am willing to believe it," said Hardy frankly. "Could you start at once with us, in the morning?"

"I reckon so."

"I will furnish you a good horse," began the ranchman; but Genesee interrupted, shaking his head with a gesture of dissent.

"No, I think not," he said in the careless, musical voice that yet could be so decided in its softness; and he whistled softly, as a cricket chirrups, and the brown mare came to him with long, catlike movements of the slender limbs, dropping her head to his shoulder.

"This bit of horseflesh is good enough for me," he said, slipping a long, well-shaped hand over the silky cheek; "an' where I go, Mowitza goes—eh, pet?"

The mare whinnied softly as acknowledgment of the address, and Hardy noticed with admiration the fine points in her sinewy, supple frame.

"Mowitza," he repeated. "That in Chinook means the deer, does it not—or the elk; which is it? I haven't been here long enough to pick up much of the jargon."

"Well, then, ye'll be hearin' enough of it from Genesee," broke in MacDougall. "He'll be forgettin' his native language in it if he lives here five years longer; an'—"

"There, you've said enough," sug-

GET THE GRAIN IN THE SACK

That's Why You Thresh

Some makers of threshing machinery get so interested in getting the straw out again after it gets into their separator that they forget where the grain belongs and run it right along with the straw.
Their stackers work fine, but their cash register gets tembly out of kilter and generally rings up, "Paid Out."

The Red River Special

ALWAYS LOOKS OUT FOR THE CASH

It makes money for owner or user because its builders are interested in getting all of the grain there is in the crop. They don't forget that the cash register attachment is connected at the *sacker*, not the *stacker*.
You'll find it right there where they put it if you buy or hire a Nichols-Shepard machine this season.

Why not Get the Big Run?

If you are influenced by good neighborly opinion, you'll find a lot of it concerning Red River Special methods in the Home Edition of a lively little paper that tells considerable about profitable threshing. We'd be glad to send you the latest number. Don't forget to request a Big Catalog when you write for the paper.

SAFETY
STORM BLAST
LANTERN FREE

This Safety Lantern cannot catch fire or explode. It is absolutely safe at all times and on all occasions. If you drop it in the hay loft, no oil can escape; if the cow kicks it over, it goes out at once.

It cannot blow out in a cyclone because of the storm blast feature. It is just the kind of a lantern every farmer needs about the house and barn.

Patent opening device raises and swings the globe free for lighting, filling and trimming. This lantern is fully guaranteed and is endorsed by the highest authorities on fire insurance, fire fighting and explosives. If dropped or turned over it immediately goes out. Oil cannot run. Impossible to catch fire. A lantern you will always feel safe with in the house or barn.

gested Genesee. "After giving a fellow a recommend for solid work, don't spoil it by an account of his fancy accomplishments. You're likely to overdo it. Yes, Mowitza means a deer, and this one has earned her name. We'll both be down at your camp by sun-up tomorrow; will that do?"

"It certainly will," answered Hardy in a tone of satisfaction. "And the folks below will be mighty glad to know a white man is to go with us. Jim Kale rather made them doubtful of squaw men, and my sister is timid about Indians as steady company through the hills. I must get back and give them the good news. At sun-up tomorrow, Mr. Genesee?"

"At sun-up tomorrow."

CHAPTER II.

As the Sun Rose.

DO YOU know the region of the Kootenai that lies in the northwest corner of a most northwestern state—where the "bunch-grass" of the grazing levels bends even now under a chance wild stallion and his harem of silken-coated mates; where fair upland "parks" spread back from the cool rush of the rivers; where the glittering peaks of the mountains glow at the rise and fall of night like the lances of a guard invincible, that lift their grand silence as a barrier against the puny strife of the outside world?

Do you know what it is to absorb the elastic breath of the mountains at the awakening of day? To stand far above the levels and watch the faint amethystine peaks catch one by one their cap of gold flung to them from an invisible sun? To feel the blood thrill with the fever of an infinite possession as the eyes look out alone over a seemingly creatureless scene of vastness, of indefiniteness of all vague promise, in the growing light of day? To feel the cool crispness of the heights, tempered by the soft "Chinook" winds? To feel the fresh wet dews of the morning on your hands and on your face, and to know them in a dim way odorus—odorus with the virginity of the hills—of the day dawn, with all the sweet things of form or feeling that the new day brings into new life?

A girl on Scot's Mountain seemed to breathe in all that intoxication of the hill country, as she stood on a little level, far above the smoke of the camp fire, and watched the glowing, growing lights on the far peaks. A long time she had stood there, her riding dress gathered up above the damp grass, her cap in her hand, and her brown hair tossing in a bath of the winds. Twice a shrill whistle had called her to the camp hidden by the spruce boughs, but she had only glanced down toward the valley, shook her head mutinously, and returned to the study of her panorama; for it seemed so entirely her own—displaying its beauties for her sole surprisal—that it seemed discourteous to ignore it or descend to lower levels during that changing carnival of color. So she just nodded a negative to her unseen whistler below, determined not to leave, even at the risk of getting the leavings of the breakfast—not a small item to a young woman with a healthy, twenty-year-old appetite.

Something at last distracted that wrapt attention. What was it? She heard no sound, had noticed no movement but the stir of the wind in the leaves and the grasses, yet she shrugged her shoulders with a twitchy movement of being disturbed and not knowing by what. Then she gathered her skirts a little closer in her hand and took a step or so backward in an uncertain way, and a moment later clapped the cap on her tumbled hair and turned around, looking squarely into the face of a stranger not a dozen steps from her, who was watching her with rather sombre, curious eyes. Their steady gaze accounted for the mesmeric disturbance, but her quick turn gave her revenge, for he flushed to the roots of his dark hair as she caught him watching her like that, and he did not speak at first. He lifted his wide-brimmed hat, evidently with the intention of greeting her, but his tongue was a little unruly, and he only looked at her, and she at him.

They stood so in reality only a flash of seconds, though it seemed a continuous stare of minutes to both; then the humorous side of the situation appealed to the girl, and her lips twitched ever so slightly as she recovered her speech first and said demurely:

"Good morning, sir."

"How are you?" he returned; and having regained the use of his tongue, he added, in an easier way: "You'll excuse me, lady, if I sort of scared you?"

"Oh, no, I was not at all startled," she answered hastily, "only a little surprised."

"Yes," he agreed, "so was I. That's why I stood there a-staring at you—couldn't just make out if you were real or a ghost, though I never saw even the ghost of a white woman in this region."

"And you were watching to see if I would vanish into thin air like a Macbeth witch, were you?" she asked quizzically.

He might be on his native heath and she an interloper, but she was much the most at her ease—evidently a young lady of adaptability and considerable self-possession. His eyes had grown wavering and uncertain in their glances, and that flush made him still look awkward, and she wondered if Macbeth's witches were not unheard-of individuals to him, and she noticed with those direct, comprehensive eyes that a suit of buckskin can be wonderfully becoming to tall, lazy-looking men, and that wide, light sombreros have quite an artistic effect as a frame for dark hair and eyes; and through that decision she heard him say:

"No. I wasn't watching you for anything special, only if you were a real woman, I reckoned you were prospecting around looking for the trail, and—and so I just waited to see, knowing you were a stranger."

"And is that all you know about me?" she asked mischievously. "I know much more than that about you."

"How much?"

"Oh, I know you're just coming from Davy MacDougall's, and you are going to Hardy's camp to act as commander-in-chief of the eastern tramps in it, and your name is Mr. Jack Genesee—and—and—that is all."

"Yes, I reckon it is," he agreed, looking at her in astonishment. "It's a good deal, considering you never saw me before, and I don't know—"

"And you don't know who I am," she rejoined easily. "Well, I can tell you that, too. I'm a wanderer from Kentucky, prospecting, as you would call it, for something new in this Kootenai country of yours, and my name is Rachel Hardy."

"That's a good, square statement," he smiled, put at his ease by the girl's frankness. "So you're one of the party I'm to look after on this cultus corrie?"

"Yes. I'm one of them—Cousin Hardy says the most troublesome of the lot, because I always want to be doing just the things I've no business to;" then she looked at him and laughed a little. "I tell you this at once," she added, "so you will know what a task you have undertaken, and if you're timid you might back out before it's too late—are you timid?"

"Do I look it?"

"N—no;" but she didn't give him the scrutiny she had at first—only a swift glance and a little hurry to her next question: "What was that queer term you used when speaking of our trip—cul—cultus?"

"Oh, cultus corrie! That's Chinook for pleasure ride."

"Is it? What queer words they have. Cousin Harry was telling me it was a mongrel language, made up of Indian, French, English, and any stray words from other tongues that were adjustable to it. Is it hard to learn?"

"I think not—I learned it."

"What becoming modesty in that statement!" she laughed quizzically. "Come, Mr. Jack Genesee, suppose we begin our cultus corrie by eating breakfast together; they've been calling me for the past half hour."

He whistled for Mowitza, and Miss Rachel Hardy recognized at once the excellence of his silken-coated favorite.

"Mowitza; what a musical name!" she remarked as she followed the new guide to the trail leading down the mountain. "It sounds Russian—is it?"

"No; another Chinook word—look out there; these stones are bad ones to balance on, they're too round and that gully is too deep below to make it safe."

"I'm all right," she announced in answer to the warning as she amused herself by hopping birdlike from one round, insecure bowlder to another, and sending several bounding and crashing into the gully that cut deep into the heart of the mountain. "I can manage to keep my feet on your hills, even if I can't speak their language. By the way, I suppose you don't care to add Professor of Languages to your other titles, do you, Mr. Jack Genesee?"

"I reckon I'm in the dark now, Miss, sort of blindfold—can't catch onto what you mean."

"Oh, I was just thinking I might take up the study of Chinook while out here, and go back home overwhelming the natives by my novel accomplishment." And she laughed so merrily at the idea and looked so quizzically at Genesee Jack's dark, serious face that he smiled in sympathy.

They had only covered half the trail leading down to the camp, but already, through the slightly strange and altogether unconventional meeting, she found herself making remarks to him with the freedom of a long-known chum, and rather enjoying the curious, puzzled look with which he regarded her when she was quick enough to catch him looking at her at all.

"Stop a moment," she said, just as the trail plunged from the open face of the mountain into the shadow of spruce and cedar. "You see this every morning, I suppose, but it is a grand treat to me. See how the light has crept clear down to the level land now. I came up here long before there was a sign of the sun, for I knew the picture would be worth it. Isn't it beautiful?"

Her eyes, alight with youth and enthusiasm, were turned for a last look at the sun-kissed country below, to which she directed his attention with one bare, outstretched hand.

"Yes, it is," he agreed; but his eyes were not on the valley of the Kootenai, but on the girl's face.

(To be continued.)

Success With Pedigreed Wheat.

That pedigree No. 2 hard winter wheat, bred at the experiment station, is showing up remarkably well this year and proving the claims made for its hardiness is attested by numbers of growers in southern and central Wisconsin. In this latitude, more or less winterkilling of small grain and alfalfa and clover has been reported. In most cases pedigree No. 2 had made good growth after resisting the alternating thaws and hard frosts without suffering any severe setbacks. Doubtless this test will do much to make the pedigree strain of winter wheat more popular than ever with practical Wisconsin farmers who believe in the use of hardy, well-tried, home-grown seed.

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

AILING ANIMALS.

Heaves.

I have a bay mare, ten years old, which seems to be developing the heaves. She has always been perfectly healthy and normal until this spring.

There is no reliable cure for heaves after it is well established. One can often improve the animal's condition by feeding lightly of hay and watering often and in smaller quantities than usual and by administering Fowler's solution of arsenic in half-ounce doses daily.

Broken Tail.

I have a seven-year-old mare that had its tail broken when a colt. Since then the hair has been rather short. Can you tell me what to do to make the hair grow?

This trouble has probably been brought about through the injury, doing damage to the blood and nerve supply in this region. It is rather a hard proposition to do any good here. You might get some results by applying a mild blistering agent to the affected parts.

A Bad Habit in Cow.

I have a cow that sucks herself once in a while. I have tried several kinds of muzzles, but without good results.

Very little can be done for a cow that sucks herself unless some mechanical means can be devised. Try using a side-stick. Put a halter on the cow, then take a long stick and fasten one end to the halter, the other end to be fastened to a strap which is made to encircle the body. This will keep her from turning her head very far to either side.

Too Free Flow of Saliva.

I have a gray mare that slobbers when eating grain. I had her teeth attended to last week, but she is just the same.

This trouble might have been brought on from any one of a number of causes, such as bad teeth, foreign bodies in the mouth, irritating foods, etc. The mouth should be thoroughly examined for unsound teeth, foreign bodies, etc. If the flow of saliva persists you may get some results by syringing the mouth out once daily with an alum solution.

Burying Cholera Hogs.

About three yeas ago I had hog cholera on my place, losing about seventy-five head. Part of them were buried about two feet under ground, while the rest were burned. Recently I turned my sows and pigs out and before I knew it the sows were rooting into the graves.

It is not known exactly how long the germ of hog cholera lasts. The climate, soil, etc., have an influence on the length of life of the germ. It has been known to remain virulent for two years, if not longer. Hogs dead of cholera should not be buried, but should be burned.

Fistula Wound.

I have an eleven-year-old mare that had a fistula last fall. She was operated on for the fistula by a veterinarian and I think it is killed, but the wound will not heal up. I have used healing powder and wool fat, but they fail to heal it up. We have been using her this spring and since the flies have come they bother her some.

It would seem that if the fistula you speak of was killed, as you say, that it would heal. You might try the application once or twice daily of the following wash: Zinc sulphate, one-half ounce; sugar of lead, one-half ounce, and powdered alum, one-half ounce, with water enough to make one quart. Shake well before using and apply freely.

Abnormal Growth on Jaw.

I have a red Short-horn heifer calf seven months old that was born with a bunch on its neck just below the jaw bone and it is growing larger as the calf grows older. The bunch is soft as if it was fleshy and not as if there was any matter. I have not done anything for it, as I thought it would go away. Please let me know if it is dangerous to the calf or not. It eats and drinks all right.

It would be very hard to say just what the nature of the growth is, since the animal had it present when born. Something might be found out by an examination by a competent man, but it is doubtful even then.

Heaves.

I have a seven-year-old mare which contracted a cold last spring and has had a slight cough until last September when she got a bad spell of choking and I had to call a veterinarian. She has been coughing nearly all the time since and when she has to pull hard her throat begins to rattle and she chokes down and has a hard time to get her breath. She sweats very easily and passes a little urine every time she coughs. Her collar is large enough so that the choking is not caused from that. The main trouble seems to be in her throat. She also has signs of heaves.

Your mare probably is the victim of heaves which has been brought about through some other trouble. The exercise and hard pulling cause her to choke down. Feed this mare sparingly of hay and water in small quantities, but often. Give daily one-half ounce of Fowler's solution of arsenic. Mix this with small amount of water and give with a syringe.

Shoo-Fly THE ANIMALS' FRIEND

For keeping flies and many other insects off of animals—in barn or pasture—longer than any imitation. Used and endorsed since 1885 by leading dairymen.

$1 WORTH SAVES $20.00 in milk and flesh on each cow in a single season. Excellent for galls. Allays itching. Aids in keeping animals from irritating sores by rubbing or tamping. Excellent for lice and mites in poultry houses.

$1.25 ($1.50 west of Mississippi River) will bring you enough Shoo-Fly to protect 10 cows 2 weeks, also our 8-tube gravity sprayer. EXPRESS PREPAID. Money back if not satisfactory. Name Express Office. Booklet FREE. Special terms to agents.

Shoo-Fly Mfg. Co., Dept. 21, 1310 N. 10th St., Phila.
Editor knows from experience Shoo-Fly is O. K.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Raises 200 June Chicks.

To the Editor:—I find June chicks just as easy to raise as those hatched at any other season if one will prepare for them before they are hatched. I have always used a covered coop and yard for them and have raised from 150 to 200 in a yard 20x40 feet until almost frying size.

There are more deaths caused among small chicks by vermin and the eating of sour, damp food than anything else. There will always be some lost and many more stunted if they are not properly cared for. On cool, dewy mornings we keep our baby chicks in their coops until the sun is well up and the ground is warm. They should never be allowed to run in the wet grass and weeds. Neither should they be fed heavy, damp food in the early morning, for they then are hungry and it will be easy for them to eat to excess, not ceasing until their little crops are distended to such an extent that they must suffer pain. Then after this they are sure to be lazy and will not exercise, which is necessary for them in the early morning.

For the first few days after the chicks are hatched I feed them sparingly on wheat bread soaked in sweet milk, with a small amount of black pepper. This will prevent bowel disease in hot weather. Then they may be fed on dry food, bread crumbs, meal and bran. They should be made to scratch for this food in straw, so as to get plenty of exercise.

June chicks should have but little water in the early part of the day and the watering vessels should be arranged so that they cannot get into them with their feet.

When they are old enough to go up on the roost they should be placed on the low roosts, not higher than twenty inches from the floor of the chicken house. The house should be high and well drained. Gravel or cinders may be used on the floor and on top of this an inch or more of good, clean, dry straw, which should be changed at least twice a week.

If lice make their appearance I use olive oil and kerosene, equal parts, applying it with a brush or sponge, just enough to wet the feathers to the skin on the head and neck only. One application of this kind is generally enough for the head louse, but for the body lice I use any kind of good insect powder, which I dust well all over the body every eight or ten days so as to catch the second brood that hatches from the nits the powder failed to kill. If this plan is followed there will be but little trouble in raising a fine flock of June chicks. O. F. L.

Hereditary Weakness in Chicks.

To the Editor:—The best advice to be given to Mrs. Kirstein who writes in the issue of May 18th, in this paper, is to have a wholesale clearance and start all over with stock from a flock that she is reasonably certain is full of vigor.

Little complaint can be made in regard to the number hatched; 125 chicks from 200 eggs is very good. Not equal to "fifteen chickens from fifteen eggs," but a very good average. The most experienced poultry people will tell you that one chick from each two eggs, and one live fowl at maturity from each chick is the rule, and the other reports are exceptions, or phenomena.

The chicks are dying; they died last season. Not all of them died last season, presumably, and the survivors are being used for parent stock, and there it is. A lack of good red blood corpuscles, resulting in weak, anemic young chickens, that, if they survive will be trying to reproduce themselves again next season—and don't you let 'em. Clean house in more ways than one.

Your feeding is fairly good. Bran and chick feed from the start is used at this place, with the result that no chickens are lost from that source, at least. To this ration is added broken bits of charcoal that we made when the yards were being cleaned by pouring water over the half-burned limbs. Until the small biddies are permitted to run on the range they are supplied clover.

A teaspoonful of tincture of iron to a pint of water will help the blood, and possibly help to raise some of your youngsters to maturity, though if the writer supposed they would be used for breeders next season it is doughnuts to dollars that this would not be written.

Go out amongst your flock of hens and critically, mercilessly size them up. Honestly, do they look the part?
M. G. S.

Millet Seed Valuable For Chickens.

To the Editor:—In a recent issue of your paper one of your subscribers calls attention to the fact that he has 800 bushels of millet seed on hand that is absolutely worthless for seed. There is no market for it, therefore, and he asks for information concerning the use that he can make of this millet.

I have found millet seed to be one of the very best foods for young chickens. I should think, at the same price per bushel as oats, this party could dispose of the seed for this purpose. It could be sold to the large companies who prepare chick feed, or by a little advertising might be sold to individuals in smaller amounts.
Henry Co., Ill. Mrs. E. E. Yocum.

Cramps in Geese.

To the Editor:—Last year I raised twenty-six geese and never lost a goose until one day they all went up the road about a mile, eating grass. When they came back they were all very hot. I set out a pan of cold water. Two of them jumped into the pan. They stayed in about two minutes, then they jumped out, threw their heads back and went around in a circle, then fell back on their backs. This happened every time these geese got in the water and was caused from the geese being hot and cooling off too quickly, causing cramps.

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

Farm Sanitation.

IN the profitable raising of live stock and poultry there are conditions outside of proper feeding that determine success or failure. The most important of these is health. Every owner knows that live stock annoyed by lice, flies and other parasites worry, scratch and work off flesh so that they do not get the full benefit of their feed. This in time results in loss of strength and leaves them susceptible to disease. To correct these conditions should be the duty of every live stock owner, as it means money in his pocket. The systematic use of a reliable stock dip and disinfectant will kill the parasites, help cure mange, ringworm and other skin troubles, and, as a sanitary protection, prevent hog cholera and other contagious diseases. The most widely used product of this kind—and one which is manufactured by a firm of the highest scientific and commercial reputation—is Kreso Dip No. 1. This dip is a dependable product because it is standardized. This means that every lot has been tested to uniform strength—an important precaution not always taken in the manufacture of such products. It is very easy to use—simply needs the addition of water. In the dilution recommended for all live stock and poultry it is very economical and may be used freely. Used as directed, it is not caustic, irritating or unpleasant to handle. It will kill lice, mites, fleas and sheep ticks and put the skin of the animal in good condition. A 2½ per cent dilution will kill virulent hog cholera virus in five minutes by contact. The manufacturers, Parke, Davis & Co., of Detroit, Mich., will mail (free) interesting booklets on the care of all live stock and poultry to anyone writing for them. Kreso Dip No. 1 is sold in original packages by all druggists.—Adv.

The Grand Champion Jumbo Hadley For Sale.

A GRAND champion boar at the head of a herd adds prestige. It is impossible for every breeder to have a champion herd boar. However, here is a chance for some Poland China breeder to place a grand champion boar at the head of their herd. Jumbo Hadley, the grand champion of the Wisconsin State Fair, 1915, and owned by Dobson & Eastman, Lancaster, Wis., is being offered for sale. The owners meant to show this boar again this fall, but inasmuch as the rest of their show herd is of their own breeding and as Jumbo Hadley is not, they have decided to sell him and let someone else show him if they so desire. Jumbo Hadley was farrowed February 11, 1913. Sire, Major Hadley by Big Hadley, dam, Jumbo Belle by Victor. His breeding is the best and the fact that he won first and championship at Milwaukee last year speaks well for his individuality. He is now in fine breeding condition, weighing right at 700 pounds. They will guarantee him as a breeder. He needs no guarantee in that respect for the first-prize futurity litter at Milwaukee last year was sired by this good boar. By having a champion boar at the head of your herd you have something to make a noise about and you can't go out and buy a prospect, fit him, take him to the fairs—maybe win—for the money with which you can buy this boar. He will only be offered for a short time and the first check for $125 gets him. He is a bargain at that price—get busy. When writing kindly say you saw the advertisement in The Wisconsin Farmer. See page 23.—Adv.

Here's Your Chance.

IF you are interested in Poland Chinas you have heard of J. C. Hendricks, Hazel, Green, Wis., for he is the fellow that produces the Polands that "make the hit." He is offering forty spring boars and when J. C. has anything to sell the inquiries come in fast and furious for the Hendricks kind are scarce. We consider Repeater one of the best boars in the state and now that he is dead this will be your last chance to get the boars sired by him. Smooth Price, his senior yearling, is the best boar of his age we have seen. We have never seen High Wonder or North Side Wonder, but if they were good enough for J. C. Hendricks they no doubt were good boars. The spring boars being offered are sired by these boars, as well as four or five other boars that have reputations as sires. Get busy at once if you want spring boars. When writing will you please mention The Wisconsin Farmer. See page 23.—Adv.

Poland China Sows All Sold.

WE have just had a letter from E. W. Hendricks, Hazel Green, Wis., advising that he has sold all the bred sows he has been advertising in The Wisconsin Farmer. Mr. Hendricks has one of the very best herds of Poland Chinas in the state, and, as is always the case, the man that has the goods can always find an outlet. In Black Jumbo, E. W. has one of the good herd boars of the state. He is producing the right kind. Sired by Heavy Bone, he is o grandson of the noted Big Bone. His dam, Big Mollie was by Chief Nelson he by Chief Price 2d. Whenever one finds a Big Bone-Chief Price 2d cross he generally finds an individual that is a producer. When September 28th comes you will be invited to attend a boar sale and when you see the boars in this sale sired by Black Jumbo, you will agree with us that he is some sire. See page 23.—Adv.

Who Wants Short-horn Cows and Heifers.

IF you have room for a few more registered cattle or if you want to get started with pure-bred cattle, we know no better herd to refer you to than the one owned by J. E. Kennedy, Janesville, Wis. We recently spent the day with Mr. Kennedy at his Oak Lawn Farm and he has a grand lot of "working" Short-horns. It is his desire to have an all-Scotch herd of cattle and for that reason he is offering to sell his Scotch-topped cows and heifers. There are many breeders in this state and adjoining states that don't want the strictly beef-bred cattle, but prefer them with some Bates breeding in their pedigree and if you are one of them, here is your chance. These cows and heifers are reds and roans, are in nice condition and several of them have calves at foot, others are well along in calf to Denmark 8th, a grandson of the noted Villager. He will sell eight or ten young cows and about the same number of heifers around a year old. No doubt many of our readers have more pasture than they can stock properly, if so buy some of these Short-horns and let them run on grass until fall, raise their calves and we feel confident you can turn them at a profit. Short-horns are good property—get some, J. E. Kennedy, Janesville, Wis., has them. Mention The Wisconsin Farmer when writing. See page 23.—Adv.

Duroc Gold Bonds.

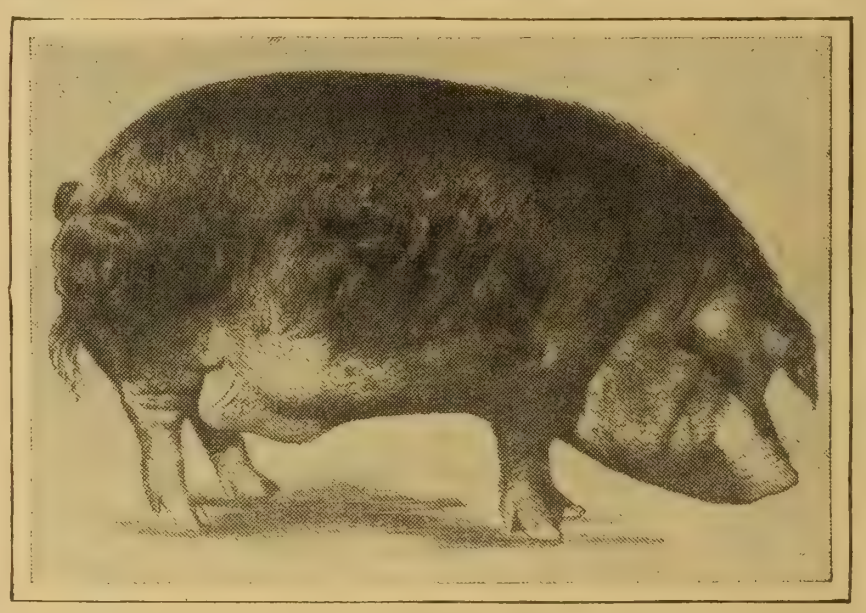
DO you want some Duroc Jersey sows due to farrow in August and September? They are bred to Gold Bond, the first-prize senior yearling boar at the Wisconsin State Fair, 1915. This Gold Bond is a good boar, having plenty of size and right in every way, and as Mr. John L. Fisher, Janesville, Wis., the owner, has some fancy bred sows the buyer of these bred sows should have some valuable litters this fall. If you are interested write and mention The Wisconsin Farmer. See page 23.—Adv.

A Low-Priced, Reliable Corn Harvester.

ON the chance that some of our readers have not heard of the Perfect corn harvester, made by the Love Mfg. Co., Lincoln, Ill., we take this occasion to call their attention to it. This machine is not expensive and with one horse and one man it will cut from five to six acres of corn in a day and cut it well. The reduction in labor is almost as great as the amount saved in the initial cost as compared with the more common higher priced machines. From all we can learn it gives excellent results, and is very highly prized by those who have them, as a machine of great economy and efficiency. Write Love Mfg. Co., Lincoln, Ill., for copy of their catalog. Kindly mention this paper.—Adv.

Bargains in Angus Bulls.

BEEF cattle are good property this year and when talking about beef cattle one must consider the Aberdeen Angus. We recently called on Harry Young, Bridgeport, Wis., and found him with a small, but good herd of Angus cattle. He has been breeding the "doddies" for some five years and has had good success with this breed. Most of his success has been due to the fact that he bought good breeding cows when he laid the foundation and he is a good caretaker and we all know that is a combination that is hard to beat. Every cow on his place of breeding age has a calf at foot and a man going there will find a working herd of Aberdeen Angus. At the present time Mr. Young has five bulls for sale and we might say that in the lot is some of the best young bulls we have seen for some time. One of the best is a yearling, two in July. He has a great frame, is an excellent top bull and very smooth. This bull is in nice condition for immediate service. One of the best of the lot is a May yearling. Here is a bull good enough to head any herd and if properly fitted he would make a creditable showing at the fall fairs. The other three bulls have just turned a year old. Anyone wanting an Angus bull to head a pure-bred herd, or anyone wanting a bull to grade up a grade herd can find suitable individuals in this herd. Since Mr. Young is a new man in the game he does not expect to get the prices that some of the older breeders get, but, as a matter of fact his bulls are being priced below their value. They are sired by Bob K. 167016 by Patna by imported Proteros, out of a dam that weighed over 2,000 pounds. The present herd bull was bred by McKevitt Brothers noted Angus breeder of Grant county, Wis., and is one of the best young bulls we have seen at the head of any herd in the state. Here is a chance to get one of more good herd bulls, don't overlook the opportunity if interested. These will only be offered for a short while. You will find Mr. Young absolutely on the square and if he writes you describing these bulls you will find them just as represented. Write for prices and description while you think about it. Kindly mention The Wisconsin Farmer.—Adv.



Prince Defender, the good two-year-old Duroc Jersey boar owned by McClurg Brothers, Viroqua, Wis. Here is a great boar.

Almeda Alcartra De Kol of East Side 131815 A. R. O. record (just made) 40.60 as a five year old. Owned by M. J. Smiley, Bellefourche, South Dakota.

Harford's Holsteins.

IN traveling through the state we meet many surprises in the way of good herds of Holstein cattle. Scarcely a week passes that we do not run across an exceptionally good herd of cattle of which we have never heard before. Many of these herds rank with the best of the breed and yet are scarcely known outside of their own immediate neighborhood. One such herd that we recently found and which is deserving of great praise is that of Fred Harford, Kaukaunee, Wis. The cows in the herd are large animals, of good, straigth type with large, square udders, well-developed milk veins, showing heavy production ability and great capacity. When one looks over the pedigrees of these animals he understands why the animals are of the fine type which he sees, for they are daughters of some of the best bred bulls of the breed. Many of them are daughters of the great bull, Hengerveld Sir De Kol, the sire of Pontiac Maid, that has a record of 30.21 pounds of butter in seven days and has an average test of 4.90. Hengerveld Sir De Kol is a son of Hengerveld De Kol that has 116 A. R. O. daughters, nine with records from thirty to thirty-six pounds of butter in seven days. The writer was recently on the Pontiac Asylum Farm, Pontiac, Mich., where Hengerveld De Kol and Pontiac Korndyke were bred. The entire herd on this farm is composed of granddaughters of Hengerveld De Kol and Pontiac Korndyke and it is of the same type as the animals found in Mr. Harford's herd. In his herd are also daughters of Pontiac Sadie Jewel, that has fourteen A. R. O. daughters, one with a record of 30.78 pounds of butter and 16 pounds of milk in seven days. He is by the same sire as King Segis and his dam is a sister of Sadie Vale Concordia 4th, that recently made forty-one pounds of butter in seven days. At the present time Mr. Harford is offering young bulls for sale out of the above cow and sired by King Colanthus De Kol Korndyke, a twenty-five-pound grandson of Pontiac Korndyke. For further information in regard to these animals write to the above address.—Adv.

Pingel's Holsteins.

ONE of the best Holstein bulls we have seen in our visits throughout the state is Calumet Johanna Abberkerk Champion 105829, owned by A. G. Pingel, Chilton, Wis. This bull combines the three great essentials for a good sire, namely large size, refined quality and high-producing ancestry. He is a massive fellow, weighing over a ton, of good, straight conformation with deep barrel, showing great capacity, a great heart girth, showing a strong constitution, wide through the hips and pin bones and a long, open jointed spine; he represents the most desirable type of Holstein conformation. His dam gave 623.70 pounds of milk and made 28.71 pounds of butter in seven days. The sire of Calumet Johanna Abberkerk Champion is a son of the $10,000 bull, The Milk and Butter King. Mr. Pingel is getting a fine lot of daughters of this bull, but buyers have taken them away from him very rapidly. Mr. Martin, of Darlington, Wis., who had one of the finest herds of Holsteins in the state and is considered to be one of the leading judges of Holstein cattle recently purchased every daughter of this bull, which Mr. Pingel would sell. At the present time Mr. Pingel is offering a yearling bull ready for service, sired by the above bull. He is three-fourths white, good and straight and well grown. For extended pedigree and further information write to the above address. See page 22.—Adv.

Milking Short-horn Herd.

AS the demand increases the supply decreases—such are the conditions we find among the breeders of milking Short-horn cattle. If you have a few cows that are good milkers or if you have a herd of breeding cows that are good at the pail you should get a bull that comes from high-producing ancestry, if you wish to increase the milking production of your herd. R. W. Lamb & Son, Janesville, Wis., have the milking strain of Short-horns. They have several bulls of serviceable age that they wish to sell and at prices that any farmer can afford to pay. If you want something of this kind, don't wait until the last minute, but order now and get the choice of the lot. In writing please mention The Wisconsin Farmer. See page 23.—Adv.

Royal King 4th For Sale.

WE have just had a letter from McClurg Bros., Viroqua, Wis., the owners of that good two-year-old Duroc boar, Prince Defender, advising that they will sell Royal King 4th. These gentlemen only have a few sows and since they have Prince Defender they will not need another herd boar this year consequently Royal King 4th is for

sale. This boar is a junior yearling—March 25, 1915, and is one of great scale, has a wonderful back, heavy bone and he will put size in your herd. He is sired by the royal champion and $2,650 boar, Royal King, and his dam is by Progressor. Here is a boar that will do someone a lot of good. Write the McClurg Bros. about this hog, they will tell you just what he is and you can believe just what they tell you. They also have a few sows that are bred to Prince Defender for fall litters. They are being priced right and if you need a few brood sows write them. Don't forget to mention The Wisconsin Farmer. —Adv.

A Promising Young Holstein Breeder.

IT IS encouraging to occasionally run across a young man, who is making an unusual success in the breeding and developing of a herd of cattle. It demonstrates that perseverance and attention to details of the business will bring the desired results, which with Holsteins is high-production ability. Firstly, of course, you must have good cattle to work on, but too many breeders neglect to develop the good things they already own. The herd of Wm. Braatz & Sons, Brandon, Wis., is one that is capable of making good records. They have proven this by the records they have recently completed. The herd is in charge of one of the sons, who is proving himself a master herdsman. He has made several seven-day records from twenty to twenty-five pounds of butter. He has also made some very creditable records among which are Bonibel Netherland Pietertje, that gave 22,663 pounds of milk and made 988 pounds of butter in a year. Ovida De Kol 2d gave 20,000 pounds of milk and made 800 pounds of butter in a year. Inka Korndyke Lady, out of three-fourths of her udder as a junior four year old made 700 pounuds of butter in 313 days and carried a calf eight months. Inka Korndyke 2d made 600 pounds of butter in a year and had not been dry for three years. Virgo Canary 2d, as a junior two year old made 595 pounds of butter in a year. Mr. Braatz feels that with the experience he obtained in this last test that he can do much better next time, for he does not feel that the cows have produced to their full capacity as yet. At the present time he is offering his senior herd sire for sale. He is a richly bred bull tracing to forty pounds breeding on both sides. His sire is a grandson of the forty-pound-bull, Johanna McKinley Segis. His dam is a 21.25-pound sister to the forty-pound cow, Johanna De Kol Van Beers, both being daughters of Sir Johanna De Kol. For an extended pedigree and further information in regard to this bull write to the above address.—Adv.

Dynamite, an Economical Means of Land Clearing.

ON almost every farm there is a certain amount of waste land due to stumps, boulders, shallow hardpan or swampy ground. The common methods of clearing are too expensive for reclaiming this land and it has remained idle. But the increasing prices of farm produce and the rising prices of land make it unprofitable to hold idle land. Therefore, a great many farmers have welcomed the use of Hercules Dynamite as a means of fitting this land for cultivation. It does the work cheaply—breaks up the stumps or rocks so that they can be gathered up and hauled away and leaves the ground loose and mellow, ready for cultivation. Also for running ditches or digging holes for setting out trees, Hercules Dynamite has demonstrated its efficiency. Anyone not fully acquainted with the work of Hercules Dynamite, should send for the free farmers' book, "Progressive Cultivation." This book takes up the subjects of land clearing, tree planting, subsoiling, irrigating, etc., in an interesting and profitable way. Clip the coupon from the advertisement on page 9 and send it, properly filled, to the Hercules Powder Co., West 10th St., Wilmington, Del.—Adv.

Sharples Milkers Have Quality.

WHEN we consider that a milking machine has to be used twice a day for every day in the year, it is at once evident that the machine should be of the very best quality and make, in order to give such constant service. In milking machines, as well as in many other lines, the best is the most economical in the long run. Therefore, those who expect to buy a mechanical milker should carefully investigate the Sharples milker, known as the quality milking machine. It is especially durable and strong throughout—all exposed metal parts are non-rusting German silver, and the rubber parts are made of pure, lasting rubber. The Sharples milking catalog will be sent free to any reader of this paper on request to the Sharples Separator Company, West Chester, Pa. See the advertisement on page 13 and write for catalog today.—Adv.

Machines for Harvesting the Potato Crop.

JUST as the grain binder has proven many times more economical and satisfactory than the scythe and flail, so will the potato digger, when tried out, prove to be far better than the spading fork or hoe. Good harvesting machinery is a money and time saver—this statement applies to the potato crop as well as wheat, hay or corn. For greatest efficiency, the potato digger must be adapted to varying conditions. Through extensive study the A. B. Farquhar Co., has found that different soil conditions require different kinds of diggers, and, accordingly, it has built the Farquhar elevated digger in three sizes, supplying each size with attachments suitable for any soil. A new booklet by this company, "Harvesting the Potato Crop," gives full information regarding these machines and other interesting facts regarding the potato crop. A request to A. B. Farquhar Co., Ltd., York, Pa., will secure this book free if The Wisconsin Farmer is mentioned. The company can also supply engines, saw mills, threshers, hydraulic cider presses and similar machines; ask them for information on the line you are interested in. See page 2.—Adv.

A New Big-Type Convert.

BIG-TYPE Poland Chinas have become so in demand by both purebred breeders and by farmers who breed for pork production that W. H. Esterly, Whitewater, Wis., has joined the big-type ranks. He has long been recognized as one of the leading Poland China breeders of the state, and realizing how the demand was turning is ready to supply what is wanted. As has been his custom in the past he has selected his breeding stock very carefully in order to furnish nothing but the best to his customers. He started by purchasing a cracking good sow from Dobson & Eastman, Lancaster, Wis. She is a daughter of thei. grand champion boar, Jumbo Hadley. She farrowed eleven fine pigs and raised ten, which is certainly proof of her ability as a mother. Burlie Dobson would not sell any more gilts last winter, as he was short himself, so Mr. Esterly had Chas. Marher, the genial judge, select two for him at the publlic sales. He sure picked him two good ones. Toppers as individuals and bred in the purple. One is a daughter of Gritters' famous, A Wonder, and one is of Henry Don's breeding. Mr. Esterly also has some boar in Jumbo Wonder. He was born September 21, 1915. When he arrived in Whitewater, February 3, 1916, he weighed eighty-six pounds. On February 27th he weighed 151 pounds; March 12th he had made 174 pounds, and on June 1st he weighed 327 pounds, or a gain of 241 pounds in 117 days, an average of over two pounds a day. If any of our other readers can beat this let us hear from you. These are the kind we like to hear about.—Adv.

UNDER date of May 25th, J. Le Roy Larson, of Iola, Wis., writes as follows: "Please change the reading in my advertisement, as I am sold out of spring boars and have but a few gilts left. The Wisconsin Farmer is doing the work for me. I have one yearling boar by Wisconsin Jumbo at $40 and a bred gilt for fall farrow at $35 bred to Fairview Jumbo, he by Wisconsin Jumbo. Also booking orders for July, August and September pigs at farmers' prices. When you see an extra good gilt or sow bred for August or first of September farrow from a well-advertised and first-class big-type stock please let me hear from you." Mr. Larson is a continuous advertiser in The Wisconsin Farmer, carrying his advertisement the year around. It will be equally profitable for other breeders of pure-bred live stock to do the same.—Adv.

IN a letter recently received from James Derivan, Fox Lake, Wis., he writes as follows: "In the last two weeks sold pigs to Charles Metcalf, of Antigo; Geo. Broman, of Grand View; Rice Lake Lumber Company and State Senator Bichler, of Belgium, Zaunkee county, came over this week and bought one of my good ones." This is an indication of the demand for breeding stock at what many breeders consider a quiet time of year. Mr. Derivan is a continuous advertiser in The Wisconsin Farmer and that it is a paying proposition is shown by the above. If you keep your herd continuously before the breeders, it will be second nature for them to think of your herd when in the market for breeding stock.—Adv.

SALE DATES.

Holstein-Friesian Cattle.

Oct. 24-25, Watertown Holstein Breeders' Consignment Sale, Watertown, Wis. S. E. Jones, Mgr.
Oct. 26-27, Lake Mills Holstein Breeders' Consignment Sale, Lake Mills, Wis. F. H Everson, Mgr.

Short-horn Cattle.

Nov. 1, Anoka Farms, Waukesha, Wis.
Nov. 2, Herr Bros. & Reynolds, Lodi, Wis.
Nov. 3, Wisconsin Short-horn Breeders' Association Sale, Madison, Wis. J. L. Tormey, Secy., Madison.

Duroc Jersey Swine.

Oct. 17, W. C. Jenkins, Bangor, Wis.
Oct. 18, L. F. Atwater, Bangor, Wis.
Oct. 19, Geo. H. Willsie, Prosper, Minn.

Poland China Swine.

Sept. 28, E. W. Hendricks, Hazel Green, Wis.
Oct. 10, Grant County Poland China Breeders' Assn., Lancaster, Wis. Burlie Dobson, secretary.

Grains and Grasses Doing Well.

(Continued from page 9.)

of wet weather, especially on low land. On high land corn is coming up well.—S. C.

Sheboygan County.—Recent heavy rains have delayed field work. The outlook for the corn crop is poor—much worse than last year. The earliest corn is ready to cultivate; the plants that have started are yellow and weak. Some corn is to be planted yet. Grain is not making much headway because of late planting and cold weather. New seeding of clover is making a good growth, and pastures are very good.—M. J. Hoppert.

Taylor County.—General crop conditions are good. Pastures, timothy and clover are fine. Oats and barley are good, except on low ground. Weather is fine now, and crops are growing nicely, but the season is about two weeks late. Potatoes and corn are planted and coming up fine. Gardens are late. Fruit will hardly make half a crop.—John E. Miller.

Walworth County.—Pasture and hay crop are very good; this year's seeding shows up fine. Oats seeding was late; the stand is good, but the acreage is less than usual. Barley looks fair, but the sowing was rather late. About 15 per cent of the corn is to be replanted yet. Most of the corn is up and shows a good stand and color in spite of the recent heavy rains. Potatoes are a little backward and bugs are plentiful. Fruit, except apples, promises well.—Ora P. Taylor.

Wisconsin Jersey Meetings.

Programs for the two state meetings of the Wisconsin Jersey Breeders' Association, one to be held at Waupaca June 29th and the other at Wauwatosa, June 30th, have been sent out. At Waupaca the speakers will be Prof. A. C. Oosterhuis, of Madison; F. R. Constance, secretary of the Waupaca County Association; E. E. Wyatt, of Tomah; C. P. Norgord, Wisconsin secretary of agriculture; and M. D. Dunn, president of American Jersey Cattle Club. Practically the same program will be carried out at Wauwatosa. The Waupaca meeting is to be held at Red Oak Stock Farm, and the Wauwatosa meeting at Fewacres, owned by Frederick W. Underwood. Additional speakers at Wauwatosa, will be W. H. Clark, of Rice Lake; J. Q Emery, of Edgerton; Mr. Harry Jenkins, of Chicago; Mr Underwood, and Julian Reis, secretary of the Waukesha County Guernsey Breeders' Association.

Eau Claire County Guernsey Breeders.

About 250 breeders and their friends gathered last week at the A. F. Bennett farm, town of Washington Eau Claire county, Wisconsin, and participated in the annual summer meeting of the Eau Claire county Guernsey Breeders' Association meeting. Speakers were L. E. Gerde, and L. E. Scott, the latter on live stock preparedness. There was a fine program of music and a big basket dinner.

HOLSTEIN-FRIESIAN CATTLE.

2 Sons of the 29.50-lb. Bull MAPLECREST HENGERVELD DE KOL.

WHOSE sire, Friend Hengerveld De Kol Butter Boy, and dam's sire, Pontiac Aaggie Korndyke, have more daughters with records over 1,200 lbs. of butter in one year than any other two bulls of any breed. Bull born Nov. 12, 1915. Dam, Vinnie De Kol Pauline 73561, A. R. O. record 22.28 lbs. butter in seven days, ½ white, straight, level type. Price $125. Bull born Oct. 20, 1915. Dam, an untested daughter of Homestead Fayne De Kol, ¾ white, straight wide rump, a mighty good individual. Price $75. Address GROVE BROS., COLUMBUS, WISCONSIN.

DUCHESS ORMSBY and ALCARTRA COWS

HOLD the world's 7-day and year records for both butter and milk. They have startled the world by their achievements during the past year. We are offering a few young bulls sired by King Pietertje Hengerveld Ormsby, that is a full brother to the former world's record cow, Pietertje Maid Ormsby. Several bulls are from Alcartra bred cows. BONNIE MEAD STOCK FARMS, Randolph, Wis.

Purebred Registered
HOLSTEIN CATTLE

Remarkable Holstein productiveness. In 1915, from April 22 to April 28, the records of 670 cows were accepted to entry in the Holstein-Friesian Advanced Registry. As evidence of the high efficiency of pure-bred Holsteins these 670 cows, of which over one-half were heifers with first or second calves, produced in seven days, 279,121 pounds of milk containing 10,067 pounds of butterfat, an average per cent of 3.61 butterfat. Average production for each animal was 23 quarts of milk per day and 17 pounds of commercial butter per week. This is just a random showing of the wonderful things of which the big "Black-and-White" is capable.

Send for FREE Illustrated Descriptive Booklet.
The Holstein-Friesian Association of America
F. HOUGHTON, Sec'y, Box 143, Brattleboro, Vt.

21.25-POUND HOLSTEIN BULL

BULLS! BULLS! BULLS!

AM offering **ABERDEEN ANGUS** bulls from 12 to 18 months old. They are well grown, in nice condition and they are priced to sell. First come gets pick. Write or, better yet, come.
HARRY YOUNG **BRIDGEPORT, WISCONSIN**

SHORT-HORN CATTLE.

A GREAT RECORD

AT the world's three largest beef cattle shows in 1915, all breeds, grades and cross-breds competing, Short-horns were grand champions. The champion carlot at Denver, Colorado, 1916, were two-year-old Short-horns. Twenty-eight Short-horn cows were added to the honor roll of the British Dairy Short-horn Society with milk records from 10,006 lbs. to 13,000 lbs. 104,954 Short-horns were recorded from March 1, 1915, to March 1, 1916, in the American Short-horn Herd Book. If you are in the market for Short-horns, our free service bureau is yours. Address
AMERICAN SHORT-HORN BREEDERS' ASS'N, 13 Dexter Park Ave., CHICAGO, ILLINOIS

MILKING SHORT-HORNS

HAVING several choice young bulls from dams giving 10 to 12,000 pounds of milk. I have a well-bred herd and keep records of production. Inspection invited. Address
Harvey H. Little **Evansville, Wisconsin**

DO YOU WANT Short-Horn

COWS, heifers or bulls? Will sell Champion Banff C 277574, Red Crest 313373 Prince Henry 402052 and other bulls from 6 to 14 months. Can also spare females. Scotch or Scotch-topped. Don't delay writing. Address
Wm. Hickin, Lancaster, Grant County, Wis.

Oak Lawn Farm SHORT-HORNS OF QUALITY

FOR sale at reasonable prices ten very good Scotch-top cows, either with calves by side or safe in calf to Denmark 8th, that is one of Villager's best grandsons. Also one good roan bull coming one year old sired by Imported Raphael. Ten heifers coming 1 year old sired by Strathallan Ring, a very good grandson of Whitehall Sultan.
J. E. KENNEDY **JANESVILLE, WIS.**

BULLS

FROM MILKING STRAIN OF

SHORTHORNS

OFFERING five of serviceable age of good Bates breeding and in nice condition. Priced to move. Write your wants. Address
R. W. Lamb & Son, Route 1, Janesville, Wis.

Bates Short-horns Fashionable Durocs

STOCK of both breeds for sale. Pigs to be shipped at weaning time. Order now. Guarantee satisfaction. B. W. Little, Janesville, Wisconsin.

MILKING SHORT-HORN BULLS

ONE to four months old; red, roan and white color. Sired by Milkman, that is out of a 4.4% butter fat cow that gave over 60 lbs. of milk per day. Send for prices and description.
Geo. Smith & Son **Burnett, Wis.**

SHORT-HORN BULLS

SCOTCH and Scotch-topped. Extra good. Also cows and heifers for sale, bred for milk and beef. Herd headed by one of the best grandsons of Whitehall Sultan. Address H. B. Drake & Son, Route 2, Beaver Dam, Dodge County, Wisconsin

SHORTHORNS

YOUNG stuff for sale—bulls or females—sired by Nominee Cumberland by Prince Cumberland. Write us. **William Bros., Bangor, Wisconsin.**

SHORT-HORNS

SCOTCH and Scotch-topped. Herd headed by Collynie Sultan by Roan Sultan, out of Marchioness dam. If interested write
E. E. JONES **ROCKLAND, WISCONSIN**
President, Wisconsin Short-horn Association

YEARLING Milking Short-horn bull of serviceable age sired by Clara's Prince. Write for pedigree and price. Timblin Bros., Eden, Wisconsin.

GUERNSEY CATTLE.

Guernsey Bull For Sale

THE richest of Guernsey breeding. Yearling bull ready for service. Sired by the richly bred bull,

GOODWILL HERO

a son of Imp. Golden Hero of L'Etinnerie, and out of a 526 imported daughter of Gov. of Chene. Dam of bull for sale is Imp. Sundari XXXI, a daughter of Galaxy's Sequel, out of a daughter of Gov of the Chene. Address
Charles Schmidt **Wrightstown, Wisconsin**

REG. GUERNSEY BULL

BY THE RICHLY BRED BULL

EGLANTINE OF SPARTA

A SON of Glenwood's Reputation. Sweepstakes bull at Wisconsin State Fair. The dam of the bull for sale just made 45.9 pounds fat in 25 days. Send for pedigree. Address
W. H. & B. L. Hanchett **Sparta, Wisconsin**

REGISTERED GUERNSEY HEIFERS

3 MONTHS to 2 years of age, and yearling bulls ready for service from Advanced Registry dams with records up to 500 pounds of fat. Send for a sale list. Address
W. A. Lawson **Rosendale, Wsconsin**

ATTENTION

PURE-BRED Guernsey bulls, two of serviceable age, and eight calves at special prices for thirty days. A rare chance to get some of the best blood lines of the breed. Address
S. A. Merriman **Fort Atkinson, Wisconsin**

RED POLLED CATTLE.

UNDERWOOD

RED POLLS

COWS, HEIFERS, BULLS Not culls. If you want good cattle write
L. C. UNDERWOOD **AVOCA, WIS.**

H. A. Martin **Gotham, Wis.**

RED POLLS A few young bulls and heifers for sale. Wm. Wulff, R. 1, Box 14, Grafton, Wisconsin.

GALLOWAY CATTLE.

30 GALLOWAY BULLS FOR SALE
FROM 14 to 18 months of age, sired by Standard Favorite and Stanley's Othello. Also cows and heifers and Oxford rams. C. S. Hechtner, Charlton, Iowa.

WANTED CALF RENNETS FARMERS and BUTCHERS Do Not Throw Away the Rennets if you kill over ten calves per month, but write us. THE MARSCHALL DAIRY LABORATORY Madison, Wis.

"Spot" Given to Ina Zoe

Little Ina Zoe Pruett, of Richland County, N. D., was looking through a farm paper one day and saw my free offer. She sent her name and I gave her "Spot." Ina Zoe says she wouldn't take any amount for "Spot."

"Fritzie" given to Marie and Margie

This is Marie and Margie Cole, of Knox County, Illinois, who also sent in their names. They are twins and 6 years old. They take turn about riding in front on the beautiful little Pony, "Fritzie," that I sent them.

"Sportsman" Given to Harold

Everybody told Harold Pierce that "Sportsman" would not come, but Harold said he would try and see. He did and I sent him "Sportsman." His father made him this cutter. Harold lives in Waushara County, Wisconsin.

All These Ponies Given Free

to Boys and Girls

READ about these beautiful Shetland Ponies I have given away to boys and girls, right in your own state or near by. Besides these eight shown here, I have given away 375 others. Now, I am going to give away several **more Ponies**—some of the finest Shetland Ponies I could buy—and I want every family that reads this paper to have an equal chance. If you are a boy or girl, send in your name, and if you are the father or mother of a boy or girl be sure to send in your child's name. Remember, no charges of any kind and nothing to buy. Just send in your name.

Every Boy and Girl Has the Same Chance to Get a Free Pony

"Mogul" Given to Roy

This is Roy and "Mogul" at work. "Mogul" isn't as big as his name, but he is quite a pony after all—so Roy thinks. Roy Podewells of Rock County, Wisconsin, is another boy to get one of my free ponies.

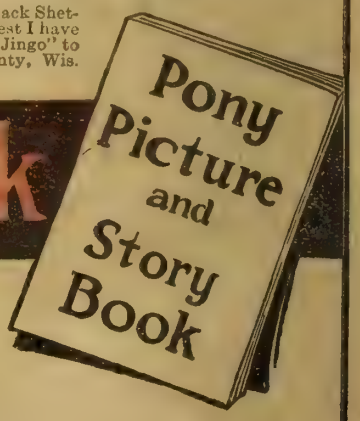
"Polly" Given to Alfred

Here is another Wisconsin boy with the Pony and Buggy that he received from The Pony King. The Pony is "Polly" and the boy who owns him is named Alfred Hokenstad. Alfred lives in Dane County.

"Jingo" Given to Pearl

"Jingo" is a beautiful black Shetland Pony—one of the nicest I have ever given away. I sent "Jingo" to Pearl Kerr, of Grant County, Wis.

Send Your Name For This Free Book



Children Don't put off this chance. Don't wait. Write your name and address in the corner below, cut if off and send it to me. I will then send you the beautiful **free Pony Picture Book** and you will have an equal chance to receive one of the Real Live Ponies that I am going to give away soon. You stand just the same chance as any other child, and it doesn't cost you a cent. Get a pencil and write your name now.

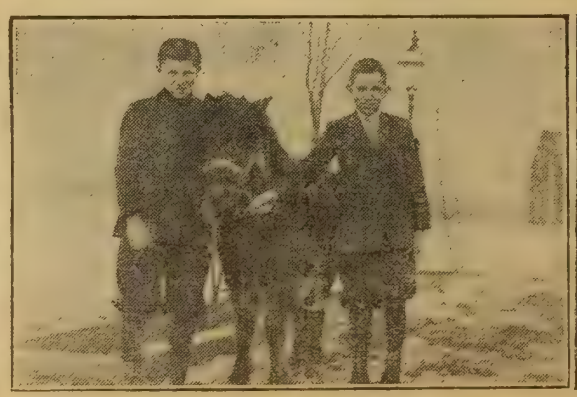
Parents Please show this offer to your child and send in the Coupon. You will be interested in the free Pony Book I send and your child will enjoy it immensely and profit by it. I receive many letters from children telling me how they enjoyed reading the book. Besides, **your child may win** one of the Shetland Ponies I am **actually giving away** this season. Your child stands the same equal chance as any other child, no matter where you live.

Address Your Letter to

The Pony King
307 Webb Bldg.
St. Paul, Minn.

"Jay" Given to Victor

On Christmas Day Victor Harris brought "Jay" into the house and introduced him to all the company. "Jay" reached Victor's home on Dec. 22nd. Victor lives in Ashland Co., Wis. and was one of the boys who sent me their names.



"Tramp" Given to Keith

Keith Walker of Juneau County, Wisconsin, and his Pony, "Tramp." When the roads are good Keith drives "Tramp" to school every day. Keith is certainly glad that he read my advertisement in the paper and sent me his name.

FREE PONY COUPON

THE PONY KING,
307 Webb Bldg., St. Paul, Minn.

Please send me the **free Pony Picture Book,** and enter my name in your Pony Club so I will have the same chance. I want one of the Shetland Ponies you are giving away.

VOL. XLV. NO. 26. THURSDAY, JUNE 29, 1916. WHOLE NO. 1796

"Oh, say, does that star-spangled banner yet wave
O'er the land of the free and the home of the brave?"

CURRENT EVENTS

GOV. EMANUEL L. PHILIPP, propped up on pillows in his hospital bed in Milwaukee, a few days ago signed a call for mobilization of the Wisconsin national guard at Camp Douglas. The governor acted in conformity with a call from the president of the United States for mobilization of all the militia of all the states, numbering in round figures 100,000 men. About 3,800 Wisconsin men are included under the call and these have been in camp several days awaiting orders to go to the Mexican border. Throughout the entire state there has been an atmosphere of patriotism attending the departure of the troops for Camp Douglas. At La Crosse, for instance, by special proclamation of Mayor Bentley, citizens gathered by the thousand at 6 o'clock in the morning to see the guardsmen off on the train for the state capital. At the time this is written the order had not been received for the Wisconsin troops to start for the border, but such an order has been hourly expected. Owing to the splendid war footing of Wisconsin troops and the high character of guard drill work in this state it has been anticipated that Wisconsin guardsmen will be among the first ordered to the front. General Funston has already asked for state troops to help defend the border, and, by the time this issue of The Wisconsin Farmer is distributed, Wisconsin troops may already be near the firing line. Our state troops will be used for patrol service and the regulars who are now engaged in such work will be sent to the fighting line wherever that may be. State troops will re-enlist as federal troops before they will be asked to cross the boundary. Wisconsin troops mobilized at Camp Randall, in Madison, in 1861, and gave a splendid account of themselves in the Mississippi river campaigns. Wisconsin troops in 1916 will be just as loyal as they were in '61 and far better equipped. In many sections of the state relief societies for the purpose of looking after the families of those who go to the front have already been formed. There has also been activity in the organization of the Red Cross work.

WAR with Mexico seems inevitable as a result of events which transpired below the border last week in rapid succession. One of General Carranza's leading officers issued a warning to General Pershing and the United States troops of the punitive expedition (sent into Mexico to arrest and punish the Villa bandits) that any movement of troops other than toward the boundary in retirement would be considered a hostile act and would be met by force. About the same time Carranza issued an impudent, even insolent, demand for the immediate withdrawal of all the American soldiers from Mexican soil. President Wilson sent a 6,000-word note in reply declaring that the troops were in Mexico to punish bandits and to restore the order which the Carranza government seemed unable or unwilling to restore and they would stay there until they had concluded their mission. Within a few hours after this note had been received in Mexico City a battle occurred between American and Mexican troops, with the reported loss of forty Americans killed, seventeen captured and several wounded, the Mexican casualties not reported. The Americans are said to have been led into ambush, the Mexicans having dug a trench across their path several hundred feet long and covered it with brush so that the on-riding troops could not see it, falling pellmell into the trap, where they were shot down by Mexican machine guns. That General Pershing would immediately pursue the treacherous Mexicans and give battle to them, with the extreme probability that war between the two countries would shortly result, was the outlook at the close of last week.

PRESIDENT WILSON has issued a call for the national guard organizations of every state in the Union for service on the Mexican border and the troops are mobilizing in every state, awaiting the call to start southward and patrol the boundary line between the two countries. According to the last reports of the division of militia affairs of the war department, the paper strength of the entire national guard, exclusive of coast artillery, was something like 117,000 enlisted men. The total number of enlisted men called for in the president's summons, exclusive of signal corps and medical corps, is 93,518, divided as follows : Infantry, 76,115; cavalry, 6,435; field artillery, 9,928, and engineers, 1,040. Mobilization of the national guard to support General Funston's line will pave the way for releasing some 30,000 regulars for immediate service in Mexico in the event of open hostilities with the Carranza government. The guardsmen themselves could not be used beyond the line without authority of congress and until they had volunteered for that duty, as they are called out under the old militia law. The new law, which would make them available for any duty under the federal government, goes into effect July 1st. Although the purpose of the action as set forth in the formal call is for the protection of the American frontier from invasion, the opinion prevailing throughout Washington is that it marks the first step of intervention in Mexico. The action is understood to have been precipitated by a dispatch from General Funston predicting trouble all along the Rio Grande, in an effort on the part of the Mexicans to force the Americans to withdraw from Mexican soil.

EVIDENCES multiply that Theodore Roosevelt will support Charles E. Hughes, republican nominee for the presidency, and that the breach between the republicans and progressives, of four years' standing, will be healed. Last week George W. Perkins, progressive leader, after a series of conferences with Colonel Roosevelt and with Gov. Charles S. Whitman, the chief Hughes boomer at the Chicago convention, announced that negotiations were under way looking to a restoration of the good feeling between the progressives and republicans. One of the leading eastern newspapers says that inasmuch as there is no longer any doubt that Colonel Roosevelt will support Justice Hughes, the question about which the most speculation now revolves is whether or not Roosevelt will support the republican nominee actively. The answer to this question is believed to be in Mr. Hughes' own hands and if the republican nominee requests Colonel Roosevelt to make campaign speeches this fall it is expected the colonel will take the stump to that extent. The former president is taking the position that he would not feel free to go into the campaign without being invited to do so. A meeting between Roosevelt and Hughes is expected to be arranged as soon as the progressive national committee gets its business over in Chicago.

NEW shells of a terrific explosive power are now being used by the Russians and are proving of great assistance in the giant drive against the Austro-Hungarians. These shells were manufactured in Japan and are said to be more terrible than any yet devised by the Germans. The formula used in the manufacture of the shells is being closely guarded and, according to some, is not even known to the other allied governments. Prisoners taken by the Russians since the drive began tell of the frightful destruction caused by the new shells. The Austrians say they are the worst shells they have faced anywhere, the effect of the explosions being felt over a greater area than by any other used by the warring nations. The Russian drive has been so successful that the city of Czernowitz has once more fallen into their hands, having been in their possession when they made their other big drive a year and a half ago, only to be lost later on. The Austrians are said to be losing much territory, but far more serious is the loss of many thousands of men, made prisoners by the Russians.

Rusk County Dairy Meeting.

Rusk county dairy farmers met recently at the court house, seventy-five in number, and had an interesting discussion. Prof. G. C. Humphrey, of the college of agriculture, talked on calf raising.

He urged every dairy man in the county to raise each heifer calf and to feed it well from the time it was born until it comes into milk. Mr. Humphrey advised farmers who are patronizing cheese factories to substitute one tablespoonful of oil meal mixed with a pint of boiling water for one pint of whole milk. After the calf was six weeks old this substitution should be continued until the calf received one-half milk and one-half oil meal gruel. The Ladysmith Creamery supplied Mr. Charles Lyman, of Rhinelander, as their part of the program. Mr Lyman gave a very interesting and instructive account of his recent investigations in Ireland about the methods used by Irish farmers and dairymen in the manufacture and sale of their dairy products. He urged the farmers to be loyal to their co-operative creamery and to strive in every possible way to deliver a first-class product to the buttermaker. Mr. Lyman's talk was very interesting and instructive and his arguments were absolutely sound.

After the general dairy meeting was over the Holstein breeders of the county organized a Rusk County Holstein Breeders' Association and elected I. M. Bergstrom, of Glen Flora, president; Nate Hand, of Ladysmith, vice president for Ladysmith; Mae Stevens as vice president for Bruce; C. A. Lindquist as vice president from Tony; W. B. Arnold as vice president from Ingram; W. E. Fond as vice president from Hawkins, and J. A. Schmidt as secretary; Philip Christman, of Tony, treasurer. The executive board will be made up of Iver Bergstrom, Philip Christman, J. A. Schmidt, C. A. Lindquist and Emil Johnson.

These facts are furnished The Wisconsin Farmer by G. M. Householder, Rusk county agricultural agent.

The Pennsylvania Agricultural Experiment Station, after a seven years' trial with a number of select varieties of corn, has recommended Wisconsin No. 7, or Silver King, for trial to farmers in the central and southern parts of the Keystone state. The officials of that station regard this as a high-yielding variety. During the period of the test Wisconsin No. 7 made an average yield of 56.9 bushels of grain and 3,286 pounds of stover an acre, a record only slightly excelled by White Cap, the favorite variety of the Pennsylvania State College.

The Wisconsin Farmer

THURSDAY, JUNE 29, 1916.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

INDEPENDENCE DAY.

AS I WRITE these words war seems imminent for our beloved nation. Patience has ceased to be a virtue below the Rio Grande and the Mexican, skulking across the border line to murder innocent women and children, must be taught a lesson, just as the man who commits murder in cold blood here in the grain belt must be hunted down by the sheriff's posse, arrested and made to suffer the consequences of his deed. I feel confident there is not a farmer in all this broad land who really wants war; all he craves is a continuation of our peaceful prosperity, with the security that he shall reap where he has sown. Yet there are insults to our national honor which make swift and decisive action sometimes necessary. I decry war; I abhor war; yet if peace is to be restored to our troubled border I firmly believe we must deal with ruffians in such a manner as to strike terror to their hearts.

The war scare, with the consequent mobilizing of our state troops—boys from the farm and boys from the city gathering together in state camps, with bugles blowing and flags fluttering—gives to Fourth of July this year stronger significance than it has known for the last eighteen years, since last "our boys" were summoned to the colors, not for conquest but to free a prostrate nation from the grasp of the tyrant. Just as we went down into Cuba to overthrow Spanish rule, so (if we go into Mexico in a warlike mood at all) we must go to restore law and order and to advance the cause of sound and stable government, which shall protect the rights of all impartially.

Fourth of July—or Independence Day, as I rather prefer to think of it—will always be one of the red letter days in our calendar, no matter what our occupation: Whether we follow the furrow across the field or toil at an office desk. It is one of the world's big days as well, for it marks the successful efforts of an ambitious, sturdy people to give to the world a government founded on right rather than might, a government "of the people, by the people and for the people." We of the farm have to thank our brave forefathers for what they wrote and did on July 4, 1776, for much of our present prosperity; for, as I have frequently pointed out, our fields would not produce so abundantly, nor would we profit thereby so materially, were it not that the stars and stripes stand for a stable government which gives to every man the right and the opportunity to work and to reap the full rewards of that work. There is an old poem which the young folks of a former day were wont to recite and which I hope will never be forgotten. It tells of the old bellman stationed aloft in the old State House at Philadelphia, waiting for the signal to be given him by his grandson that the Declaration of Independence had been signed, and this is the concluding stanza:

> The old State House bell is silent,
> Hushed is now its clamorous tongue;
> But the spirit it awakened
> Still is living—ever young;
> And when we greet the smiling sunlight
> On the fourth of each July,
> We will ne'er forget the bellman
> Who, betwixt the earth and sky,
> Rung out, loudly, "Independence;"
> Which, please God, shall never die.

Whether or not our boys are still with us, on the farm and in the office, next Tuesday—Independence Day—let us join in heartiest supplication that even though war shall come to mar our peace and perhaps shatter our prosperity, whatever may be the fate which Providence has in store for us, now or in the future, we shall never forget the bellman or the brave deed his clangor commemorated, nor the ringing words of the poet:

> "Independence;"
> Which, please God, shall never die.

AGRICULTURE AFTER THE WAR.

I ASKED Mr. Harry C. Evans (whose series of articles on war-time conditions in Europe, particularly in regard to agriculture, ends with the one entitled "After the War—What?" found on another page) to give me his answer, briefly, to this question: "Will agriculture be so retarded by the war that it will take many years for Europe to recover, or will there be a great agricultural awakening once the war is over?" I have already explained that Mr. Evans had exceptional opportunities to get at the heart of the subject. For instance, he crossed the German empire, back and forth, four times. He visited belligerent and neutral countries alike, he is a trained newspaper man, he interviewed public men on the vital issues of the day. This is how Mr. Evans answered my question:

> That a tremendous impetus in agriculture will follow the European war is certain. The warring nations have learned that the defensive power of a nation is strengthened by its capacity to feed its own people. Without this capacity, and with the markets of the world closed to her, Germany would have been crushed in the early months of the war. The nation that depends on foreign sources for food supply, in times of war or peace, is in hard lines.
>
> Another thing the warring nations have learned is that the stability and physical strength of a nation depend largely on those classes who have either been born and brought up in the country or have had the advantages of country life. The recruiting returns show a much larger proportion of men rejected for physical reasons in the large towns than in the country districts. There will be an effort, therefore, to encourage as large a proportion of people as possible to live on the land.
>
> The demobilization of the navy and army will afford a unique opportunity of developing agriculture. A large number of the men were employed in agriculture prior to the war and it is urgent that as many as possible of these should be induced to resume agricultural life at home. In addition, there may be many others, formerly engaged in urban industry, who will be reluctant to return to the life of the factory, the shop, or the office, and who will seek opportunities for an open-air occupation. If no such opportunities are open to them in their own country they will emigrate, and the warring nations will exert every effort to keep their men at home. Never before in the world's history will men be needed so much as in Europe after the war.
>
> Already, I am advised, Great Britain is taking the preliminary steps in a great "back to the land" movement, having two purposes: First, to maintain agricultural production, so as to make her independent; second, and more important, to keep her men at home and occupied in healthful, productive, satisfying labor. She is already considering land settlements for sailors and soldiers, with a government appropriation of $10,000,000 to start with. The details of the plan are interesting. An official report has been made for a comprehensive scheme of land colonization for ex-service men, to be undertaken partly by the state and partly by local authorities, and in recommending its adoption the parliamentary committee records the unanimous conviction that the attraction of a large population to the land is urgent, not only on account of the obligation of the country to its defenders, but in the highest interests of the nation as a whole. The first step is to acquire and equip land for three pioneer colonies, comprising 5,000 acres in all, with additional land for other colonies to be acquired later on. It is contemplated that the three pioneer colonies would each accommodate about 100 families. The preliminary appropriation of $10,000,000 should, it is thought, be sufficient to provide for at least 4,000 or 5,000 families, including a proportion of unmarried men. The main details of the plan, as they are now agreed upon, are as follows: No men should be allowed to take up holdings of their own unless they have the necessary experience; men without such experience should in the first instance be offered employment at wages. Any small holdings established should be on a basis of tenancy rather than ownership. The colonies should be laid out so that more land can be added to each holding in due course. For housing purposes the war office should hand over, free of cost, any of the military tents and quarters not required after the war. Expert guidance should be provided for the settlers in each colony by the appointment of a resident director and an agricultural or horticultural instructor, and one or more demonstration farms should be established. Co-operation in all directions should be encouraged. A depot should be established in each colony for the collection and disposal of produce, and a store for the sale of requirements. Part of each colony should be retained as a central farm, from which horses, implements, etc., can be let out on hire to the settlers. A co-operative credit society should be established in connection with each colony, and the state should take up share capital in such societies. All possible social amenities should be provided in the colonies, and women's institutes or clubs should be established for the settlers' wives.
>
> This work interests me immensely, for it points to two important things: First, that agriculture will have a great awakening after the war. Second, that there are some statesmen who can already foresee the end of this titanic and horrible struggle and are already planning for the return of peace. Personally, I have long held to the opinion that the war will end this fall or early winter. I have no reason for this belief other than an intuitive belief, maybe it would be better to call it a hope. Once the war is over—hasten the day—nothing is more certain than that the men who are fighting will demand a portion of the land they fought to save and that the nation which makes it possible for them to obtain and operate this land on the best conditions will make the most rapid recovery. It is not only "the defensive power of a nation," as Mr. Evans says, but the productive, creative power likewise that is strengthened by a capacity to feed its own people. We are proving this, here in the United States, with an agricultural productiveness never surpassed in the history of the world.

FARM BOY VS. CITY BOY.

I HAVE no desire or intention to assist anyone in luring young men away from the farm, yet I cannot refrain from quoting a portion of the remarks made by one of the recruiting officers, as set forth in a Milwaukee newspaper recently. He was comparing the young men of the country and of the city in regard to their ability to take orders and eventually to rise in the world and said:

> The best type of men in the United States navy come from the farm or the village. The rawest kind of a country boy will make the best kind of material when properly handled. He is willing to accept the commands of a superior officer. The navy department wants lads from the country. The navy is not particularly a calling for the sailor, but it is a place for a man who will take his place in the working out of a great system. The whole navy proposition is handled upon a very strict system plan and it is found that it is the boy who is the "gawk" that gets to the front in the end. The fellow from New York "knows it all," while the farm boy admits that he doesn't, but he is willing to learn.

Whatever may be our individual beliefs on preparedness, military service, a larger navy, and so on, here is some food for thought, to say the least. No man can rise to become a captain of men, whether it be in the army or in the most peaceful of all professions, farming, until he has himself learned to take orders. The boy's dream of war are of a captain far in advance of his command, with his sword flashing in the sun, shouting orders in a stentorian tone, which his men must obey at the peril of their lives. How vastly different from this is the real article, the millions who are engaged in war upon its gigantic scale in Europe today will testify. But whether the captain charges across the shot-riddled field far in advance of his men, or crouches in a trench and gives his order to far-distant battalions through the telephone, he cannot order until he has first learned to obey. And the boy who comes from the farm and the village obeys better than the boy who comes from the city; we have the recruiting officer's word for this.

One of the best things written in recent years, in my opinion, was the late Elbert Hubbard's "Message to Garcia." It tells of an army officer given instructions to find Garcia in Cuba and deliver a message; the man who sent him did not know where Garcia was, how he could be reached, what dangers might beset the messenger. Yet because he was a good soldier and knew better than to ask foolish questions, the officer set forth without a word—and found Garcia, though the way was tortuous and beset by hourly dangers. I like to think of our farm boys as carrying messages to Garcia, whether they ever wear uniform or not. They are sent forth by the mother who bore them, to make the fields yield abundantly and to feed and clothe the world. They do not ask why they are so sent, what their reward shall be, why some other boy does not do it so they may rest at ease in town; they carry the message to Garcia—and the fields produce abundantly. They are sent forth by their father into the waiting world, to battle with temptation and disease and sin and a million insidious foes and back they come, in their old age, to the farm from which they set forth in their youth, to gladden the hearts of those who never lost sight of them while they carried their message to Garcia in the business or the professional world.

Yes, it is the "gawk" who succeeds over the city boy, whether it be on shipboard, in the army, or in the marts of commerce the wide world over. He knows how to take orders and, because of this, he comes, in time, to know how to give orders. The recruiting officer spoke wisely when he paid his tribute to the farm boy, only it is a tribute due him whether he enlists to fight in army or navy or enlists to fight in the still bigger, broader campaign to make the world a better place in which to live, and all folks happier because of what he has done.

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-In-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Ave. Des Moines, Ia. | 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscription or advertising may be addressed.

MEMBER AGRICULTURAL PUBLISHERS' ASSOCIATION
MEMBER AUDIT BUREAU OF CIRCULATIONS

SUBSCRIPTION RATES—Single subscriptions, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of fifty or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription prices in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing give the same name and initials as you gave before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address WISCONSIN FARMER, MADISON, WISCONSIN

The New Wisconsin Institute.

THE WISCONSIN FARMER is advised that Supt. E. L. Luther, of the farmers' institute staff, has some new ideas which he expects to put into execution in the near future. Mr. Luther has learned that the world is devoting a great deal of attention to specializing, and this feature of life has not entirely escaped farming operations. While the farmer may have "more irons in the fire" than the business man or the professional man, the time is coming on when the most successful farmer is the man who finds out what branch of farming will be most profitable under the conditions which exist on his particular farm.

The old-fashioned farmers' institute has done a great deal of good for Wisconsin. But in some respects, no doubt, it can be improved upon. Under the old system about every conceivable subject related to farming was touched upon during the three-day institute. An instance was related the writer a few days ago where a call was made at an institute for a talk on ventilation. The workers conferred and decided that a certain man, an expert on hogs, should deliver the talk on ventilation the following afternoon. Now it is not often possible for many men to be expert on a number of subjects. A man might be an expert on hogs and know nothing about ventilation of barns. Under the old system of conducting institutes the farmers were simply glutted with information, much of which did not apply to their immediate conditions, and considerable of which might better be left unsaid. Under the more modern plan the effort is to get at the needs of the community in which the institute is to be held. Better still an effort will be made to concentrate attention on some one subject which is more important in that community. Along this line The Wisconsin Farmer believes great good will result from the sheep institutes which are being conducted in the Kickapoo valley this week. These institutes attract a definite class—men who are interested in sheep raising. They provide definite information on the subject and the farmer may retire from the institute with some tangible idea along a given line. Fruit institutes would be appropriate in certain sections. In cases where there are two or three principal lines of agriculture in a community, and two or three subjects ought to be covered, it might be better to have a one or two-day institute for one subject and another day at another time for the discussion of another important subject. At any rate, the old-fashioned hopper system of opening up the farmers' brains and literally flooding them with every sort of information is out of date. The institute of the future is going to be a sort of school for the accomplishment of a given object, and Superintendent Luther will increase his success and the value of his institutes in so far as he is able to carry out his plans to make each session accomplish a definite purpose in its community.

A Wisconsin Man's Views.

MR. GEORGE T. VORLAND delivered an interesting address at the first annual picnic given by the Colfax, Wisconsin, Creamery Company. Among other things, Mr. Vorland discussed the relation between the farmer and the merchant. Mr. Vorland is of the opinion that the average merchant sizes up the average farmer incorrectly. The merchant forms the opinion that the farmer is always concerned with the "all-absorbing question of buying his goods cheaply." This is an error, in the opinion of Mr. Vorland, who says that the farmer has a great many other things on his mind. In many cases, according to the speaker, the real trouble lies with the merchant and not with the farmer. Too often the merchant does not show enough interest in the farmer. If the farmer may be accused of always thinking of buying cheaply is it not possible that the merchant may be thinking too much about selling. In many cases the merchant's mind is narrowed down to the "one idea of selling, selling, selling to the farmer." We quote the following from Mr. Vorland's address:

There are a great number of questions which are to the interest of both the people of the villages, and the people on the farms—the good roads movement, school and social improvements, guide boards, and marketing. These are problems which are and should be of mutual interest to both. The farmer has no reason to believe that it is to the interest of the merchant to get the farmers' products at a less price than they are really worth. The merchant's interest must be to co-operate with the farmer and open facilities that will bring these products to the large markets and bring the best price. This will enable the farmer to buy more goods from the merchant and become a more valuable customer.

It is equally as important that the farmer earns the benefit accruing to himself from buying his goods of his local merchant—as long as he has to buy them anyway. To own a farm in the vicinity of a so-called "dead town" means the ownership of a low-priced land. When such a farmer wishes to retire he finds that in the sale of his farm he pays, or he receives, his reward in proportion to his former attitude with respect to the development of his town. If he has helped to build up his farm and village at the same time he will be amply repaid; if he has distributed his patronage elsewhere, the money saved in this way, will be taken from him in the decrease value of his land.

Let us, therefore, be wise men and women. Let us not try to spite one at the expense of another. Let us not give attention to one thing and neglect some other. Let us work in perfect harmony—in business as well as socially.

Trade is not all in life. Cheap buying and dear selling should not be our chief aim. We must have more of love, more of sympathy, more of cheer, and more of affection. Let us live and labor in harmony, for mutual benefit and general advancement. And remember that the more one tries to serve his neighbor, the more this neighbor will endeavor to return the service. A transaction which does not benefit both parties to the transaction is unjust, and, anyone who insists getting all the benefits in his dealings with his neighbors, be he farmer, merchant, or banker, is imbued with the selfish spirit. No matter what our vocation in life is our aim should always be to do our work well and to the benefit and welfare of our fellowmen.

Experience has proved that merchants who are fully awake to the value of the farmer trade, and to the importance of the farmer in the community, usually get their share of trade.

Increased Cost of Producing Implements.

AN INTERESTING investigation has recently been made of the wages paid at the Chicago factory of the International Harvester Company. The matter came up in connection with a dispute with employes over a proposed advance. The company felt that it was doing considerable for its employes, and went to the trouble to make an investigation of increase in labor cost in its factory since 1902. The investigation, to be fair and impartial, was left to non-interested certified public accountants. The company granted an increase to its employes amounting to something over 11 per cent before the report of the accountants was received. The accounts reported that since 1902 the International Harvester Company had increased wages of employes 50.34 per cent on the average hourly rate. This did not include superintendents and general foremen, the purpose being to get at the increase to men working by the day, week or piece in the factory. Including the increase which has recently been granted the International Harvester Company in its Chicago factory has increased wages 67.03 per cent since 1902, or more than two-thirds.

At about the same time that the report was issued on the International Harvester Company Chicago factory, a similar report was gotten out by the same certified public accountants on the payroll situation at the Deering and McCormick twine mills, of the International Harvester Company of New Jersey. This showed an increase of wages for female employes, exclusive of superintendents, of 58.89 per cent; male employes, 51.47 per cent; all employes, 55.91 per cent. But a new scale had gone into effect at these mills at the time the books were being checked over, and this brought the per cent of wage increases since 1902 up to 76.84 per cent for male workers, and 96.58 per cent for female workers, or an average per cent increase for all workers in the twine mills of 86.46 per cent. This is an increase of the hourly wage rate in the twine mills of more than four-fifths since 1902.

Considering the big per cent increase in wages in these factories it is remarkable that the farmer has not yet felt a big increase in cost of implements. That he has not has been due to improved methods of manufacture and increased outputs. Just at this time the material market offers a greater bugbear to the implement manufacturer than the labor market, and the increase of cost of the two combined bid fair to force an increased cost in agricultural implements which the manufacturer will not be able to avoid. The Wisconsin Farmer gives these figures on labor costs in this great company's mills, so that our readers may have a glimpse at the truth of the situation in case he is called upon to pay a little more for implements than he has formerly paid.

Soldiers Back to the Land.

THE third and concluding article in the series written by Mr. Harry C. Evans expressly for The Wisconsin Farmer will be found on page 10. This last article deals with the sentiment of the English soldier in the present struggle and his conviction that he is entitled to a share of the land which he is fighting to save. Mr. Evans sets forth the results of a very interesting interview with an English officer, who told him how the English soldiers are looking forward to getting back to the land and to increasing British agricultural production rather than being content to return to the factory and the office. Mr. Evans' articles have been extremely interesting and give the most accurate and vivid picture of agricultural conditions in the belligerent countries that we have yet had the pleasure to see. We advise all of our readers to turn to page 10 and read Mr. Evans' concluding article.

Effect of Drainage on Physical Character of Soil.

A RECENTLY-PUBLISHED volume on land drainage by Jos. A. Jeffery gives considerable attention to the practical effect of tile drainage on the mechanical nature or character of the soil. According to this author, when the ground water is permanently lowered to three or four feet below the surface where previously it stood almost at or near the surface, one of the first effects is to cause cleavages or cracks in the soil. Photographs of cross sections of soil made to considerable depth show most plainly large crevices produced by the shrinking of the soil as a result of removing the water from it by drainage. It follows naturally that when soil is thoroughly wetted, as it will be following heavy rains, every particle is pressed tightly against its neighbor particle. One may easily imagine that there is within the soil considerable lateral pressure as the granules become distended by taking up a maximum proportion of water. On the other hand, when land is drained there is a uniform contraction of the particles and the effect of this is to make the soil more or less friable to the depth of the tile drain. A rain will again close the crack and the alternate drying of the soil will open them, with the practical result that channels are formed so that more ideal conditions are created for roots to penetrate soils to enormous depth.

Of course, in those instances where the soils are dried out by evaporation from the surface larger cracks will be formed, but in that case the soil does not break up into small divisions but rather into enormous clods or chunks. Every man who has observed this matter closely knows full well that undrained lands during a dry season will show large cracks on the surface, whereas the soil that is tiled will dry out in an entirely different way, and in that case the cracks will be small and much more numerous.

Breaking up of the soil in this way through alternate processes of wetting and drying means that millions of air passages are formed and these afford an opportunity for soil ventilation and for the penetration of roots. The main reason why tiled land will stand drouths better than the land that is not tiled is that the former is more friable and admits air more freely. When the air penetrates the lower subsoil moisture is extracted therefrom and this continues day and night. It means, literally, that moisture is squeezed out of the air, thereby increasing the supply for the use of growing crops. The movement of air into little crevices of soil means that there will be much more chemical reaction than would be the case if air were excluded. The mere fact that roots penetrate drained soil better than they would the undrained land means that the soil tends to become more or less filled with vegetable matter upon the decay of roots, even to the depth of three or four feet. The roots of farm crops ordinarily will not go beyond the surface of the saturated soil, but will creep along in the dry areas where all rootlets are bathed with moist particles rather than with free water.

A friable soil becomes congenial for certain forms of insect life that take possession of fertile lands. Among these are earthworms and ants. These creatures, where conditions are favorable, work diligently creating passageways from the subsoil to the surface, and the millions of openings that they make become "passageways for both drainage and ventilation." These little creatures also bring large quantities of organic matter to the surface, obtaining these from decayed rootlets that have penetrated far below. This material is rich in plant food and it quickly becomes mixed with the surface soil where it will supply plant food to surface-feeding rootlets.

The drainage of land changes the condition of its organic matter which comes from the decomposition of roots, so that this material more readily combines with mineral elements and becomes compounded into products that the delicate roots can use. It simply means that you have a sweet rather than a sour content, and for most economical plants a sweet soil is just as necessary and just as important as sweet, wholesome food is to man and animals.

Reports of Wisconsin Summer Meetings.

THE WISCONSIN FARMER has been giving considerable space to reports of summer live stock breeders' meetings, and a number of these reports will be found in this issue. For the kindly hospitality extended to our editors at these meetings The Wisconsin Farmer takes this method of extending special thanks and also for the help which secretaries and other officers have given us in getting up reports, securing pictures, etc. Despite the rainy days and in some cases the bad roads, the attendance at the live stock meetings this June has been above the average and the interest has been the most enthusiastic ever shown. These facts are decidedly encouraging.

IN AND AROUND WISCONSIN.

Mr. Roy D. Hunter, a Wisconsin College of Agriculture short course student, 1912, has recently been appointed a trustee of the New Hampshire Agricultural College.

R. H. Cameron, instructor at West Green Bay, has charge of eighteen acres of gardens and is furnishing valuable instruction as well as employment to many city children. R. H. Rahmlo, of Bayfield, is doing similar work on a less extensive scale.

Another record of Wisconsin land at $200 per acre was made near Hartford recently when the Henry Pesch farm, two and a half miles west of that city was sold to Otto Pribenow. The farm consists of 100 acres and good improvements and was sold for $20,000. The farm is now rented, but possession will be given to Mr. Pribenow in the fall. This transaction is fairly representative of the increase in value of farm land in the vicinity of Hartford.

Detailed soil surveys are being made in Rock and Waupaca counties by the soils department of the college of agriculture, co-operating with the state geological and natural history survey and the United States Department of Agriculture. Maps of the counties will be made showing the variations in soil types and topography as the principal factors, with other things of value included incidentally. Reports of the surveys will be issued by the bureau of soils, United States Department of Agriculture, and the state soils survey.

According to the report of the state feed inspection department, 921 samples of licensed commercial feeding stuffs were analyzed in Wisconsin during 1915. These include 685 different brands. The inspection service continues to enjoy the support of manufacturers and dealers doing business within the state and through their co-operation nearly all differences have been adjusted without recourse to legal action. Only one manufacturer was fined for failure to brand his feeds with the information required by law. The shipment into the state of unbranded feed has been the chief cause of complaint. To control this situation the state feed inspection service now reports violation to the United States Department of Agriculture for the enforcement of the pure food and drug act, as it relates to feeding stuffs.

Directions for the culture of potatoes and control methods used against blight and beetle attacks have been sent by the college of agriculture to a number of county school superintendents for distribution among young people intending to enter potato-growing contests this year. Rules governing the contests and the selection of potatoes for exhibition purposes are also being prepared for the same purpose. High grade seed stock, mostly from "certified" fields, is being used in the work. Organized contests have been started in Chippewa, Adams, Sauk, Polk and Washburn counties. Several of the other counties in Wisconsin's potato belt are also holding growing contests under local leaders. Opportunities for exhibiting potatoes at state shows this fall will be given at the state fair, West Allis, in September and at the state potato growers' convention at Eau Claire in November.

A large number of the students who completed the courses at the College of Agriculture this month have accepted positions as teachers of agriculture in high schools and county agricultural schools. A few of these are: Earl Cooper, Marshall High School; E. T. Cusick, Sparta High School; Julius L. Jordan, Stanley High School; Glenn Lycan, Plymouth High School; R. F. Blecker, Peshtigo High School; J. A. McCutcheon, Wild Rose High School; A. A. Trojahn, Laona High School; S. G. Corey, Wood County Agricultural School; Arthur C. Murphy, Marshfield High School. Three other men have secured good positions as teachers of agriculture in colleges outside of the state. They are John T. Wheeler, College of Agriculture, Amherst, Mass.; W. O. Lockhart, Iowa State Teachers' College, Cedar Falls, Iowa; H. S. Murphy, director of agriculture, Colored Agricultural and Normal University, Langston, Oklahoma; R. O. Helland, Stuart, Minnesota Agricultural School.

A cow-testing association has been organized in the vicinity of Fairchild, Eau Claire county. First samples from cows in herds of the members were recently submitted to the high school agricultural department at Fairchild for testing. The test showed a wide variation, ranging from 2.5 per cent to 6.5 per cent. There are about 150 cows under test

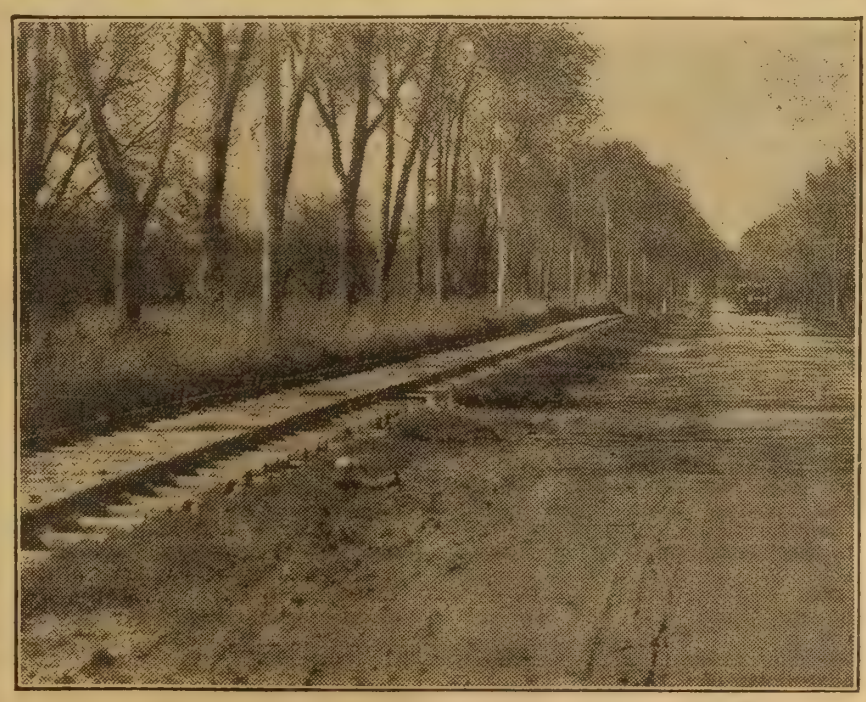
Polk county, Wisconsin, farmers recently made an excursion tour into Minnesota and visited six dairy farms in the vicinity of Stillwater and St. Paul. There were about thirty-five in the party, which was headed by J. S. Klinka, Polk county agricultural representative. The receiving delegations were headed by H. R. Leonard, county agent of Washington county, Minnesota. Those who made the trip from Wisconsin were members of the Polk County Holstein-Friesian Association.

Waukesha county Guernsey breeders gathered on the lawn of the Roy Burton farm, at Eagle, the occasion being the annual picnic, on June 3d.

A $2,000 building, size 32x100, is being erected on the grounds of the Walworth County Agricultural Society at Elkhorn, for the accommodation of the poultry exhibit. This building will have a capacity of 500 coops.

Between twenty and thirty young men will spend six weeks this summer studying the methods followed by successful farmers living in some of Wisconsin's leading dairy regions. This field course is a part of the regular summer school schedule of the college of agriculture at the University of Wisconsin. Those enrolled in this course are especially interested in farm accounting, dairy production and live stock management. The camps will be made successively at Rosendale, Fond du Lac county; Bethesda Crossing, Waukesha county, and on the Beloit College campus, Beloit. From these field headquarters the students will make "reconnaissance" surveys of about twenty-five farms in all. They will pay particular attention to the equipment, machinery, live stock and production records, crop rotations and feeding systems of the farms. The course, which opens June 26th and closes August 5th, will be given under the direction of D. H. Otis, supervisor of Wisconsin farm management contests.

Some interesting facts have been brought out at the meetings of the cow-testing associations this summer. Mr. Archibald House, of Omro, gave a report at a recent meeting of the association. This report showed forty cows in the association which had been sent to the slaughterhouse after it had been fully demonstrated that they did not pay for their keep. Attention to separating added $14 to one farmer's monthly milk check and $5 to another's. A properly balanced ration, made possible by the purchase of clover hay, added 3,500 pounds of milk to a month's output, which added $54 more money to another farmer's income. Mr. Roy T. Harris, state tester, announced recently that there are now forty-nine cow-testing associations in Wisconsin testing 22,000 cows each month.



ROADWAY AND CAR LINE TO MADISON TRACTOR GROUNDS.

Farmers who plan to grow certified potatoes for seed purposes this year should make their applications before July 1st. This applies throughout the entire state and indications are that a greater number than ever before will grow such seed. R. L. Cuff, agricultural representative of Barron county, in calling for applications points out the value to farmers in that county who last year grew certified seed. Only six or seven farmers took the trouble to raise certified potatoes. The number of bushels of potatoes grown by these six or seven farmers amount to a little better than two carloads, or about 2,400 bushels of seed potatoes that have been sold so far this year. Had there been twice as many bushels raised, yes, several times as many, by our farmers it is safe to say that all of the seed could have been sold this year at the same price that the 2,400 bushels were sold, that is, 50 to 75 cents above the market price. There are some who have questioned whether it paid to take the trouble of inspection and certification. The cost of this certified seed amounted to $30 to $35, divided among six or seven farmers who raised the seed. The increase in price to these same farmers amounted to about $1,500.

Considerable progress has been made by the Holstein-Friesian Breeders' Association of Wisconsin, on the Wisconsin Holstein booklet. This booklet was decided upon recently at a special meeting of the association. Advertising orders and memberships have been received up to date amounting to a total of $762.50. This includes orders for thirteen full-page advertisements, fifteen half-page advertisements and nineteen smaller advertisements. The secretary, Mr. C. J. Schroeder, expects to receive orders for twenty-five full-page advertisements.

Students with special training in farming and home making, numbering 139 in all, graduated last week from the College of Agriculture. Of the total number eighty-seven are graduates of the regular four-year course in agriculture, and thirty-nine young women completed the four-year course in home economics. Certificates of graduation were also granted to thirteen men who have satisfactorily finished two years' study in the middle course. The College of Agriculture was represented in the commencement exercises by Walter B. Krueck, of South Milwaukee, who delivered the class oration, and Irving V. Bullis, of Eau Claire, planting the class ivy.

Dairymen in Walworth county, Wisconsin, and Henry county, Illinois, to the number of 200 met recently at Woodstock to discuss the organization of a co-operative marketing company for the milk producers. All were members of the Milk Producers' Association. Briefly the object of the selling company would be to take charge of the entire milk supply, the city distributors and bottling plants contracting with this company for their supply. A commission would be charged the producer for selling and handling sufficient to cover expenses. Under such an arrangement the producer would have to deal only with his co-operative selling agency and it is believed that in this way a better price for milk for the farmer can be secured. It is expected that from $250,000 to $500,000 will be required to establish this distributing company and it is proposed to have each producer take at least one share of the stock, which will be sold for $25 or $50, as the case may be. If he should move away so that his milk was no longer handled by this company they would buy back his stock at not less than he had paid for it. It is the aim of the officers of the association to have the distributing company all ready for operation by the next contract period, and the plans will be considered at the next meeting of the directors.

Delbert Kingston, who by placing ten of twelve cows correctly, won the Waukesha County Guernsey Association's judging contest on June 3d.

LIVE STOCK SUMMER MEETINGS

Wisconsin Farmer Representatives Report Most Enthusiastic Summer Meetings of Breeders in Many Wisconsin Counties Within the Past Few Weeks.

Waukesha Holstein Meeting.

Waukesha county Holstein breeders held at Dousman on Wednesday, June 21st, what was undoubtedly the largest and best meeting ever held by the Waukesha County Holstein-Friesian Breeders' Association. That is a very broad statement as this organization has held some splendid meetings in the past but none that were so well attended as the summer picnic last week when between 650 and 700 persons were in attendance. The writer counted 147 automobiles in the road and about the grounds at one time in addition to sixteen buggies, and more than 500 persons were fed in addition to the scores who brought their own lunch or arrived after the dinner hour.

The meeting was held at the Wisconsin Home and Farm School a few miles from Dousman. It gave Waukeshe county breeders as well as those from afar an opportunity to learn of the splendid work which this school is doing under the superintendency of Mr. R. W. Bradford. The school farm consists of 220 acres and the entire institution is supported entirely by the free-will offerings of prominent Wisconsin men who are providing in this school a place for training orphan boys or those who are without the adequate home support and surroundings that boys between the ages of eight and sixteen years require. There are now thirty-five boys at the home and farm and all are being trained for a farming career in addition to being given a regular eighth grade education. There is a nice herd of Holsteins on the farm in addition to other live stock, and it proved a most enjoyable place for the holding of this gathering.

The weather was ideal for the occasion. The Waukesha county breeders seem to have a faculty of knowing which days of the year are going to be good picnic days and then choosing them. Out of a week of rainy, cold weather they were fortunate to pick one that was sunshiny and warm and with the roads in splendid condition the breeders and their families poured in from every corner of the county. It must be said of the Waukesha county meetings that they always arrange for an interesting program of speaking and music to follow a bounteous dinner, and that the meetings are planned to be just as interesting and as pleasing to the wife and the children as to the men. Dinner was served by the ladies of the Congregational Church at Dousman, who found themselves almost swamped when the crowd began to pour in, but there was plenty for all.

Mr. John B. Irwin, of Minnesota, owner and developer of the champion Holstein cow, Duchess Skylark Ormsby, was the principal speaker of the day. This was one of a series of five addresses Mr. Irwin made last week to Wisconsin Holstein breeders, and he divided honors with Mr. F. G. Swoboda, county agricultural representative of Langlade county, and Mr. S. S. Cramer, of Milwaukee. Music was supplied during the dinner hour by an orchestra from Waukesha, and during the afternoon by the Dousman quartet and by the boys in the Wisconsin Home and Farm School

Mr. Irwin followed somewhat closely the advice which he gave to the breeders in Walworth county on the previous day and which is mentioned elsewhere in this issue. He commanded the closest attention, as Waukesha county breeders who themselves are developing some pretty high-producing black and white cows were much interested in the developer of a cow who could almost give in a year her weight in butter. He gave Waukesha county the highest kind of praise for the co-operative effort which has been going on in that county for the last few years and said that while they were producing high producers in Minnesota that they also had their eyes on Wisconsin as one could not tell when, at any minute, some Wisconsin breeder might come forward with a better producer.

Mr. Irwin likes the type of dairyman who makes partnership with his cows; who takes them right into the business with him and studies them and knows them like a book. He likes the dairyman who knows his herd like the boy knows his multiplication tables after they have been thoroughly memorized, and he told the Waukesha breeders that in his mind one of the great elements of success in the pure-bred live stock business is the knowledge of what every cow can do; what her ancestors have done; what her family connections are and what the future may hold forth. For that reason he uses the term of "take your cows in as your partners," so that the dairyman may know their history, their families, their ability and their prospects as money-makers. To make progress he believes a man must go thoroughly into the question of pedigrees and to always remember that it is the little things in dairying that always count.

Although Duchess Skylark Ormsby has reached the high mark of 1,205 pounds of fat in a year, Mr. Irwin does not believe that the limit of production for a cow has been reached. He would not be surprised any day to hear of her record being broken and, although he has developed her to this point, he is not content but anxious to make even better records. "And it would not make me feel badly in the least," he said, "for Duchess will gladly take a back seat, and I am certain the limit has not been reached, as there appears to be no limit to the ability of the Holstein cow."

Mr. Irwin dwelt on the value of constructive breeding along definite lines, as this, in his mind, is of prime importance in building up good herds of fine producers. He referred to the many Wisconsin breeders who have been building up herds along definite blood lines for years as indications of what can be accomplished with this kind of breeding, and said that in this state the other breeders certainly should profit by the experience of their neighbors.

Mr. Swoboda took as his text, "Uniting for Progress," in which he outlined the great value of co-operation; showed what it had done and what it meant for Waukesha county. Mr. Swoboda was, until he became an agricultural representative, in charge of the work at the Wisconsin Home and Farm School, and it was like meeting homefolks to address the Waukesha gathering. His knowledge of conditions there years ago afforded him the opportunity to show by comparisons the great progress made through co-operative effort in dairying in Waukesha county during the past ten years. He remembered well when there was not a pure-bred herd in the county; less than a half dozen pure-bred sires and less than a half dozen silos. Today there is a silo to almost every dairy farm; a scrub sire is an exception and the reputation of the county today as a breeding center speaks for the pure-bred herds. Since January 1st there have been fifty carloads of high-grade Holsteins shipped from Waukesha county.

Co-operation, Mr. Swoboda pointed out, means progress, for the owner of scrub sires feels that he can't afford to belong to breeders' associations, and the man without silos looks at it the same way, as a rule. Wherever the breeders have gotten together, wherever dairymen have united in cow-testing associations, etc., Mr. Swoboda said that one could look for progress.

Mr. Swoboda went into the matter of advertising and called attention to the fame of Waukesha county as a breeding center, all obtained through advertising and the work of the breeders' associations. "There is nothing like printers' ink," he told them. Look into every line of endeavor and you find business men spending millions to advertise, and the same proposition confronts the dairyman with pure-bred stock to sell. He can't hide his light under a basket and succeed. He also discussed the future of the dairy business, praised the efforts of the National Dairy Council to increase the use of dairy products and pointed out the benefits to the farmers of a greater use of cheese, butter and milk. This will require greater production and this is one of the problems he believes that is facing the country, although not a critical one at this time. Not only get more milk from the cows but also make the land produce more. and Mr. Swoboda said he expected to see the day when the farmer with 160 acres and eighty of it lying idle will be considered a public nuisance. More intensified farming must come, he believes, and with it will come greater production from the soil, a living on forty acres and contentment on the farm.

Mr. Cramer spoke briefly of the recent national Holstein convention at Detroit, and Mr. A. J. Framer, president of the First National Bank of Waukesha, took occasion to praise Waukesha county, having just returned from a long eastern trip.

A judging contest conducted by Mr. Chris Schroeder developed considerable interest. Fifteen took part and the prize winners under fifteen years of age were: 1, Charles Pierce; 2, Frank Swartz; 3, Ivor Hopkins; 4, Harold Carr. Winners above fifteen years of age were: 1, Roderic Rice; 2, Edwin Hall; 3, William Kollath; 4, Emery Bade.

Fond du Lac County Jersey Meeting.

The Fond du Lac Jersey Breeders' Association held its third annual meeting June 15th at the home of E. Bruins. The meeting was a great success. The association was organized June 12, 1914, with twenty-seven charter members and now has a membership of fifty-one. F. H. Scribner, who was the first president of the association and re-elected last year, asked to be relieved at this time, and E. Bruins, of Fairweather, Wis., one of the veteran breeders of the state, and one of the most progressive of Jersey men, was elected president. A. S. Crooker, of Ripon, another of the stanch Jersey men of this county was elected vice president; Charles A. Peterson, of Rosendale, secretary-treasurer; Parker Bussey, of Omro, director; C. E. Pinning, of Fond du Lac, director and F. W. Page, of Princeton, director. F. H. Scribner, of Rosendale, gave an interesting talk on the Jersey cow, her feeding, breeding and care also mentioning some of the essential points to be taken into consideration in selecting Jerseys. At the annual meeting in 1914 several members were delegated to push the organization of cow-testing associations in their respective communities, and as a result of their efforts and the co-operation of H. C. Searles, of the state dairymen's association five cow-testing associations have been organized in this and contiguous territory of neighboring counties, giving Fond du Lac county the largest number of cow-testing associations in the state. Thus encouraged, effort is to be made to organize one or more associations in every township in the county. It was decided at this meeting to hold a public sale of pure-bred Jerseys probably at the time of the county fair next fall. These cattle will be consigned by members of the association, and a committee is to be appointed to pass upon any cattle offered for the sale to see that none but sound, absolutely first-class and guaranteed stock is consigned. The secretary was instructed to get out a directory of the members and see that the association is properly advertised. Some pure-bred bull calves were offered as premiums for the best exhibit of grade Jerseys at fairs in the newer sections of the state last year and this work is to be resumed on a larger scale this year. Quite a nice exhibit of Jerseys was made at the county fair, last fall, and it is expected that much larger showing will be made at the fair this year. An appeal was made to the members to join and support the State Jersey Breeders' Association, and also the Wisconsin Live Stock Breeders' Association, and effort will be made to co-operate as far as possible with other local Jersey breeders' associations in the state. In informal discussions much emphasis was placed on the value of official testing and the necessity of real constructive breeding on the part of members of the association. A cow-judging contest was staged for the boys and young men in attendance, with John Dixon, of Brandon, as final judge. This feature is to be made a part of the future meetings and prizes awarded to the winners in the contest.

Walworth County Holstein Meeting.

Walworth county Holstein breeders, with their families, gathered at Lake Lawn, near Delavan, that county, on Tuesday, June 20th, for their annual picnic and summer gathering. About fifty breeders were in attendance when the meeting was called to order by Mr. E. B. Watrous, of Troy Center, the president. Mr. John B. Irwin, of Minnesota, owner and developer of the champion cow, Duchess Skylark Ormsby, was the principal speaker, this being a series of five meetings which he attended and addressed last week.

The Walworth county association was unfortunate in choosing a cold, bad day for their gathering which kept many away. The day opened auspiciously, but before noon a cold east wind set in, followed by rain throughout the afternoon. The meeting was held in the pavilion at the lake and with warm weather the gathering should have been largely attended, as Lake Lawn, a part of the farm of Dan LeBar, is one of the show places of Walworth county and an ideal place for such an outing.

Walworth county is the home of many splendid Holstein herds. Crop conditions are very good, excepting corn. However, corn is considerably ahead of last year and the breeders and farmers are very optimistic. Breeders also report a good demand for pure-bred stock and every indication points to a good summer for the dairymen.

Mr. Irwin spoke very interestingly of the work of his champion cow and praised the part the women had taken in the Lake Lawn meeting, as he does not believe any dairyman can succeed without the help and inspiration of his wife. As a result, he always likes to see them at the meetings, for there is much they wish to learn about dairying and at the same time enjoy such outings.

Mr. Irwin believes the primary consideration in successful breeding to be constitution. Without a strong constitution, without ability to digest and take care of the 35,000 pounds of feed and roughage she consumed during her first year's test, he does not believe Duchess Skylark Ormsby could ever have made the record of 1,205 pounds of fat which she established. Her record was 27,700 pounds of milk at a cost of $190 for feed, leaving her owner a net profit for the year of $210.

Production, he realizes, is the basis of the dairyman's business, but Mr. Irwin doesn't care to lose sight of type and individuality in getting good producers. The scale of points, he says, is based on types with the ability to produce and he considers that when one is establishing a herd according to this scale that he is pretty certain to get good producers. He cited as an instance that when he bought the John B. Young herd, of Iowa, in which herd was Duchess Skylark Ormsby, that he asked W. S. Moscrip to pick out what he considered the best five cows, according to the scale of points. This record cow was among the five and the other four chosen by Mr. Moscrip were all good producers. "Nothing helped me so much," he told the breeders, "as studying the scale of points."

Mr. Irwin's theory is that it is best

(Continued on page 21.)

Cattle Grazing In Wisconsin

by J. L. Tormey

IN THE past few years considerable interest in the cut-over sections of northern Wisconsin, Michigan and Minnesota has been manifested. This interest has grown out of the wonderful agricultural development that has taken place in those sections within the past five or ten years. Men with an eye to the possibilities of the future have, in some cases, bought quite extensive tracts of land to hold for advancement in price. Others, showing a broader-minded spirit, are opening up large tracts for colonization and by studying the conditions and helping the settler have assisted ably in increasing the nation's wealth.

The settler without much capital occupies a small tract and by energy, thrift and ambition manages by the labor of his and his family's hands to clear the land and in the end own a home. He cannot be expected to pasture extensively and what pasture he has will be utilized for pasturing dairy cows. The regular income from the dairy cow makes her the animal that can best carry the settler. She pays for the labor and time put upon her and the settler has more time and labor than anything else.

Those who own large tracts of land are especially interested in the possibilities of grazing beef cattle or sheep to pay them something while they are holding the land awaiting the settler and also to help subdue the land. There is not much data at hand concerning the grazing possibilities of raw cut-over land. One can be sure, though, that the ideal conditions under which the ranchman grazed are not always present. While tame grasses flourish in the northern sections and there is an abundance of rainfall, there still exists in many places too much brush and too many water holes and low, marshy places to which the sun has no access. Good grass for grazing and brush cannot flourish in the same place and water holes are excellent places for breeding insect pests, such as flies and mosquitoes. It takes especially good feed to support both the flies and the cattle. The flies generally prosper, while the cattle do not. However, there seems to be fascination and romance in the grazing of cattle. There may also be profit, although in the past two or three years the latter has, in many cases, been absent. In spite of the reverses some men have met and in spite of the fact that many went on record as promising to themselves that they would never again pay upward of 8 cents for cattle to graze, the markets this spring are witnessing higher prices than usual for thin cattle of quality to be grazed or fed through the summer. I remember when men said anyone who paid more than 4 cents for feeders could not make money.

With few exceptions, cattle are higher in the spring than in the fall. There are reasons for this. Summer gains are considered cheap and cattle can be grazed with the minimum of labor, care and with practically no overhead charges. The building and care of fences, losses not to exceed 1 per cent by disease, accident or lightning, salt and frequent visits are about all the necessary expenses connected with the industry in Wisconsin. On the other hand, considerable expense is connected with keeping cattle over winter, whether they be fattened, kept growing or allowed to get thin by trying to maintain them at a constant, or nearly constant, weight. Wintering cattle demands equipment such as barns or sheds, the providing of feed the summer previous and the labor incident to feeding and caring for the cattle during the winter. Cattle may be maintained over winter on roughages alone and may be made to gain on good clover or alfalfa hay and corn silage, but the growing and preserving of such crops involves considerable expense not met with in summer grazing. Consequently there is always a demand in the spring for cattle to fill pastures and buyers are plentiful; in the fall, when pastures are empty, there are more sellers than buyers.

A system of handling this problem that seems rational and has been recommended for men who have considerable pasture and are equipped to winter is to buy in the fall and winter cheaply. The usual spread in price per 100 pounds between thin cattle in the fall and thin cattle in the spring is about $1.50. At the Pennsylvania station beef cows were maintained through a period of 140 days on an average daily ration of about sixty pounds of silage and one pound of cottonseed meal. With silage reckoned at $3.50 per ton and cottonseed meal at $32 per ton the cost of feeding one cow for 140 days was $16.84. For a period of five months the cost would approximate $18. These cows made an average daily gain of 1.17 pounds. If feeders weighing 900 pounds and costing 7 cents the 1st of December could be wintered as cheaply and advantageously they would weigh 1,075 pounds the 1st of May. Their total cost to that time would stand the owner $7.53 per hundredweight. The spread necessary in this case would be about $1 less than the great demand for cattle in the spring usually allows. Tasker Bros., of Turtle Lake, Wisconsin, have been very successful cattle grazers in northern Wisconsin. They watch the markets and generally buy in the fall when cattle are cheap. They co-operate with canning factories and winter the cattle cheaply on pea vine silage, straw and corn fodder and generally sell the cattle off grass in late summer or early fall the following season.

YOUNGSTERS SPELL ECONOMY IN CONVERTING GRASS INTO BEEF.

Wisconsin is not considered a beef state. In fact, men on the Chicago market rather smile when Wisconsin cattle are mentioned. However, many good cattle are grazed in southwestern Wisconsin and a glance at the successful grazers' work may be helpful in solving the situation for the man who contemplates grazing in the new country to the north. Mineral Point is the principal shipping point for good grass cattle from southwestern Wisconsin and "Mineral Pointers," as these cattle are termed on the Chicago market, are considered among the best grass fat cattle that appear at Chicago. The men who turn out good fat grass cattle are good judges of cattle and know their worth on the market. It takes good cattle and mature cattle to fatten well on grass and bring up to 10 and 11 cents on the open market, as some of the cattle from that section of the state have done. Men who turn out such cattle as those mentioned above feel that they can afford to graze only good ones and often spend considerable time and exercise great care to get the right kinds. There are others who prefer cattle of medium quality with good gaining possibilities. It takes more experience and greater knowledge of cattle prices on the market to successfully handle cattle of medium quality. Well finished, heavy cattle generally sell well. It takes skill to accurately estimate from reading reports of sales what common cattle will bring on the market. Again there are men who prefer to graze cows and heifers, and if these can be bought at a reasonable figure they usually return a profit. Grazers of cattle, however, generally have a specialty, like other successful people. Cows and heifers fatten well on grass and for the past few years fat heifers have brought good prices. The profit in cows lies in their ability to make a good increase in weight and fatten well on grass.

The men who graze young steers must be content to make a profit—if there is any—by the increase in weight on grass. For the past few years cattle weighing around 600 or 700 pounds have, on the average, been higher priced per pound in May than they were at the end of the grazing season. Many grazers feel they can "graze down" the initial cost and many reports state that cattle can be carried through the grazing season at a cost of $6 or $7 per head. Still others estimate the cost of keep at $1 per head per month. Let us assume that good 700-pound steers can be delivered to the pasture at 8 cents per pound and gain 275 pounds through the grazing season of five and one-half months in Wisconsin. The initial cost of the steer is $56 and the cost of grazing at

SUCH CARE MUST BE GIVEN TO STEERS SO THAT EVEN THE "BASHFUL" INDIVIDUALS WILL GIVE A GOOD ACCOUNT OF THE FEED CONSUMED.

these figures is $5.50. Not considering the probable losses, interest on capital, taxes, repairing or building fences, time of owner, salt and other expenses, the 975-pound steer at the end of the season would have cost $61.50. To get back the original price paid and the cost of pasturage the steer would have to sell for $6.31 per hundredweight, or $1.69 per hundredweight less than the spring price. We know that no one would figure this way, but the example serves to show what enthusiasts mean when they speak of "grazing down the cost," and in actual grazing operations "grazing down the cost" is about as fictitious as the above example.

Let us estimate where the grazer does actually get off or arrive with his 700-pound steer. The grazers of southwestern Wisconsin estimate one 1,000-pound steer to each two and one-half acres of land. Of course, there are boosters who claim an acre of land ought to support one head of cattle. So it ought, but that land cannot be bought at $75 to $100 per acre. The grazer has to fence and pay taxes on hillsides, creek and creek bottoms that are not tillable and his land receives no manure except what the cattle return. Eight per cent is little enough to allow for interest on investment and charges such as salt and fencing. This puts the grazing charge for the summer on the two and one-half acres of land at from $15 to $20 for the 1,000-pound steer and at least $10.50 to $14 for the 700-pound steer. To this expense must be added a six months' interest charge on the initial cost of the steer; and if the steer is shipped to market all costs of marketing, which include freight, commission, shrinkage and other incidental charges. Shipping 130 miles to Chicago is reckoned at about 40 cents per hundred. At the end of the grazing season our account with the steer would stand something like this:

Original cost	$56.00
Interest at 6 per cent—six months	1.68
Pasture (average)	12.00
Marketing expenses on 975 lbs. less 4% shrink @ 40 cents	3.74
Liability of loss 1% on average sale for season	.67
Total cost	$74.09
Price per cwt. at market to break even on 936-pound steer	$7.92

The above estimate shows the cost of the steer has been "grazed down" 8 cents per hundredweight or 1 per cent of the initial cost. The past few years the market has marked summer grazed cattle down quite severely in the fall and many cattle that cost 8 cents in the pasture May 15th to June 1st have gone begging for from $7.25 to $7.75 per hundredweight in Chicago in the fall. This may have been due in large measure to quarantine restrictions, but it is also due in part to the heavy marketing in the fall.

Not long ago I answered an inquiry from a person who owns 20,000 acres of cut-over land in northern Michigan. The writer of the inquiry stated there was plenty of government literature on how to raise skunks, but nothing on profitable grazing on cut-over land. The value of cut-over land for grazing is variable. Good gains are sometimes hard to get on good grazing land where conditions as to shade, water, good blue grass, high ground and freedom from flies are ideal. It is hard to promise success to a novice in the cattle game, when men who have made a life work of the cattle business in good grazing sections are scratching their heads to see their way out. Gains and costs can be estimated because there is an abundance of information and experience to call on, but market fluctuations cannot be foreseen. Who can foresee tight money or hard times?

The grazer of heavy cattle that fatten well on account of their age would do well to consider marketing on the usual midsummer swell in the market if the cattle are fat. Late August and up to October have been best times the past few seasons for marketing heavy grass fat cattle. Grazers hesitate to sell at this time of the year. They dislike to sell the cattle when pastures are good and cattle are gaining, but often the cattle would bring more actual dollars if sold early. If the grazer is prepared to winter—and many are—the pastures could be used later in the fall to carry younger stuff bought when the flood goes to market.

Packers appear to be concerned—and well they might—over the attitude shown by cattlemen throughout the country toward the condition of markets. One authority says the packer states that cattlemen are paying too much for stockers and feeders. That is no news to cattlemen. What is the cure for this? Can anyone answer? Apparently the cattlemen have the choice of paying the established price or not getting cattle. Many are not getting them. There is a limit to the amount of money one can lose, no matter how optimistic or foolhardy he may be. One authority states, though, that the packer bids on feeders, because he would like to get them for butcher stock. Some go even further and say that the packer will now pay butcher prices for stock that was drawing only canner and cutter prices during quarantine times. At least one of the big packing concerns of Chicago is now starting a survey of cattle producing conditions. It is a movement worth while.

In the meantime, the producer of stockers and feeders feels quite well satisfied. Whether they would continue to produce at lower prices is a question. High price is the best-known stimulant to production.

Studying Extension Work.

The demand for capable extension workers in agriculture is steadily increasing throughout the country. To aid in meeting this need the college of agriculture is offering special work in its summer session (June 26th-August 4th) which is designed to help in fitting teachers, farmers and other workers for these important posts. The program as already arranged will afford a splendid chance to study at close range the methods used by some of this country's most successful agricultural extension workers.

Some of the speakers listed: E, L. Luther, state leader of county agricultural representatives for Wisconsin; A. J. Curtis, Portland Cement Manufacturing Association; E. F. Murray and F. R. Crane, agricultural extension agents, Great Northern Railroad; W. A. Lloyd, United States Department of Agriculture; H. G. Bell, National Fertilizer Association, Chicago; J. R. Wheeler, agricultural committee, American Bankers' Association; Dr. H. E. Horton, agricultural commissioner, American Steel and Wire Company; Perry G. Holden, director of agricultural extension, International Harvester Company, and Ford Allen, dairy agent, Chicago & North-Western Railroad.

A Few Suggestions.

Le Roy Cady, horticulturist, University Farm, St. Paul, gives the following helpful suggestions for the week ending June 30th:

Keep the cultivator going. Weeds are unsightly as well as injurious to the crop.

Take a day off and visit someone else engaged in your line of work. Perhaps you can learn something from their methods.

Do not allow too many suckers to grow about the raspberry hill. Some varieties sucker very badly.

The old-fashioned bleeding heart makes one of the best perennials for planting about the home.

Keep the green aphis off sweet peas and roses by frequent spraying with some tobacco preparation.

Strawberries should be at their best now. If you do not have at least a small patch, it is your misfortune.

If the strawberry bed is to be fruited again, mow it close to the ground as soon as picking is done. Thin the plants to at least a foot apart and cultivate thoroughly.

Proper advertising should give just as good results to the farmer and gardener as to the merchant. Now is a good time to give it a trial.

Is the home well supplied with flowers now? Shrubs, perennials and annuals have given a magnificent showing about the city homes and parks this year.

Caladium and cannas need an abundance of heat, water and plant food. It is often a good plan to mulch the plants with rotted manure on the approach of dry weather about the middle of July.

Late cabbage may be set on the land that the old strawberry plants grew on, if the ground is plowed at once. Turnips or rutabagas also often make a good crop on a piece of land of this sort.

Look well after the early chicks. They will pay well if given good treatment, otherwise it is best not to have any at all.

Corn Crop Needs Warm Weather.

Pastures and Meadows Are Growing Well--Small Grain Prospects Are Good--Too Cold and Wet For Corn.

Barron County.—Small grains and canning peas look good. Clover and timothy are very heavy and sugar beets have a good stand on account of the continued wet weather. Corn and potatoes were planted late. Pastures are good and creameries and cheese factories are getting all the milk they can handle. Small fruits and apples promise well.—F. J. K.

Brown County.—Excessive rains and cold weather have held crops back. On high lands oats and barley are looking well, but on low, flat lands they are poor. Corn which has come up is at a standstill. The white grub is bothering corn and sugar beets. Hay has improved some, but will be a light crop. The cow is making the best crop, if we can produce enough to feed her through the winter we will pull through.—J. D. McAllister.

Burnett County.—Heavy daily rains have soaked the ground to the surface. Pastures and hay fields are in splendid shape. Small grains look fine. Corn is late and doing poorly. Potato fields are too wet for cultivation. Gardens on high ground are fine. Roads are almost impassable with automobiles and horses are getting back onto the job.—E. H. Johnson.

Clark County.—Not all the corn has been planted on account of heavy rains, and that which is planted has been retarded in growth. Conditions are more favorable at present; corn is growing more rapidly, but very little cultivating has been done. Some replanting is necessary. Meadows and small grains are growing rapidly on fairly high ground. Grain on the lower land is suffering from too much moisture. Pastures are not doing as well as expected and many farmers are increasing their acreage of pasture. Small fruits promise an abundance. The potato acreage is about normal.—Louis Buddenhagen.

Crawford County.—During the last two weeks, unusual rains and storms have done considerable damage to crops. Corn planting was delayed and some farmers are still planting. All small grains are doing well. Pastures are unusually good and the dairyman is in his glory; cream and milk prices are very good. A few hot days and nights are needed to push the corn along.—A. M. Laird.

Dunn County.—Cold, rainy weather has prevailed for some time. Small grains have made a wonderful growth. The hay crop will be tremendous. Corn is not growing well; prospects for it are not good. Much hay was lost in curing. The first crop of alfalfa has been cut, but the conditions for curing it are very poor.—J. D. Millar.

Fond du Lac County.—Weather continues cold and wet for this time of year. Small grains look well. Pastures are good. The acreage of hay is small, but the crop will be good. Corn is backward and considerable is to be planted yet. The apple crop promises to be far above the average.—A. L. Williams.

Iowa County.—Oats, barley and other small grains look well. Barley is beginning to head. Corn is up and it is difficult to keep the weeds down with so much rainfall. Weather is too cold for corn to grow rapidly. Corn and corn land suffered much from a very heavy rain in this community, which came about two weeks ago. Water was higher than it has ever been known to be, and the lowlands were washed over, and fences carried away. Pastures are very good and cows are producing well. Cheese factories are handling more milk than they have ever done before. Fruit will not be plentiful. Strawberries are ripening.—J. M. Blotz.

Juneau County.—Weather is cool. Small grains are doing well. Corn is backward on account of too much rain and cold weather; some will have to be replanted. Hay is making a light crop. Pastures are not very heavy. Potatoes which were planted the last of May are just coming up; most of the acreage, however, is just being planted. Apples will make about one-third of a crop. Gooseberries and currants are fair crops. Strawberries are very good where the wind and rains did not damage them.—C. E. Haskins.

La Crosse County. -Small grains look good. Corn is backward on account of wet, cool weather. Much replanting has been done. Clover badly witerkilled on tame hay lands. Early potatoes are looking fine. Small fruit crops will be short.—S. J. Dawson.

Lafayette County.—Corn is late, but doing well; second and third cultivations are now in progress. The first crop of alfalfa has been cut—it was not as heavy as last year. All hay looks good. Small grain is very rank. Pastures were never better and all live stock are doing fine. Strawberry crop was a disappointment, averaging only about 50 per cent normal. There are no cherries or plums to speak of. Garden truck is doing exceptionallly well.—W. J. Martin.

Lincoln County.—Crops are about two weeks behind because of cool weather and too much rain. Pastures are very good. Hay prospects are good; the new seeding came through in fine shape. Grain does not promise more than half a crop, with some pieces of oats entirely ruined. Potatoes which were planted early are just coming up; some planting has not been done yet. There is no fruit to speak of.—G. A. Patterson.

Manitowoc County.—Barley and peas are turning yellow on account of excessive moisture. Rye and winter wheat look fair, and oats are coming on in fine shape. Corn planting is late on account of wet weather, and many farmers are still planting. Grass is short because of late, cool season. Clover which did not winterkill is in good shape. Live stock that wintered well are now in fine shape in spite of short pastures and unfavorable weather. Potato planting is nearly completed; acreage will be about the same as last year's. Truck crops had a late start, but look thrifty.—Edward E. Straka.

A Fast Clean Ditch At Little Cost

One man with two horses or at most, three, can dig a V-shaped ditch as fast as you would plow a furrow. The Pile cuts straight and digs to any depth. Cuts through any soil. Dig your own ditches and make money digging for your neighbors with

The Pile PATENTED **Riding Ditcher-Grader**

The operator rides. No fatigue. No weighting with stones. Blade adjustable to any angle. The V-shaped ditch does not cave in. You can drive a wagon over it and can cultivate to the water's edge. Cuts flat-bottomed ditch if desired.

The Pile can be used for irrigation ditches, terracing, levelling, building levees, cleaning ditches and gutters, road making, grading, etc. **Ten Days' Trial** and liberal money-back guarantee.

Write for Literature

Let us show you how your increased crop from twelve ditched acres will pay for a Pile.

International Farm Implement Co., (Inc.)
142 W. Third St. Owensboro, Ky.

The TORNADO SILO FILLER

IF you want your silo filled with silage which will produce good, rich milk and plenty of it; also silage which will produce fat rapidly, fill it, or have it filled, with a **Tornado**, on account of the fact that the **Tornado** reduces it to a very fine condition.

By having it cut fine you get much more in the silo. It will settle closer, eliminating mould pockets, thus resulting in a much sweeter and better feed. Another reason why you should have it cut fine is that the cattle eat every particle, thus eliminating any waste.

By cutting it fine the cattle eat that part which contains the largest percentage of food qualities, which is the stalk.

The **Tornado** will be the means of bringing about these results.

Holstein Meeting at Manitowoc.

The annual picnic and summer meeting of the Manitowoc County Holstein-Friesian Breeders' Association, which was held on Sunday, June 18th, proved to be one of the most successful ever held by this growing association. The day was cold and the meeting followed a period of rainy weather that left the roads in bad shape which kept many breeders from attending, especially from Brown county, which had been invited with the Kewaunee county breeders to join in the festivities.

Crop conditions in Manitowoc county, aside from corn, are very favorable. The grain and hay crops promise to be as large as last year, when records were broken, and with warm weather during the next sixty days, it is thought the corn will pull through nicely, although some of it has not yet been planted. Conditions in the dairy field are very good. Manitowoc county is rapidly waking to the value of dairying and considerable official testing is now being done in that county in addition to the testing being done by three county associations so that the dairymen will know which are their good and their poor producers. H. R. Brewster, supervisor of dairy tests for the county, informed the writer, who had the pleasure to be the guest of the association on this occasion, that some splendid work is being done by the herds in the county and that Manitowoc will bear watching in the future. There is a growing demand there for pure-bred females, while the use of pure-bred sires is now general.

The picnic was held on the Lakeside Farm of Mr. Julius Lindstedt, a few miles from the city of Manitowoc. Mr. Lindstedt's farm overlooks Lake Michigan and a more ideal spot for such a gathering could not have been chosen. Mr. Lindstedt recently moved his Holstein herd to this farm from Michigan and it was a delight to look over his herd of about thirty-five pure breds, including his young stock, in which are some very distinguished individuals. Mr. Lindstedt plans to make this farm eventually one of the show spots of Wisconsin as well as the home of some of the best Holstein stock, to which end he is gradually working.

The meeting brought out during the day about 500 breeders and their families, who enjoyed a picnic lunch on the Lindstedt lawn and afterwards heard a splendid talk by Mr. F. B. Fries, the well-known Holstein breeder of Richland Center. There was a good number of breeders from Kewaunee county, headed by Mr. W. C. Katel, secretary of the Kewaunee county association, which will hold its annual picnic the first Sunday in July. Mr. Katel announced that the meeting, which was originally set for June 25th, had been postponed until the first Sunday in July and extended an invitation to all Manitowoc county breeders as well as those from other counties to attend. Music was furnished by a band from Manitowoc and a milking contest and a cow-scoring contest served to increase the interest in the gathering.

Mr. Adolph Otto, of Valders, president, presided at the meeting, assisted by Mr. Charles Hampke, of Manitowoc, secretary, to whom great credit is due for the success of the picnic and the growing popularity of the association. Mr. Hampke announced that the association now has about 100 members and that it is hoped before the winter meeting to enroll every Holstein breeder in the county.

Mr. Fries gave the breeders a typical, enthusiastic Holstein talk. He is a breeder of the black and white; is convinced that it is the best cow for the dairyman and is not backward about boosting for the breed. He touched on many essential points, such as breeding, selling, etc. Mr. Otto spoke briefly on the advantages of the association and urged every Holstein breeder in Manitowoc county to put his shoulder to the wheel and boost the organization.

Mr. Fries is a strong believer in advertising and considers publicity one of the essentials of a pure-bred live stock business. But when the buyers are attracted and visit the farm his advice is to have the stock in tip-top condition. Too many sales have been lost, he told the breeders, because stock was not in good condition when the buyers came and he said that no matter how good a cow's production record she must look good to the eye or the buyer will want to slash the prices. Mr. Fries considers that there are three ways of advertising. First, it is through the medium of the press; then at the county or state fairs and then through official testing and advanced registry work. He contends that nothing so well establishes a herd at home than to show it at the county fair, while the newspaper advertising will take care of it abroad. Mr. Fries has done considerable official testing and is in a position to speak relative to the merits of this class of advertising and he declared that the cost of an A. R. O. record is much more than taken care of in the sale of such a cow, as buyers will invariably pay more for A. R. O. cows than those that have been tested privately.

Support of the county fair was urged by Mr. Fries and he gave the breeders some pointers in getting their stock into the show ring. By all means get them out in good condition. Too many breeders, he said, are willing to run their stock into the fair without any previous attention and the result is that they look bad and that such is a poor advertiser for the herd. He also urged the breeders to interest every neighbor breeder in showing at the fair, as the more the merrier, and the better the advertisement for the breed in the county.

Mr. Fries also touched on the value of the pure-bred sire and the selection of females for foundation herds. He is a believer in sticking to blood lines, but would never sacrifice individuality. This is especially true of the sire, as he says many a breeder is judged by the sire he owns and that he should be true to the Holstein type. He favors picking a particular line of breeding and staying with it.

Fairness and honesty in dealing with buyers was also discussed and Mr. Fries said that nothing made so much for the success of a breeder than to let it be known that he stands unqualifiedly behind every animal he sells. If a buyer asks the owner's opinion of a bull calf he believes in giving it to him straight, for a good bull in the buyer's herd is always a walking advertisement for the seller's herd.

1819 Miles in 24 Hours

As far as from New York to Denver

With a Hudson Super-Six

The Supreme Endurance Test

The Hudson Super-Six, in many a test, has proved itself the greatest car that's built.

No car has ever matched it in hill-climbing. No other stock car ever went so fast. None ever went so far at top speed. And no motor of its size ever showed such reserve power.

But here is a record which perhaps means most to farmers who buy cars.

Best Record by 52%

A Hudson Super-Six with stock chassis was driven 1819 miles in 24 hours on the Sheepshead Bay track on May 2nd. The average speed was 75.8 miles per hour.

That car, in a single round of the sun, went the distance from New York to Denver. It went 52 per cent farther than any other stock car had ever gone in that time.

One man drove it all the way. No man could do that in a car which was not vibrationless.

That man went farther in 24 hours than a man ever traveled before.

50 Miles in One

Some engineers figure that one mile at racing speed equals 50 miles of ordinary driving, in wear and strain on motor.

This car had run 2,000 miles before that test, at average speed of 80 miles per hour. So this 24-hour run made 3,800 miles which the car had been run at top speed—as high as 102 miles per hour.

Yet no part or bearing, when the engine was inspected, showed any appreciable wear.

The Thing You Want

What you want in a car above all else is reliability. And that's what these tests are proving.

It would take ten years of road work, perhaps, to show what we prove in a few days of speed work.

In all our tests we use a stock chassis.

The motor is exactly the same as in every Hudson Super-Six. So every man who buys a Super-Six gets the same super-endurance.

A Patented Motor

The Super-Six motor is a Hudson invention, controlled by Hudson patents. The principle which gives its utter smoothness is entirely new.

That is why it out-performs any other car that's built. Or any car that can be built.

It develops 76 horsepower from a small, light Six. That is 80 per cent more than old types.

You rarely use that power. In ordinary driving you run at half its capacity, so the motor is never strained.

But the owner of a Super-Six knows that he has the power. He knows that his car is a master. He knows that in speed, in hill-climbing, in quick pick-up, no car can do what his does.

He takes pride in those facts. But his chief satisfaction lies in the car's endurance. He knows that his car will last. That another car at half the price might cost more in the long run.

Don't buy a fine car until you know the Super-Six. You would surely face years of regret.

WHEN THE WAR IS OVER, WHAT?

Harry C. Evans, a Prominent Member of the Recent Ford Peace Party, Writes His Third Article on the European War Situation, Describing the Hunger For the Land.

WHEN this battering shock of doom has ended—what then? What of the 20,000,000 young men of Europe now under arms, and in the reserve—what will they do, what will they think, how will they be changed?

Will they be content to go back to measuring ribbon, to typewriting, to clerking—these bomb-throwers and trench fighters who have found their strength, and discovered their bodies are fine and fit and strong, these men who have been engaged in heroics—will they be content to go back to the gentle and feminine pursuits they were hitherto engaged in?

I asked that question of a young English lieutenant. He had gone with the small English army across the channel in those first days of the war, had met the Germans before they reached the southern frontier of Belgium, and with his command had fought every inch of the renowned retreat to within eight miles of Paris, where he stopped a bullet that clipped his left lung.

His recovery was not sufficient to enable him to return to the front, so he went to Stockholm as the representative of an English newspaper, and I saw him there.

"Many of our boys look forward to that time," he replied, "with definite fear, and many with unquenchable hope. Not many can be found who hope to go back to life as they knew and left it."

There was tremendous import in this answer, and during my hospitality at a dinner the young Briton expounded on the future hopes and fears of the English soldier.

"When the boys have time," said he, "that is between fights and preparation for fights, they are wondering what they shall do when the war is over. But there isn't much time for anything but the fights. You know over there in France our lines are often but a hundred feet from the enemy. There are no waste spaces between the lines. Each force is as greedy to possess every possible square foot of those old fields as a Jew is to possess the most valuable square feet on the Strand—in fact, more so, for the Jew only pays money, while the soldiers pay with their lives. So there isn't much time to think of anything but your immediate surroundings in the trench, and the German lads in front of you. You see you are always wondering what they will do next."

"But when there is time?" I persisted, for I wanted to know about the "definite fear" and the "unquenchable hope" in which the British soldier holds the future. The speaker was a collateral descendant of a well-known British family of nobility and a graduate of Eton college.

"You say the boys do not want to go back to the old life. What was the old life?"

"Loafing, much of it," he replied, "and light work that women might do. There's plenty of hard work, of course, but the harder the work the poorer the pay. To be more definite, I would say the 'old life' of the laboring man to which he does not propose to return is the old fear of unemployment, and the old fear of meager wages when he is employed. Life in England for the poor man is not very attractive. There is probably a larger per cent of our people unemployed than in any other nation. There is little peace, little real happiness for the laboring man with a family, because his future is so desperately uncertain. In fact, there's but one thing certain about it, and that's its uncertainty.

"These thousands of laboring men have had regular employment during the war. They are sure of their job as long as the war lasts, or so long as they last, and their famliies are sure of a comfortable living, for the government is taking care of them while the bread winners fight. And they are wondering what they will do when they return home."

"But many of them will never return," I suggested, "and perhaps the relation of men to jobs will be in better proportion than in the past."

"True, tens of thousands have need of nothing further than the peace of the grave—but there are left those dependent on them. Thousands more will be broken; many of these bodies of ours are already practically worthless—but we must live. True, there will not be so many men to work, but every man will have larger responsibilities, more people dependent on him, therefore, his job must be certain and his wage higher.

"There are two big thoughts the boys in the trenches have. One of them is about the land. They never thought much about the land before. They have learned now how necessary it is to life. On the battle line the trench is the soldier's refuge, his haven. With all its stench and filth he loves it as the peasant loves his home, for in the trench only is there anything like safety. So the soldier has concluded that if on the battle front the land may be utilized to conserve his life, it can be used for the same purpose in time of peace. So he is going to want the land."

My soldier philosopher was well started now; further suggestive questions were unnecessary.

"You have told me," he continued, "how intensively the soil in Germany is cultivated. It is not so in England. I do not know what per cent of our soil is under cultivation, but I do know there are thousands and tens of thousands of idle acres. The boys will want these. There are miles and miles of fields where years ago wheat and corn were raised that now grow nothing but grass which fails to keep the sheep that wander over it. We think it cheaper to buy our wheat in Canada than to raise it in Kent, so our Kent fields are idle. Our great idle spaces must be made into rich gardens and orchards. The boys now in the trenches will want to do this, and the government must give them the land. Just how the soldier is to get the land I do not know. They have been brave enough to save the land to the owners, perhaps the owners will be brave enough to share the land with the soldiers. It is time now for those who are looking after affairs at home, while the boys are doing the fighting and saving the land, to think of this. They ought to begin to get things ready for the return of the boys. Perhaps, other methods failing, the principle of compulsion might be applied. It is used against the soldier to compel him to fight. If used against life, why cannot it be used against property—against the thousands of idle acres of game preserves, for instance, owned by the landlords?

"The boys could occupy England's waste acres immediately. They are even now planning to do it if those who make war and peace and industrial conditions will permit. The fact that there are few or no houses on the land will not matter. The boys have learned to laugh at the weather, to sleep on the bare ground under the stars, to have fellowship with the wind and the sun and the rain and the storm. Houses! If military campaigns lasting for months can be fought without shelter, fields can be tilled without shelter.

"It will not be the same world when the war is over. Doubtless we will nearly all be very poor, and there will be much hardship. Our nation imports many of the necessities of life, very much of our foodstuffs. Out of the land comes food, clothing, all necessities. We must stop buying these things of other nations, and produce them ourselves. We must till our land, all of it, the fence corner and the dooryards, as you tell me they do in Germany. There are none to do this except the soldier boys when they return home.

"When the soldiers go on the land there must be government experts to teach them how. We must not waste years, as you did in America, learning how to make the earth produce. Intensive farming must begin immediately.

"And then when the boys get the land the question of transportation must be solved, or rather the solution occasioned by the war must be maintained. The government found it necessary, in the transportation of armies and munitions, to take over the railroads. This to prevent exorbitant rates. If it is necessary to transport fighting men and guns and other forces of death cheaply in times of war, why is it not just as necessary to transport foodstuffs and other forces of life cheaply in times of peace? At the end of the war the government will have on its hands

Soldiers marching through a vineyard where the peasants—women and old men mainly—are picking grapes, showing the contrast of peace and war. Mr. Evans contributes his third war article to this week's paper. The first appeared two weeks ago and was entitled "War-Time Farming in Germany." The second appeared last week, and was entitled "Live Stock Scarce in Germany." This article concludes the series. Mr. Evans was a member of the peace party which Henry Ford took to Europe in a well-intended effort to end the war and restore international peace. He had exceptional opportunities to observe conditions.

the thousands of splendid vehicles of the motor transport section of the army service. What is to be done with them? Are they to be 'scrapped'? Why not turn them over to the civil authorities, with the trained men who now drive them, to collect the food and farm products all over the country and hurry these to the waiting markets in the hungry towns, thus affording ready and cheap transportation of the necessities of life between producer and consumer?

"And this brings me to the second great question the boys in the trenches are thinking about—when the German lads fronting them give them time to think. The government may find it convenient and necessary to keep the railroads and the factories after the war.

"There is another reason why the government may keep them. The war has increased our national debt to $10,000,000,000. It's costing us now $25,000,000 a day! The interest at 4 per cent on our war debt amounts to $400,000,000 annually. To pay the interest alone will consume the yearly wage of 1,000,000 men each earning $400 a year. How are we to pay the interest, to say nothing of the principal?

"It can be done, in my judgment, only in one way, and that by the government retaining the vast industries now in its hands and applying the profits to pay off the debt. Of course, there are serious objections to this plan. You say it would make us a nation of wage earners. Well, that's just what the great majority of the people of every nation are. The world has never faced such conditions as will prevail at the close of the war, and therefore the world will find it necessary to meet these conditions by doing things in a different way. It is among the possibilities that the few men who in the past have been enjoying the profits of business and labor, must yield those profits to all the people—in short, to the government.

"But the one big dominating thought," he concluded, "that is likely to end in a demand, is that when the boys get home they will want the land."

The Farmers' Open Forum

WITH CONTRIBUTIONS FROM READERS OF THE WISCONSIN FARMER

More Sheep Needed on Our Farms.

To the Editor:—Although the use of mutton is increasing rapidly and the demand for wool growing stronger there are 35 per cent less sheep on Wisconsin farms today than ten years ago.

What has become of the former flocks? Do we not need them now?

Yes, and much more than ever before.

A county that formerly shipped from fifty to sixty carloads of lambs to market each fall now seldom ships over twenty-five. In this same county where 200,000 pounds of wool were annually marketed, about 50,000 pounds are now produced.

This sharp decline may be explained as follows: (1) Roaming dogs have done untold damage and driven many good flockowners out of the business; (2) several years ago the prices of mutton and wool were low; (3) in late years dairying has been the sole interest of many Wisconsin farmers; and (4) lack of knowledge and improper care and management have caused many failures in sheep raising.

The legislature of 1915 enacted a law permitting the farmer to shoot any dog found roaming about his farm and chasing or annoying his live stock. In addition, a fine or jail sentence may be inflicted on the owner of the dog. This was not possible with the old law, and hence ought to encourage many farmers. Of course, where there are good fences the dog evil is eliminated to a great extent.

Instead of the low prices paid for mutton and wool several years ago, a premium is now paid for both products. Recently, last year's lambs were sold for 12 cents per pound (live weight) on the Chicago market. Spring lambs have been selling for from 14 to 17 cents a pound (live weight). Wool is selling at this time for 32 to 34 cents a pound, the highest price paid since the civil war. These certainly are good prices and there is promise that these products will continue to remain high on account of the shortage of both. Meat packers are forced to pay high prices for live mutton and lamb because of its scarcity. Woolen manufacturers, likewise, are paying high prices for wool because of the shortage. "Shoddy" has partly taken the place of wool, but this cheaper material does not make the kind of goods that suit all classes of buyers. Wool is a necessity.

All feel proud of the fact that Wisconsin is considered the greatest dairy state in the Union, and due credit and honor is given to the dairymen. This great industry undoubtedly is very profitable where the farmer can conduct it with his own family help. This business, however, often requires much hired help.

Are there not many farmers in this state whose boys and girls, once faithful workers on the farm, have now left the farm and started for themselves? These farmers are not in shape to do many chores, but would not a flock of sheep lighten their burden?

A prominent sheepman in addressing a large farmer audience recently made the statement that sheep need a little more intelligent care than some of the other classes of live stock, but when farmers in Wisconsin and other states have familiarized themselves with the proper care of sheep, just as the man with the dairy cow, and the woman with the chickens have done, then sheep husbandry can be carried on, not only more extensively, but also with much greater success and profit.

Sheep should again be raised on our Wisconsin farms. One of the directors of a county farm in this state says that last year they realized a net profit of a little over $2,000 on 150 breeding ewes. The land on which these sheep were grazed was rough and had been purchased for $20 an acre. This man, who is absolutely trustworthy, after figuring the cost of establishing the flock, and of the feed and labor, stated that they had derived from the sheep a much higher net profit than from any other class of live stock kept on that farm. Another farmer who lives in a section of high-priced land in southwestern Wisconsin purchased twenty-four grade ewes in the fall of 1914. These ewes netted him $234 in a year for lambs and wool. He stated that their entire feed had been good pasture during the grass season and good clover hay in winter. No grain or other feed was used. He was out trying to buy more sheep and said that he was deriving far more profit from his sheep than from his cattle and hogs.

Although sheep have greatly advanced in price in the lest few years, still a man can start a flock with a reasonable amount of money. In the fall perhaps is the best time to purchase. At this time the western range men dispose of their surplus breeding ewes, and one can secure a small flock of from fifteen to twenty-five head without making a large investment. Sheep multiply fast, and by the use of a good, pure-bred ram of any of the leading mutton breeds, a fine flock will soon be established. A ram in many cases can be used by two farmers on small flocks in one or two breeding seasons, thereby lowering the cost of the ram.

Farmers, it will pay you to think this matter over carefully and make plans for next fall. You will find profit in sheep raising providing you handle your flock properly. If you need assistance call upon your agricultural experiment station.

Frank Kleinheinz,
University Shepherd, Madison, Wis.

Sugar Beets and Weather.

To the Editor:—Notwithstanding the excessive rains this season and the abundant moisture now in the soil, crops that have been and are grown on well-drained lands and sandy soils have not shown signs of distress to any large degree. Although sugar beets, barley, peas, corn and potatoes have more moisture now than is required even in high and dry places, as is known, sugar beets will endure more moisture in the soil than many other farm crops. But the beet, too, in the end will suffer if there is too much moisture in the soil and when all the pore spaces in the immediate vicinity of the root are occupied by water instead of air. Plants need to breathe as well as do animals in order that they might live right. It will be noted that the foliage of many plants has turned to a yellowish color and this is a sign that the plants are suffering from too much moisture in the soil.

Too much moisture in the soil will have a tendency to retard the growth of the sugar beet. Finally the beet roots and rootlets will spread out near the surface and the beet will have many short roots and the tap root will be a short one also. The best beet is the one that has a clean, long tap root with only fine rootlets with which it feeds. In order that a beet sugar of good quality may be harvested this fall, it will be necessary that the beets grow under dried conditions together with more sunlight and warmer weather.

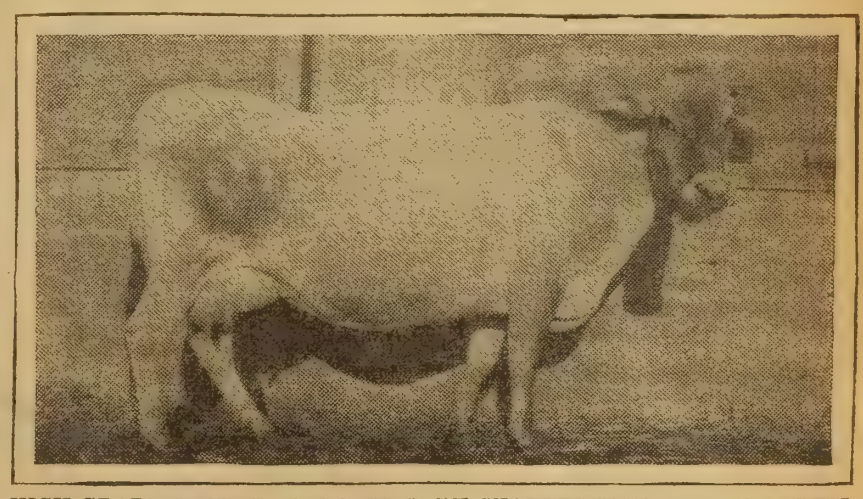
Quite frequently a season of wet weather followed by a season of dry weather operates to the detriment of a root crop. Because of abundant moisture in the soil the rootlets of crops have grown near the surface and later when the plant was in need of moisture the rootlets were not sufficiently deep in the soil so as to take up the moisture from lower depths. This condition will result in a much reduced crop. What is true of sugar beets will, in a large measure, be true of other root crops having tap roots.

Dane Co., Wis. J. F. Wotja.

Upper Wisconsin

Upper Wisconsin Dairyman's Experience.

The champion cow of the Langlade County Cow-Testing Association for the past year was the high-grade Jersey whose picture is shown herewith. She produced during the twelve months 8,424 pounds of milk and 4,663 pounds of butter fat. Her gross returns for butter fat were $131.40. Deducting $38.68 for cost of feed she has to her credit the neat sum of $92.34 as a net profit.



HIGH-GRADE JERSEY COW OWNED BY CHARLES SCHOTTE, VICE PRESIDENT LANGLADE COUNTY COW-TESTING ASSOCIATION.

Mr. Schotte's cow is not an accident, either as to breeding or production. For a period of years Mr. Schotte has maintained a pure-bred Jersey bull on his farm. He now has practically a full grade Jersey herd. Mr. Schotte admits that, like many other farmers, he fell down woefully at the feeding end of the dairy business until membership in the cow-testing association put him on the right track. He appreciated that his prize cow, like other members of his herd, was a good cow, but she never got a chance. When he found that she stood a show at topping the list in the testing association he got after the feeding business right. In one month he got the cow to produce twenty pounds of butter fat more than she could have under his previous system of care and feeding. Needless to say this was reflected in better care and feeding of his whole herd.

Experiences like Mr. Schotte's are doing much to open the eyes of farmers generally throughout the county to the importance of better care and feeding. An incident in Mr. Schotte's experience illustrates the value of cow-testing when it comes to selling cows. Early in April he found he had two cows to sell. Naturally those with the lowest record were the ones booked to go. His first thought was to sell them to the butcher. It was suggested to him that it was a mistake to sell them to the butcher as long as there were so many cows in the county so much poorer than his poorest. He was advised to put the following small advertisement in the local daily paper:

For sale, two high-grade Jersey cows with two years' cow-testing records.

Before he had completed his chores the following morning a buyer drove into the yard. He led away the two cows. That same day and the two following fully a dozen buyers called at the farm to buy the two cows. "I could have sold my whole herd without any trouble," declared Mr. Schotte. "Does it pay to belong to a testing association?" you ask. "I got enough more for the two cows to pay my testing association dues for two years."

Comparisons Help Upper Wisconsin.

To the Editor:—It has always seemed to me that every article which appears in a magazine or paper, whether editorial or not, is a medium through which people are either stimulated to accomplish things or are more or less discouraged.

Everyone enjoys a human story and when they read of a success it has a tendency to make one feel more buoyant, more ambitious to resolve to do a little better. Now, I believe one of the greatest stimulants to northern Wisconsin would be to print as many stories as one could secure of the phenomenal successes which have been made throughout Upper Wisconsin by men who started on practically nothing. Every village, town and community in Upper Wisconsin have citizens who are the worst enemies of that portion of the state and if they could read of the many successes that have been made there and would see or hear comparisons of crops grown in Upper Wisconsin to the crops grown in other sections of the United States it would convince in time such people of the many advantages of Upper Wisconsin. Men who are most harmful to the development of Upper Wisconsin have been those who lacked the energy, the intelligence or are too busy doing something else to recognize the tremendous advantages in their own yards. To such people I believe there is only one way to awaken them and that is through comparisons. If they can see that their yard will grow more than the same ground in Illinois, Minnesota and other states they are going to wake up. I read your paper with a great deal of interest and appreciate its value for the farmer.

S. A. Loveland.
Minneapolis, Minnesota.

Figures compiled by the Italian government show that the world produced 4,000,000,000 bushels of wheat last year, an increase of 800,000,000 bushels over the year before.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

QUESTIONS AND ANSWERS.

Horse Power of Motor.

What is the horse power of a four-cylinder automobile motor having a two and seven-eighths inch bore and four and one-half inch stroke, when running at 1,500 R. P. M.?

Answer.—Your motor should develop ten to twelve horse power.

Defective Carburetor.

My four-cylinder car runs well, and there is no gasoline leakage that I can detect, either from the line pipe or from the carburetor. However, there is a strong odor of gasoline while the car is running. The car is also a little extravagant of gasoline, so there are two indications that there is a waste of gasoline. I have examined my spark plugs and find that they are in good condition; the metal points being clean as if there is good ignition. How would you go about it to find out the cause of the waste of gasoline indicated by the strong odor?

Answer.—The most probable cause, if your motor fires regularly, is that the float of your carburetor is gasoline soaked so that too high a gasoline level is maintained in the bowl of the carburetor. This brings the gasoline too near the top of the spraying nozzle and when the motor starts a part of the gasoline is not vaporized, but runs down the spraying nozzle and out into the mud pan of your car. After running your motor until the odor becomes noticeable look and see if this is not the case.

Motor Lacks Power.

I have a Model C 25 Buick car. It does not have the power that it should have. I think that it takes too much gas. Please tell me what is wrong with it.

Answer.—The first thing necessary for power is good compression. If the compression is not good grind the valves. If the compression is still poor it may be necessary to use new piston rings.

After attending to the compression see to the spark. Remove the spark plugs and clean them with kerosene, removing all the carbon from the porcelain. Lay the plugs on top of the cylinders, with wires connected, and switch on battery. Crank the motor over slowly and see that each plug gives a good, fat spark. See that the spark occurs just after the piston passes dead center at the end of the compression stroke when the spark is fully retarded. This is very important.

If compression and spark are O. K. the carburetor or carburetor adjustment is probably at fault. Write to the makers of the carburetor for their circular describing the proper way to adjust it. Test the motor for air leaks at the inlet valve stems and at the intake manifold gaskets. It is impossible to adjust a carburetor for all speeds if there are air leaks in the intake.

A considerable amount of carbon in the cylinders lessens the power of a motor.

Charging Storage Batteries.

I have a little problem that I would like for you to answer. I have a forty-volt, twelve-ampere generator that I use to charge a thirty-two-volt, one hundred ampere hour storage battery. I would like to use it to charge a three-cell battery of almost the same ampere hour capacity. I have tried connecting them all in series, which way seemed to work successfully, but, while charging, the volt meter on the switch board would register forty-five to fifty-two volts. Was this an overload for the generator and if so, would it be enough overload to injure it? I have two more plans in mind, but have never tried them. One is to connect the three extra cells in parallel with three cells of the other battery. With this arrangement I would not have any more voltage, but would I get the same number of amperes through all the cells? The other plan is to disconnect the large battery entirely and connect the extra battery in series with a bank of lamps in parallel. I have thought that perhaps with this plan, the lamps in series with the battery would take care of the excess voltage of the generator. I could regulate the rate of charging by the number of lamps turned on. I might mention that the rate of charging my outfit is regulated by the field rheostat to a certain extent.

Answer.—Using a bank of lamps as you suggest is a common method of charging a low voltage battery with a high voltage generator. It is quite practical, though not economical in use of current.

Connecting the three extra cells parallel with three cells of the main battery would not be advisable, as the three cells would only obtain half a charge.

Connecting all the cells in series and regulating the generator to produce about fifty volts will overload your generator to some extent, but should not do any damage. This is the most practical thing for you to do. Protect your generator by using a fifteen-ampere fuse. If the generator heats badly the load is too great.

A Reversing Switch.

I have a small electric motor, for which I would like to make a reversing switch. I can reverse the motor by using two two-way switches. Is it possible to do it with one? If so, how should the switch be wired to the motor?

Answer.—Figure 1 shows a reversing switch and the way to connect it in the field circuit. It is a two-pole, double-throw switch with the outside

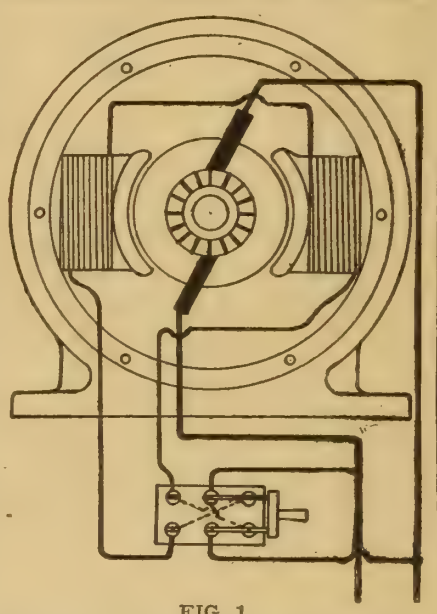

FIG. 1.

terminals connected by cross wires, as shown by the dotted lines.

A Tire Question.

Does an automobile tire weigh more inflated than when deflated? If so, why?

Answer.—Air has weight. The volume of an inflated and deflated tire is nearly the same, as all the air is seldom expelled. Since the inflated tire contains about six times the volume of air occupied by itself it will weigh more than when deflated, the difference in weight being the weight of about five times its volume of air under atmospheric pressure.

Lightning Rods.

The lightning rod man has placed lighting rods on my house and wired them as illustrated. (Fig. 2.) He has no ground to rod A, but has ground wires on rods C and D. Now, if lightning strikes rod A, will it follow the wire up the roof, or will it follow the wood to the ground?

Answer.—If lightning should strike rod A it might follow the wood to the

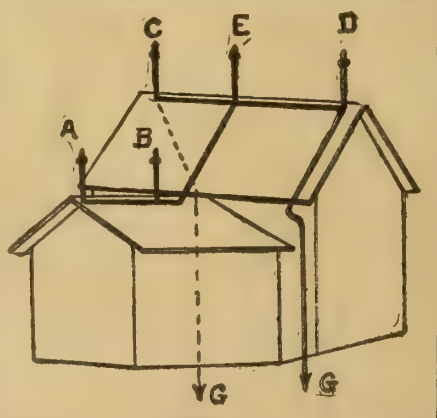

FIG. 2.

ground. Electricity flows up hill as well as down, but an electric current from lightning is an alternating current of extremely rapid alternations. When the current attempts to flow up the wire from A to E the alternations would induce an opposing current in the ground wire GD. This opposing current might be strong enough to cause the current from the lightning to follow the wood. A ground wire from A would remedy the trouble.

Coil Trouble.

We have an engine equipped with a jump spark coil operated by four dry cells. The cells and connections are in good condition, but the spark is very weak, and sometimes fails entirely. I opened the coil, and one place in the black cement it looks like a hole has been burned in it. Can a coil burn out? Could it be repaired?

Answer.—A coil may burn out, but this very seldom happens. When a coil does burn out it is generally cheaper to get a new coil than to have the old one repaired. See that the vibrator points are in good condition and properly adjusted. Your trouble might be due to a loose wire on the timer, or a poor contact at the timer.

Making a Dynamo.

I am making a dynamo out of an old cog wheel. Will this do for an armature core? It is eight inches in diameter and two inches thick. It has sixteen slots about three-fourths of an inch deep. What size wire shall I use? Will the white metal boxing interfere with it? How much will it generate? How should I wire the coils? Could I lay copper bars around two wooden wheels for a commutator?

Answer.—The cog wheel might be used on an experimental machine, but the core of a practical armature is always made up from thin disks of soft sheet iron. When the armature core revolves in the electric field currents are produced in the core, flowing lengthwise of the core. These are called "eddy currents." If the core is solid these eddy currents would make the armature very hot. If the core is made of thin pieces of sheet iron, however, the scale on the sheet iron acts as an insulator and prevents the eddy currents from flowing and heating the core. The windings on the core must be of insulated wire. The white metal boxes would not affect the armature. For your motor wind the armature with No. 8 double cotton-covered copper wire. Use sixteen commutator bars. You may mount them on wood. Wind the slots of the core about full of wire, passing the wire around and around the core through opposite slots. Then solder the two ends of the coil to two opposite commutator segments. Then wind the next two slots full and solder the wires to the segments next to those for the first coil. When completely wound the slots will all be full and each commutator bar will have a wire soldered to it.

Make the field cores out of soft iron about two inches in diameter. Wind about two pounds of No. 28 wire on each core. Connect the armature brushes and field coils as shown in Figure 1, omitting the switch. The coils on the two field cores must run in opposite directions. It would be difficult to estimate the output; it would probably be about ten amperes at forty volts when the generator is running at 1,000 R. P. M.

Alexander Galbraith, formerly of Janesville, who is the superintendent of fairs and institutes for the Alberta Department of Agriculture, has selected two former Wisconsin stockmen, R. B. Ogilvie and R. P. Stericker, to officiate as judges at the summer fair to be held at Edmonton early in July.

Ask your neighbor to subscribe for The Wisconsin Farmer.

Those Copper Gaskets Are Asbestos-Cushioned To Save the Porcelain

If your porcelain insulator breaks, your spark plug is out of business.

There's nothing for it but a new insulator or a new plug.

The rapid succession of explosions in your cylinders beat with full force on the shoulders of the insulators of your spark plugs.

Champion plugs are made with two asbestos-cushioned copper gaskets, (*patented by us April 25, 1916*) to protect the porcelain and prevent loss of compression.

That is one big, exclusive feature which accounts for the greater dependability of Champion Spark Plugs.

And their greater dependability accounts for the fact that more plugs of this type are in use today than any other plug ever designed.

And this same condition has existed for years.

Champion Dependability and the reasons for it should be remembered when you replace the plugs in your motor.

There is a Champion Plug designed especially to serve the particular kind of motor you have in your car.

Your dealer knows which Champion you need.

Be sure the name "Champion" is on the porcelain—not merely on the box.

Champion Spark Plug Co., 510 Avondale Avenue, Toledo, Ohio

Pure Fresh Water Instantly

Own a modern water system furnishing water straight from well to any part of your house or barn when you turn the faucet. No slimy storage tanks.

PFAU COMPRESSED AIR MOTOR PUMP

Operates in well with but 3 inches water. All working parts protected – no freezing. Protects you against fire – gives you modern bathroom, laundry and toilet facilities – cuts down your cows' feed bills and increase their milk yield. Write for Free Literature and Special Offer.

E. G. Sutton, Tester.

Alban and New Hope Cow-Testing Association.

To the Editor:—Does it pay to test cows? I think all the members of this association can answer this question in the affirmative, from the results they have obtained. Some of the "boarder" cows are being eliminated from the herds and some pure-bred sires are being bought to replace the scrub sire.

M. J. Wrolstad had the largest producer for pounds of butter fat. She is a grade Guernsey twelve years old, producing 1,237 pounds of milk testing 5.1, which gives 63.0 pounds of butter fat.

Henry Wogsland's herd gave an average production of 891.2 pounds of milk per cow and 39.1 pounds of butter fat per cow, which was the best average for this period. His herd consists of nine cows, being grade Guernseys and natives.

The following table gives the names and records of the cows in the association which have produced more than forty-five pounds of butter fat during the period of thirty days ending June 10, 1916:

Owner and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
G. J. Olstad

M. E. Smith, Official Tester.

Geneva Co-operative Cow-Testing Association.

Although more cows and two year olds qualified in the Geneva Co-operative Cow-Testing Association during the month of May than in the previous month, there was a dropping of test in many instances. Cows seem to be testing low this spring, lower than is usual even for the month of May. Dairymen are at a loss to explain it, the weather, the pasture or cow receiving the blame. In some cases the cause is known. The May report shows that, generally speaking, records were lower on an average than for several months, but in spite of this there were many good records made.

The following table gives the names and records of the cows in the association which have produced more than forty-five pounds of butter fat during the period of thirty days ending May 31, 1916:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat

Frank Drake, Tester.

You need a new
DE LAVAL SEPARATOR NOW

1st If you are still using some gravity or setting process of creaming—

BECAUSE YOUR WASTE IS greatest and quality of product poorest in mid-summer when the milk supply is heaviest.

BECAUSE TIME IS OF GREATEST value on the farm at this season and the time and labor saving of the good separator counts for most.

BECAUSE THE SKIM-MILK IS poorest without a separator in hot weather and often more harmful than helpful to calves.

BECAUSE THE WORK OF AN improved De Laval Cream Separator is as perfect and its product as superior with one kind of weather as with another.

2nd If you have a very old De Laval or an inferior separator of any kind—

BECAUSE THE LOSSES OF THE poor separator from incomplete skimming and the tainted product of the hard-to-clean and insanitary separator are greatest at this season.

BECAUSE OF THE GREAT economy of time at this season in having a separator of ample capacity to do the work so much more quickly.

BECAUSE AN IMPROVED DE Laval is so much simpler and more easily handled and cared for than any other, and you cannot afford to waste time these busy days "fussing," with a machine that ought to have been thrown on the junk-pile long ago.

BECAUSE THE DE LAVAL SEPARATOR of today is just as superior to other separators as the best of other separators to gravity setting, and every feature of De Laval superiority counts for most during the hot summer months.

These are all facts every De Laval local agent is glad of the opportunity to prove to any prospective buyer. If you don't know the nearest De Laval agency simply write the nearest main office, as below.

THE DE LAVAL SEPARATOR CO.
165 Broadway, New York 29 E. Madison St., Chicago

Want an easy running Silo Filler?--just read this

Yes, the Blizzard is easy running.
Mr. Geo. All, of Spencer, Iowa, couldn't get a 10 or 12 H.P. engine, ordinarily used for a No. 15 Blizzard, and filled his 14x36 silo in 3 days with his 6 H.P. engine, and says "it worked fine."

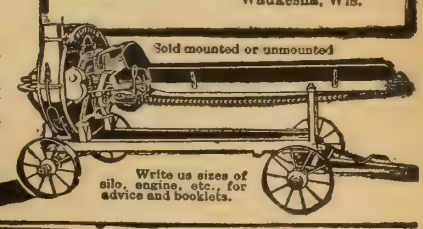
"My 4 H. P. gasolene engine furnished sufficient power to run the No. 9 Blizzard to perfection." E. J. MONROE, Burlington Flats, N. Y.

"The Blizzard No. 11 filled our 12x35 ft. silo with ease, using 6 H.P. gasolene engine. We were told before starting that we did not have power enough, but actual work demonstrated that we had a great plenty." J. C. MILHAM, Waukesha, Wis.

BLIZZARD
Ensilage Cutter

Herman Eppler, of Oconomowoc, Wis., writes: "I run the No. 13 Blizzard with my 8 H.P. engine, and have all the power I want. My silo is 40 feet high.

In addition to light running, you will find the Blizzard has *unlimited elevating ability*; is simple, safe and dependable: a glutton for work; makes even-cut silage; costs very little for repairs; stays in the harness for years. WRITE for catalog and full information.



The Jos. Dick Mfg. Co. Box 64 Canton, Ohio

Write us sizes of silo, engine, etc., for advice and booklets.

Better Silage in a Life-time Silo

Experiment Station tests prove that the nearer silos approach being air-tight, the better the silage and the less the loss.

ZYROMETAL SILOS

are positively air-tight—doors and all—made of anti-corrosive NO-CO-RO METAL, the great rust-resistant.

You get a handsome silo that stands solid as a monument and lasts a life-time—windproof, fireproof, crackproof, weatherproof, collapse proof, repair proof.

Easy to erect

ZYRO Metal Silos are easy to erect. The sectional sheets are easily fastened in place by two men.

WRITE FOR BOOKLET telling why air-tight ZYRO Metal Silos mean sweetest silage and lowest cost in the long run.

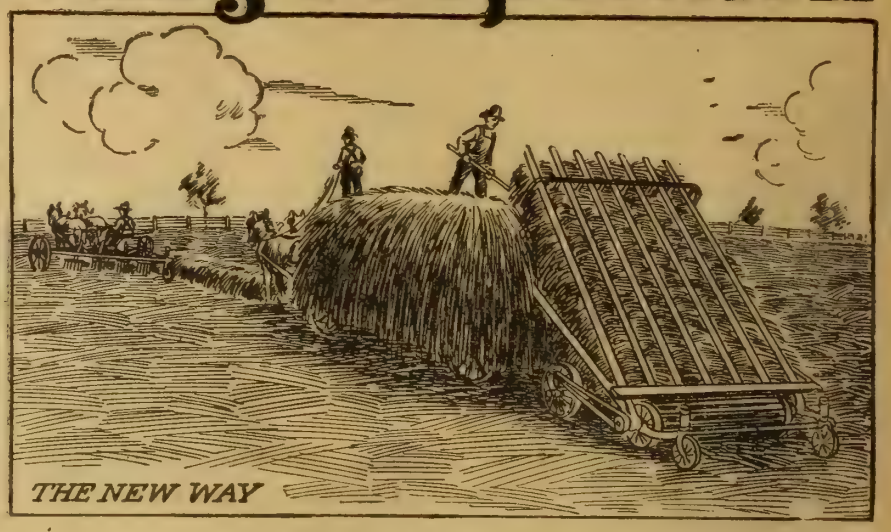
Hay Making A Hustling Proposition

THE OLD WAY



THE NEW WAY

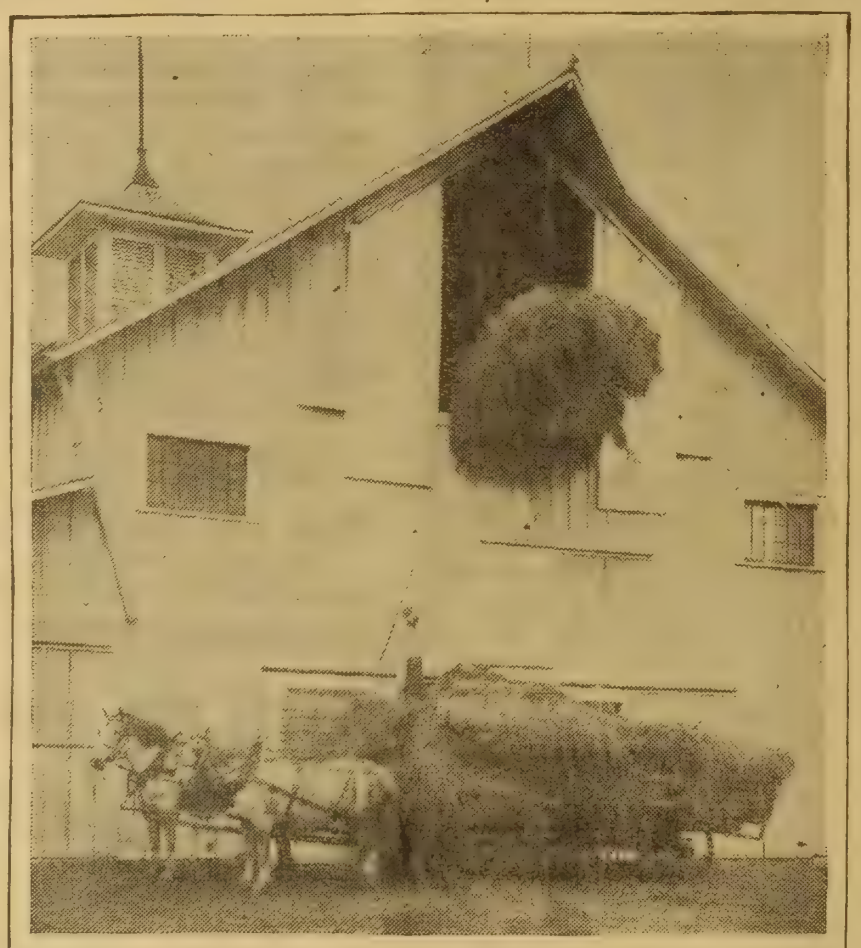
NO OPERATION on the farm requires so much hustling in the performance of labor attending it as the saving of the hay crop. In the first place, it comes at a time when there is still some corn to cultivate and usually before haying is finished, the harvest fields are ready for the reaper.

The introduction of modern haying machinery has contributed immensely to the rapidity with which the crop can be handled and it is not worth while for this paper or any other paper to spend time in recounting old-fashioned methods and out-of-date systems of making hay. The tedder, the side-delivery rake and the loader —these have changed the whole situation and now it is simply a question of headwork and horse power.

If we turn to those individuals who have a large quantity of hay to save we will find that their emphasis is placed on the importance of having good haying implements. Six and seven-foot mowers are rapidly supplanting those with a five-foot cutter bar. One extensive hay producer calls attention to the fact that he starts his mowers in the morning, but does not touch the hay afterwards until it is free from all outside moisture as he says, "haying machinery is intended to handle hay, not wet grass, and when farmers recognize this fact they will save themselves a great deal of trouble in handling the hay crop."

In most cases nowadays no attempt is made to cure out the crop in the fields save only such curing as takes place in the swath after cutting or in the windrow. An exception to this will be those instances where the hay is mostly clover and stirring will be required in order to hasten the drying. Therefore, when the hay runs from two to three tons per acre drying will be a slow proposition, as a general rule, unless some attempt is made to stir it and thereby expose the tough green hay to the rays of the sun. The only alternative will be to allow the hay crop to reach a fair state of maturity. This cannot always be done where a large acreage must be harvested because in that case part of the crop must be cured early and part of it late.

By the use of the side-delivery rake and hay loader it is sometimes possible for a force of four or five men to clear as much as thirty-five or even forty acres in three days. The rake is usually operated only a few acres ahead of the loader. Of course, all haymaking rules must be set aside in bad weather, but when the atmosphere is clear and the temperature high one can usually cut down a considerable acreage when haying operations are started. If as much as ten or fifteen acres are in the swath, when the hay rake starts this will mean that the gang working the rake and the loaders can keep out of the way of the mowers. At no task on the farm does the low-wheel wagon serve a better purpose than it does during the haying season. Even where the loader takes the place of the pitch-fork in the field, a low wagon will be found exceedingly convenient and one man with a boy as a driver can put on all that a sturdy two or even three-horse team can handle in ten or fifteen minutes.



THE HAY FORK WILL REMOVE A LOAD IN FIVE OR SIX "BITES" WHILE THE SLINGS WILL DO THE WORK IN TWO.

An enormous quantity of hay is put up quickly in the central West by using the bull-rake and overshot stacker. In unloading hay, slings are highly recommended by some, while others persist in using the time-honored hay fork. One advantage of the sling is that by this system one can take off an ordinary load in two lifts. This means that you will have to put one set of slings on the bare rack and put the other set in place when the wagon is half loaded.

While there is some risk attending the baling of hay directly from the swath, it is nevertheless true that many men have been very successful in operating in accordance with this plan. One of our subscribers who sells considerable hay points out that the stacking system will involve the loss of from one-eighth to one-fourth of the entire crop. He began baling in the field two years ago and has not lost a forkful of hay since. Not only is this method applicable to those cases where hay is marketed, but it is recommended where there is limited barn room because one can store five times as much baled hay in a given space as can be put in the same space when the hay is not baled.

The average man will hesitate about baling his hay direct from the swath, fearing that it will spoil if it contains too much moisture when compacted in this way. It is pointed out, however, by those who have tried this plan that if hay is sufficiently dry to go in the mow, it will be dry enough to bale. It will heat and go through the sweat just as it will in the barn, no matter how dry it is at the time of baling. It will even get so hot that you can scarcely bear your hand on the surface of the bale, but even at that it has been found from practical experience that it will not spoil. The thing to be avoided above all else, if hay is baled directly from the field, is to have it free from exterior moisture at the time of baling. This means such moisture as may come from rain or from dew. Where it is the intention to bale hay in the field it is advisable to allow the crop to get fairly mature, and it will always be a great mistake to try to carry out this plan in the case of green clover. Clover that is in full bloom contains an enormous amount of moisture and it is better to get rid of part of this moisture before cutting rather than after cutting.

While this paper strongly recommends the use of good, heavy haying machinery in order that hand work may be eliminated as far as possible, we recognize and adapt ourselves to the great variety of conditions. Those, for example, who have a comparatively small acreage of alfalfa to cure will find it to their advantage if they undertake to have the crop go through the sweat in the field, and this means

THE SIDE-DELIVERY RAKE HAS PROVEN TO BE A GREAT BOON TO THOSE WHO HAVE LARGE HAY AREAS TO HANDLE.

ONE MAN WITH LOADER WITH A USEFUL BOY AS DRIVER CAN PUT ON A LOAD IN TEN OR FIFTEEN MINUTES.

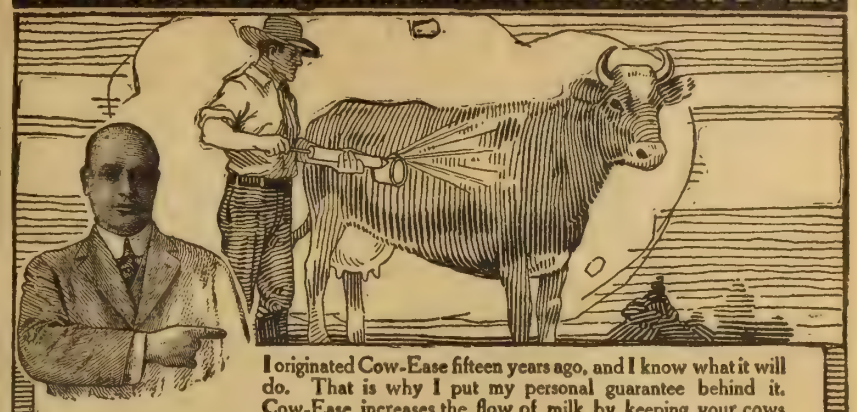
that it will have to be put up in the shock and in this condition allowed to cure out for two or three days. A ton of good alfalfa hay is so much more valuable than hay that has been bleached and shattered that one can easily afford to put a little extra labor on the crop.

In handling alfalfa, the thing above all else to be kept in mind is that the leaves constitute the nutritious part of the crop, and these are easily shattered off and left on the ground. By cutting alfalfa in the forenoon and putting it in the shock the following day there will be little loss from the shattering of the leaves, and if it is cured out in the shock it will be green, palatable and rich when put in the mow or stack. If it seems that this involves too much labor it should be remembered that alfalfa is of practically the same feeding value when used for dairy cows or even fattening cattle, as wheat bran. One is therefore dealing with a precious product and the labor spent on the crop will usually bring as large returns as can be obtained in the performance of any other task during the whole year.

Where the area of alfalfa is too large to handle in this way a very good product may be made by getting the hay into a windrow the day following cutting. It will cure out in that condition quite well, and drying may be hastened by turning the windrow over by a side-delivery rake the following day. It may be necessary to turn the windrow the second time with the rake, but after that, if weather conditions are at all favorable, the hay will in all probability be dry enough to stack or put in the mow. With this plan, hand labor is cut out and the leaves will not shatter out anything like the same extent as will be the case if the crop is allowed to dry before being raked.

THE SIX AND SEVEN-FOOT MOWER CONTRIBUTES TO THE "HUSTLE" OF HAYING OPERATIONS.

COW-EASE Guaranteed to Make Good or I Will!



I originated Cow-Ease fifteen years ago, and I know what it will do. That is why I put my personal guarantee behind it. Cow-Ease increases the flow of milk by keeping your cows quiet and contented.

COW-EASE Keeps Flies off Cattle and Horses

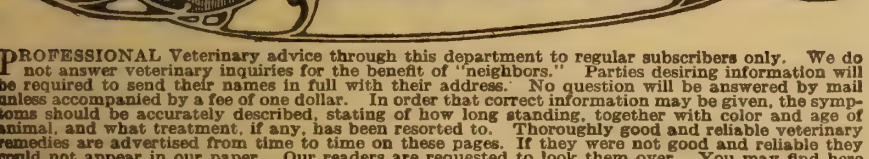
It is a liquid applied with a sprayer which we furnish. Flies cannot come near it. It is harmless, does not gum the hair or blister the skin. Flies not only irritate your cows, reducing their yield of milk, but they are deadly germ-carriers, and dangerous to health. Get rid of them! Spray your cows with Cow-Ease before each milking—they will stand quietly—and feed in peace throughout the day. One gallon is enough to spray a cow 200 times. Remember that I personally guarantee to return your money if you are not satisfied. Thousands of dairymen and farmers are using it. Do you? Sold by Reliable Dealers Evverwhere.

M. Elton Voce Assistant Treasurer.

CARPENTER-MORTON CO., 87 Sudbury St., Boston, Mass.
Manufacturers of Cow-Ease. Established 1840.

TRIAL OFFER

If your dealer cannot supply you, send me his name and $1.25, and I will deliver prepaid to your address a half-gallon can of COW-EASE and SPRAYER for applying. For west of Missouri River and for Canada, above Trial Offer, $1.50.



PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

AILING ANIMALS.

Bad Habit.

I have a two-year-old colt that has a habit of eating my horses' and colts' manes and tails off. Would like to hear through your paper if any of the readers have had experience of this kind and if there is any cure for same.

This is probably more of a bad habit than anything and will probably be hard, if not impossible, to overcome. Mechanical means may be resorted to, such as a muzzle, but will probably not overcome the tendency to chew the mane and tail.

Wind Sucking.

I have a valuable horse five years old that has a habit of cribbing, which he started this spring. He cribs in the stall and when I hitch him in the wagon every chance he gets he cribs on the neck yoke. I shall greatly appreciate advice from you what to do to break him of it.

This is a vicious habit which is not easily overcome. The use of a muzzle or spiked strap about the larynx may sometimes prevent wind sucking. Avoid any articles which can be bitten; feed off the ground or remove manger after feeding.

Lame Cow.

I have a Holstein cow supposed to be seven years old. I bought her at a sale two years ago and she was lame at the time in one hind leg. They said she had got hurt in the barn. Her lameness is rather worse. Both hind legs seem a little stiff and lame, but the right one is quite lame. When she walks her stifle joint sounds like it was slipping out of place. She is thin in flesh, hair looks pretty good, has no cough, has a good appetite, was fresh a week ago and gives a good flow of milk. Some think she has tuberculosis. Is there any home method by which I can ascertain the fact, as I live so far from a veterinary. If she has tuberculosis should I kill and bury her?

The test for tuberculosis should be carried out by one who has had training along this line. If you should have the cow tested by a veterinarian he will advise you as to the proper method of handling her if she proves to have tuberculosis.

Tumor in Nostril.

I have a three-year-old colt that has a pus pocket about the size of a walnut three or four inches above the right nostril. This has been there since he was six months old. I opened it a number of times a year ago and syringed with peroxide, but this did not help any.

It is probable that the growth is a tumor of the false nostril. However, it may be purely an abscess which fails to heal when opened. You had best have a veterinarian to examine this and find what is causing the trouble so a more rational line of treatment can be carried on.

Lymphangitis.

I bought a mare last fall, seven years old, bay of color, weighs 1,150 pounds. I fed her ground oats, six quarts a day and clover and timothy hay; and had her out about an hour every day for exercise. One morning about two months ago when I came over to the stable I noticed her hind leg was swollen and the mare was shivering. I got the doctor for her in the afternoon and he said she had been overfed and had had too little exercise. He called it the Monday morning disease, or water farcy. I got some medicine to give her and some liniment to apply and bathed her leg with warm salt water three times a day, half an hour each time. Next day the doctor came back and gave me some powder to give her in the feed, but the mare wouldn't eat it and was getting worse. The doctor told me to feed her only bran and that was the only feed she had for two or three days. Afterward the doctor came back and had another doctor with him who claimed that it was blood poison that had started. The mare didn't have any sores of any kind. They gave me some powders to give her in her feed and told me to bathe the leg with warm salt water. The mare wouldn't eat her feed with the powders in, so she stood there for two days and still she wouldn't eat it. I thought something had to be done, as I knew if she had blood poison and she didn't get any medicine she would die soon, so I thought I would try another doctor, who is supposed to be pretty good. When he came he said it was not blood poison, but that she had been overfed. He called it the Monday morning disease. I got some medicine from him to give her. I kept on with them for about two weeks and her leg swelled up very big in the knee on her hind leg and pus started to come out of the skin. I had the doctor look at it and he opened it up. Only blood water came out of it and it healed up in about a week's time, but the swelling didn't go down very much and it started to swell up more in about a week's time and broke open the same place it had been opened and a whole lot of pus came out of it. I had some medicine which I injected in the sore and it healed up after a while, but now it keeps on that way. It heals up and opens and has done that three times, and she can scarcely step on her leg now. I am poulticing it with linseed, but it doesn't seem to help. Please advise me what to do with her.

It would seem from your history that your animal has been the victim of an attack of lmyphangitis. You fed your animal well and gave too little exercise. Since the case is of such long standing it will need different treatment than at first. Take oil of turpentine and sweet oil equal parts and rub well into affected leg once daliy, avoiding application to the open sore. Give internally in watery solution, two drams of potassium iodide daily for six or eight days. You may get some results from above treatment.

Sweeny.

I have a four-year-old gelding weighing about 1,500 pounds that has a bad sweeny on the right shoulder. Have often seen remedies in your veterinary columns for sweeny to be blistered on the outside, but I would like to know of a remedy to blister under the skin, using a hypodermic needle. Have used pure iodine with good success, but think it is too strong. Would like to know what to dilute with or of something else that will do the work.

There is no agent that is better than tincture of iodine if used in the right manner. It should be injected in seven or eight places over the sweeny, using about one cubic centimeter in each place. Turpentine and alcohol may be used in the same manner.

Rock County Guernsey Meeting.

The first annual picnic of the Rock County Guernsey Breeders' Association was held June 20th. This association is only two months old, having been organized largely through the efforts of W. A. Munn, of Janesville, and Theodore A. Clarke, of Edgerton. The picnic was held at the M. S. Kellogg farm, two miles east of the city of Janesville. The program included a history of the Rock County Guernsey Breeders' Association, by Prof. H. C. Buell, of the Janesville city schools. W. J. Dougan, of Rock county, a producer of certified milk, gave a talk on "Breeding of the Dairy Herd" He told what may be accomplished with a pure-bred sire. He has bred up his own milk cows from grades, and thinks that this is the way for the dairymen to make a success. Each female he has kept in his herd has been better at the pail than her dam. Prof. A. B. West, of the agricultural department of the Janesville city schools, spoke on "Opportunity of the Boy on the Farm." He said that statistics prove that a large percentage of great men come from the farm. Ninety per cent of Chicago's most successful business men were reared on a farm. Charles Hill gave a very interesting and instructive talk on the "Island of Guernsey."

When the association was first organized it had seventeen members. Twenty-two were added at the recent meeting. It is the intention to pick a show herd from the herds of members and to make an exhibit at several of the county fairs for the purpose of advertising. Another meeting will be held in the fall at the D. L. Babcock farm near Albion.

The officers of the association are: Dr. W. A. Munn, Janesville, president; Theodore A. Clarke, Edgerton, vice president; J. A. McComb, Milton, treasurer; E. M. Erickson, Janesville, secretary

There were 214 present at the summer meeting, notwihtstanding the fact that the weather was rainy.

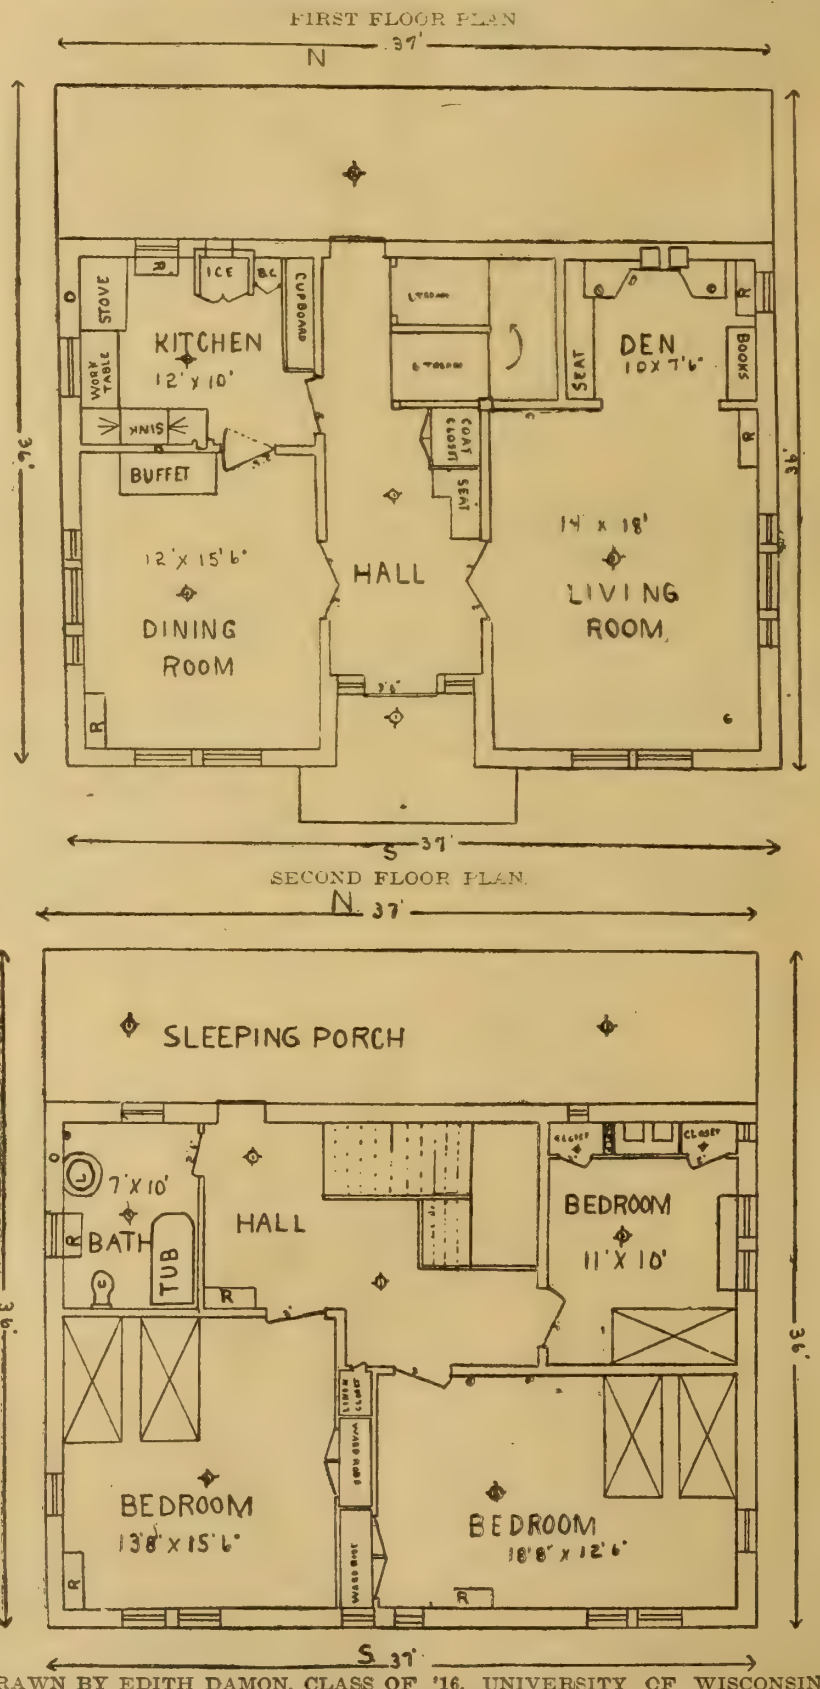
Furnishing a Home.

[Editor's Note.—Our farm girls are taking a great interest in the home economics departments of the schools and colleges, and the agricultural schools in the grain belt, especially, have been improving courses of study along this line. Home economics offers a splendid field for the girls who are planning to teach. Miss Edith Damon, of the University of Wisconsin, class of '16, gives some valuable pointers on this work and some interesting information in general for the housewife.]

A welcoming doorway—who can resist the invitation if we find a hall that is equally as welcoming, in color and in furnishing? It should be cheerful, but yet should have the feeling of formality. In order to obtain these things, it must be well lighted, well arranged and simple in furnishings. We must remember that the hall is the waiting room and also the introduction to the other rooms, therefore it must be attractive. The furniture placed in such a hall will be determined by the size of the hall and the way it opens into the other rooms. In every hall our guests will need a mirror, placed where the light is good. Where gas or electricity is available bracket lights on either side the mirror will be decoratively and usefully effective. A seat of some kind, either a hall chair or a built-in settle, in which there is a place for storage under a hinged seat, may be the other furniture in a small hall. The combination hall tree, seat, mirror, cloak rack and umbrella stand, which in our inexperience the furniture dealer sold us, we have learned to recognize as a catch-all for dust and dirt, therefore, to say the least, is in bad taste. Rugs and pictures are not necessary in the hall, although a small rug of good design and color would not be out of place. The furniture of the larger hall might consist of a small side table, with a drawer for pads, pencils, etc., and one or two straight-back chairs placed against the wall. This is quite enough furniture for any hall. If the hall is a very large one, a carefully selected hall clock and possibly a willow settle would be good additions to make.

The dining room; one may think this a very easy room to furnish, but the opposite is quite the case. To one entering the dining room the impression should be that of cheerfulness and freshness. Remember that it is the place where food is to be served and, when one thinks of the part psychic secretions play in the digestion of food it is quite essential to have the dining room restful in color and in furniture. This is the place where the family comes together at least once a day. Simplicity in this room should be the keynote. The decorative details are the things to watch closely in the dining room. The furniture which is necessary in this room is the dining room table, six chairs, a buffet and a serving table. A tea cart is really a labor-saving device and should find its place in every dining room. The buffet or side table must be selected with care. In the use of this piece of furniture avoid a grand display of china, silver and cut glass unless you want your dining room to be a show room. Sometimes it is a good idea to line the glass doors of the buffet with some soft material which will harmonize with the color scheme of the room. If you have been invited to a home to dine and have had the pleasure of watching yourself eat, because of a mirror which was placed so conveniently in front of you, you will in your own home avoid having a mirror above the buffet, substituting for it a well-selected picture, the subject of which does not suggest food. The lighting of the dining room is very important. The wall lights are much to be preferred, for they do not cast shadows as the central lights would, causing your guests to have a ghastly appearance.

How many women say, "I hate to go into the kitchen to work." If this is the attitude is not there something wrong with the kitchen? Let us see what things would be desirable in the kitchen. The motto of this room is cleanliness and convenience. A white kitchen is very pleasing, but more difficult to keep clean than slightly grayed or buff walls. Seeing that our aim is convenience, our kitchen should be arranged so that in doing the work we pass in sequence so as to save our steps; in other words, our kitchen is routed; first, storage; then preparation table, cooking surface, sink, garbage and shelves. Group small utensils near the work of which they form a part. Much of the time which housekeepers spend in the kitchen is unnecessary because they do not know the value of convenient arrangement. The furnishings of the kitchen should be simple. Much of the furniture of today is built in. Plenty of cupboard room is very essential. There should be places to accommodate all of the necessary utensils. Our motto should be, "a place for everything and everything in its place." The kitchen should be well ventilated and lighted. Too often the kitchen has but one light. If it is necessary to have curtains have those which will launder easily. It is a good idea to run a rod through both top and bottom of the curtains, so that they will not fly into things, for the work table is often in front of the window. If the view is good it should not be obstructed. The kitchen must be sanitary, therefore do not have rugs unless they are washable. Avoid pictures for the same reason. Today the great expense of equipping a kitchen comes in buying a great many so-called labor-saving devices, which prove to be otherwise. There should be a good refrigerator in the kitchen. The stove need not be so expensive, but there should be a hood over it to prevent the disagreeable odors from getting into the room. A high stool is necessary in the kitchen. There are so many times a housekeeper could sit down and do her work, thus lightening her labor. The utensils for the kitchen should be simple. Miss Marlatt says, "The more things you learn to do with one piece of apparatus the more you save in time and money." If you are doing your own work it may pay to equip your kitchen with aluminum, but this is rather expensive, and other materials are very satisfactory and durable.



DRAWN BY EDITH DAMON, CLASS OF '16, UNIVERSITY OF WISCONSIN HOME ECONOMICS DEPARTMENT.

We have glanced into the workroom of the house, now let us look into the room which represents restfulness as well as cheerfulness, the living room. "It is the place where work is to be done; it is the haven of rest for the workers; it is the place where children grow up and thrive and gain their first impression of life and the world." This room has so many needs to fill that it is difficult to keep the furnishings simple and at the same time have the necessary furniture. One writer said, "Its charm and individuality spring from the fitness to meet the needs of its occupants as simply and directly as possible, to express honestly the life that goes on in the house and the character of the people who live in it." In selecting the furniture an important thing to consider is stability. "A cheap article gives satisfaction but once, when you pay the bill. It extorts compound interest whenever afterwards it enters into consciousness." The chairs in the living room should be especially comfortable. To me, a rug of good design seems to have a place in the living room. It tends to give the room a more homelike appearance. The hangings should be simple and should harmonize with the color scheme of the room. Some of the pieces of furniture which might rightfully find a place in the living room are a library table, davenport, several comfortable rockers, foot stools, a small wall table, a writing desk and a couple of straight-back chairs. Plants are a great help in making the living room successful. One should be very careful about the lighting. With electricity there should be plenty of places to plug in the light so that everyone can have a good light by which to work or read.

Freshness and daintiness is the motto of the sleeping rooms. The furniture should be simple, light and airy. The important thing in the bedroom is the bed. The frame is not so important, but there should be a good pair of springs and a good mattress. White furniture is very good for the sleeping rooms. Use dainty hangings and small, washable rugs. The other necessary pieces of furniture for the bedroom are a rocker, one straight-back chair, a dressing table and chiffonier or a dresser, and a small table beside the bed for a reading lamp.

We might consider the guest room separately. The same principles should be followed in the furnishing of this room, but there are some additional points to consider. This room should show the individuality of the owner, but should not contain too personal things. It should contain things which will please the guest and stimulate the desire to return. One might add to the above list of furnishings a writing table, a footstool and books.

Control of House Ants.

Most of the common house ants are spoken of as large or small black ants, reddish brown ants, and tiny yellowish ants. All these kinds of species of ants usually come from outdoors and, according to A. C. Burrill, assistant entomologist, University of Wisconsin, must be killed in one of three ways: (1) By mechanical de-

struction which is rather tedious and not always practical; (2) by poisoning, which takes the most time and may not always prove successful; (3) by fumigation with carbon and bi-sulphide where the nest can be reached. This treatment is not always dependable if the nest runs under the cement walk, a house wall or a stump.

Mechanical measures consist of laying greasy bones or sugared sponges in the ant trails, and when the ants have gathered in numbers plunging the bone or sponge into hot water; or digging up their nests and widely scattering them among the chickens. Ant-proof cupboards, food safes, or the removing of attractive food from the reach of the ants will usually cause the ants to not work in the house. Where the nest is not easily found, poison sweets may be set along the trails so that the ants will carry the poison to the hidden nest and feed it to the laying queen and brood before they are themselves destroyed by the poison. This method will in time completely do way with the ants, as they are attracted to the bait.

Use tartar emetic, one part to ten of sugar dissolved in 100 parts of water. Spread this on chips of wood or glass and place on ants' trails out of the way of pet animals. It may be also combined with cold lard or a similar grease so that it will not evaporate rapidly. In case tartar emetic cannot be secured, an equally effective poison can be made by using three grams of sodium arsenate (soluble) in a spoonful of water, added to two pounds of sugar dissolved in three-fourths pint hot water. The poison sirup may be soaked on bits of sponge and placed along the ant trails.

Where the trail of ants is easily followed to a nest in the soil, carbon bi-sulphide may be applied, preferably towards dusk, when most of the workers are at home. With a stick make three holes from three directions on the edge of the next towards the center. As quickly as the stick is withdrawn each time, pour in an ounce of the carbon bi-sulphide and immediately close with damp earth so that neither ants nor gas can come out. One or more wet sacks laid over the nest will help to hold the fumes.

Have Plenty of Sunlight.

Sunlight is a safeguard to health and this is a fact that many housewives fail to recognize when they pull down the shades or hang heavy curtains at the windows. Houses that are constantly purified by the free admittance of light and air will not long harbor disease germs.

The curtains should be transparent in texture and hung so that they may be easily moved aside.

Monument For "City Mother."

In Twin Falls, Idaho, a monument has been erected to the memory of the woman who saved the town. The monument is a tall shaft of gray granite and it bears a small bronze plate with an inscription which tells the story. The woman was Mrs. Alice Rozeille McCollum, foster mother of the "homeless twenty," by whom the monument was erected. The story shows what a factor one woman can be when she bends her energies in the right direction—home making.

Twelve years ago Twin Falls comprised some thirty shacks and tents which peeped from a dusty sagebrush desert. The water was not then in the canals and a scorching wind blew unceasingly.

Practically all the inhabitants of the village were pioneer business men who had left their families "back home." Reverses, together with the soul-trying environment, created a wave of homesickness that was more demoralizing to the embryo city than a raid by a band of Comanche Indians. It steadily grew worse until depopulation stared the town in its dusty little face.

Mrs. McCollum saved the day.

"It's a home they want," she told her husband. "We must throw our home open to them and save the city."

The McCollum home, the first real home in Twin Falls, was rushed to completion and the homeless men invited to a big house warming. That was the beginning. Once each week thereafter until all had established homes the homeless assembled at the McCollum home, enjoyed music, home cooking and true home spirit. Twenty homeless men were present at the house warming when the Homeless Twenty was organized. Its membership grew to twenty-seven.

From the first meeting the homeless men gained more interest in life and started ahead with new vigor to make fortunes and build a city. The town was saved and it prospered. The members of the Homeless Twenty are scattered from ocean to ocean, but they recognize the debt they owe to the foster mother of Twin Falls and the Homeless Twenty.

"Try-a-bag" of fertilizer. Our brands are soluble and active, and not only increase yield but improve quality and hasten maturity. Agents wanted. Address American Agricultural Chemical Co., Cleveland, Cincinnati, Detroit or Baltimore.—Adv.

Household Hints.

In making quilts first take some sheeting or similar kind of cloth and make a regular quilt out of the sheeting and cotton batting. Having this made, make a cover to fit over quilt, the cloth being of the desired color or design. The cover, when dirty, may easily be washed without washing cotton batting.

When making egg custard pies, always heat the milk to the boiling point before mixing it with the eggs. If this rule is followed the undercrust will always be crisp.

When you have no one to hold the yarn while you wind it, place two flatirons the proper distance apart, on the table, stretch the yarn to them and wind it conveniently.

An excellent way to finish arm-holes in a fine lingerie waist is to sew the sleeves in by machine; then buttonhole around the edges with either a coarse thread or soft floss.

Before washing lace collars baste them closely on a piece of white cloth. They will not be stretched nor torn. If no starch is put in them they will look like new.

The next time your fire has almost gone out try throwing a little granulated sugar on it, which will have the same effect as kerosene, but is not at all dangerous.

To steam velvet, instead of using a flatiron, try your soapstone and see how much better and smoother the velvet will be.

Recipes.

Stuffed Tomatoes.—Cut a thin slice from the smooth end of the tomatoes. Scoop out the pulp, mix with an equal quantity of cold cooked rice, macaroni or a few fine bread crumbs and mince of cold roast beef or mutton. Add salt, pepper, butter and a few drops of onion juice. Refill tomato shells, cover with top and bake one-half hour.

Macaroni and Cheese.—Break macaroni into uniform pieces (one cup of macaroni). Drop into boiling water, boil until tender. Drain and rinse in cold water. Place in a buttered baking dish. Make a cream sauce using two tablespoons flour, two tablespoons butter, one cup of milk, salt and pepper. Melt one cup of grated cheese in the cream sauce. Pour over the macaroni. Sprinkle with bread crumbs and bake.

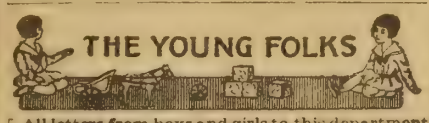
Pecan Nut Loaf.—Mix together one cup of bread crumbs, one cup of pecans, one cup of milk, one cup of boiled rice, two eggs, two tablespoons of butter. Season with salt and paprika and bake in a buttered baking dish. Serve with a cream sauce.

Stuffed Round Steak.—Two pounds round steak; make a dressing of stale bread seasoned with salt, a little onion pepper and butter; spread on the steak and roll and tie; put in a pan with a pint of water and let bake for thirty minutes before putting in the potatoes; when potatoes and meat are done make a gravy.

Strawberry Shortcake.—Make a soft dough of two cups sifted flour, three full teaspoons baking powder, one-third cup butter, one egg, three-fourths cup sweet milk, one-half teaspoon salt, small; make two layers, butter, put one on top of other and put on berries and whipped cream on the top.

Cucumber Sandwiches.—Cut slices of Boston brown bread in rounds one-quarter of an inch thick, spread lightly with creamed butter and put between each two slices a thin slice of crisp cucumber dipped in French dressing. Serve as soon as prepared.

Baked Herring.—Place herring in a baking dish, sprinkle with salt, pepper and chopped parsley, cover with bread crumbs and bits of butter and pour over it one cupful of cream. Bake twenty minutes, or until well browned.



All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

A Letter From a South African Friend.

Dear Young Folks:—I am a subscriber to this good paper and, therefore, have an opportunity to read your interesting and "homey" little stories. In fact, I look forward with more pleasure to your stories than I do to any other articles which might be contained in the paper. I guess if you could see me when I receive my copy of the paper you would notice that I open it right in the middle, just where your stories are. I have an idea that I would like to write something for the little folks' department today. Before beginning my subject I must first tell you where my home is. My home is in South Africa. Yes, no doubt you think I am a negro, but I am not. I am a white man. It is a year ago this month (June) since I left home. Things over in this country are very different to what they are there. For instance, we do not use horses down here to plow with. We would be laughed at if we did. We use oxen. We yoke up from four to six of them, two in front of the others. We do not use lines, but we shout at them to keep in the furrow and when we want them to turn around we tell them to come back. The word we use down there is "Woya."

My home was between thirty and

LOTS OF FUN WITH A FAMILY PET.

forty miles from the railroad. Therefore we had to freight all goods by ox wagon. Then we would hitch up, or yoke up, as we would say, fourteen of these animals in the same way as I have just explained. Sometimes we would be a week on the road; sometimes longer than that, for often the rivers would rise between us and home and we would have to camp along the bank until the river went down. Sometimes there would be about twenty or more wagons camped together. Of course, the wagons are a great deal larger than the wagons here. One would make a dozen of the wagons you see here. We get free range for grazing our oxen. There is no such thing as a fence hemming you in within ten feet of you wherever you go.

—J. Miller.

Likes Out-of-Door Work Best.

Dear Young Folks:—I have been reading your letters and I am quite interested. I am twelve years old and in the seventh grade. I have two sisters and three brothers.

We have a big garden and lots of chickens. I like to feed the chickens and gather the eggs. We have three incubators. One is 120-egg size and the other two are 400-egg size. We have no cows or horses—all we have is chickens.

I like to hoe in the garden and weed onions. I bake cakes and do a little cooking. Our teacher teaches us cooking and sewing. I like to go to school in winter and early spring, but I don't fancy it in hot weather. I don't like housework very well, but I can stand it if I have to.

There is a wren's nest in our barn. It has six eggs in it.

My little sister, Mildred, is a great girl to go out in the pasture or in the blackberries or some place like that and sit down and talk to herself. She is four years old. She is the next to the youngest.

I am pasting all the cake recipes in a little book I have, so if any of you have any good recipes just send them to the Young Folks' department.

—Helen.

A New Riddle.

Dear Young Folks:—I have been reading the Young Folks' department and enjoy it very much, so thought I would write, too.

I live on a 120-acre farm, four miles from town. We have seven horses and one mule. His name is Jerry. Whenever an automobile goes along by the pasture where he is he will run to the fence to see what it is.

I crochet and embroider. I can make jelly cake also. I am nearly eleven years old and am in the fifth grade at school. I have three-quarters of a mile to go to school. I have two pet cats and three little kittens.

I think that giving riddles in our letters and guessing is lots of fun. I will give a riddle. What shows that a clock is bashful? I think the answer to Florence's riddle is a river, because it has no legs or eyes, but has a mouth and goes on forever.

—Esther.

International Sunday School Lesson.

Lesson for July 2, 1916.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

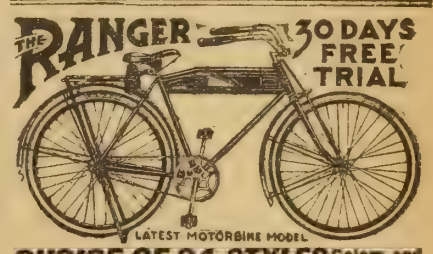
Paul at Thessalonica and Berea.

LESSON TEXT—Acts 17:1-15 (cf. I Thess. 2:1-12).

GOLDEN TEXT—Him did God exalt with His right hand to be a prince and a Savior.—Acts 5:31.

To place a modern war map by the side of the ancient one will help to make the places Paul visited more real. In both of the events of this lesson reference is made to the reading and use of the Scriptures, and teachers should use that to emphasize the reading of the Bible by both old and young. There is real patriotism as well as safety and a liberal education in Bible study. Paul reached Thessalonica about twenty years after the establishment of the Christian church, remained perhaps five or six months and then went on to Berea. Modern Saloniki has been since the Roman days of Thessalonica an important center, thriving and prosperous of later years till the recent Balkan-Turkish war.

I. At Thessalonica (vv. 1-9) (1) Rea-



CHOICE OF 94 STYLES Colors and Sizes in the famous line of "Ranger" Bicycles. There are eighty-three (83) others, also, shown at factory prices from $11.95, $13.80, $14.75, up. There is a Mead Bicycle for every rider, at a price made possible only by our Factory-Direct-to-Rider sales plan.

MARVELOUS OFFER—30 days—one month's free trial on this finest of bicycles—the "Ranger." We will ship it to you on approval, express prepaid—without a cent deposit in advance. This offer absolutely genuine.

WRITE TODAY for our big catalog showing our full line of bicycles for men and women, boys and girls at prices never before equaled for like quality. It is a cyclopedia of bicycles, sundries and useful bicycle information. It's free.

TIRES, COASTER-BRAKE rear wheels, inner tubes, lamps, cyclometers, equipment and parts for all bicycles at half usual prices. A few good second-hand bicycles taken in trade, to be closed out, $3 to $8.

RIDER AGENTS wanted in every locality to ride and exhibit a sample 1916 model Ranger furnished by us. Do not buy a bicycle, tires or sundries until you get our catalog and new special offers. Write today.

soning (vv. 1-5) (a) The place. On this second journey Silas and Timothy (v. 14) were Paul's companions. Recently driven from Philippi (I Thess. 2:1-2) they at once repaired to the synagogue upon reaching the city, knowing that there they could gain a foothold with both Jew and Gentile. It was Paul's usual means (v. 2 Am. R. V.). Doubtless during the two weeks the disciples used every opportunity for discussion. Paul made use of the Sabbath day of assembly, although Christians met on the first day of the week for their own distinctive service (Acts. 20:7). He also reasoned from the Scriptures which the Jews so highly revered. The best agent for doing personal work is the word of God (Eph. 6:17; Jer. 23:29; Jas. 1:18; I Pet. 1:23). (2) The method. Paul employed three. (a) He reasoned that Christ must suffer. Why? (See Isa. 53:6; Math. 26:28; Heb. 9:22; John 19:36). Paul had only the Old Testament. We have also the New to bring to our aid. (b) That "Christ must rise from the dead"—like Peter at Pentecost. Paul proved this from the Old Testament. If we will allow the Holy Spirit to "open the Scriptures" to us we will find things new and old and exclaim that whereas "once I was blind now I see." (c) He "alleged and affirmed" (set forth), e. g., gave testimony that "this Jesus whom I proclaim unto you is the Christ." Paul knew that the historical Jesus was the glorified Christ, for he had met him "in the way" to Damascus. Paul's manner of life in the city as he lived and preached Jesus was such that it contributed greatly to his success. His "manner of life was blameless" (Acts 26:4); he supported himself (I Thes. 2:9; II Thes. 3:8). (2) Reception (v. 6-10). At first these men were received as from God by large numbers (v. 4. See I Thess. 1:6-10). But the gospel then, as now, causes divisions. Not all professed followers of God know or accept the gospel. Paul's success aroused the envy of the Jews just as every successful servant is envied by those of lesser light. The charge brought against Paul and Silas (v. 6) was in large measure true, and it was a good testimony and tribute to their effectiveness. It was also in accord with Christ's prophecy. (Math. 10:34; Luke 12:53). It is the business of the gospel to accomplish just such results. We need more of such as shall turn the wrong side down and the right side up. These men were accused of "saying that there is another King, one Jesus."

II. **At Berea.** (v. 10-15). The disciples' departure by night was an act of prudence (Math. 10:23), and Paul continued his great interest in the converts he had left. See the two letters addressed to that church. Reaching Berea Paul began as usual to preach Jesus first of all to the Jews. The citizens of Berea were "more noble" and have continued to this day as a great inspiration to Bible students (witness the Berean series of lesson helps). (1) They "received the word with readiness of mind." There was a hunger for spiritual food and they partook of it with a relish. Some receive truth under compulsion, while others hunger for it. (See I Thess. 1:7; 3:10). (2) "Searched" (examined) the Scriptures daily. (2) Each day they sought the mind of God.

Much of our present-day Bible study is interesting and enlightening, but is not energizing nor evangelistic because it looks upon the Bible merely as literature.

We need to study the Bible as did the Bereans to know, love and obey Jesus as our Savior and king.

We need to study it as our guide and counsel through life.

Those who "believed" as the result of such preaching and study were well grounded (I Thess. 3:10).

After several weeks of such blessed ministry the Thessalonian Jews interfered, "stirring up and troubling the multitude" (v. 14 Am. R. V.), and Paul again moved on, this time to Athens in Greece, while Silas and Timothy remained for a further ministry in Berea.

WE CAN SAVE YOU 30% TO 40%

ON the cost of material for your new house or barn, and an equally large percentage of your labor cost in addition. Our cut-to-fit, ready-to-erect plan is a big time and material saver. We own our own Forests, our own Sawmills, and do all the manufacturing ourselves. We ship to you direct. You save all commissions. You pay one profit only. Your freight is just as low as your nearest lumber dealer's. Final payment when you are satisfied. We guarantee satisfaction. Send 4c for our Book of Plans. Look us up in Dun or Bradstreet's, or any of the Portland Banks, and assure yourself that we are thoroughly responsible. Then write us and we vill show you. Address

WANTED Married man by year on dairy farm, must be good dry hand milker and teamster. Apply to Neill W. Fox, Woodside Farm, Oregon, Wisconsin.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and inclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery.

CATALOG OF SPRING AND SUMMER FASHIONS.

Send 10 cents in silver or stamps for our up-to-date 1916 large spring and summer catalog, containing over 400 designs of ladies', misses' and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, MADISON, WISCONSIN.

1752—A good style for a school or play dress. The pattern is cut in 4 sizes: 6, 8, 10 and 12 years. It requires 3¾ yards of 44-inch material for a 10-year size.

1645—A dainty night dress. The pattern is cut in 3 sizes; Small, medium and large. It requires 5½ yards of 36-inch material for a medium size.

1323—"Junior" dress with underwaist, and with two styles of sleeve. (In high or low neck outline.) The pattern is cut in 3 sizes: 12, 14 and 16 years. A 16-year size will require 2¼ yards of 27-inch material for the guimpe or underwaist, and 4½ yards of 44-inch material for the dress.

1434—Ladies' kimono or lounging robe. The pattern is cut in 3 sizes: Small, medium and large. It requires 6 yards of 36-inch material for a medium size.

1630—A jaunty Russian blouse suit. The pattern is cut in 4 sizes: 2, 3, 4 and 5 years. It requires 2½ yards of 44-inch material for a 5-year size.

1733—A simple gown for home or porch wear with sleeve in either of two lengths. The pattern is cut in 7 sizes: 32, 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 7½ yards of 36-inch material for a 36-inch size.

1643—A simple but pleasing dress for the growing girl. The pattern is cut in 4 sizes: 6, 8, 10 and 12 years. It requires 2¾ yards of 44-inch material for an 8-year size.

1723—A neat and practical model. The pattern is cut in 3 sizes: Small, medium and large. The medium size will require 5⅛ yards of 36-inch material.

1379—A comfortable and practical dress with bloomers and with sleeve in either of two lengths. The pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It will require 2⅜ yards of 44-inch material for the dress, and 1¼ yards for the bloomers, for a 6-year size.

1749-1750—A pretty afternoon or calling gown. Comprising ladies' waist pattern 1749 and ladies' skirt pattern 1750. The waist pattern 1749 is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. The skirt pattern 1750 is cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. To make entire dress of one material will require 9 yards of 36-inch material. Two separate patterns, 10 cents for each pattern.

1734-1737—A smart suit for outing or sport, for misses and young women. The waist pattern 1734 and the skirt pattern 1737 are cut in 3 sizes: 16, 18 and 20 years. It will require 7¾ yards of 27-inch material to make the entire dress for an 18-year size. Two separate patterns, 10 cents for each pattern.

1738—A new and comfortable bathing suit for girls. The pattern is cut in 6 sizes: 4, 6, 8, 10, 12 and 14 years. It requires 4¾ yards of 27-inch material for an 8-year size, for the suit with bloomers; without bloomers 3½ yards are required.

OUR LEGAL DEPARTMENT

Landlord and Tenant—Repairs.

It is a general rule of law that a landlord is under no obligations to a tenant to make repairs on the leased premises, unless he expressly agreed to do so. If there be no contract between the landlord and tenant concerning repairs, the tenant is nevertheless bound by law to make fair and reasonable repairs during the term of his tenancy, so as to prevent waste and decay of the premises—such as putting up fences when they are torn down by wind, water, or other causes—repairing doors and windows broken during his occupancy, and other things of a similar nature, but he is not required to replace buildings which are destroyed by fire, flood or other accidental causes, nor to make general or permanent repairs. He is not required to replace an old floor by a new one, nor a worthless fence by a new one, nor rebuild a fallen chimney, nor put a new roof on a building. He is not bound to do anything on the premises which is merely ornamental, such as papering, whitewashing, or painting the buildings, but he is bound to use the premises in a good, tenant-like manner, and not permit them to fall into decay more than would be caused by ordinary wear and tear. In the leasing of farming land, the law implies that it shall be used for that purpose, and that the tenant will not commit waste, and that he will cultivate the same in a good husbandmanlike manner, and will not exhaust the soil by negligent and improper tillage, and will keep the premises in a reasonable state of repair, and surrender the same to the owner at the end of the term, in as good condition as they were when he received them, natural wear and tear, and unavoidable accidents excepted. The foregoing principles are applicable to cases where there is no express agreement between the parties concerning repairs. Of course, either party may bind himself in the leasing contract to make repairs. A general agreement on the part of the tenant to make repairs is construed by law to have reference to the condition of the premises at the time the tenant takes possession. For instance, if the premises are old when the tenant enters he is not liable for such dilapidation as results from time and the elements. Under such an agreement if there be an old house on the premises the tenant is not required to restore it to an improved state or condition, but it is his duty to keep such house in as good condition as it was when he took possession. Decrease in value resulting from the operation of time and the elements falls upon the landlord, but the tenant must see to it that the premises do not suffer more injury than the operation of these causes would make.

LAW QUESTIONS.

Children Have No Right to Property.

An Old Farmer, Friendship, Wis.—I am an old man and two years ago I bought a farm in Adams county, Wis. Last fall my wife died and two of my boys who are more than twenty-one years old boarded in my house all winter and never paid a cent for their support. I am so crippled with rheumatism that I can hardly walk and the boys refused to do a stroke of work about the place. If I should sell my place, or keep it, are the boys entitled to any of the property by the laws of Wisconsin?

Answer.—They are not while you live and you can make a will giving your property at your death to whom you please, so that the boys will get none of it when you die.

Inherited Money Garnisheed.

A Subscriber, Iowa, Minn.—A died in June, 1915, in Minnesota, leaving a will which provided that each of his sons was to get certain land in case they should pay off the other heirs within a year from A's death—one of A's sons was to pay B a certain amount of money, and in January, 1916, garnishee papers were served on A's son for said money, upon a contract made by B for the purchase of a piano on the installment plan. B gave up the piano, but the company holds the contract, compelling B to pay on it. (1) Can money which one gets by inheritance be garnisheed? (2) What can B do about the matter?

Answer.—(1) Such money can be garnisheed. (2) It would likely be best and cheapest for B to settle the claim of the piano company.

TOLD IN THE HILLS

Author of "That Girl Montana," "The Bondwoman," "My Quaker Maid," Etc., Etc.

(Copyright Rand McNally & Co.)

SYNOPSIS OF PRECEDING CHAPTERS

The prologue, or Part First, is laid in New Orleans and concerns two brothers, one of whom has proved faithless to the girl who trusted him, the other one marrying the girl and giving her the name and home which the faithless brother had well-nigh robbed her of. The scene then shifts to the Kootenai country, in the Pacific Northwest, where Genesee Jack is prospecting for gold and "bunking" with an old Scotchman, named MacDougall, his only companion, save his beloved horse, Mowitza. A neighbor, named Hardy, comes to their camp looking for someone to guide a party of easterners through the country and Genesee Jack volunteers. Enroute to Hardy's he meets Rachel Hardy, with whom he rides to the camp.

CHAPTER III.

What is a Squaw Man?

"RACHE, I want you to stop it." The voice had an insinuating tone, as if it would express "will you stop it?" The speaker was a chubby, matronly figure, enthroned on a hassock of spruce boughs, while the girl stretched beside her was drawing the fragrant spikes of green, bit by bit, over closed eyes and smiling; only the mouth and chin could be seen under the green veil, but the corners of the mouth were widening ever so little. Smiles should engender content; they are supposed to be a voucher of sweet thoughts, but at times they have a tendency to bring out all that is irritable in human nature, and the chubby little woman noted that growing smile with rising impatience.

"I am not jesting," she continued, as if there might be a doubt on that question; "and I wish you would stop it."

"You haven't given it a name yet. Say, Clara, that sounds like an invitation to drink, doesn't it?—a western invitation."

But her faultfinder was not going to let her escape the subject like that.

"I am not sure it has a name," she said curtly. "No one seems to know whether it is Genesee Jack or Jack Genesee, or whether both are not aliases—in fact, the most equivocal sort of companion for a young girl over these hills."

"What a tempest you raise about nothing, Clara," said the girl good humoredly; "one would think that I was in hourly danger of being kidnaped by Mr. Genesee Jack—the name is picturesque in sound and suits him, don't you think so? But I am sure the poor man is quite harmless and stands much more in awe of me than I do of him."

"I believe you," assented her cousin tartly. "I never knew you to stand in awe of anything masculine, from your babyhood. You are a born flirt, for all your straightforward, independent ways. Oh, I know you."

"So I hear you say," answered Miss Hardy, peering through the screen of cedar sprays, her eyes shining a little wickedly from their shadows. "You have a hard time of it with me, haven't you, dear? By the way, Clara, who prompted you to this lecture—Hen?"

"No, Hen did not; neither he nor Alec seem to have eyes or ears for anything but deer and caribou; they are constantly airing their new-found knowledge of the country. I had to beg Alec to come to sleep last night, or I believe they would have gossiped until morning. The one redeeming point in your Genesee Jack is that he doesn't talk."

"He isn't my Genesee Jack," returned the girl; "but he does talk, and talk well, I think. You do not know him, that is all, and you never will, with those starchy manners of yours. Not talk!—why, he has taught me a lot of Chinook, and told me all about a miner's life and a hunter's. Not talk!—I've only known him a little over a week and he has told me his life for ten years back."

"Yes, with no little encouragement from you, I'll wager."

"Well, my bump of curiosity was enlarged somewhat as to his life," acknowledged the girl. "You see he has such an unusual personality, unusually interesting, I mean. I never knew any man like him in the East. Why, he only needs a helmet instead of the sombrero and armor instead of the hunting suit, and he would make an ideal Launcelot."

"Good gracious, Rache! do stop raving over the man or I shall certainly have Hen discharge him and take you back to civilization at once."

"But perhaps I won't go back—what then; and perhaps Hen could not be able to see your reason for getting rid of a good guide," said the girl coolly, knowing she had the upper hand of the controversy; "and as to the raving, you know I never said a word about him until you began to find fault with everything, from the cut of his clothes to the name he gives, and then—well, a fellow must stand up for his friends, you know."

"Of course a fellow must," agreed someone back of them, and the young ranchman from the East came down under the branches from the camp fire just kindled; "that is a manly decision, Rache, and does you credit. But what's the argument?"

"Oh, Clara thinks I am taking root too quickly in the soil of loose customs out here," explained the girl, covering the question, yet telling nothing.

"She doesn't approve of our savage mode of life, does she?" he queried, sympathetically; "and she hasn't seen but a suggestion of its horrors yet. Too bad Jim Kale did not come; she could have made the acquaintance of a specimen that would no doubt be of interest to her—a squaw man with all his native charms intact."

"Hen," said the girl, rising on her elbow. "I wish you would tell me just what you mean by a 'squaw man;' is it a man who buys squaws or sells them, or eats them, or—well, what does he do?"

"He marries them—sometimes," was the laconic reply, as if willing to drop the question. But Miss Rache, when interested, was not to be thrust aside until satisfied.

"Is that all?" she persisted; "is he a sort of Mormon, then—an Indian Mormon? And how many do they marry?"

"I never knew them to marry more than one," hazarded Mr. Hardy. "But, to tell the truth, I know very little about their customs; I understand they are generally a worthless class of men, and the term 'squaw man' is a stigma, in a way—the most of them are rather ashamed of it, I believe."

"I don't see why," began Rache.

"No, I don't suppose you do," broke in her cousin Hardy with a relative's freedom, "and it is not necessary that you should; just confine your curiosity to other phases of Missoula county that are open for inspection and drop the squaw men."

"I haven't picked up any of them yet," returned the girl, rising to her feet, "but I will the first chance I get; and I give you fair warning, you might as well tell me all I want to know, for I will find out."

"I'll wager she will," sighed Clara, as the girl walked away to where their traps and sachels were stacked under a birch tree, and while she turned things topsy-turvy looking for something, she nodded her head sagaciously over her shoulder at the two left behind; "to be sure she will—she is one of the girls who are always stumbling on just the sort of knowledge that should be kept from them; and this question of your horrid social system out here—well, she will know all about it if she has to interview Ivans or your guide to find out; and I suppose it is an altogether objectionable topic?"

The intonation of the last words showed quite as much curiosity as the girl had declared, only it was more carefully veiled.

"Oh, I don't know as it is," returned her brother; "except under—well—circumstances. But, some way, a white man is mightily ashamed to have it known that he has a squaw wife. Ivans told me that many of them would as soon be shot as to have it known back East where they came from."

"Yes," remarked a gentleman who joined them during this speech, and whose brand new hunting suit bespoke the "got-up-regardless" tourist; "it is strange, don't you think so? Why, back East we would hear of such a marriage and think it most romantic; but out here—well, it seems hard to convince a Westerner that there is any romance about an Indian."

"And I don't wonder, Alec, do you?" asked Mrs. Houghton, turning to her husband as if sure of sympathy from him; "all the squaws we have seen are horribly slouchy, dirty creatures. I have yet to see the Indian maiden of romance."

"In their original state they may have possessed all the picturesque dignities and chivalrous character ascribed to them," answered Mr. Houghton, doubtfully; "but if so, their contact with the white race has caused a vast degeneration."

"Which it undoubtedly has," returned Hardy, decidedly. "Mixing of races always has that effect, and in the Indian country it takes a most decided turn. The Siwash or Indian men of this territory may be a thieving, whisky-drinking lot, but the chances are that nine-tenths of the white men who marry among them become more worthless and degraded than the Indian."

"There are, I suppose, exceptions," remarked Houghton.

"Well, there may be," answered Hardy, "but they are not taken into consideration, and that is why a man dislikes to be classed among them. There is something of the same feeling about it that there is back home about a white man marrying a negro."

"Then why do they do it, if they are ashamed of it?" queried Mrs. Houghton with logical directness.

"Well, I suppose because there are no white women here for them to marry," answered her brother, "and Indians or half-breeds are always to be found."

"If ministers are not," added Houghton.

"Exactly!"

"Oh, good gracious!" ejaculated the little matron in a tone of disgust; "no wonder they are ashamed—even the would-be honest ones are likely to incur suspicion, because, as you say, the exceptions are too few for consideration. A truly delightful spot you have chosen; the moral atmosphere would be a good field for a missionary, I should say—yet you would come here."

"Yes, and I am going to stay, too," said Hardy, in answer to this sisterly tirade. "We see or know but little of those poor devils or their useless lives—only we know by hearing that such a state of things exists. But as for quitting the country because of that—well, no, I could not be bought back to the East after knowing this glorious climate. Why, Tillie and I have picked out a tree to be buried under—a magnificent fellow that grows on the plateau above our house—just high enough to view the Four-mile Park. She is as much in love with the freedom of these hills as I am."

"Poor child!" said his sister, commiseratingly; "to think of her being exiled in that park, twenty miles from a white woman!—didn't you say it was twenty?"

"Yes," and her brother leaned his back against the tree and smiled down at her; "it's twenty and a half and the white woman whom you see at the end of the trip keeps a tavern—runs it herself, and sells the whisky that crosses the bar with an insinuating manner that is all her own. I've heard that she can sling an ugly fist in a scrimmage. She is a great favorite with

Bale Your Hay The SANDWICH Way

More Bales Bigger Profits

Bale your own hay, bale your neighbors' hay. There's money in it—big money when you use the fast-working Sandwich hay press (motor power).

SANDWICH HAY PRESS

Solid steel construction. Sandwich Gas and Oil Engine, with magneto, mounted on same truck furnishes power. All designed and built in our own plant, superior to assembled machines. Heavy steel chain transmission (no belt to slip). Simple self feeder and block dropper. Turns out a continuous stream of solid salable bales. Starts or stops instantly. Best press for alfalfa. Horse and belt power presses also.

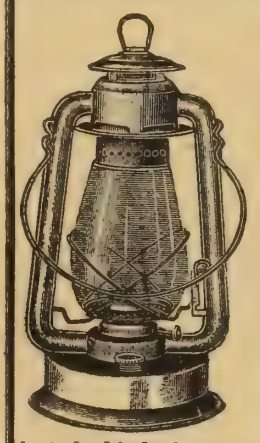
SAFETY STORM BLAST LANTERN FREE



This Safety Lantern cannot catch fire or explode. It is absolutely safe at all times and on all occasions. If you drop it in the hay loft, no oil can escape; if the cow kicks it over, it goes out at once.

It cannot blow out in a cyclone because of the storm blast feature. It is just the kind of a lantern every farmer needs about the house and barn.

Patent opening device raises and swings the globe free for lighting, filling and trimming. This lantern is fully guaranteed and is endorsed by the highest authorities on fire insurance, fire fighting and explosives. If dropped or turned over it immediately goes out. Oil cannot run. Impossible to catch fire. A lantern you will always feel safe with in the house or barn.

OUR OFFER

Send $2.00 for a three year new or renewal subscription to The Wisconsin Farmer and we will send you one of these Safety Storm Blast Lanterns as a premium free and postpaid.

the boys; the pet name they have for her is Holland Jin."

"Ugh! Horrible! And she—she allows them to call her so?"

"Certainly; you see it is a trademark for the house; her real name is Jane Holland."

"Holland Jin!" repeated his sister with a shudder. "Tillie, come here! Have you heard this? Hen has been telling me of your neighbor, Holland Jin. How do you expect to live always in this out-of-the-way place?"

Out from under the branches where their camp had just been located came Tillie, a charmingly plain little wife of less than a year—just her childishly curved red lips and her soft dark eyes to give attractiveness to her tanned face.

"Yes, I have heard of her," she said in a slow, half-shy way; "she can't be very—very—nice; but one of the stockmen said she was good-hearted if anyone was sick or needed help, so she can't be quite bad."

"You dear little soul," said her sister-in-law fondly; "you would have a good word to say for anyone; but you must allow it will be awfully dismal out here without any lady friends."

"You are here, and Rache."

"Yes, but when Rache and I have gone back to civilization?"

The dark eyes glanced at the speaker and then at the tall young ranchman. "Hen will be here always."

"Oh, you insinuating little Quaker!" laughed the older woman; "one would think you were married yesterday and the honeymoon only begun, would you not, Alec? I wonder if these Chinook winds have a tendency to softening the brain—have they, Hen? If so, you and Tillie are in a dangerous country. What was it you shot this time, Alec—a polecat or a flying squirrel? Yes, I'll go and see for myself."

And she followed her husband across the open space of the plateau to where Ivans was cutting slices of venison from the latest addition to their larder; while Hardy stood smiling down, half amusedly, at the flushed face of the little wife.

"Are you afraid of softening of the brain?" he asked in a tone of concern. She shook her head, but did not look up. She was easily teased, as much so about her husband as if he was still a wooer. And to have shown her fondness in his sister's eyes! What sister could ever yet see the reason for a sister-in-law's adoration?

"Are you going to look on yourself as a martyr after the rest have left you here in solitary confinement with me as a jailer?"

Another shake of the head, and the dropped eyes were raised for one swift glance.

"Because I was thinking," continued her tormentor—"I was thinking that if the exile, as Clara calls it, would be too severe on you, I might, if it was for your own good—I might send you back with the rest to Kentucky."

Then there was a raising of the head quick enough and a tempestuous flight across the space that separated them, and a flood of remonstrances that ended in happy laughter, a close clasp of arms, and—yes, in spite of the girl who was standing not very far away—a kiss; and Hardy circled his wife's shoulders with his long arms, and, with a glance of laughing defiance at his cousin, drew her closer and followed in the wake of the Houghtons.

The girl had deliberately stood watching that little scene with a curious smile in her eyes, a semi-cynical gaze at the lingering fondness of voice and touch. There was no envy in her face, only a sort of good-natured disbelief. Her cousin Clara always averred that Rachel was too masculine in spirit to ever understand the little tendernesses that burnish other women's lives.

(To be continued.)

The publicity committee of the Wisconsin Tractor Demonstration met recently in Madison to further plans for the state demonstration which is to be held at Madison September 4th-8th. Representatives of the Madison committees, of the College of Agriculture, the state farm papers, trade papers and others attended the meeting which was an enthusiastic one. Plans are being made to make this tractor show one of the biggest farmers' meetings ever held in the state.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Poultry in Midsummer.

To the Editor:—Through the hot months poultry requires as much care, only in a different way, as poultry in wintertime. Laying hens, frying chicks and the tiny ones, too, require lots of cool, fresh water often through the day just the same as people. The drinking vessels should be cleaned every morning before the poultry are turned out and they should be filled with pure water. This should be repeated again at noon or sooner. The drinking troughs should be kept in a shady place all through the day. There should be plenty of shade for fowls through the hot summertime and they must be provided with it if natural shade is not available for any degree of success. Hens will not lay that are kept out in the broiling sun from sun up until sun down. Little chicks cannot thrive without shade, although they require a moderate amount of sunshine to be healthy and strong. They must be sheltered from the hot noonday sun through the hot months. We find that hens must have a grain feed at least once a day even if they have free range if eggs are to be expected through the hottest months. Of course, we do not feed them near so much of any kind of feed in summer as in winter, but a small amount of grain fed twice a day will promote the egg yield. Milk may be fed in abundance through the summer season if it is to be had. Milk in any stage is good for the chicks as well as the laying hens.

Keeping things clean is another item not to be neglected through the hot days if the health of the flock be regarded. Sulphur should be sprinkled in the nests of the laying hens and in the coops of the little ones to keep lice and mites away. Lice thrive in filthy nests and brood coops and strong measures must be employed to keep them down if successful with poultry in summertime. Pulverized tobacco mixed with sulphur half and half, to be used as a powder upon lousy fowls, we have found to be excellent. We have also found that black oak bark kept in the drinking water, adding a few drops of carbolic acid once or twice a week, works wonders in keeping down bowel trouble among the chicks and is good for the hens also. A pile of charcoal kept by the drinking vessels will help to keep fowls in a healthy condition in hot weather as well as cold and is really necessary, as the young chicks are more apt, as well as the old ones, to have an acid condition of the system in summer than in winter. Pure coal oil poured upon the perches in the henhouse will rout the lice and mites, and the cleaning out of the manure every few days with a liberal sprinkling of lime in and around the henhouse will keep down all bad odors, which is detrimental to the health of any kind of poultry.

Mrs. S. E. McCoy.

Johnson Co., Illinois.

First Year With Geese Experiment.

To the Editor:—It generally takes two or three years to learn how to raise geese successfully. Therefore if you do not have success the first year you should not get discouraged or blame the one you bought the eggs or goslings from. Even when grown birds are purchased the beginner does not usually have success the first year. The birds, immediately after being removed from one farm to another, or even from one yard to another, do not breed or lay well.

The breeder should remember or realize that the first year is to be a period of experimenting. Geese should have free range from the time the goslings are hatched out of the shell till they are ready for the market. While it is possible to raise geese without water, it is much easier to raise them where they have a pool to take a swim in whenever they desire. The breed is a matter of choice. Some breeders have found the Toulouse the most profitable, while others have found the Embden to be producers. The African goose is coming into favor with many farmers, and we do not doubt that in a few years they will be as common with us as either of the other breeds named.

It is essential that the geese whose eggs are used for setting should have plenty of green feed. By testing the eggs of those confined we have found that they do not show 50 per cent fertility, while those on free range will test as high as 80 to 90 per cent. After the goslings are hatched off they should have plenty of shade. We have learned that hot sun frequently kills those tender birds. If there are not trees in the field or lots, a shed should be built. Four posts set in the ground with a few boards nailed over the top will prove sufficient. Goslings are very little trouble if given plenty of water, green feed and plenty of range.

The little fellows will make rapid growth on grass, water and a small amount of cracked corn. But the first few days we feed nothing but grass and clear water. I think it is a good plan to spray the sheds where the birds roost with some good disinfectant each evening before they go to roost. The spraying kills the disease germs and makes the place more healthful.

F. O. L.

Weaning the Chicks.

The best time to wean the chicks from the brooder will depend on the season of the year and also the coops used. In cold weather of early spring the chicks must be left in the brooder longer than during warmer weather. The first weeks after weaning the chicks require close watching, as there may be changes in the weather and sudden showers.

The colony house is the most satisfactory for developing the young stock. They should be constructed so as to provide an abundance of fresh air in warm weather. About fifty chicks is a large enough number to place in a single colony house. A house 6x6 feet, if properly ventilated, will accommodate forty to fifty growing birds, while a coop 6x3 will accommodate about twenty-five growing birds. Make these small coops about thirty-six inches high in front and twenty-four inches high at the back. The upper half of the front should be left open for ventilation. A muslin door should be used over this opening in cold and stormy weather. An adjustable hook can be made that will let this muslin door lie flat on top of the roof when not in use. Care should be taken to place the colony house on high, dry ground.

Chicks of different ages should not be placed in the same coops. Old birds should not be allowed to run with the chicks. For best results the young stock should have a run by themselves and they should never be placed in the same houses with the old birds.

Roosts should not be used until the birds are about four months old. If allowed to roost too early crooked breast bones may be the results. The floor should be covered with sand, loam or dry litter.

Shade of some kind is necessary for the growing stock. When no trees are present some kind of shade must be provided. A cornfield makes a splendid shade; sunflowers will serve the purpose or some shelter of boards, canvas or straw may be provided.

The more range the birds get the better. Free range not only means more strong, vigorous chicks, but it also helps to reduce the feed bill. Much feed can be secured from grasshoppers, worms and insects, which means more vigor and better growth.

—[North Dakota Bulletin.

Engine "Why" Book.

ONE of the cleverest little books on engines that has ever been published, has just been printed by Ed H. Witte, a Kansas City engine expert. Mr. Witte says that while the supply of books lasts, he will be glad to send a copy to anyone interested. The book is called "Why." Just write "Why," with your name and address on a postal or scrap of paper and address Mr. Witte, 271S Oakland Ave., Kansas City, Mo. Every reader of this paper who is interested in economical farm power, should send for this book.—Adv.

The Wheat Yield Tells the Story

of Western Canada's Rapid Progress

160 ACRE FARMS IN WESTERN CANADA FREE

The heavy crops in Western Canada have caused new records to be made in the handling of grains by railroads. For while the movement of these heavy shipments has been wonderfully rapid, the resources of the different roads, despite enlarged equipments and increased facilities, have been strained as never before, and previous records have thus been broken in all directions. The largest Canadian wheat shipments through New York ever known are reported for the period up to October 15th, upwards of four and a quarter million bushels being exported in less than six weeks, and this was but the overflow of shipments to Montreal, through which point shipments were much larger than to New York.

Yields as high as 60 bushels of wheat per acre are reported from all parts of the country; while yields of 45 bushels per acre are common.

Thousands of American farmers have taken part in this wonderful production. Land prices are still low and free homestead lands are easily secured in good localities, convenient to churches, schools, markets, railways, etc.

There is no war tax on land and no conscription.

Write for illustrated pamphlet, reduced railroad rates and other information to

Live Stock Summer Meetings.

(Continued from page 6.)

for a beginner to follow the blood lines established by other breeders. He believes that one can advance more rapidly by following this plan than by starting out for himself. Therefore, he followed the lines already developed and took advantage of the experience of successful breeders before him. In this respect, he said, Wisconsin is fortunate, as in this state there are many herds built up by studious breeding along definite lines.

Mr. Irwin is a great believer in starting the boy and the girl on the farm into the breeding game as early as possible. "My idea is that if we just move about our live stock that we are not getting very far," he said. "Our greatest crop is our children and our work will be for naught if we do not train them to take up the work where we leave off." Mr. Irwin believes it a good plan to give the boys and girls a calf or some other animal to develop.

Mr. Irwin spoke on the following day to the Waukesha county breeders at Dousman, on Thursday to the breeders at Kenosha, on Friday to the breeders at Randolph, and on Saturday at the Ozaukee county meeting at Port Washington.

St. Croix Guernsey Picnic.

The annual picnic of the St. Croix Guernsey Breeders' Association, held June 16th on George Graham's farm, one-fourth mile south of Roberts, was attended by over 500. Picnic dinner was served on the grounds and the Roberts Military Band furnished excellent music for the occasion. A very able address was given by Dr. Wood, of Mankato, Minn., who talked on the improvement of dairy cattle and gave an interesting account of his visit to Guernsey Island. A number of Guernsey cattle, representing a number of the noted herds in the county, were exhibited and these subjects of much admiration.

The stock-judging contests for high school and grade boys attracted a great deal of attention. The New Richmond high school team carried away a silver cup trophy for the best team judging. The Ellsworth high school team won second honors and the Union high school at Roberts was a close third. The best individual judging was done by James Walker, of Roberts, who placed three classes of animals correctly. One of the interesting features of the program was the judging of the weight of Clara's Sequel, the noted sire owned by Rundell Bros. Prof. J. M. May, of the agricultural department of the River Falls Normal, carried away a $5 bill for judging the sire's correct weight, 1,610 pounds.

Breed Days at Southwestern Dairy Show.

The Southwestern Dairy Show Association have designated Monday, September 18th as Brown Swiss Day; Tuesday, September 19th, Ayrshire Day; Wednesday, September 20th, Guernsey Day; Thursday, September 21st, Jersey Day; Friday, September 22d, as Holstein Day, at their first annual exhibition of Dairy Stock, Dairy Products and Dairy Machinery and Equipment to be held in Convention Hall, Kansas City, Missouri, September 18th to 23d, inclusive.

On these particular days the Local and State Breeders' Associations will hold their meetings. The Southwest Jersey Cattle Breeders' Association, Mid-West Guernsey Breeders' Association, State Holstein Breeders' Association and the State Ayrshire Breeders' Association are planning special programs for their respective days.

Special breed trophies have been donated by the Holstein-Freisian Association, American Jersey Cattle Club, Ayrshire Breeders' Association, Southwest Jersey Cattle Breeders' Association, State Holstein Breeders' Association, the J. R. Mercer Jewelry Company, of Kansas City, and J. G. Watson, of Kansas City.

Special mention is made of trophies presented by the American Jersey Cattle Club. These trophies are replicas of the famous Warwick vase. The design is famous and the cups are valued at $100.00 each. The trophies are presented for the Grand Champion Jersey Bull and the Grand Champion Jersey Cow at the Southwestern Dairy Show.

Not Always the Cow's Fault.

It is not altogether the fault of the cows that there are so many poor producers scattered over the country. Too many of them never had any training which would bring out their more or less latent milking qualities. They have been "broken" to milk, but not "trained" to milk. Too often the "breaking" process has not been such as to increase their tendency to milk or their confidence in the good intentions of mankind.

This condition cannot continue. Land is too high priced, labor too valuable and feed too expensive to permit the dairyman to keep unprofitable cows. He will have to inquire more carefully into the qualifications of the cows which apply for employment with him. He will give them a physical examination like that required before you get your life insurance policy, for he must have a healthy and durable herd. He is already beginning to insist on good breeding. The mongrel dog may persist years without number. He doesn't have to work for his living. But the mongrel cow has hard sledding before her and will have to make room for her more reliable rivals, the grade or the pure bred. Besides, Mr. Dairyman is asking disquieting questions about ability at the pail. Previous training and experience counts with cows as with men. The demand is for specialists in the fine art of making milk at a profit and there are wonderful opportunities for highly educated cows in this line.

This is the cow with the "sheepskin," the diploma, the card showing that she has passed certain tests and demonstrated her ability to produce. In effect she has graduated from a "cow college" and has her sheepskin to show for it. It may have been a secondary school like a testing association or a short course like the seven-day test or a full course for a year; in any event she has done something, has shown what she can do and has usually increased her capacity at the same time. She has added to her own reputation and her progeny inherit some of it also along with other qualities which may descend to them.

It is true that sometimes her "college training" does not make her any better. We must remember that human beings sometimes pass through college without acquiring much more than a few expensive tastes, but we don't condemn college courses on that score. It is the fault of the individual or his early training and cows are more or less like other animals.

Be that as it may, the Babcock test and the scales compel cows to be honest and it is hoped that they will also lead men to be more honest with their cows. The cow is so constituted that she can be made to consume a great deal more food than she needs to support her body. It is certain that man is greatly at fault if he does not educate her to use this capacity for his benefit. No experienced driver expects a horse to make rapid time on the road unless it is trained, nor a team to draw a heavy load unless they are taught to pull together and hardened for the work.

Advanced registry records show that training is just as necessary with dairy cows. A really great record is seldom, if ever, made without preliminary work of some kind with the definite purpose of increasing the ability to produce. The results secured show something of what can be done. The need for better returns will enforce the lessons and urge adoption of better methods in handling cows.—[In Black and White Record, June 1, 1916.

Test Shows Fall Pigs Yield Profit.

Fifty-seven fall pigs fed at University Farm, St. Paul, last winter and marketed recently left a margin of $4.56 a head to cover cost of labor, risk, interest, profit, etc.

R. C. Ashby, of the animal husbandry division at University Farm, began a series of tests two years ago to determine whether raising fall pigs is profitable in Minnesota. The margin of nearly $5 a head is the result of the test.

Eleven sows farrowed fall litters for the tests and the pigs were weaned December 16th. They were put on feeding tests two days later. The records kept cover all feeds consumed by sows and litters from farrowing to weaning and from the time the actual feeding test was begun until it was finished.

The total cost of feed for the sows and pigs up to weaning time was $186.81. From weaning time to the time of marketing the feed cost $577.88, making a total cost of $13.42 a head. The feed was counted at these prices: Shelled corn, 75 cents a bushel; ground barley, 65 cents a bushel; shorts, $26 a ton; tankage, $55 a ton.

The pigs averaged 191¼ pounds when sold May 6th. They were sold at $9.65 in South St. Paul, a price equivalent to $9.40 at home. The selling price of $17.98 left a balance of $4.56 each. No account of manure is taken in these figures.

The pigs were fed in five lots, three lots from self-feeders and two lots fed by hand. Those in the lots in which the self-feeders were used did better than those in the other lots. The corn-fed lots required about seven bushels of corn, forty pounds of tankage and from thirty to forty pounds of shorts for each pig from weaning time to the close of the test.

The pigs were fed grain alone. They were given no milk and did not have access to the cattle yards. Mr. Ashby thinks that when milk is available or when the pigs can pick up after cattle the margin will be correspondingly increased.

The horse that is compelled to fight flies continually cannot get in a full day's work, or at least if it does there is loss in stamina which eventually tells on the life work of the animal. Neither can do its best with an ill-fitting harness. The horse that is comfortable and in good spirits is the one which makes the record.

A submerged oak forest covering several square miles, from which logs more than 100 feet in length have been taken, was discovered by Russian engineers while dredging a river.

Shoo Fly Plant

KEEPS FLIES OUT OF THE HOUSE

Flies will not stay in a room where it is grown. Very mysterious, but tests show such to be the case. Blooms in a short time (60 days from planting). Flowers both summer and winter. Package of seed by mail with catalogue, 10 Cents.

JAPAN SEED CO., Desk V, South Norwalk, Conn.

GALLOWAY

SECOND EDITION NOW READY

Ask for your copy today. A postal gets it. The first edition of this big, 250-page book of Galloway bargains was exhausted. Second edition just off the press. It describes the famous Galloway line of Sanitary Cream Separators, the Galloway gasoline and kerosene Engines, the new, modern Galloway Manure Spreaders, our new 12-20 h. p. Farmobile; Galloway Farm Trucks, all kinds of farm machinery, hay tools, ensilage cutters, power house accessories, grinders, buggies, wagons, harness, fencing, roofing, saddles, Galloway automobiles, stock tanks, corn tools, automobile accessories, sewing machines, household goods, carpets and rugs, furniture, and a complete line of clothing for every member of the family.

I WANT YOU TO HAVE YOUR COPY OF THIS BOOK

You can get it for a postal. If it guides your summer and fall buying it will save you from $200 to $600. It tells the the truth about cream separators, it gives engine secrets and facts, it tells how and why the Galloway manure spreaders made Galloway famous, fully describes my new 12-20 h. p. Farmobile or tractor. A copy of this book should be in your hands even if you are not now in the market for a single one of our bargains. Printed in four colors, handsomely illustrated. Ask for your free copy today. Address

Four low prices and four good sizes of Galloway Separators

Gasoline or kerosene engines from 1 3-4 to 16h.p.

D-32

WM. GALLOWAY COMPANY, Mfg. Specialists
37 Galloway Sta. Waterloo, Iowa

Galloway's new 12-20 Farmobile. Low price.

Seven Styles: Farm trucks from 750 lbs. to 3 ton capacity

Equal to 3 men and 3 teams

These Manure Spreaders made Galloway famous. Big, free book gives details of size and style.

If none of the above combinations suit you, you can make your own club of papers in the following way: First select The Wisconsin Farmer and figure it at $1.00 per year. Then select any of the papers or magazines listed above and figure them at half their regular subscription price as indicated above, choosing whatever papers or magazines that appeal to you. As an example, suppose you should want The Wisconsin Farmer, Kansas City Weekly Star, Woman's World and People's Home Journal. You would figure The Wisconsin Farmer in the combination at $1.00; then you would add up the regular subscription price of the other three papers, which amounts to $1.10. Half of that amount equals 55 cents. Add this to the regular price of The Wisconsin Farmer, which is $1.00, and you would have a total of $1.55, which would be the rate for The Wisconsin Farmer, Kansas City Weekly Star, Woman's World, and People's Home Journal.

If you wish to subscribe for any papers or magazines not listed in any of the above offers, write to us for special rates. Send all orders to Club Dept., The Wisconsin Farmer, Madison, Wisconsin.

Collected by Representatives of The Wisconsin Farmer

Keep Your Eye on This Poland Herd.

THE herd to which we above refer is owned by C. S. Flesch, post-office, Mt. Ida, and shipping point Fennimore, Wisconsin. Poland men of the state want to keep their eyes on this man Flesch, for, while he is just "warming up" now, he is going to "finish strong" for he has the right kind of stuff. In the first place, Jumbo's Equal 2d the herd sire is some boar—he has it all. Look at his breeding. Sired by Big Jumbo 2d by Big Jumbo, dam Big Lady by Mastodon Chief. He traces twice to Big Bone, once to old A Wonder 107353 and once to the original Longfellow. Pretty good combination isn't it? He is of June 12, 1913, farrow and we would class him as a 900-pound boar and for quality you can't beat him. He has the back that we like to rave about, deep, smooth sides, deep hams and just as wide at the ham as he is at the shoulder. We will class him among the five best Poland China boars that we have seen in the state. Mr. Flesch has only been in the pure-bred game for two years, and, as with all starters, he bought a few "lemons" that didn't turn out well, but he has some sows that are real producers. One of the good sows is of A Wonder 107353 breeding and she has a great litter of eight by Jumbo's Equal 2d, she is also the dam of the best two-year-old sows on the place. Miss Big Bone by Big Bone 2d is another one that any breeder could tie to with success. Another three-year-old sow by Keeffer's A Wonder out of a dam that traces to Chief Price 2d is worth the long price Mr. Flesch paid for her. She has a litter of eight by the herd boar. There are eight matured brood sows on the farm and they are good ones. If you are in need of a good fall boar, they are in this herd. Two out of Miss Big Bone, mentioned above, one out of a daughter of Mastodon Chief and one out of Miss Wonder by Oakland's Equal—all sired by Jumbo's Equal 2d. Take your pick, they'll do. Don't overlook this herd boar. Spring pigs number fifty and there are going to be some boars of this lot that are herd headers. No spring pigs to offer at this time, but the fall boars are ready to go any time. A herd worthy of recommendation. Write. See page 23.—Adv.

Lindauer's Holsteins.

DURING a recent visit to the farm of L. Lindauer, Kaukauna, Wis., we had the pleasure of looking over his herd of Holstein cattle. During the inspection we were impressed by the uniformity and fine conformation of the animals in the herd. It is evident that Mr. Lindauer has selected this herd with care and discrimination. He not only has purchased animals of good type and high production ability, but has also combined with this blood lines of proven merit. At the present time he is offering for sale a bull born September 20, 1915. This young bull was sired by King Segis Pontiac Polkadot, a full brother in blood to the $50,000 sire, King Segis Pontiac Alcartra. King Segis Pontiac Polkadot was sired by King Segis Pontiac one of the greatest bulls of the breed, that was a thirty-seven-pound son of King Segis. His dam was K. P. Polkadot, a daughter of King of the Pontiacs, that now has 180 A. R. O. daughters, two with records of forty and forty-four pounds of butter respectively, and thirteen others with records above thirty pounds. The dam of K. P. Polkadot was Alcartra Piebe Burke, making her a sister of Sadie Vale Concordia 4th, that has a forty-one-pound record. At the recent National Holstein Meeting in Detroit we met Mr. J. Le Roy Pelletier, who purchased a large number of cows bred to King Segis Pontiac Polkadot. He says that he is getting such wonderfully fine calves from this bull that he intends to ship several cows from Detroit, Mich., to Wisconsin, to be bred to this bull. For further information in regard to the young bull offered for sale write to the above address. See page 24.—Adv.

Van Etta Offers Great Values.

THOSE of our readers that are interested in the Ayrshire cattle will be interested in the herd owned by Jas. Van Etta, Lima Center (Rock county) Wis., for he has, without a doubt, one of the very best herds of Ayrshires to be found in the Northwest. Most of his breeding herd has good A. R. records and this alone demonstrates the fact that his cattle are producers. At this time he has several young bulls that he is offering at prices far below their value. They range in age and breeding. They are from A. R. dams. We are glad to recommend this herd for Mr. Van Etta has the goods. Write him for particulars and in so doing kindly mention The Wisconsin Farmer. See page 24.—Adv.

Nuttleman's Chesters Are Great.

IF you are a Chester White breeder Adolph Nuttleman, West Salem, Wis., has some spring boars that look like they will make real herd boars if properly cared for. If you are a farmer and want to cross your sows with a Chester White boar, he has boar pigs that will put size and quality in your herd. The writer has seen thousands of spring pigs since March and with the exception of pigs pushed for show he hasn't seen any with the growth that Nuttleman has on his pigs. It is true that he has some February pigs, and, of course, they are big, but not taking age into consideration he has it "on" many of the breeders and the only secret is that he has good sows and is a care taker from the word go. You will be pleased with your pig if you order from this breeder. Don't forget to mention The Wisconsin Farmer when you write. See page 23.—Adv.

One Man Drives Hudson Super-Six 1,819 Miles in Twenty-four Hours.

BY traveling 1,819 miles in twenty-four hours, a distance equal to that from New York to Denver, the Hudson Super-Six has made another demonstration of its marvelous speed and endurance. This new record was made with an average speed of 75.8 miles per hour and one man drove the car all the way. No man could have accomplished this feat in a car which was not vibrationless, and a very significant fact in regard to the car used is that, upon inspection after the trip, no part or bearing showed any appreciable wear. Speed work of this kind is a tremendous strain on a car—many years of road work will not equal a few days of speeding. A stock chassis was used in this race and every purchaser of a Hudson Super-Six gets exactly the same motor and the same super-endurance. The Super-Six motor is a Hudson invention, develops seventy-six horse power, runs with utter smoothness, is never strained in hill climbing, in quick pick-up or in speeding, and possesses durability and strength that is marvelous. Absolute satisfaction is the experience of Super-Six owners. The seven-passenger Phaeton sells for $1,475 at Detroit; a choice may be made from seven other styles of bodies. The Hudson Motor Car Company, Detroit, Mich., will gladly furnish complete information about these cars, as will any Hudson dealer. See the advertisement on page 9.—Adv.

A Modern Water System Without Storage Tanks.

A MODERN water system with a Pfau compressed air motor pump will furnish running water for any farm home or barn. It is connected directly with the well and no inconvenient storage tanks are necessary; the pump will operate with but three inches of water in the well. All working parts are protected and there is no danger of freezing and bursting the pipes. The system will provide facilities for a modern bathroom and toilet and furnish running water in the kitchen, which is a great saving of time and labor. In addition, the live stock may be furnished with an abundance of pure water with very little trouble—this is an important item, since pure water is absolutely essential in order to realize the greatest profit from stock raising. Anyone interested in this water system should read the advertisement on page 12 and write for free literature and special offer. Address Otto R. Pfau, Enterprise Bldg., Milwaukee, Wis., and kindly mention The Wisconsin Farmer.—Adv.

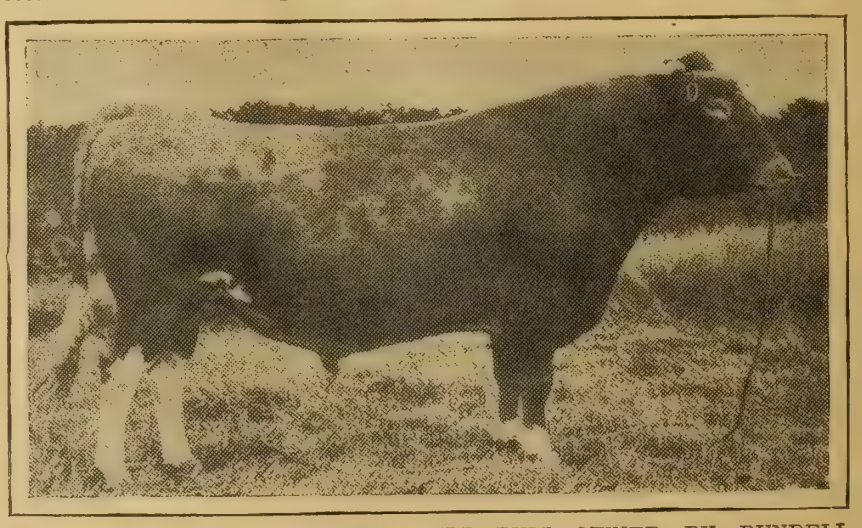
Auctioneering a Profitable Profession.

NO profession offers more lucrative opportunities than auctioneering. The services of the competent and efficiently equipped auctioneer are constantly in demand, but a thorough knowledge of every angle of the business is necessary. There is one place where this information can be secured and that is Jones' National School of Auctioneering, Chicago, Ill. The oldest established, the best equipped and the most efficient administration make this the logical school for those desiring to enter the ranks of the auctioneer. It is conducted in a practical manner by practical and experienced auctioneers. The president, Col. Carey M. Jones, is one of the best auctioneers the country has ever produced, and every detail of the school is carried on under his personal direction, with the aid of competent and experienced instructors in every department. Graduates of this school are successfully practicing their profession in every section of the country. A handsomely illustrated catalog giving full particulars will be sent to any person upon application. Address Jones' National School of Auctioneering, 40 North Sacramento boulevard, Chicago, Ill. The advertisement appears on page 23.—Adv.

Floss, a Chester White sow, that has forty-nine pigs in three litters. Owned by Leonard Behrens, whose advertisement appears on page 23.

A Prolific Chester White Sow.

IT IS the aim of every breeder of swine to produce prolific strains. Too many sows are and always have been prone to farrow small litters of pigs. One of The Wisconsin Farmer readers, however, has developed a strain that is very prolific. When we were recently inspecting the herd of Leonard Behrens, at Corliss, Wis., we asked him what lines of breeding he was following. He said, "Every animal you see traces to that big show sow, Floss." We said that she looked good enough for a foundation sow and he replied, "Yes and she delivers the goods. She has had four litters as follows; fifteen pigs, sixteen pigs twice in four litters." Her daughters are not quite so prolific, but four sows in the herd farrowed fifty-one pigs, an average of almost thirteen pigs to the litter. The spring pigs are growing in fine shape and are thrifty. He has several sows due to farrow soon and is offering pigs for sale to be shipped at three months of age. These are sired by Sir Raleigh, a litter brother to the second-prize boar at the 1915 Wisconsin State Fair. See page 23.—Adv.



IMP. CLARA'S SEQUEL, GUERNSEY HERD BULL OWNED BY RUNDELL BROTHERS, GRANT COUNTY, WISCONSIN.

Gray Chester Whites.

TO BE consistent with the name—A. L. Gray—Chester Whites predominate on the farm owned by the above breeder located near Mt. Hope, Grant county, Wis. Mr. Gray has been breeding Chesters for over a dozen years and is another one of the many that have made money out of pure-bred swine. He has a good herd of this breed and they carry excellent blood lines. The best thing on the farm is the junior herd boar, Paddy. He is a two-year-old son of the noted Schoolmaster, a boar that Harry Crandall, Cass City, Mich., paid $800 for. Here is a good Chester White boar having good size with a nice arched back and a boar of great quality. The senior herd boar is C. Evans, a son of the noted Combination 2d and out of Perfection Lady by Triumph. C. Evans is a litter mate to the well-known boar, Prince Triumph. We saw an outstanding two-year-old sow on this place, she being a granddaughter of old Combination 2d and she is raising a nice litter of eight by Paddy. There are some fine boars in this litter. Mr. Gray has a yearling boar for sale sired by Hiawatha he by Young America that might do someone some good. He is a fair sort of a boar and it does not take very much money to get him. If interested write for particulars. The spring pigs are doing fine, a very uniform lot and they are now ready to ship. The first come, first served. You can buy one, a pair or trio, unrelated. Keep this herd in mind and if you order from Mr. Gray and you are not satisfied when you get the pigs home you can send them back and get your money, but there isn't any likelihood of your doing that, for the owner won't ship anything that isn't right. His advertisement appears in this issue and when writing for breeding and prices please mention The Wisconsin Farmer. See page 23.—Adv.

Parker & Son Offer Duroc Boars.

WE recently spent the day with those good Duroc breeders of Janesville, Wis.—E. H. Parker & Son—and their spring pigs have made a wonderful growth since last we saw them, some six weeks ago. When you talk about the good Duroc herds of the state the Parkers must be classed among the head-liners. Ed does most of the feeding and he knows how to handle the slop pail so as to get the best results. His pigs are now in nice condition to ship and if you are going to want a boar or some gilts now is a good time to buy and Parkers is a good place. They come cheaper now than they will in September or October, besides the best ones will be gone by that time. Just now they have forty boars to pick from and naturally the first ones get the pick. As for breeding, they haven't any "cold blood" in the herd. The pigs are out of daughters of such boars as Orion Chief, Volunteer, Illustrator, Marion's Wonder, Lee's Defender, Lincoln Model, Pal's Col. The pigs are sired by a son of the champion, Lee's Defender, a son of the Royal champion, Royal King, and a son of Cherry King's Rival, the Prof. Mulford boar. Now, if you can find any fancier, more popular breeding than this, you can do better than we have done—it is as good as is known to the breed. As for individuality, we will leave that to you. If you don't think the pig or pigs are up to standard when they arrive at your station, send them back and we'll guarantee you'll get your money back. The Wisconsin Farmer is glad to recommend the Parkers, of Janesville, Wis. We kindly ask that you mention The Wisconsin Farmer when you send in your order. See page 23.—Adv.

Some Angus Cattle that Please.

WE recently spent some time on the Hauk farm near Cassville, Wis., and saw a grand herd of Aberdeen Angus cattle. The owners, Hauk Brothers, haven't the largest herd, some twenty breeding cows, but they have without exception one of the best herds of this breed that we have seen in the Northwest and one of the best bulls in the state stands at the head. His name is Patna and is sired by the imported Proteros out of Pride McHenry 28th. This bull is above the average for size and when in show shape he weighed over 2,150 pounds. The young bulls being offered are dandies and if you need an Angus bull most any one of these will please you. They are priced to sell—get busy. See page 24.—Adv.

Meinking Polands.

WITH this issue of The Wisconsin Farmer, R. Meinking, Bangor, Wis., changes his advertisement and he is now offering spring pigs of both sexes for sale. He has a large number to select from, and, as some of them are of early farrow, they look fine at this time. Write the above for particulars and mention this publication. See page 23.—Adv.

Send for This Special Cutter Catalog.

THE free, special ensilage cutter catalog of the Challenge Co., Batavia, Ill., should be in the hands of every

farmer planning on purchasing an ensilage cutter. Several distinctive features of the Challenge machines add greatly to their durability, economy and efficiency; among these are the direct drive to blower, slant cut, auxiliary feed roll and hot-riveted all-steel frame. The Challenge Co., also makes silos, engines, windmills, tanks, pumps and grinders. Every farmer should have one of their catalogs for reference; write for your copy today. See page 8.—Adv.

Hay Demands Protection From a Wet Season.

WET weather again this year will compel farmers to put stack covers on their hay, if they want to save it. One heavy rain can cause more damage than the cost of the cover. And besides, the cover will pay for itself many times over in ordinary seasons, because dew and showers destroy much of the hay that is annually exposed to the elements. The Des Moines Tent & Awning Co., Des Moines, Iowa, have been making an extra good quality of canvas stack cover for thirty years, and their product is well-known throughout the middle West. They will be glad to mail a catalog and price list, on any size cover readers of this paper may be interested in. When writing them please mention this paper. See page 2.—Adv.

H. A. Martin's Red Polls.

WHEN you read, talk or hear about Red Polls you naturally link the name of Martin with that breed, for no men in the country have done more for the Red Polls than the Martins, of Gotham, Wis. H. A. Martin has a large herd of select animals and can generally supply the demand for either males or females. If you are in the market for a few females, bred or open you will find cows and heifers that will please you, in this herd. If yon want a bull just a little better than the one your neighbor has, get prices on the bulls H. A. Martin has. When you see a Red Poll think of Martin. Write your wants and please mention The Wisconsin Farmer.—Adv.

Need One Collar Per Horse.

Letting old Bill wear Dobbin's collar when Dobbin isn't working may save the price of an extra collar, but it's mighty likely to put both horses on the "sore shoulder" list when work is most rushing, says the animal husbandry department at Iowa State College.

It's poor economy to use one collar on several horses. This is a common practice among farmers and the cause of more shoulder trouble than any other one thing.

In buying a collar be sure to get one that fits the horse. Poorly fitted collars result in sore shoulders, viciousness and balkiness. A properly fitted collar should rest snugly when drawn against the shoulders on all places of bearing surface, but should cramp at no point. It should be long enough when buckled to allow the open hand to be slipped between it and the windpipe.

It is necessary to properly adjust a new collar. To do this, place it in about three inches of water and let it remain overnight to take out the factory stiffness. By working it thoroughly it will become soft and adjust itself to every inequality of the shoulder.

SHORT-HORN CATTLE.

MILKING SHORT-HORNS

HAVING several choice young bulls from dams giving 10 to 12,000 pounds of milk. I have a well-bred herd and keep records of production. Inspection invited. Address

CURRENT EVENTS

JUST as war with Mexico seemed a matter of only a few hours and President Wilson was preparing to go before congress to ask authority to send a big body of troops to rescue the imprisoned soldiers at Chihuahua (which would have been a virtual declaration of war) the situation was relieved somewhat by General Carranza's action in freeing the twenty-three colored soldiers who have been imprisoned ever since their capture at the battle of Carrizal. The troopers reached the American boundary the latter part of last week, right glad to get back to "God's country." Whether a state of war has been prevented or merely postponed no one in Washington would attempt to say. Official information as to the attitude of General Carranza was lacking. Until his response to Secretary Lansing's note, dispatched Sunday, making two peremptory and distinct demands is received there will be no declaration whether President Wilson shall lay the crisis before congress. In the meantime General Pershing is retaining his troops at their base about 250 miles below the United States border and the state troops are being mobilized and rushed to the border as rapidly as possible. Last week fully 15,000 state troops left their home camps and started south, while by the middle of this week this number will be increased to fully 50,000. The troops are being equipped and armed and will patrol the border, at first, allowing the regular soldiers to bear the brunt of the fighting.

CHARLES E. HUGHES and Theodore Roosevelt will, in all likelihood, be working together, hand in hand, against Woodrow Wilson and the democrats long before the presidential campaign is ended. Mr. Hughes and Roosevelt lunched together last week, when the breach between the progressives and republicans was completely healed. Mr. Hughes has informed Colonel Roosevelt that he wants the latter "to feel that I wish to have all the aid you are able and willing to give." In this friendly spirit of co-operation Roosevelt promises to be a big and perhaps a dominating figure in the forthcoming campaign. In accepting the progressives' support Mr. Hughes issued a public statement in which he said: "The most serious difficulties the present administration has encountered have been due to its own weakness and incertitude. I am profoundly convinced that by prompt and decisive action, which existing conditions manifestly called for, the Lusitania tragedy would have been prevented. We strongly denounce the use of our soil as a base for alien intrigues, for conspiracies and the fomenting of disorders in the interests of any foreign nation, but the responsibility lies at the door of the administration. The moment notice is admitted, responsibility is fixed. For that sort of thing could not continue if the administration took proper measures to stop it. That responsibility the administration cannot evade by condemning others. The government has and must have most emphatically the unstinted and patriotic support of every citizen in the existing exigency. But unquestioning, loyal and patriotic support of the government is one thing, approval of the fatuous course which the administration has followed, is quite another." The campaign has thus become a straight out-and-out fight between two parties, with the progressives, as an organization, completely eliminated.

IF WAR with Mexico eventuates, Theodore Roosevelt will ask the government for permission to raise a division of volunteer soldiers. He will attempt to duplicate the success of the Rough Riders, which he commanded, with Leonard Wood, in 1898. Colonel Roosevelt has made his plans after consultation with high military authorities and they call for a special division of 12,000 men, consisting of four brigades—one of infantry, two of cavalry, one of field artillery, supplemented by troops including engineers, signal corps and hospital corps. For months the colonel has had these plans in his head, for weeks he has been working them out to the smallest details against just such an emergency as existed across the border, and for ten days quiet recruiting has been going on in all parts of the country by men to whom the former president has entrusted this task. Such of the bigger arrangements as providing horses have been looked after already and a declaration of war with Mexico and a call for volunteers will be the signal for an office to be opened in or around New York City for recruiting and clerical work and for division headquarters to be established, probably in Texas, where the troops would be assembled.

THERE will be no third party presidential ticket in the field this year. That much was definitely decided at the meeting of the national committee of the progressives held last week. By a vote of thirty-two to six the committee indorsed Charles E. Hughes, the republican nominee, for president and the bull moose party practically went out of existence as a national political organization. This action was taken after a letter had been read from Theodore Roosevelt positively declining the progressive nomination and urging the party to support Hughes. It was not taken, however, until after a fight, the name of Victor Murdock, of Kansas, being presented as a substitute for Roosevelt to head the ticket. In his letter of final declination Colonel Roosevelt indorsed Mr. Hughes in this manner: "Mr. Hughes' character and his whole course of conduct in public affairs justify us in the assured conviction that the fact that these men have for their own purposes supported him will, in no shape or way, affect his public actions before or after election. I wish very solemnly to ask the representatives of the progressive party to consider at this time only the welfare of the people of the United States. We shall prove false to our ideals and our professions if, in this grave crisis of the nation's life, we permit ourselves to be swerved from the one prime duty of serving with cool judgment and single-minded devotion the nation's needs. Our own political fortunes, individually and collectively, are of no consequence whatever, when compared with the honor and welfare of the people of the United States. Such things do not count when weighed in the balance against our duty to serve well the country in which, after we are dead, our children and our children's children are to live. We have the alternative of continuing in office an administration which has proved a lamentable failure, or of putting into office an administration which we have every reason to believe will function with efficiency for the interest and honor of all our people. I earnestly bespeak from my fellow progressives their ungrudging support of Mr. Hughes."

THE plan of campaign which the United States army will pursue in case of war with Mexico is understood to call for 250,000 volunteers in addition to the regular army and the state troops. It is said that the president will issue the call for volunteers within a short time after the outbreak of hostilities. The campaign in a general way will then be carried on in two distinct phases. First will come the establishment of an effective defensive, destined particularly to police the border while the state troops and volunteers are being brought into shape. Second will be what army officers describe as the clean-up phase of the campaign, when all is ready for the clock-like advance calculated to speedily subjugate the country. This latter phase, it is explained, would probably not start in earnest until the fall. "The big idea of the army's plan," said one ranking officer, "will be the domination of Mexico at a minimum price in American lives."

The Wisconsin Farmer

THURSDAY, JULY 6, 1916.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

SHIPS FOR AMERICAN FARM PRODUCTS.

I HAVE always maintained that there is no public question today in which the farmer is not directly and vitally interested. He may seem, at times, to be aloof from the rest of the world and even to be independent of his fellowmen, but this is far from being the case. Farming has ceased to be a one-line occupation, just as it has ceased to be a one-man occupation. The successful farmer must know something of mechanics, something of chemistry, something of weather probabilities, something of marketing conditions, and so on and on through an interminable list of subjects. Farming does not begin and end in dropping the seed into the ground, by any means.

It is because farming is such a complicated process, dependent on so many things in addition to seed, sun and soil, that I have been urging my readers to insist they be represented by a member on the proposed non-partisan tariff commission. The tariff may seem far removed from corn planting and sheep shearing, but that it is very closely related to all operations of farming we all of us learned—almost to our sorrow—when one-sided Canadian reciprocity was in a fair way to be foisted upon us. Nor can we drop the matter with the tariff either. I defy you to mention any great national problem or issue which does not affect the farmer's welfare, whether it be war with Mexico, equal suffrage, ship subsidies, tariff or what not. Take the question of American ships in which to send American farm products around the world, for instance. I have just finished reading a very interesting article by Wm. G. McAdoo, the present secretary of the treasury, in which he points out how important this matter is to the farmer, particularly here in the middle West where the bulk of the nation's wheat is raised. Secretary McAdoo makes his point in this manner:

No classes of our people are more vitally concerned in adequate steamship lines to deliver our products to foreign markets than our farmers and laboring men.

Our farmers have always produced more than they could sell in our home markets. This is notably true of grain and cotton. We depend absolutely upon foreign markets for the disposition of our farm surplus. To show the magnitude and importance of our foreign trade in farm products, I need only call attention to the fact that for the fiscal year 1915 our total exports were $2,716,178,465, of which the total crude and manufactured farm products represented $1,616,687,466, or more than 59 per cent of our total exports.

If steamship facilities are inadequate, the farmer has added difficulty if he is not to a large extent actually prevented from getting his surplus products to foreign markets. Moreover, he is a great sufferer from exorbitant freight rates.

Because of the lack of American ships and the scarcity of ocean tonnage generally ocean freight rates in the Atlantic have been extortionately high. The normal rate of 4 cents per bushel for grain from New York to Liverpool has been increased to 40 cents per bushel. I do not have to argue with any intelligent farmer that he gets less for his grain on the farm when it costs 40 cents per bushel to ship it from New York to Liverpool than when it costs only 4 cents per bushel for the same service. The cotton producer in the South has suffered to a greater degree. Ocean freight rates on cotton have gone as high as $15 per bale from Galveston to Europe, as against $2.50 per bale prior to the war.

Our farmers, because they produce the bulk of our wealth as well as the bulk of our exports, ought to be protected against extortionate freight rates, and ought to have the assurance of sufficient steamship service and reasonable rates to secure fair treatment and enable them at all times to compete in the open markets with their rivals in the other great farm producing regions of the world.

If there is any one great and glaring mistake we American citizens make it is in allowing big questions like this to be so entangled by and obscured in politics that the real meat and the rights of the matter are lost sight of. We have been going along for years making the tariff a political issue, while the farmer paid most of the bill, and it has been only in the last year or two that we awoke to the fact that tariff tinkering was a mighty expensive amusement and that the problem should and could be settled in a businesslike manner. The ship subsidy has never seemed to most grain-belt farmers so awfully important to them, but Secretary McAdoo makes out a pretty clear case. I am not going to say that we should grant government subsidies to ship builders and ship owners, or in any paternal way make this business different from most commercial enterprises, but this much I will say: Here is a subject which we should study and discuss together, to the end that we may arrive at a solution which will conserve our interests and advance our welfare. Do not let any political bugaboo scare you from attacking any question now before the public or reaching any conclusion which will be to the greatest good of farmers as a body, regardless of which political party it may hurt or help. It is your duty and mine to make farming more pleasant and profitable and farm life more satisfying and ennobling; nothing else is half so important.

FARM BOYS AND WAR.

WHETHER our boys who are mobilizing these days in the various national guard camps are ever sent into Mexico or not, whether they ever see actual fighting or not, we cannot but be proud of the way they are responding to their country's call. To me, it is a sad sight to see the young boys, many of them not more than eighteen or nineteen years old, standing before the mustering officer and with right hand upraised taking the oath of service under which they can be sent outside the country, if necessary. Some of these boys are known to me personally; they are the sons of my subscribers and I know how the hearts of their fathers and mothers ache, even while pride quickens the heartbeat at the eagerness and heroism with which the boys answer the call to the colors. I have always contended that when war shall come the farm boy and the farmer will be found quickest to respond and bravest to dash ahead. I cannot refrain from printing a little item which I find in one of the big daily newspapers of the grain belt, in reference to one of the state camps. It tells how many of one of the companies of militiamen are farm boys and how they emulated the example of brave old Israel Putnam—who, you may recall, was plowing on his farm in Connecticut when the news came of the battle of Lexington; he unharnessed the team, left the plow in the furrow and mounting his plow horse started for the front, without even stopping to change his clothes. Does not what I am about to set out here recall his heroism as recorded in history?

"Israel Putnam has nothing on Stephen Shelangouski, a Polander in my company," Captain Smith said, "or Ray Rainer and Phillip Kaler.

"These men are farmers. They have their all invested in farms with their crops just now in critical condition and needing their attention. Yet they did not hesitate for a moment. Others of the company are farmers who rent their property. They left their plows and answered the call, some of them leaving young brides. There are sixteen or eighteen farmers in all.

"One man had hay to cut, but he left it and came in through the mud, reaching us five hours after he received the summons," the captain said.

It is sad, indeed, to think that some of the boys who are leaving the farm, the factory and the office to answer this call to uphold our national dignity and honor below the Rio Grande may never come back to us. They are in the very flower of young manhood; straight and strong and good to look upon, the boys we were counting on to keep up the old home place after we were gone. And yet, for all that, how proud we are of them as they march forth to whatever fate may await them. It carries us older folks back to the sixties and the middle-aged ones back to 1898, when the bugle call of war last sounded throughout the country. As I write these words—Friday afternoon—there is some prospect that war with Mexico may be averted. I sincerely hope so—I earnestly pray so. And yet if the war comes we will know that the boys from the farm are fighting shoulder to shoulder with the boys from town and city and that our great nation is united as never before. It may be that the war clouds will be dispelled, that the rainbow of peace with national dignity and honor may yet be visible in the now darkened skies. Let us hope that this will be the case, yet let us be prepared for the worst, leaving it all to Him who, watching over Israel, slumbers not nor sleeps.

WHERE DOES THE WEST BEGIN?

WHO can tell where the West begins? We of the grain belt proudly assert we are westerners, yet when I get out beyond the Rockies the people there call me an easterner. Is there any one place where we can truthfully say the East ends and the West begins?
